Addressing State governors in 1957, President Eisenhower dealt, as he had before, with the temptation to transfer the problems of States and cities to Washington for solution. "Every State failure to meet a pressing public need has created the oportunity, developed the excuse and fed the temptation for the National Government to poach on States' preserves," he said in that address at Williamsburg, Va. "Year by year, responding to transient popular demands, the Congress has increased Federal functions. So, slowly at first, but in recent times more and more rapidly, the pendulum of power has swung from our States to the central Government." Yet, as the President then said, it is difficult to "turn back long-established trends."

In 1949 General Eisenhower, addressing the U.S. Conference of Mayors, meeting in Washington, had also commented upon this tendency to "pass things unnecessarily to the Federal Government because thereby they (local officials) escape the necessity of levying locally unpopular taxes which may be hard to explain to the voters."

President Eisenhower has an excellent opportunity in this, his final year in office, to advance the principles he has thus so long espoused. This oportunity lies in agreeing with Governor Rockefeller's proposal that the Federal Government allow its 10 percent excise tax on local telephone service to lapse on June 30, 1960, and let States or localities take it over to finance the services, including education, for which they are so hard put to find money.

Mr. Rockefeller would entrust this taxing power to localities for support of schools. It is estimated that it would supply $70 million in New York State, and it would carry with it other attendant benefits: By relieving the political pressure for much greater State aid, it would serve to avert that greater centralization of taxation and power in State capitals that is similar to what President Eisenhower would like to avoid as to Washington in its relations with the States; it would avoid new, locally imposed nuisance taxes that might prove damaging if enacted; it would strengthen the principle of local governmental responsibility, bringing the raising of money and the spending of it into closer proximity.

Resolutions by Propeller Club of the United States in Support of American Merchant Marine and Allied Industries

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Monday, January 25, 1960

Mr. MAGNUSON. Mr. President, at it recent annual convention, its 33d, the Propeller Club of the United States adopted a number of resolutions supporting the American merchant marine and its allied industries.

These resolutions merit the consideration of the Congress and the attention of all the people of our country. I ask unanimous consent that certain of the resolutions which I believe to be of particular importance be printed in the Appendix of the RECORD.

There being no objection, the resolutions were ordered to be printed in the RECORD, as follows:

RESOLUTIONS ADOPTED BY THE 33D ANNUAL CONVENTION OF THE PROPELLER CLUB OF THE UNITED STATES AND THE AMERICAN MERCHANT MARINE CONFERENCE, DETROIT, MICH., OCTOBER 14, 15, 16, 1959

MERCHANT MARINE ACT

The Propeller Club of the United States reaffirms its belief in the basic principles of the Merchant Marine Act, 1936, as amended, and urges that the necessary funds be appropriated to carry out its purposes, particularly—

1. The orderly replacement of such vessels as are needed to serve commerce or the national defense.

2. The further upgrading of the efficiency of merchant ships, including further exploration of nuclear energy for merchant ships.

3. The payment of operating-differential subsidies to those lines serving essential trade routes.

4. The construction subsidy provided by law should achieve parity by covering the entire excess cost of construction of vessels in American shipyards over the fair and reasonable estimate of cost as determined by the Federal Maritime Board of a vessel of comparable capacity and utility constructed in a foreign shipyard.

STRENGTHENING OF PARITY PRINCIPLE IN MERCHANT MARINE ACT

The present statutory limitation of 50 percent of foreign construction costs should be adjusted in the Merchant Marine Act, 1936, to conform with current cost differentials.

CARGO PREFERENCE

The Propeller Club of the United States should take all reasonable steps to support efforts of American-flag operators toward

more equitable and effective implementation of cargo preference statutes.

NAVY WORK IN PRIVATE SHIPYARDS

The Propeller Club of the United States urges Congress to enact legislation to require that 75 percent of the funds for conversion, alteration, and repair of naval vessels be expended in private shipyards, and to require reports of compliance directly to appropriate congressional committees.

VESSEL REPLACEMENT PROGRAM

The Propeller Club of the United States recommends that the Federal Maritime budget for the fiscal year 1961 to be presented to the Congress in January 1960, includes, as a minimum, funds for 30 replacement cargo ships, 2 large passenger liners (1 for the United States Lines and 1 for American President Lines, which have been already authorized by Congress) and 1 nuclear-powered experimental tanker, as a means of stimulating the replacement program now far behind schedule and also to correct deficiencies in our present merchant marine so that it may eventually constitute a mobilization potential adequate to meet initial wartime needs.

PRESERVATION OF DOMESTIC COMMERCE FOR U.S. VESSELS

The Propeller Club of the United States opposes any further breaching of the historic and universally accepted policy of preserving domestic commerce for vessels built in the United States, documented under the laws of the United States and owned by citizens of the United States and reaffirms the policy so firmly established by the Merchant Marine Act of 1920, the purpose of which was to assure an American merchant marine adequate to take care of our domestic commerce.

TAX DEFERRED DEPOSITS

The Propeller Club of the United States urges the Congress to amend the Merchant Marine Act, 1936, as amended, to permit unsubsidized steamship operators and inland waterways operators in the domestic and foreign trade to make tax-deferred deposits of earnings in a construction reserve fund for vessel replacement.

DISCRIMINATION AGAINST AMERICAN VESSELS

The Propeller Club of the United States supports efforts by the Maritime Administration and the Department of State to remove discrimination against American vessels in foreign countries.

The Propeller Club of the United States urges the Congress to repeal the so-called section 22 rate authority, which has resulted in transportation media handling Government cargoes at rates resulting in loss or not providing full compensation.

COMPETITIVE RATE PRACTICES

The Propeller Club of the United States opposes any further legislative erosion in regard to unfair competitive rate practices of other modes of transportation. We also urge the Interstate Commerce Commission to rigidly apply the spirit of the 1958 Transportation Act in not permitting the quotation of rates by other land transportation media below compensatory levels, particularly when such rates threaten the continued operation of inland or ocean water carriers.

TRANSPORTATION POLICY AS REGARDS HAWAII AND ALASKA

Such control of transportation as is necessary between the continental United States and the new States of Hawaii and Alaska should remain under the jurisdiction of the Federal Martime Board and should not pass into the hands of other Government agencies less qualified to judge matters concerning ocean transportation.

STEAMSHIP CONFERENCE SYSTEM

The Propeller Club of the United States urges that all reasonable effort be made by all segments of the industry to increase public understanding of the absolute need of the steamship conference system as the best method of guaranteeing reliable and uninterrupted steamship service to the import-export trade of the United States, as well as in all world trade and providing service in which rates are at such levels as to encourage the movement of cargoes, and not susceptible to disruptive fluctuations, and it endorses and supports the dual rate system or any equivalent arrangement such as will reasonably guarantee patronage for conference line vessels.

VESSEL DOCUMENTATION

The Propeller Club of the United States acknowledges the seriousness of redtape in connection with navigation of vessels to and from their ports and recommends to the Customs, Public Health, Immigration, and other agencies—and urges upon these agencies—that immediate steps be taken, as necessary, to reduce duplication of information and unnecessary documents in connection with entering and clearing of vessels.

Through the medium of the International Maritime Consultative Organization, or other appropriate international shipping organizations, the U.S. Government should take positive steps toward seeking uniform vessel document requirements throughout the world.

NAVIGATION OF VESSELS ON THE GREAT LAKES

The Propeller Club of the United States urges upon Congress the passage of legislation which will require the navigation of all vessels in trade on U.S. waters of the Great Lakes to be in charge of personnel whose knowledge of applicable rules of the road, and whose familiarity with those waters have been adequately demonstrated to competent authority.

Horsesense

EXTENSION OF REMARKS

OF

HON. JAMES A. HALEY

OF FLORIDA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 25, 1960

Mr. HALEY. Mr. Speaker, under leave to extend my remarks, I wish to place in the CONGRESSIONAL RECORD an editorial column which appeared in the January 21, 1960, issue of the Lake Wales News, one of Florida's outstanding weekly newspapers. The writer of "Over in My Corner," Mr. O. A. Brice, is a man of sound thoughts who commands the respect of all who know him. The subject of this article is very pertinent to the problems we face here today. I agree with Mr. Brice's philosophy and I hope my colleagues will give their attention to his statements. As Mr. Brice has said we should "dig deep for all the horsesense we possess and then apply it effectively and decisively" to the problems which face us.

The article follows:

[From the Lake Wales News, Jan. 21, 1960]

OVER IN MY CORNER

(By O. A. Brice)

I once knew an old veterinarian whose specialty was doctoring horses. He possessed a pretty clean philosophy of life and regardless of what subject might be under discussion as the crowd gathered around the big-bellied stove in the grocery store on winter evenings, his conclusions somehow were generally accepted pretty much as plain old horsesense.

He used to declare, when pressed into the corner on some argument, that most of the problems of the world could be solved if people would only apply a liberal amount of horsesense toward reaching the right conclusion.

I have seen him when disappointment and hard luck stepped in his path and there seemed to be little chance for him to avoid the blockage. It was then he displayed his best brand of horsesense and he usually hurdled over the obstruction in a fashion which caused his friends to label him as "just pure lucky."

As I grow older, this pioneer horse doctor's reasoning seems to ring even more true. In the complex problems most of us face at times and in the disappointments of our busy lives—in fact in our everyday living, I come to the conclusion that he really had something in his simple, honest way of reasoning and in the tolerant, unselfish manner in which he met the issues.

This oldtimer literally loved the critters to whom he administered and their traits were so familiar to him that in almost every instance he could find someway to apply their sense.

One time in a community campaign when the proposed project was about to be lost, the chairman of the meeting called upon the old horse doctor for a speech. He had heard a lot of kicking and complaining during the course of the discussion and when he arose his friends wondered how he could apply his philosophy to that particular occasion.

But he gave his speech in just a few words which after all were just plain horsesense and the campaign proved a success. Here were his remarks which I have always remembered: "A horse can't pull while kicking, this fact I merely mention. And he can't kick while pulling, which is my chief contention. Let's imitate the good old horse and lead a life that's fitting—just pull an honest load and then there'll be no time for kicking."

There have been too many times in recent years when the average person permitted the other fellow to do his thinking and his voting. If community jobs needed working it was assumed the other fellow would do them.

If an election of importance was in the offing, a lot of us have neglected to even qualify so our ballot would be counted. Old plain old horsesense should cause us to remember that about all it has taken to be seated in some important political office was the ability to talk, a box from which to address the voters and the political trading which usually takes place here and there in campaigns.

The men and women who made the final selection too often have failed to analyze the promises made by the high-sounding candidate and the hero of the hour went into office wearing tinsel which caused the voters to believe him as the glamour individual of the age. They refused to use their horsesense, much to their regret at a later date.

I am wondering if it isn't about time that more people stopped chasing those dollars in the rainbow and give more thought and concern as to the freedom America is losing and the signs which gradually point to another world conflagration.

Even the horsesense of my old veterinary friend made him understand that he couldn't spend more than he made without bankruptcy. His horsesense could never agree to any program which would grow hogs, wheat, cotton or potatoes and then destroy them while thousands in the world go hungry.

Yet through our failure to use horsesense we permit politicians who subscribe to such programs to perpetuate themselves in office term after term and then come back asking for more.

The year 1960, in a world beset by problems which sometimes seem unsurmountable, seems to me to be an excellent period of

civilization to dig deep for the horsesense we possess and then apply it effectively and decisively.

Federal Registration of Certain Voters—Civil Rights Views of Father Hesburgh, of Notre Dame

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, January 25, 1960

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very informative statement made at Portland, Oreg., by the Reverend T. M. Hesburgh, president of Notre Dame University, with respect to Federal registration of voters in areas where the States have refused to people their inalienable American right to vote. Father Hesburgh is an outstanding member of the Civil Rights Commission, and thus entirely familiar with the situation which he discusses. The article describing Father Hesburgh's views appeared in the Oregonian-Journal of January 18, 1960, and I believe it should be included in the Appendix of the RECORD for the information of the Members of the Senate and House.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NOTRE DAME CHIEF SEES FEDERAL REGISTRATION

Fourteen recommendations dealing with Federal registration of voters in areas where the States refuse such registration have been prepared and submitted by the Civil Rights Commission, the Reverend Theodore M. Hesburgh, president of Notre Dame University, said Sunday.

At a press conference preceding a testimonial dinner Sunday at the University of Portland, the Catholic educator expressed views on a number of points with which he comes in constant contact through positions he holds in adidtion to the presidency of Notre Dame.

Father Hesburgh is a member of the Civil Rights Commission and the National Science Board through appointment by President Eisenhower. He is also the permanent Vatican City representative to the International Atomic Energy Agency.

RESPONSIBILITY, TOO

Speaking as a member of the Civil Rights Commission, he said it is the consensus of Southern editors that the South cannot claim State rights control without also assuming States right responsibilities. "Unless the States assume responsibility for honest registration of voters they will have to expect some Federal intervention," he declared.

Among the recommendations for Federal voter registration is one which would empower the President to give authority to local Federal officers to register voters. Even though this would result in a storm of protest, it would serve the purpose of giving the voting franchise to large numbers of Negroes who are not now allowed to vote in some Southern States.

WOULD SOLVE SELVES

The questions of equal opportunity in housing, employment, voting, and education would solve themselves, Father Hesburgh said, if people were given equal opportunity according to their ability. We will have true equality of opportunity once people are given a chance to develop to the limit of their individual ability.

"It is unfair to say you have to qualify before you can get equal opportunity and then withhold the opportunity to qualify," he stated.

Father Hesburgh refused to speculate on the nature of the "fantastic" new weapon of which Nikita Khrushchev boasted last week. All nations have fantastic weapons of some sort, he said. These may be nerve gases, nuclear devices or other things.

QUESTION UN-AMERICAN

In response to a question, Father Hesburgh said he considered it "un-American" to raise the question of religion in relationship to a political candidate. He said he did not think Catholics as a whole would automatically support a Roman Catholic candidate purely on the basis of religion. He expressed confidence that voters of his faith would weigh the merits of opposing candidates on other than religious grounds.

When questioned about the population explosion, Father Hesburgh said he thought overpopulation was purely relative in terms of the amount of food a country could produce. "You could argue that this country was overpopulated by the American Indians before the coming of the white man because the Indians were glutted one day and starved shortly after."

CITIES JAPANESE

He said the Japanese have given up the idea of birth control by the use of contraceptives because it simply did not work out. They now are depending upon legalized abortion of control their population growth.

In speaking of his assignment on the International Atomic Energy Agency, he said 75 nations, including the Russians, are cooperating in the peaceful uses of atomic energy. New vistas have been opened up to man through atomic energy and new uses are being explored.

Miss Kaye Johnson, a Leader

EXTENSION OF REMARKS
OF
HON. JAMES W. TRIMBLE
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. TRIMBLE. Mr. Speaker, while at home during the congressional recess, like the rest of my colleagues I visited with the people of my district. It was a pleasure as always. I was present at many meetings. One of the most pleasant of all was my opportunity to be a guest at the 4–H Club achievement banquet for Washington County at Fayetteville, Ark., where the outstanding members of the Washington County 4–H Clubs were honored. Many young people were there, as well as many adults. I was inspired at the meeting by the maturity of these young people and their grasp of the challenges which are ahead for them and for us.

The president of the organization in Washington County is Miss Kaye Johnson of Route 1, Lincoln, Ark. She was the master of ceremonies at the meeting, and she did a wonderful job. She is modest, intelligent, and a Christian leader. It was my great honor to sit by her at the banquet table. A lovely young person of the type which helped make America great and will keep it great.

I asked her what 4–H had meant to her. Here is her answer. I am proud and happy to let you, my colleagues, know what she says. My heartiest good wishes to her and her loved ones, and to all her leaders and coworkers in the 4–H Club work.

WHAT 4–H HAS MEANT TO ME

Four-H has various meanings to different boys and girls, but to me it means, a way of life. A way in which we learn to do things and the learning made fun.

Since a little girl, I have been taught that a girl should know how to cook, sew, run a home, manage a budget, can the winter food supply as well as to know something about farming or business. In 4–H work we learn to do these things on a competitive basis such as dress reviews where we model our clothing, and the county and State fairs where we enter sewing and canning for judging. Winning a ribbon or prize is a big thing in the life of a 4–H'er and makes the learning of necessary things interesting and fun instead of everyday drudgery. Keeping records on all of my 83 4–H projects has made accounting and budgeting seem easy.

Being a 4–H member has also helped me to overcome a very real shortcoming, that of being shy and timid around strangers. When I first became a 4–H member, even making a motion in our club was a major undertaking; then my first demonstration was a horror to me. But, surprisingly to me, I made it, and learned I could talk and people would listen. From that beginning I have been so fortunate in holding various offices in my local club, our county and now our State. Now talking to any group is a pleasant and stimulating experience to me instead of a nightmare. I feel this one thing will make a very real contribution to my future, and this ability I owe directly to my 4–H work.

Meeting boys and girls, adult leaders, and extension workers at our State and National 4–H Congress has given me a much broader outlook in general. It is broadening to exchange ideas with others from other parts of the country, and to learn how they feel and do things. Also, in this vein, I have been fortunate in meeting boys and girls from other countries; 4–H is a worldwide group, you know. This past summer we were a very luck family to be chosen to have as our guest, and "Hey" (Internation Farm Youth Exchange) student. She was a lovely girl from Finland. This was a real experience. Learning to understand her ways and exchanging ideas with her, learning how they cook, keep house, and do so many things in another country. All this makes the world seem much smaller, and through this experience I shall always have a warm feeling for Finland.

While we win ribbons, prizes, and trips for our best work in 4–H projects, those are not the main objectives; a young 4–H'er soon learns to be as good a loser as a winner. By doing a good job on a project I feel I have won a prize every time, whether I actually receive something tangible or not because I have learned to do something new, and to do my best with whatever the task may be. Our motto is "To Make the Best Better." This teaches one to always strive to do just a little bit better each year, and with each project one undertakes. One big thing I have learned from my 8 years in 4–H work is that you only get out of a thing what you put into it. To sum it all up, to me 4–H means the best of everything; the best way of life a young boy or girl may have.

The Steel Strike and Vice President Nixon

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Monday, January 25, 1960

Mr. HARTKE. Mr. President, this morning's Washington Post and Times Herald had some comments on the recent steel strike. In an editorial entitled "Mr. NIXON and Steel" the newspaper questioned Mr. NIXON, saying that he raised the bogey of governmental wage fixing and price fixing if events had run their course."

I agree wholeheartedly with the editorial's comments that Congress would have worked out or effected a solution which would not have necessarily imposed either governmental price fixing or wage fixing.

I fear, Mr. President, that the Vice President's comments on wage fixing and price fixing are the words of a politician. I feel that the political implications should be toned down. Let us not forget that Mr. NIXON apparently did absolutely nothing to avoid the strike and that nothing occurred in the settlement that could not have been done before the strike began.

Mr. President, I ask unanimous consent to have the complete text of the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

MR. NIXON ON STEEL

Vice President NIXON's defense of the steel settlement that he and Secretary Mitchell helped to bring about lost some of its punch when he raised the bogey of governmental wage fixing and price fixing if events had run their course. Nearly everyone is glad that Congress does not need to wrestle with the issue of an unsettled steel strike in this election year. In that sense the settlement brought a general feeling of relief. It does not follow, however, that if Congress had been compelled to act it would necessarily have slipped into the quagmire of governmental price fixing and wage fixing. Rather, we surmise, Congress would have worked out or imposed a compromise similar to that now in effect.

In the light of other recent labor-management contracts and the record of negotiations in the steel industry since the war, the Nixon-Mitchell settlement was certainly not extreme. What is most deplorable is the fact that the Government and the industry had to resort to this kind of semiofficial maneuvering as the only alternative to a longer period of chaos. Also deplorable is the fact that the settlement effected is now being drawn into politics. Of course, that is inevitable so long as a candidate for office finds it necessary to step into situations of this sort, which brings us back to the great desirability of effective and well established govermental machinery for handling such problems.

Mr. NIXON gives assurance that he will continue studying the problem with the object of suggesting legislation to protect the public interest without impairing the "basic strength of our private-enterprise economy." It would be useful to have all the presidential aspirants expound their views on this issue. Reconciliation of the right to strike in basic industries with the public interest will be a major issue before the next Congress and it calls for a maximum of careful deliberation.

Welcome Test

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I include the following editorial entitled "Welcome Test," which appeared in the Rockford (Ill.) Morning Star of January 22, 1960:

WELCOME TEST

The Murray-Metcalf Federal school-subsidy bill, which has won the solid support of the National Education Association, the Americans for Democratic Action, and practically all of the free-spending Democrats in both Houses of Congress, is apparently to become a referendum issue with the American people.

It may carry another name, but in substance it will be Murray-Metcalf.

Present Democratic congressional plan is to push through the Murray-Metcalf bill, which would pour out billions of dollars in direct aid both for school construction and administrative subsidy to the States, and deposit it on President Eisenhower's desk for almost certain veto.

Then, the Democrats would go before the people next fall and term the Republican Party antieducation, stingy to the children, the party of illiteracy. The Democratic Party would be presented as the stalwart bulwark of public education. The public would then decide the road to take; and the educationists, the ADA, and the Democratic spenders apparently have no doubt as to what the verdict would be.

Previously, Democratic Congressmen have taken the view that half a loaf is better than none. Try for a school-subsidy bill which might stand a chance of signature, and, failing that, would stand a chance of rallying enough votes to override a veto. In this presidential year, however, it is deemed better strategy to try to hang an albatross around the Republican Party's neck. If Murray-Metcalf should be passed and vetoed, the Republican Party would have to carry the onus of being against the opening of Federal sluice gates for public school subsidy.

The Murray-Metcalf bill is so extreme, however, paving the way for federalization of the school system; that Republicans should welcome standing against it, in Congress and before the public. It would be up to the voters to declare in their choice for President and Congressmen whether they wanted the schools run from Washington or kept as a community responsibility and challenge.

And a referendum on this issue is overdue. We have seen, over a number of years, the Federal-subsidy forces making beachheads on the public schools for the eventual mass invasion. Does the public want its schools run from Washington, or does it prefer to have a hand in running them in its own communities? A great many voters would welcome a chance to affirm that they are tired of the nibbling away of American education by Federal educationism.

Federal Aid to Education

EXTENSION OF REMARKS
OF
HON. JOHN STENNIS
OF MISSISSIPPI
IN THE SENATE OF THE UNITED STATES
Monday, January 25, 1960

Mr. STENNIS. Mr. President, in the Washington Post and Times-Herald of January 25, there appeared a fine editorial regarding Federal aid to education. I commend it to my colleagues, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FOUNTAIN OF YOUTH

The Senate's Democrats, in caucus assembled on Wednesday, are reported to have expressed strong sentiment for a broad Federal aid to education bill—including aid for teacher salaries, college classrooms, and school construction. "There is nothing more vital to America and nothing more important," Majority Leader LYNDON JOHNSON told reporters, "than passage of education legislation." If the Democrats really believe this—and there is good reason for them to believe it since it happens to be incontrovertibly true—they ought to act on it. They could devote themselves to no more useful—and no more politically profitable—issue in this presidential election year.

The public schools of this Nation suffer today from a shortage of 132,400 classrooms. The number of pupils enrolled in excess of normal classroom capacity rose from 1,850,000 in the fall of 1958 to 1,883,000 this fall. These figures are taken from a statement by Arthur S. Flemming, Secretary of Health, Education, and Welfare in a Republican administration. "We have made very little progress over the years," Mr. Flemming said, "in dealing with the huge backlog of need for classrooms which developed during the war years, when school construction was virtually at a standstill." A press release issued simultaneously by the Commissioner of Education, also a Republican, says that "State departments of education reported in the survey that 98,800 full-time teachers have not met full certification standards for teaching. This total is an increase of 5,900, or 6.3 percent, over that of last year."

But it is now perfectly apparent that the Republican administration which recognizes and presents this problem is not going to do anything to solve it. The President's school aid proposal is so meager, so niggardly, so inadequate as to amount to no more than an empty, mocking gesture in the school crisis. "The administration has been up and down the hill on this issue," Senator HUBERT H. HUMPHREY told newsmen, "but never in the schoolhouse. This is the time to put them on the line." He is abundantly right. Perhaps, as Senator FULBRIGHT predicted, the President would veto any real school bill passed by Congress. The Democrats could choose no firmer, more advantageous ground on which to take their stand.

For all Americans are touched by the public schools. All Americans can see their decay. All Americans can understand that the schools are the essential source of the Nation's security and strength—that the quality of the schools today will determine the quality of scientific and industrial and political performance in the United States a decade hence. All Americans know that from the earliest days of this Republic the public schools have been its fountain of youth. And they will not choose to let that fountain run dry.

Ukraine Independence

SPEECH
OF
HON. AIME J. FORAND
OF RHODE ISLAND
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. FORAND. Mr. Speaker, on January 22 millions of Ukrainians, both here and abroad, observed the 42d anniversary of the Ukrainian National Republic, a nation which was established in the latter days of World War I. This status was short lived; only a few short years later they were absorbed by the Communist rulers of the Soviet Union.

There is a Soviet fiction that the Ukraine today is a free Republic, with all the attributes of sovereignty including a diplomatic service, and that she remains in the Soviet system as a matter of choice and free will. This is utterly false. More than 40 million people in the Ukraine share the common desire of the captive and satellite peoples of Eastern Europe for freedom and self-determination.

The history of the Ukrainian people, as we know, reflects the centuries-long struggle of man to attain individual freedom. Three hundred years ago, the Ukraine was an independent state, rich in its culture and thriving in its commerce. Today, despite its enslavement, it is the second largest of the Soviet Republics and the richest in agriculture. Through the intervening years, the Ukrainian people have become familiar with the workings of Russian tyranny and oppression, under which they have suffered greatly.

For 300 years the Ukraine has been submerged in the Russian continent. Only once in the course of three centuries has it had the opportunity to attain the goal as a free republic. That was on January 22, 42 years ago, the day on which the Ukrainian Republic came into existence. That memorable and historic day has become a landmark in modern Ukrainian history, and remains as the brightest spot in the struggle of its people for their national independence and freedom. Since then January 22 has been celebrated annually as a national holiday.

Today, I sincerely hope that the remarks uttered on the floor will be of some small comfort to those millions of captive Europeans. I have faith that the Ukraine, and, indeed, all of the captive nations of Europe and Asia, will once again be free. If history has proved anything, it is that no despot, however cruel, can extinguish the yearning for liberty that dwells in the hearts of men.

This yearning for freedom must be kept alive in our hearts as well as theirs. We can never forget that the infringement of personal liberty in any part of this world constitutes a threat to freedom everywhere. On this day, when we reverently celebrate with Ukrainians the 42d anniversary of the founding of the last Republic, we should reconsecrate ourselves to the spirit to which that Republic—and our own—was born.

How Hawaii Met the Test

EXTENSION OF REMARKS
OF
HON. OREN E. LONG
OF HAWAII
IN THE SENATE OF THE UNITED STATES
Monday, January 25, 1960

Mr. LONG of Hawaii. Mr. President, Mr. Lorrin P. Thurston, publisher of the Honolulu Advertiser, has given one of the most stirring accounts of how Hawaiian youth met the supreme test of loyalty to their country during World War II and the Korean war. Mr. Thurston's remarks were made in a memorial address which he delivered at the statehood celebration at the Pacific National Memorial Cemetery on November 26, 1959. Mr. Thurston is a fourth generation resident of Hawaii, descended from Asa Thurston, who came to the islands in 1820 as a missionary. Mr. Thurston's father was the late Lorrin A. Thurston, distinguished statesman in the governments of the Hawaiian monarchy, the republic, and the U.S. territory.

In order to bring Mr. Thurston's inspiring remarks to the attention of the Members of the Senate, I ask unanimous consent that his speech be printed in the Appendix of the RECORD.

Without objection, the address was ordered printed as follows:

MEMORIAL ADDRESS, STATEHOOD CELEBRATION, PACIFIC NATIONAL MEMORIAL CEMETERY, PUNCHBOWL, NOVEMBER 26, 1959, BY LORRIN P. THURSTON, CHAIRMAN, HAWAII STATEHOOD COMMISSION

Fellow Americans, as part of the official observance of the granting of statehood to Hawaii, we stand here, first-class Americans all—with every privilege and every responsibility that status implies.

This solemn ceremony is held under the auspices of the 442d and the 100th Infantry veterans. As last chairman of the Hawaii Statehood Commission and as one closer than most to the problems involved in the attainment of Statehood, I know of the unique and fundamental contribution made to this cause by our gallant soldiers.

We are assembled here today in respect and in reverence, in devotion, and in humility, surrounded, as we are, by touching evidence of man's valor and of his unyielding resistance to tyranny.

The heroes who sleep here in this hallowed ground, under an eternal canopy of blue sky, and white cloud, are the comrades of all the courageous Americans who gave their lives, that their loved ones might continue to breathe the air of freedom.

As we gather here, in the middle of the Pacific, in this resting place of brave men cut down by fate in tender years, one can almost hear the muffled drumbeat and the distant bugle call of 184 glorious years of American history. It is a long and proud parade in which our beloved youths here still march in memory—Concord, Lexington, Bunker Hill, Yorktown, Vicksburg, Gettysburg, the Marne, Chateau Thierry, Casablanca, Anzio, the Bulge, The Coral Sea, Midway, Tarawa, Iwo, the Pusan Perimeter, Heartbreak Ridge.

The roll is much, much longer, and the scars are still fresh in the hearts and minds of those who sorrow.

It is a sorrow softened by love and compassion and rightful pride—for here is symbolized the spirit of freemen, who made the ultimate sacrifice, to which the thousands of graves in this sacred place are quiet testimony.

Here, before many of the parents whose honored sons rest all about us.

Here, before hundreds of their comrades in arms and service.

Here, before the representatives of the Government of the United States of America.

Here, before the eyes of all the world, let me say it plainly and simply—without the proof of devotion and loyalty so amply present in this national cemetery, so graphically written into history, we in Hawaii would not be a State today.

No protestations of good will or loyalty would have been enough to remove the doubts of the American public or of their elected representatives in Congress, as to our fitness for full citizenship. These doubts were erased in the finality of blood, on the battlegrounds of the world.

Hawaii's soldiers proved the contention of President Roosevelt, that Americanism is a matter of mind and heart; Americanism is not and never was a matter of race and ancestry.

Shortly after the outbreak of World War II, the 100th Infantry Battalion of the U.S. Army was formed from Hawaii's Americans of Japanese ancestry.

This handful of heroes, after participating in the fierce battles around Cassino and the bloody crossing of the Rapido and Volturno Rivers during the intense fighting in Italy, emerged from the war a few years later as the most decorated unit of its size in American military history.

You may recall that it was in January of 1943 that the War Department ended restrictions on Hawaii AJA's joining the Army, and volunteers were called to form an all-Nisei combat team. Response was instantaneous and overwhelming.

During a month's call, 10,000 volunteered. That was an amazing 40 percent of the total eligible population. Of the 10,000—finally 2,600 were chosen—although the original quota was only 1,500.

These 2,600—together with 1,000 mainland AJA's—formed the 442d Regimental Combat Team, which joined with the 100th Battalion to help write into the annals of American military history one of its greatest records of heroism.

I am intensely proud of the fact that I was one of those whose confidence and faith in these men, as good Americans, perhaps contributed in some small way to their being given the chance to prove to Hawaii, to America—to the world—what good and loyal Americans they were.

These 3,600 men earned 10 unit awards, including 7 Presidential unit citations.

They received 5,000—yes, 5,000—individual awards including: 3,600 Purple Heart Medals with 500 Oakleaf Clusters, 810 Bronze Star Medals with 38 clusters, 15 Soldier's Medals, 17 Legion of Merit Awards, 342 Silver Star Medals with 12 clusters, 1 Distinguished Service Medal, 47 Distinguished Service Crosses, and 1 Congressional Medal of Honor.

Small wonder, then, that this record of Hawaii's fighting men in World War II prompted a Senate Interior and Internal Affairs Committee to report in 1951:

"It is submitted that, if the ultimate test of loyalty and patriotism is the willingness to fight and die for one's country, then Hawaii has nobly met this test."

After World War II, opponents of statehood, balked by a World War II record of overwhelming patriotism in their attempts to discredit the loyalties of Hawaii's non-Caucasian Americans, turned to another avenue. They warned that the Territory must not be granted statehood because of "successful Communist penetration and control of the Hawaiian Islands."

Again it was on the battlefield that Hawaii's sons disproved aspersions on their patriotism.

On January 27, 1954, the late Senator Hugh Butler submitted a report on communism in Hawaii after an on-the-spot investigation, in his capacity as chairman of the Senate Committee on Interior and Insular Affairs.

In it he said:

"In attempting to assess the extent of remaining Communist influence in the Territory, it is desirable to get away from conflicting assertions by proponents and opponents, and to find, if possible, some objective test of the extent to which communism controls the minds and loyalties of a significant proportion of the residents of Hawaii.

"Fortunately for our study of the question, such an objective test is available. I refer to the existence of the armed conflict in Korea against the military forces of communism and the call which has been made upon the men of Hawaii to do their part in holding the line against Communist aggression.

"If there is such a thing as a supreme test of loyalty to an ideal, then a willingness to serve in battle in support of that ideal is entitled to such a description."

Yes, the supreme test of loyalty to their country was passed again by the youth of Hawaii.

Not one case of cowardice by a Hawaii soldier in the face of the Communist enemy was recorded in Korea.

Not one case of successful Red brainwashing of any Hawaii soldier was recorded.

Not one case of a Hawaii soldier's desertion to the enemy was recorded.

There were 426 Hawaii boys killed in Korean action, a death toll 4½ times the killed-in-action average for the rest of the United States. There were 1,352 total battle casualties from Hawaii, a rate three times as great as the casualty rate per capita for the rest of the Nation.

No less a soldier than Gen. Douglas MacArthur was prompted by events to say—and I quote his official statement which he made to Governor Quinn and to me in New York:

"Hawaii should become our 50th State. No sophistry of political manipulation should delay the conferring of full status of citizenship on this loyal and devoted community. That a Nation such as ours, founded on the concepts of liberty and freedom, should further hesitate on such a basic question of right and justice, is not understandable."

To the parents of the youths who gave their all, to the parents of the men who came back alive, I say: "Honor indeed is yours." Your sons have earned for themselves, and for you, the grateful appreciation of every thinking citizen.

May you parents, who happily have your boys with you today, continue to give to them the devotion which will encourage them to take an ever greater part in the sound leadership and building of this—our new State.

May you back them in their efforts to make an ever-increasing contribution to the building of friendship and understanding of the "American way of life" among all the peoples who border the Pacific—and among the peoples of all the world.

We do not ask—we do not know—nor have we reason to want to know, what the political beliefs were of those who lie buried here.

May you help your boys who live, to learn that loyalty to America is greater indeed than party or political loyalty.

Here in Hawaii, we share a heritage—a heritage of racial good will, tolerance, and understanding. We share this, I believe, to a greater degree than is present in any other part of this world.

If we were destined by a Divine Power to be helpful in spreading this tolerance and understanding thoughout the world—and I think we were—may God help us to do our jobs well—help us to create by our everyday contacts and by our daily living, an example which will make for our children and their children for generations to come, a better Nation and an ever more tolerant one.

If the day ever comes when we of Hawaii and America must again stand, shoulder to shoulder, to fight to preserve our American way of life, I know our cause will be strengthened by the friendship and mutual respect we have—each for the other—as Americans.

May those who lie around us, or who lie in graves around the world—have just and increasing cause to say, if they were able: We did not die in vain.

All This Meat and No Potatoes

EXTENSION OF REMARKS
OF
HON. BASIL L. WHITENER
OF NORTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. WHITENER. Mr. Speaker, in the Friday, January 22, 1960 edition of the Shelby Daily Star, Shelby, N.C., there appeared an excellent editorial pointing up the inconsistency in the President's promise of a surplus in the Treasury for the next fiscal year and the fiscal experience we have had so far during his administration.

The editor of the Star is to be commended on his very fine analysis of this situation, and I request unanimous consent that his editorial be printed in the Appendix of the RECORD.

ALL THIS MEAT AND NO POTATOES

The proposed Federal budget is so mammoth that to contemplate such a document in a single editorial would be difficult. We are puzzled, however, about one angle.

If a surplus of over $4 billion is anticipated, why is it necessary to call for an increased gasoline tax and an increase in the postal rates?

This almost seems to us sort of like a man borrowing money from a bank to place in a savings and loan institution. He pays 6 percent interest on the loan to get 4 percent on his savings, and that's a losing proposition.

Now, we believe the postal rate increase suggestion has about as much chance of getting through Congress as a snowball in Hades.

The gasoline tax boost may get a more favorable reaction because it's more of the hidden nature than the postal tax. We'd feel the latter every time we licked a stamp.

Our major concern, though, is a seeming urgency on the part of the Republican administration to produce at least an anticipated surplus on paper. It would seem the interest here is more in political effectiveness than in efficient fiscal planning.

In reviewing President Eisenhower's askings, we can't help but remember his 1952 campaign promises that called for lower taxes and lower budgets.

Since that time, in spite of the fact that we've had 8 years of peace, we've had progressively higher taxes, progressively higher budgets, and, likewise, a higher national debt.

Instead of producing on his promises of lower taxes and decreased governmental costs, the President is going to go out of office with the record of collecting more taxes and spending more money than any 8-year peacetime President in the history of the Nation.

During the 8 years of the Republican administration, we have seen government become bigger than ever and the costs of government grow in the same way.

Now the same administration seems to be grooming its party's candidate for a promise of a reduced national debt with this year's surplus, and reduced taxes next year.

We can't swallow either proposition.

Outbreaks of Anti-Semitic Activity

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Monday, January 25, 1960

Mr. WILLIAMS of New Jersey. Mr. President, many voices have been raised to decry the recent outbreaks of anti-semitic activity and communities have moved swiftly to stop them. The journey of Dr. Joachim Prinz of Temple B'nai Abraham in Newark to preach in the synagogue in Cologne destroyed by Hitler is a moving reminder of past events which were uncontrolled.

Mr. President, I ask unanimous consent that this editorial from the Newark Sunday News, which gives needed perspective to the situation today, be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

RELIGIOUS HATRED

Dr. Joachim Prinz, rabbi of Temple B'nai Abraham, is going to West Germany to preach in the Cologne Synagogue Friday night. His appearance and sermon will symbolize the abhorrence of all right-thinking men for religious hatred because it was the desecration of this synagogue on Christmas eve that touched off antisemitic incidents around the world.

Dr. Prinz was spiritual leader of Berlin's Jewish community before he was expelled by Hitler. It was this bitter experience of nazism that impelled him to say of the recent outbreaks: "Whether the work of crackpots or international conspirators, it apparently takes but little to bring the violent instincts of some antisemites to the surface."

West Germany, too, has shown concern. Cheers from the Bundestag greeted the admission of Vice President Carlo Schmid that the disgrace of antisemitic vandalism cannot be lessened by its occurrence elsewhere. "Here, under the swastika, 6 million Jews have been murdered," he reminded the Bonn parliament.

Herr Schmid concluded that "certain areas of filth must remain" and until they are cleansed "our nation never will be sound." This task of eradication is not, however, West Germany's alone. A report by the American Jewish Congress to the United Nations shows that of the 163 antisemitic incidents from Christmas to mid-January, 63 took place in the United States. West Germany was second with 24, but also sharing the taint were Great Britain with 16, Austria 12 and France 10.

It is disheartening, some 20 years after the Hitler horror, to find nazism, under whatever guise, on the loose again.

Cranberry Echo

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. DELANEY. Mr. Speaker, Thanksgiving is long past, and with it, the cranberry storm. But the storm's reverberations continue, and, indeed, are growing in volume.

Secretary Flemmings' commendable action in invoking the cancer clause of the Food Additives Amendment of 1958 in the cranberry fracas, and later actions involving the use of the hormone, stilbestrol, have stirred up widespread opposition on the part of various industries and producer groups.

Some industries, through scientists who front for them, are trying to persuade the public that the cancer clause has no sound scientific basis.

The letter, written by Dr. David D. Rutstein, professor and head of the Department of Preventive Medicine, of Harvard University, appeared in the New York Times of November 18, 1959. This noted scientist fully supported Secretary Flemming, and the letter defends the cancer clause in language that any layman can understand. I comend it to the attention of my colleagues.

The letter follows:

CRANBERRY BAN APPROVED—BACKGROUND OF SECRETARY FLEMMING'S ACTION ON PRODUCT DISCUSSED

To the EDITOR OF THE NEW YORK TIMES:

Your editorial of November 14 "Cranberries and Mr. Flemming" prompts me to set out some of the biological facts and their relationship to the public health.

Through most of his history man has survived in his evolution by gradually adjusting to the unfavorable factors in his environment. Suddenly he was faced with a new problem. He learned to create new and useful chemical substances, some of which have deleterious effects on living things, including himself. He found, for example, that in his factories he had to protect himself against some of these new compounds or he might die as a result of contact with them.

In his wisdom man also sharpened up some of his new poisons so that they might actually destroy whole species of those germs, insects or weeds which might harm him or compete with him for the bounty of the earth. He learned how to do this without causing immediate harm to himself.

DELAYED DEVELOPMENT

Then man found to his dismay that some of these new substances might have subtle evil effects. Cells might be made to grow wild and destroy their host by a disease called cancer. This was difficult to anticipate or to detect. A harmful substance might not produce cancer for years or even decades after man had come in contact with it. For example, the radium dial painters in New Jersey during World War I developed cancer of the jaw many years later. From such experience man learned that if he had to get clear proof that a substance produced cancer in human beings it would be too late.

So man was forced to test the cancer-producing effect in animals. To this day no better method has been found for the testing of new compounds. Animal testing is difficult to do because a substance may cause cancer in one species and be harmless to another. But one fact is clear: a substance is more likely to produce cancer in man if in any dosage it produces cancer in test animals.

A further difficulty is introduced by the fact that large amounts of the cancer-producing substance, the carcinogen, may be needed to produce its evil in one animal and yet smaller amounts may produce the same effect in another species. Your editorial does not concern itself with the possibility that aminotriazole may be more harmful to man than to rats.

These facts were recognized in the recent amendments to the Food, Drug and Cosmetic Act. A substance producing cancer in animals was not permitted in any quantity in food sold for human consumption. More important, the public health was given priority over a possible commercial or industrial benefit. The burden of proof was wisely transferred from the Food and Drug Administration. The individual introducing the new substance had to show that it is not harmful to human beings.

IRRESPONSIBLE VIEWS

In this connection it is appalling to read the irresponsible statements of prominent politicians on the cranberry question. Blithely ignorant of the biological facts, they seek votes and curry favor by drinking cranberry juice in public in the spirit of juvenile bravado and adults delinquency. One may well wonder whether, in considering the questions of war and peace, they will not gloss over the facts of government and international relations in the same self-seeking way.

One may also be seriously concerned about the effect of the attacks on the Secretary and the behavior of prominent politicians on the future of the public health of the United States. When a similar situation arises in the future, will the Secretary or his successors be able to stand up forthrightly for the public interest? Or, will he, anticipating the adverse pressures, take the easy way out?

DAVID D. RUTSTEIN, M.D.,
Professor and Head, Department of Preventive Medicine, Harvard University.
BOSTON, *November 16, 1959.*

It's Another Game Khrushchev Is Playing

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, January 25, 1960

Mr. WILEY. Mr. President, today the East-West forces are at a relative standoff—although this may be only temporary.

However, the Communists have drawn tailormade battle plans for economically penetrating, subverting, and/or ideologically influencing nations all around the globe.

In the face of such tactics aimed at extending Communist influence and control, I believe the West must more clearly define its battle plans in the nonmilitary field.

The postwar U.S. mutual assistance program, for example, has been a unique effort in history by a nation to aid friendly people in attaining economic recovery and staving off aggression.

For the future, however, we must—if we are to be successful in competing in nonmilitary fields—more clearly define lines of strategy in combatting communism.

On a global basis, our allies—now moving ahead economically—can and should share proportionately in meeting the challenge.

Overall, however, the fact is, presently at least, that the major East-West contest is between the United States and Russia—major examples of free versus Communist systems.

The United States, I believe, should welcome a challenge in a field in which it excels—that of providing well for its people. As a nation, we have achieved the highest standard of living in the history of the world.

Realistically, however, we must recognize, too, that a propaganda war exists. Consequently, we must not fail to effectively tell our story to the world—if we are to expect our accomplishments to be recognized and emulated elsewhere in the world. There is, then, a dual challenge:

First. Adhering to—and as necessary stepping up—policies and programs that will assure U.S. superiority over the Communist system in the nonmilitary field—as well as maintain an adequate deterrent power militarily; and

Second. Effectively telling the U.S. story of freedom and progress to the world.

A clear definition of lines of strategy in the nonmilitary field, I believe, will help to accomplish that objective.

In the Washington Post and Times Herald of Sunday, January 24, a column entitled "It's Another Game Khrushchev Is Playing," by Roscoe Drummond, sheds light, I believe, on what are some of the real issues at stake in the competition between communism and capitalism.

Reflective of thoughtful analysis of the real points of contest between the East and West, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Jan. 24, 1960]

COMMUNISM VERSUS CAPITALISM—IT'S ANOTHER GAME KHRUSHCHEV IS PLAYING

(By Roscoe Drummond)

What is this contest between the Soviet Union and the United States we all talk about?

We know we are in it. We know it is deadly serious. But aren't we in the position of playing a form of basketball on a football field without knowing what makes a score? Nothing could be more confusing, particularly to those in the grandstand—the nations and peoples uncommitted and uncertain of their future—than not being able to see what the contest is about.

Premier Khrushchev says that the Soviet Union will shortly show that it can exceed the standard of living of the United States and that as the result other countries will come to choose socialism over capitalism as their way of life.

If that is the contest—and there will be many who see it that way—then the first thing to bear in mind is that Soviet communism is not socialism because it is dictatorship and that American capitalism is not

what millions of people, who have never been to the United States, think it is.

The tendency is to picture American capitalism in the image of the reformer's indictment of a century ago—the image of the masses of workers being ground down with long hours at low pay for the benefit of the few—instead of viewing American capitalism as it has actually evolved.

U.S. officials and others whose duty it is to expound the United States abroad have often striven for some new phrase to replace capitalism, since so many ideas non-Americans have about capitalism are outdated.

But what is more important than new terms is new insight into what life is really like under American capitalism and what our kind of economy, call it what you will, actually does for a whole people.

If Mr. Khrushchev wants the world to choose between communism and capitalism, here are some of the facts that show that the benefits of American capitalism are not for the few.

Real income per capita has increased by nearly 20 percent since 1946.

Housing has been increased by 15 million private nonfarm dwelling units since 1946; some 60 percent of all nonfarm dwelling units are owned by occupant families.

The number of bachelor's and first professional academic degrees conferred annually trebeled from 1956 to 1959.

In the past decade more than 83,000 doctorates have been conferred, compared with some 27,000 in the 1930's and about 31,000 in the 1940's.

About 58 million persons—87 percent of all those in paid employment—are now covered by the Federal Government's old age, survivors, and disability insurance system.

More than 19 million persons are covered by privately financed pension plans.

The Federal State unemployment compensation system, which provides a defense against loss of income in periods of economic adversity, now protects nearly 85 percent of all persons on nonfarm payrolls.

This is modern capitalism at work.

But should we accept Khrushchev's definition of the contest—that the world must choose between communism and capitalism?

Let's be clear that this is not what we are asking the uncommitted world to choose between. We are inviting people to compare two kinds of societies and choose whether they feel they must develop their resources under an economic and political dictatorship or can develop their resources in an environment of economic and political freedom.

We are not inviting the world to choose American capitalism, although we like it pretty well ourselves. We are inviting the world to choose liberty and to develop an economy as each wishes in an environment of liberty.

Employment at Record High as Steel Strike Is Settled

EXTENSION OF REMARKS

OF

HON. LEO E. ALLEN

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Monday, January 25, 1960

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I include the following article, entitled "Employment at Record High as Steel Strike Is Settled," which appeared in the Sterling (Ill.) Daily Gazette of January 15, 1960:

EMPLOYMENT AT RECORD HIGH AS STEEL STRIKE IS SETTLED

WASHINGTON.—Employment hit a record 65,699,000 for December as the Nation's economy rebounded from the steel strike.

Secretary of Labor James P. Mitchell said the December employment situation reflected a marked improvement from November with these results:

Employment: Up 59,000 to 65,699,000, a record for the month. This was the first December since World War II that showed no job downturn. Usually the December drop runs around 700,000.

Unemployment: Down 93,000 to 3,577,000. The seasonally adjusted ratio of idle workers to the total work force declined from 5.6 percent in November to 5.2 percent in December. Normally unemployment increases by about 100,000 in December.

A modest decline in the overall labor force accounted for a decline in unemployment greater than the increase in employment.

Seymour Wolfbein, Deputy Assistant Secretary of Labor, said the employment situation in December climbed back to its prestrike levels with indications the improvements will continue as workers laid off because of steel shortages are recalled to their jobs.

The strike ran 116 days until halted by court injunction in early November. The job recovery began rather slowly and mounted heavily in December.

By the time the Government took its job-sampling survey in mid-December some 150,000 autoworkers laid off because of steel shortages had been reemployed. Wolfbein said this has been continuing.

The factory workweek rose by more than half an hour in December to 40½ hours. This was about twice the normal seasonal rise for the month and reflected an effort to make up for production time lost during the steel stoppage. Overtime increased in December.

The average hourly earnings of factory workers rose by 3 cents in December to $2.26, a record. Average weekly earnings rose by $2.55 to $91.53, also a record. These increases reflected increased overtime and the return of higher paid steel and auto workers to their jobs.

Compared with a year ago, employment in December was up 1,726,000 and unemployment was down by 531,000.

There was the normal increase in temporary workers employed in pre-Christmas trade and in the postal service. The usual decline in construction and other outdoor work also was experienced.

Democratic Party Policy—Senator Gore's Goals

EXTENSION OF REMARKS

OF

HON. ALBERT GORE

OF TENNESSEE

IN THE SENATE OF THE UNITED STATES

Monday, January 25, 1960

Mr. GORE. Mr. President, I ask unanimous consent to have printed in the Appendix of the Record an article entitled "Demos Need Policy Unity," written by Milton Britten and published in the Knoxville (Tenn.) News Sentinel of January 21, 1960; also an editorial entitled "ALBERT in the Lion's Den," published in the Chattanooga (Tenn.) Times, of January 22, 1960, dealing with Democratic Party policy.

There being no objection, the article and editorial were ordered to be printed in the RECORD, as follows:

[From the Knoxville News Sentinel, Jan. 21, 1960]

DEMOS NEED POLICY UNITY

(By Milton Britton)

WASHINGTON.—Some basic questions about Senator ALBERT GORE's goals in his losing party policy battle with Senate Majority Leader LYNDON JOHNSON (Texas) are still kicking around, including:

1. Why does GORE want an expanded and elected Democratic policy committee to propose policies for action by the Democratic Senate caucus?

2. Why should these policies, if adopted by the caucus, serve as a yardstick for measuring party loyalty?

3. And just how loyal can a Senator be to his party within a legislative body and still do justice to his own convictions and the interests of his home folks?

COMMITTEES SET UP

Talks with GORE and a close review of the record of debate sketch out his picture:

The proposed Congressional Reorganization Act of 1946, which indirectly gave birth to Senate Democratic and Republican policy committees, spelled out both that members should be elected by all Senators of either party and the committees should have policy formulating functions.

This act was passed, but without the policy committee provision because the House didn't want it. The Senate did and shortly thereafter created majority and minority policy committees through an amendment to an appropriations bill.

The Republicans, led by the late Robert Taft, of Ohio, were then the majority party in Congress, but Democrat Harry Truman controlled the White House.

GAVE PARTY LEADER POWER

Under these conditions the Republicans chose to follow the recommendations of the original act—that is, elect their policy committeemen and give them policy formulating duties.

The Democrats wth their man in the White House felt less need of policy direction. They gave their party leader, then Alben Barkley of Kentucky, the power to appoint members.

But today the Democrats are in exactly the same position the Republicans were when they first organized their policy committee—that is, they control Congress but not the White House.

It's against this background that GORE launched his battle. All Democratic Senators should elect their policy committeemen, he said, because this "goes to the heart of democratic procedure within the Democratic Party."

Practical result today of having the majority leader appoint them has been to leave Tennessee and all other States east of the Mississippi River and north of Georgia with only one representative on the committee—93-year-old THEODORE FRANCIS GREEN, of Rhode Island, GORE says, adding:

"The committee should be enlarged so that all major sections of the country could have representation and, thus take into consideration the true national character and interest of our party."

Republican policy, he notes, is defined by White House pronouncements and by Republican policy arms in the Congress. But who establishes it for the Democrats? GORE argues:

"It cannot be formulated by the advisory committee to Democratic National Committee Chairman Paul Butler. It cannot be formulated by Butler himself, who hasn't been chosen by the ballots of the people.

"Here in the Congress, where the Democratic Party has a two-thirds majority of the House and Senate, chosen by the people, we have the most responsible spokesmen and officials of our party on the national level."

GORE says an expanded, representative policy committee should develop and submit with recommendations which the full Democratic caucus might accept or reject as the majority chose.

SAYS VISION IS BLURRED

As to why such policy decisions should be a yardstick of party loyalty, GORE says: "Without such policy, the vision of the Democratic Party is blurred.

"Unless there is some sense of party responsibility, the workings of the two-party system will break down in its end goal, which is to give the people a clear-cut choice. As it is, there's no position to which one can be either loyal or disloyal.

"I would not have our party 'weasel' one time after another in controversies with the White House until we stood for nothing except compromise."

So, must every Democratic Senator then adhere to party policy? "No," says GORE. "I would be the first to proclaim my independence and reserve the right to vote as I please. Let each member consider his own responsibility in voting. But let the rank and file of our party and the people of the country have a yardstick by which to measure any Senator's record in terms of his faithfulness to clearly defined policies of his party."

[From the Chattanooga Times, Jan. 22, 1960]

ALBERT IN THE LION'S DEN

Certainly newspapers go all out in favor of the men in public life submitting to interviews by the gentlemen of the press. But it must be admitted that it takes courage for them to appear on one of those television interviews. Not only do the gentlemen of the press composing the questioning panel light out after the man in public life like a pack of wolves in full howl, but the questions asked are pitfallish.

Senator ALBERT GORE gave a good account of himself on "Face the Nation" recently. Indeed, as the program ended he was saying that another Democrat named as a possible candidate for President would make an articulate spokesman for the Democratic Party, and the director of the program quickly said: "You are an articulate spokesman yourself." This kind word for a victim of a panel is almost unprecedented.

Asked if he wanted to be President, Senator GORE said he would like to be, as would millions of Americans, but that he was not a candidate, so one west Tennessee newspaper headlined the story with "GORE Is Willing To Make Race."

No endorsement or rejection of the political views expressed by Mr. GORE is involved in the statement that he handled himself well.

There were two points in his answers, however, which merit some comment. Asked if he will go along with Gov. Buford Ellington and other Tennessee leaders in backing Senator LYNDON JOHNSON for the Democratic nomination for President, he ducked the question, and he was wise to do so.

After all, how can Tennessee's favorite for President be named before the delegates to the convention from this State are chosen? Are the common people to have no voice in the selection? How can the Democrats consistently criticize the Vice President as being the "rigged" candidate of the Republican county chairmen and at the same time let the Democratic county chairmen determine the choice of any particular State? Something certainly can be said for presidential primaries.

On the point of Senator KENNEDY'S candidacy, Senator GORE might have been optimistic in saying that the young front-runner would not lose a single Southern State. The South ceased being dependably solid some time ago, and any candidate might lose a Southern State.

But Senator GORE was eternally right when he said: "In my view, no one should be given, no one should be denied, no one should seek or decline an office of public service because of religious, sectional, or racial prejudice. I do not think either has a place in the White House or, so far as I am concerned, in the ballot box."

On the whole, he made an unperturbed, amiable, and skillful appearance.

Swindles Practiced on Social Security Recipients

EXTENSION OF REMARKS
OF
HON. EDITH GREEN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mrs. GREEN of Oregon. Mr. Speaker, in the Washington Post Parade supplement for January 24, there appeared a fine article by Sidney Margolius, pointing up in detail some of the vicious swindles that are practiced on our senior citizens by individuals and organizations purporting to be Social Security officials, or claiming to have the power to modify the social security system in return for cash contributions by OASI recipients. Those whose activities are described by Mr. Margolius have found in our retired people a fertile field for their activities. This is true partly because of a confusion in the public mind as to the true nature of social security; and it is true partly because the present social security benefit has not kept pace with the cost of living. Many recipients, banned from earning supplemental income by the work of their hands or their brains, are hard put to meet the basic needs of life on the amount of the current benefit. But, whatever the reason for their success, the fact remains that these parasites have been stealing untold amounts of money from those citizens to whom a very few dollars means the most. I hope the Department of Justice and the Social Security Administration will help crush this unspeakable racket in the shortest possible time.

I ask unanimous consent that Mr. Margolius' article be printed at this point in my remarks.

SWINDLES PRACTICED ON SOCIAL SECURITY RECIPIENTS

(By Sidney Margolius)

BALTIMORE, MD.—Hundreds of Americans have been fleeced by the Nation's newest, cruelest, and—until now—least-known racket. And the danger menaces millions.

In many parts of the United States, glib confidence men posing as "Government representatives" have been sweet-talking social security beneficiaries out of their badly-needed payments. Pathetically, the swindlers' special prey have been those who can least afford to lose money. Chief among their victims have been confused oldsters, widows with children, and disabled shut-ins.

In Alexandria, Va., recently, for instance, two men who said they were social security agents visited a widow the day her check arrived. They told her she had been overpaid and demanded a refund to the Government. The frightened woman signed over her check to them as "part payment" and even offered to take out a mortgage on her house to pay the rest.

In other cases, beneficiaries have been relieved of as little as $5 and as much as $300. Sometimes the representatives outfit themselves with fake "Government" credentials. Others work in pairs to lend each other authority. One even wore a badge labeled "U.S." However they cloak themselves, these swindlers heartlessly fatten on frightened Americans with little income and a gnawing fear that even that will be taken away.

The new racket is so widespread and so successful that the Social Security Administration here has set up its own Investigations Branch to deal with hoaxers. More swindles were reported in 1959 than in 1958. Chances are the number will increase. Nearly 14 million Americans now receive social security, and the number is growing. Since many of them are both trusting and confused about social security laws, they could be easy pickings for confidence men. Some, the Social Security Administration believes, have been swindled already and do not even realize what has happened.

Although there are some local—and ingenious—variations, most of the swindles fall into six main categories:

The "refund" gimmick, in which the beneficiary is told he has been overpaid and must return money to the "agent." One imposter working the Indianapolis area was able to persuade beneficiaries to hand over as much as $282 each to settle "overpayments." Previously he had used the same scheme in St. Louis.

The "bonus" offer, in which a person is promised extra payments in return for a "fee." In Nashville, Tenn., a con man promised beneficiaries $500 apiece if they first paid $60 to the "agent" to help "veterans." The "vets' fund" was short of money, the "agent" explained.

The loan to the Government hoax. Beneficiaries are told social security is short of money (a persistent fear with beneficiaries) and must borrow from them temporarily. In one case in Shelbyville, Ind., a con man got $214 from a widow with this argument. He told her that changes in the law entitled her to more money, but because of the fund shortage she would have to loan money to social security to get it.

DOCTOR'S FEE: ONE WATCH

The phony physical examination. Beneficiaries are persuaded to take—and are charged for—a physical examination in order to continue getting payments. One cruel hoaxer in the Midwest used this spiel to prey on terrified recipients of disability benefits. Posing as the social security doctor, he even sold them medicine and persuaded them to discard medicines they already were using. In one case, he demanded a $12 fee from a disabled man, then took the man's watch as security for an additional $84 fee.

The magazine subscription racket, believed to be originated by one young man in Indiana. He told beneficiaries they would receive larger payments if they subscribed to a social security magazine. He collected as much as $15 apiece before he was recently caught.

The inspection team approach, usually used by two men working together. The fake inspectors visit elderly people to learn if they are getting social security. If the

answer is yes, the inspectors demand a payment—in one case, it was $110—to continue payments. If the answer is no, a fee is requested to become a beneficiary for the rest of your life.

HAVE YOU BEEN SWINDLED?

On enterprising operator in Lenoir, N.C., even established his swindle on a mail-order basis. He sent letters to people getting disability payments, advising them that they were required by Government law to sustain a lifetime benefit at the disability security main office, Birmingham, Ala. A fee of $25 was demanded, to be sent to "Security Board," Box 54, Lenoir.

Social security administrators believe there may be other variations still unknown because many victims have not reported them. Some victims may be reluctant to admit they have been bilked. The rest still are not aware of it. If you pay $25 to make sure your benefits continue, and the checks keep coming, you may not realize you've been swindled. Or if you refund an overpayment, and get no more dunning letters, you may assume that the record now is straight.

Both Federal and local governments are doing their best to stamp out the racket. In addition to the Social Security Administration's investigators, the FBI handles cases where Government checks are involved. But authorities say the only real protection against swindlers is self-protection. If you are receiving social security payments, you should follow these steps in dealing with agents who turn up at your door. Or if your parents or members of your family benefit from social security, you should pass along this advice:

1. Demand official identification from anyone who claims to be a social security representative. Actually this in itself is not enough protection since con men often are canny enough to fake identification.

2. Check with the local social security office by phone to make sure a representative approaching you is not a fake.

3. Have a witness if possible. One operator never returned for a fee he'd been promised because he observed a relative listening to the conservation. Another was caught because a neighbor, hearing the conversation through her apartment wall, tipped off investigators.

4. Use the mails for social security dealings. Occasionally, a social security beneficiary is overpaid, usually if he is working on the side and earns more than the limit on such earnings. But requests for refunds in these cases usually are by letter. Only if correspondence brings no result would a legitimate social security representative call. But even then, you are within your rights to mail the refund to the local social security office.

NO CASH, NO JEWELRY

5. Do not give cash, jewelry, or checks made out to individuals to anyone purporting to represent the Social Security Administration. A legitimate representative would not accept cash or jewelry. And he would insist that checks or money orders be made out to the Bureau of Old-Age and Survivors' Payments.

6. Notify the Social Security Administration, or police authorities, if you believe you have been swindled. Only by full reporting of all swindles can the Government learn the real scope of the racket. Unfortunately, if you have been swindled, you'll have to foot the loss yourself. Uncle Sam won't replace the money in spite of your good faith.

WHY THE RACKET SUCCEEDS

The real reason the racket has spread is that many beneficiaries don't understand the basic nature of social security themselves. They confuse it with State welfare payments, which are based on need. Social security benefits are based on your average earnings during your working life and are fixed by law as firmly as the ground under your feet. There is no way to get an increase because you need more money, or by cultivating a representative's good will. If you think you are entitled to more, the local social security office will recheck your benefit—and at no cost to you.

Nor is there any shortage of social security funds despite beneficiaries' chronic worry about the prospect, social security benefits are financed by taxes, never by loans from beneficiaries. Nor is there any way to get social security benefits if you didn't work long enough in covered employment, or if your husband wasn't sufficiently covered.

The potential proportions of social security racketeering are immense. Almost every American family now is covered by social security, payments already total $10.3 billion a year, and there are potential victims on every block. Your own folks will be eligible for payments someday, and so will you. All may be easy pickings if they don't guard themselves against bunco men who prey on public misunderstanding of social security laws.

Protection of the Public in Management-Labor Disputes

EXTENSION OF REMARKS

OF

HON. RICHARD L. NEUBERGER

OF OREGON

IN THE SENATE OF THE UNITED STATES

Monday, January 25, 1960

Mr. NEUBERGER. Mr. President, on January 14 the distinguished Senators from New York [Mr. JAVITS] and Vermont [Mr. AIKEN] introduced S. 2810, to establish emergency procedures to protect the public interest in the case of labor disputes affecting adversely the national health, safety, or welfare. I was pleased to join in cosponsoring this legislation, which represents a sensible and equitable approach to problems created by strikes such as that recently concluded in the steel industry.

S. 2810 represents application of a concept now found in the Railway Labor Act to a more general field of labor-management relations. Its aim is to preserve the principle of collective bargaining without imposing on the public a perilous penalty.

The Washington Post and Times Herald of January 23 praised the approach outlined in S. 2810 and urged that the bill be utilized as a foundation upon which to base Senate hearings on methods of dealing with peacetime labor disagreements which have an impact on the well-being of the Nation.

Mr. President, I ask unanimous consent that the Washington Post editorial explaining and commenting on S. 2810 be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Washington Post, Jan. 23, 1960]

TO PROTECT THE PUBLIC

Despite the absence of any recommendations from the White House, Senators JAVITS and AIKEN have introduced a promising bill designed to protect the country against future emergencies such as that resulting from the steel strike. "The measurable loss to our economy during the steel strike," Mr. JAVITS said, "was staggering." The steelworkers are estimated to have lost $1.1 billion in wages; the steel companies $3.3 billion in sales; the Government $710 million in taxes. Defense operations were handicapped, and the gross national product, which was expected to rise about $13 billion from July 1 through September, decreased instead by $6 billion. All of this emphasizes the importance of improving the mechanism through which the Government copes with such disputes.

Borrowing from the Railway Labor Act, Senators JAVITS and AIKEN would authorize the President to name a factfinding board whenever the national health, safety or welfare should be imperiled by a strike or lockout in a vital industry. At the request of the President, either at the time of appointment or later, such a board could recommend terms of settlement. The parties would not be compelled to accept the factfinders' solution, but it is anticipated that they would be under heavy pressure from public opinion, and no strike or change of working conditions could take place for 60 days after appointment of the board.

If no settlement should be effected by this means, the President could ask a district court to authorize seizure of the plants whose operation he deemed essential to the national health or safety. A special receiver for the plants would be appointed, and he could retain the previous management. Working conditions would remain the same unless the court should direct that the factfinders' recommendations be made effective. As an alternative to seizure, the President could seek a Taft-Hartley injunction, as he did in the steel strike.

In our opinion, this bill will need a good deal of refining, but the general principles on which it rests seem to be sound. The power to seize industrial plants when necessary to avert national disaster has often been granted by Congress. But there is need for a law specifically relating this power to emergencies growing out of peacetime strikes that imperil the national health or safety, and carefully regulating its application. The rule forbidding strikes against such plants, while under Government operation, should also be made explicit.

There is much to be said for placing alternative remedies at the President's disposal. That creates a powerful incentive to serious collective bargaining, as neither side can be certain whether seizure or a labor injunction will be sought. We think, however, that Congress should improve the Taft-Hartley machinery in addition to granting seizure powers. The President should be able to put into effect the recommendations of his factfinders, for the duration of Government control over the industry, whether the plants were seized or an injunction were ordered. This power might better rest with the President than with the court. It is an administrative rather than a judicial issue, although judicial safeguards against arbitrary action would be in order.

Messrs. JAVITS and AIKEN have given the Senate a good foundation on which to build. We should like to see the Committee on Labor and Public Welfare proceed with hearings on the bill while the cost of the steel strike and the grave problems that it raised are still fresh in the public memory.

National Broadcasting Co., American Heritage, and Equitable Life Assurance Co. Present Outstanding Television Program in Tribute to Career of Gen. John Charles Fremont

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, January 25, 1960

Mr. NEUBERGER. Mr. President, many of us in the Senate have expressed concern over the content of television programs because we have feared that this great medium of expression was being perverted to shows glorifying crime, sex, violence, sadism, and corruption.

It is a pleasure to cite a contrast to this trend.

On Sunday night, January 24, over the National Broadcasting Co. network, a television show was presented under the title of "Destiny West." It described the westward explorations and mapmaking of a figure of historic destiny, Gen. John Charles Fremont.

The program was sponsored by the Equitable Life Assurance Co. Its historical content was supervised by the editors of that excellent magazine American Heritage.

I wish to commend all associated with this splendid television spectacle—actors, writers, editorial counselors, the firm sponsoring the program, the NBC network and its staff and officials.

It was an inspiring contrast to the western gunfighting TV shows which depict a West which never was or will be. It contained no violence. The performances were excellent which portrayed such historic personages as Fremont, Kit Carson, Senator Thomas Hart Benton, and his daughter, Jessie. I wish we could have more TV programs like "Destiny West." The television screen would have new and richer meaning for Americans, young and old, if such could be the happy case.

I ask unanimous consent to have printed in the Appendix of the RECORD a summary of the program which was sent to me by the Equitable Life Assurance Co.

There being no objection, the summary was ordered to be printed in the RECORD, as follows:

DESTINY WEST

John Charles Fremont, the pathmarker of the West, went where others had been before him—men like Lewis and Clark, whose reports were dull and maps inaccurate—but Fremont had as a guide the greatest scout the West had known, Kit Carson, and he was assisted by a skilled map maker, Charles Preuss. In addition, he had an admirable wife—beautiful, young, understanding—in Jessie Benton Fremont, and an influential and courageous friend in his father-in-law, Senator Thomas Hart Benton, the leading expansionist in Congress.

The story opens with Fremont having returned from his first expedition—mapping the Minnesota and Dakota Territories with Joseph Nicolas Nicollet, a skilled scientist who taught Fremont surveying and topography—in 1841. Fremont, Nicollet, Senator Benton and his daughter, Jessie, 16, are drawn together by their faith in America's "manifest destiny" to be bounded "by water on both sides." Fremont and Jessie fall in love and are secretly married over her father's objection, because he feels the marriage might interfere with Fremont's projected second expedition. Fremont leaves, meeting Kit Carson along the way, on the expedition to the Rockies and the fabled South Pass across the Continental Divide, and Jessie, pregnant, stays behind.

He returns in 1842 in a wave of popularity but disturbed because "there are another thousand miles of uncharted wilderness beyond the South Pass to the Oregon country." Benton commissions him to return to the West to find a shortcut to California to bring it in the Union in case of war with Mexico.

Fremont departs—promising Jessie that "you travel with me every step of the way"—on his third expedition, expecting to return in 8 months. He travels west to the Columbia and Oregon, then down into the Great Basin of Utah and Nevada, finally west over the Sierra Nevadas toward the Sacramento Valley.

The expedition is overdue and Senator Benton and Mrs. Fremont fear for John's life. We find Fremont, Carson and their party half-frozen, hungry and discouraged in the Sierras. All—even Carson—want to turn back, but Fremont persists in pushing on. They reach a tiny ledge high and open. They have found the valley to the Pacific. Fremont has done more than prove the route to California and Oregon. He has aroused men's minds to the West.

The cast includes: Jeffrey Hunter as John Charles Fremont, Susan Strasberg as Jessie Benton Fremont, Howard St. John as Thomas Hart Benton, and James Daly as Kit Carson.

The Old Stone House

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. MARTIN. Mr. Speaker, under leave to extend my remarks in the RECORD I include an announcement written by Mrs. Frank Allen West, of Georgetown, concerning the opening on Saturday, January 23, 1960, of the Old Stone House, which has been preserved as a museum through the inspired efforts of local citizens. As Mrs. West points out, it will be an interesting addition to the historic attractions of the Nation's Capital.

Mrs. West and a group of patriotic women are responsible for the preservation of this historic landmark.

The announcement follows:

THE OLD STONE HOUSE

(By Mrs. Frank Allen West)

The Old Stone House opened January 23, 1960, as the District's newest museum in the District's oldest building, standing on the original site chartered by the Commonwealth of Maryland in 1751.

Constructed by hand from ordinary fieldstone, the house was completed about 1764.

This example of early Americana has been saved by the untiring efforts of local Georgetown citizens and national patriotic societies who have aroused congressional interest and aid.

The Old Stone House shows the home life of a modest family in a small river-port town of the pre-Revolutionary era.

The Park Service is furnishing it in the appropriate style of the period, using original pieces as much as possible.

It will be an interesting addition to the historical attractions of the Capitol.

Ezra Benson's a Fighting Man

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I include the following article, entitled "Ezra Benson's a Fighting Man," written by John Grimes and which appeared in his column "An Editor's Notebook" in the January 22, 1960, issue of the Rockford (Ill.) Morning Star:

EZRA BENSON'S A FIGHTING MAN

Agriculture Secretary Ezra Taft Benson came out fighting when Senator SYMINGTON, Missouri Democrat and head of a special subcommittee investigating grain storage costs, called storage costs, shockingly high and demanded that the Government reduce them. Said Benson:

"I sympathize with those who are now just waking up to the fact that this is a costly, indefensible, and unnecessarily wasteful matter. But this is what results from the continuance of an outmoded, unrealistic program."

The program the Secretary refers to is the absorption of grain surpluses by the Government. When farmers decide not to repay their Federal price-support loans, the Government takes over the surplus grain. Our 2 billion bushels of this grain are now stored in private warehouses under contracts that guarantee operators a fixed fee, plus handling charges. Those 2 billion bushels of stored grain are equal to over 50 bushels per American family.

How did the grain get into surplus? We raised it under an indefensible farm program; we took it over, under a wasteful surplus-absorption program; and we store it in private warehouses at a fee because that is what the law provides. Wherever possible, the laws says, grain is to be stored in private facilities. On that point, Benson says, he is "sure the program would have been far more costly and wasteful had the Federal Government attempted to handle this vast storage problem." Waste of grain would clearly have been higher, since preservation of grain in usable quality involves a pretty close watch, shifting and sifting to prevent mold and vermin.

As to the rates paid the commercial warehousemen for moving wheat in and out of storage, Benson says they are precisely the same as in 1949; and the current 16.8-cent-a-bushel fee for actual storage in the Middle West is up only one-sixth since 1952. A lot of things are up a lot more.

Then Benson gets to the kernel of the matter. The big storage charge, running to $1,250,000 a day, does not rise from per-bushel charges, but from the tremendous volumes of grain the Government has taken over. In short, it costs more to store 2 billion bushels of grain than it does a half-

billion bushels, just as it costs more to ride 500 miles than it does to ride 100.

Storage costs, Benson says, "will go higher, unless this scandalous, obsolete grain program is corrected."

And what, it may be asked, is Senator SYMINGTON, with an eye on the Democratic presidential nomination, doing to get us out from under that scandalous program? He is certainly not doing anything to antagonize votes that might be harvested in the grain belt.

Benson has, on the other hand, been under heavy fire for his continual war on the outmoded farm-price-support program. That fire hasn't come alone from the Democrats. From Republicans, too, has come a plea to the White House to "keep Benson quiet." In fact, Benson's firmness is reported to have antagonized him even with RICHARD NIXON, and it has been rumored that NIXON will not want Benson in his cabinet if he becomes President.

But we need men who come out fighting, and NIXON needs a balance to the liberal Republicans, like Labor Secretary Mitchell, who have been causing a great deal of heartburn among the conservative Republicans.

NIXON could do worse than get into this fight on Benson's side. NIXON can use fighters.

JOHN GRIMES.

Cost of Crime Prevention

EXTENSION OF REMARKS
OF
HON. ESTES KEFAUVER
OF TENNESSEE
IN THE SENATE OF THE UNITED STATES
Monday, January 25, 1960

Mr. KEFAUVER. Mr. President, we are constantly reminded by newspapers and other sources of communication that organized crime poses a grave threat not only to life and property but to the very principles upon which this great democracy was founded.

All of us are determined to do whatever we can to stamp out crime. One of the best ways, in my opinion, is for our newspapers to point out the need for constant local vigilance.

The Chattanooga Times, in its December 1, 1959, issue, published an article in which I was quoted at length on this great need. In order to call it to the attention of all Members of the Senate, I ask unanimous consent that the article, written by Alex Corliss, Times police reporter, be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Chattanooga Times, Nov. 1, 1959]

KEFAUVER STRESSES COST FOR PREVENTION OF CRIME

(By Alex Corliss)

In a recent address before the annual convention of the Tennessee Law Enforcement Officers Association in Knoxville, Senator ESTES KEFAUVER deplored the lack of public support given lawmen.

"During the hearings before the Senate Crime Investigating Committee in 1950–51, of which I was chairman, we found that the American public was dangerously uninformed and apathetic about the pervasive presence of crime" Senator KEFAUVER said.

"We met many policemen during our investigations—men who told us of the difficulties they have in enforcing the law because of a lack of support from the law-abiding citizens of their community; men who told us how pressure to obtain special consideration or favors breaks down the whole system of law enforcement.

"The ugly facts that splashed across the television sets of the Nation served to arouse the American people and rid them of their apathy about the crime problem. The hearings stirred a good deal of anticrime activity in the form of volunteer citizens groups, new crime commissions, tightening of State laws and congressional legislation.

"But unfortunately much of this activity, particularly the concern of local citizens, has been sporadic and needs dramatic stimulants. An honest and courageous police officer is priceless even as the children and adults he protects. There may be an occasional bad apple, but the vast majority of our law enforcement population represents America's most dedicated men and women. It is the responsibility of all our citizens to see that our anticrime leaders receive adequate salaries and work in conditions unimpaired by dissension or patronage."

EXPENSIVE OPERATION

The Tennessee Senator mentioned the staggering sum being spent to combat crime and pointed out that the cost in dollars is not the greatest expense.

"Crime is a cancer that destroys the minds and the souls of its practitioners and extorts severe penalties from all of us," he declared. "Approximately 3 million crimes will be committed in the United States this year. In order to meet this menace about $22 billion will be spent by local and Federal law enforcement agencies. That's more than half the amount that this Nation will spend this year for our national defense. It is 140 times the amount that has been asked by the administration to implement the National Education Defense Act. For every dollar that is contributed to our churches $10 will be spent to combat crime. From a tax viewpoint $22 billion cost every citizen $128.

"These startling financial figures do not represent the greatest expense that crime inflicts. Most serious of all is the loss in human resources, the corruption of our youth, the weakening of our moral fiber.

"When we are locked in a global struggle that threatens our ideals and ideas we cannot afford to see our future strength sapped by the corruption of our youth. I am sure you are well aware of our juvenile delinquency problem and the central part it plays in the whole crime movement. During 1959 more than 1 million young people will get in trouble with the police. More than 50 percent of all those arrested for crime against property will be youths under 21 years of age. The rate of juvenile arrests is growing 2½ times faster than the rate of population growth in this age classification."

CRIME COSTS

"Crime does not pay—although a few hoodlums make temporary financial profits. But crime certainly does cost.

"Organizations such as yours lead the counterattack against this national menace. The first line of defense against the criminal is the man with the badge who walks the beat or cruises in a patrol car; the sheriffs and officers and policemen who face the gunman, the burglar, and the mugger and at times give their lives in defense of law and order.

"You are doing a determined and courageous job, and your ranks are filled with able, dedicated men. But you can't do it all by yourselves. Your efforts are the central one, but they must derive added strength from other sources. An effective anticrime campaign is one in which America's law enforcement officers represent the link between local civic activity and national coordination. You must have the support and interest of the individual citizens which you are protecting. And your efforts would be greatly enhanced by an exchange of ideas and information between various law enforcement agencies through a national crime commission.

DESERVE CONSIDERATION

"Our law enforcement officers need to be better paid, and they need to have more adequate security when they retire or when they are disabled. Unless we can provide these incentives it is going to be hard to maintain the high caliber of people entrusted with the enforcement of our laws. I think there is a duty on the part of the Federal, State, and local governments in this connection. A great many State and local violations are also violations of Federal statutes. Local law enforcement officers very frequently assist in the enforcement of Federal statutes as well as State laws. Many times they may be killed or disabled while doing so. So I think it is proper that the Federal Government join State and local communities in a program of seeing that our law enforcement officers have better protection."

Senator KEFAUVER told the assembled officers that he had filed a bill that will extend the provisions of the Federal Employees Compensation Act to cover State and local law enforcement officers when they are killed or injured while enforcing any Federal law.

Rigged and Slanted News

EXTENSION OF REMARKS
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. WIER. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to insert the following article, entitled "GTA Daily Radio Roundup," for January 22, 1960, prepared by the Grain Terminal Association Public Relations Department, St. Paul, Minn.:

GTA DAILY RADIO ROUNDUP

Circulation 6,500,000. That's what Life magazine, which speaks so often for big business and the Eisenhower administration and is owned by the Luce interests, brags on its front cover. We wish we could say that our farm publications had that much circulation but there aren't that many farm families left since Benson's big squeeze went on in 1953.

We can't criticize Life's circulation figures, although many others often do, because we don't know. But undoubtedly it is large. The point is, that when a national publication of purposes of its own, sets out to blast farmers with all its editorial guns farmers are at a definite disadvantage. And that's what is happening.

You all remember Life's recent vicious attack on farmers that ran serial fashion for several issues. There's no letup. Now, in its most recent issues, the big slick magazine attacks the Farmers Union directly, and your Grain Terminal Association in particular. It stems from the present review of grain storage conditions by a Congressional subcommittee. Life says it wonders why the Government should store farm products at all. And it hints, just hints you'll notice,

that the subcommittee's head, Senator STUMINGTON, might be soft-pedaling any mention of "a leading participant in the booming storage business." This "leading participant" Life names as Farmers Union Grain Terminal Association which it claims "grosses about $8.5 million a year in Government storage payments."

Well, just like any other public warehouse, GTA stores grain for the Government as well as for farmers and their country elevators. But not nearly as much as the big private grain firms because GTA is still small compared to them. In fact, the figures show that when a check was made a year ago, GTA was storing only 8 percent, or 12,290,000 bushels, of the 94 million in storage in the Twin Cities and Duluth-Superior areas.

So it seems fair to ask why Life points the editorial finger at GTA, but makes no mention of the really big outfits in the storage business. There must be a reason because we notice in its next sentence Life picks up the line of the NTEA, which you know is so anxious to kill off or at least cripple the competition from farmers' cooperatives.

Life peddles the NTEA line this way: "Being a cooperative, it (GTA) pays a few taxes on its profits. Instead, it spends most of them on propaganda and political pressure for higher farm price supports which in turn build more surpluses and the need for still more storage."

Well, that's not hard to answer. GTA believes that farm prices are too low, that family farmers deserve decent incomes and ought to have them. And we make no bones about saying so. But what has Life magazine been doing for farmers lately? And of course, GTA makes no profit. That belongs to the farmers who own GTA and every last red cent is allocated back to them. And we think the record is abundantly clear on who has led the wheat referendum campaign for 7 straight years to hold down wheat production. GTA, of course, and Farmers Union.

That speaks for itself don't you think?

Farmers are proud of the record they have made in their cooperatives and it is an open book for all to see. We'd urge Life to keep the fight clean—and tell the truth about your GTA—the co-op way.

African Explosions

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, January 25, 1960

Mr. WILEY. Mr. President, we recognize that, in a fast-changing world, there is a real need to constantly reevaluate the factors and influences which may affect not only the present, but also the future.

As we look around the globe, the world spotlight of tomorrow, I believe, will focus more and more upon Africa—the once so-called dark continent. Including about one-fifth of the land area of the entire world—with its population of over 220 million, and vast natural resources—Africa will become increasingly important in the balance of world power.

Currently, a great many nations on the African Continent are undergoing the birthpangs of independence and nationalism.

As a respecter of the rights of self-determination, the United States should adapt its policies—and as necessary, create new ones—to recognize and assist the economic, social, and political progress and independence of the African nation.

Actually, this is in our own self-interest.

Currently, the tide of nationalism sweeping over the world—particularly in less developed countries—will not be stemmed; unless assistance and guidance is provided the emerging nations, unrest will continue, and grow—threatening peace.

If we fail to lend such assistance also, we can be assured that the Communists will step in to fill the gap.

We recall that Lenin—expounding Communist doctrine—stated that Communists should initially support nationalism, to break any existing ties with other powers; then communism should move in to amalgamate the newly independent peoples into the Communist bloc.

As the African nations strive for independence, their leaders have a deep responsibility to their people: First, in their great yearning for a quick transformation to national independence, to protect the rights and freedom of other people; and second, by declining the bait of communism—to assure that they do not trade their opportunity for achieving nationalistic goals for subjugation to the dictatorship of international communism.

Recently, the New York Times published an editorial entitled "African Explosions" reviewing significant factors in the struggle of newly emerging nations for nationalism and independence.

I ask unanimous consent to have the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the New York Times, Jan. 21, 1960]

AFRICAN EXPLOSIONS

As Europe's colonial domain continues to recede in Africa a new factor begins to emerge in that hitherto rather quiescent continent. It further complicates the task of African leaders to give effect to their people's clamor for freedom and independence.

The new factor, never wholly absent but acquiring new significance, is that the struggle is not only between Europeans and Africans but also between Africans and Africans in a multiplicity of patterns. It ranges from intertribal combat between war-painted warriors with bows and arrows to uprisings against feudal tribal chiefs, to revolts against the new governments, to conflicts between the newly independent states themselves. And it is accompanied in some parts, at least, by a relapse into ancient and even barbaric customs that include witchcraft, mass poisonings and public executions.

The emergence of intra-African strife is perhaps part of the birthpangs of a new order on a continent that tries to lift itself almost overnight from the neolithic age, still prevalent in many parts of it, right into the 20th century. Its more than 200 million people comprise many races, tribes and nationalies, with some 700 languages, and divided not according to their own groupings but according to colonial partitions which have developed separate nationalisms. These people include all cultural levels, from the primitive bushmen to the sophisticated western-influenced town residents who are still too few in many cases to provide effective political leadership and essential managerial talent.

These factors will not stop Africa's transformation, and all that the West can do is to attempt to aid and guide this transformation to avert graver dangers. But consideration of this kind might well caution the African leaders themselves not to rush things too much and to build first of all a foundation for independence before attempting to exercise it, lest premature independence unleash destructive forces which could engulf them and all Africa.

State of Oregon Hard Hit by Decline in Residential Construction

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Monday, January 25, 1960

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a very informative and thoughtful editorial from the Milwaukie (Oreg.) Review of January 21, 1960, entitled "Home Building Drop Means Trouble For Oregon." This editorial, written by State Senator Monroe M. Sweetland, editor of the Milwaukie Review, stresses the fact that high interest rates inevitably discourage new home construction, and that some 75 percent of the production of Oregon sawmills, which is our State's basic industry, rely upon residential building for a market.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Review, Jan. 21, 1960]

HOMEBUILDING DROP MEANS TROUBLE FOR OREGON

Will we ever learn that high interest rates mean depression?

Homebuilding experts estimate that the Eisenhower tight-money policy, which now raises interest rates again, will cut housing starts this coming year by 10 percent. This throws a pall over all parts of our home-short Nation, but it hits Oregon hardest of all.

Dun & Bradstreet's 1959 publication of "The Failure Record Through 1958" has just reached us. This volume tells how many Oregon businesses failed that unhappy year in a minor depression. What State led the Union in failures? Our Oregon, with 201.5 failures per 10,000 concerns. No other State in the Union was even close to us. Washington had 91.2 failures; the average for all eight

Mountain States was 32.7; Massachusetts was 42.8; Missouri, 26.9; Minnesota, 25.3.

The reason is not hard to find. When big finance was given its reward by the administration it took a double swipe at faraway Oregon, where the economic life is dominated by lumber. Lumber lives on the Nation's new construction, and the price we pay is tragedy for 201.5 businesses out of every 10,000—and far greater numbers of others who are all but plowed under by the consequences.

Have the Wall Streeters changed in all these years? We have sometimes thought so as their tune changed, but now it appears the words and spirit have not changed. They are basically the same today as they were in 1928, when tight money and high interest rates led us down the path to national ruin.

The chief economist of Bankers Trust Co., of New York, Roy L. Reierson, recently lauded tight money in a New York University speech.

"Interest rates in recent years," argues Mr. Reierson, "are just returning from subnormal depths. They are returning to the neighborhood of levels prevailing in 1928, a year of good business."

How blind this is to history, which a year after 1928 saw the plunge of 1929 which nearly ruined American economy, but Banker Reierson called it "good business."

As the cost of loans on new houses soars well above 6 percent, the ability of young families to buy them is sharply curtailed. The cost of a 25-year $10,000 home mortgage (FHA) has risen a thousand dollars in 2 years and few homes are built for a mere $10,000 these days.

High interest rates discourage borrowing, but by making money "dear" they increase the bankers' take at the higher level, at least temporarily. A community of new homes and future homes like our North Clackamas area, pays two ways: We find our development slowed down and the costs much higher; we find our lumber industry, which underlies all of Oregon's economy, sickening again, and this affects many incomes in our own area.

When logging and lumbering—plywood, boom operations, shipping, trucking, saw manufacturing, and all that lives on timber—is in trouble, we are all in trouble in Oregon. Two hundred and one and five-tenths failures led the Nation's bankruptcy roll 2 years ago, and it will happen again unless a mighty effort rolls back the selfish, reckless program of tight money which the Eisenhower-Nixon administration has sponsored.

Independence of Ukraine

SPEECH
OF
HON. CHARLES A. BUCKLEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. BUCKLEY. Mr. Speaker, January 22 is the date that marks the 42d anniversary of the independence of the Ukraine. It is a tragic fact, however, that this independence was a short-lived one and that in 1920 the Red Communist Army ruthlessly overran and crushed the Ukraine.

Since that date the 42 million Ukrainians have been living in enforced captivity under the heels of their Soviet oppressors. It is indeed sad that in this day and age when the world is moving slowly but steadily toward equal rights for all, that these proud and independent people are still forced to languish under the thumb of their Communist masters. They have been subject to Soviet control longer than any other minority in the Soviet Union. Their people have died by the millions in slave labor camps, in prisons and in the vast expanses of the Siberian wilderness.

Ever since they assumed control, the Soviet regime has attempted every means possible to crush the spirit of the Ukrainian people. It is a tribute to the spirit of these people that today their love for freedom and liberty shines as brightly as ever.

I am honored to join today in saluting these courageous people and in the spirit of the Captive Nations Week resolution of last July, I join in the fervent prayer that one day soon the liberty-loving Ukrainian people will indeed be properly able to celebrate their national independence day in their own free country.

Area Redevelopment Legislation Urged at This Session

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following copy of a letter sent to Members of Congress by the Area Employment Expansion Committee, 99 University Place, New York, N.Y., which urges the Congress to pass an area redevelopment bill at this session of Congress. Also included is a fact sheet as of November 1959, showing the distressed labor markets in the United States by geographical regions, as well as rural development areas prescribed by the House Banking and Currency Committee in proposed Area Redevelopment Act.

The matters follow:

AREA EMPLOYMENT
EXPANSION COMMITTEE,
New York, N.Y., January 15, 1960.

Hon. DANIEL J. FLOOD,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN FLOOD: We are hopeful that Congress will enact area redevelopment legislation at this session. We have received assurances of support for this measure from the leaders of both parties. They have indicated their deep concern for the human suffering and economic waste found in chronically distressed urban communities and long-suffering underdeveloped rural counties.

S. 722 has been passed by the Senate and has been adopted by the House Banking Committee in a revised form. We have been assured of support to clear this measure through the House Rules Committee. Your aid in this effort would be highly prized. We hope that we can count on your endorsement of the legislation and your vote when it reaches the floor.

You of course know that the Special Senate Committee on Unemployment Problems has held hearings throughout the country which have highlighted the tragic neglect of these communities and the need for Federal assistance and guidance in their redevelopment. Many have already exhausted their own resources. These communities contain personal, industrial, commercial and public investments aggregating hundreds of millions of dollars. Tremendous losses will be sustained without the stimulus which Federal assistance will provide.

The staff report of the Joint Economic Committee has urged the adoption of this legislation. We believe that the committee in its forthcoming report will similarly endorse the bill and the Special Senate Committee on Unemployment Problems will also find the adoption of this measure essential to the solution of our Nation's unemployment problems.

We are enclosing a tabulation of the distressed urban communities which would have been eligible as of November 1959 for assistance under S. 722. (House revision.)

Unemployment continues to be concentrated in these distressed labor markets in a serious manner. While the number of such communities has receded from the total of 204 in July to 172 in November (including 5 in Alaska), they still exceed the 119 distressed areas of January 1959. We believe that most of the currently distressed urban communities will remain in this category for some time.

The persistence of unemployment in these areas is indicated by the following:

	January 1959	November 1959 [1]
Number of distressed labor markets	119	172
Total unemployment in these distressed labor markets	811,973	926,868
Percent of Nation's unemployment in these distressed areas	17.2	25.1
Percent of Nation's working population in these distressed areas	9.3	13.7
National rate of unemployment (percent)	7.0	5.3
Rate of unemployment in these distressed areas (percent)	12.9	9.8

[1] The number and percentages of unemployed will be raised when the full November data are available for Pennsylvania. The 5 areas in Alaska were omitted for comparability with January 1959.

We are also enclosing a list of the rural distressed areas.

Without the passage of the pending area redevelopment bill we shall not be able to attain maximum employment as required by the Employment Act of 1946 and shall continue to shoulder the high cost of support for the unemployed and their families and suffer from the waste of valuable private and public assets.

If we can be of further assistance to you in this matter, feel free to write us.

Sincerely,

PRENTISS M. BROWN,
Chairman.

AREA EMPLOYMENT EXPANSION COMMITTEE,
New York, N.Y.

FACT SHEET NO. 38D (SUPP. 1)

Employment, unemployment, and unemployment as percent of labor force in distressed labor markets in the United States, by geographical region, November 1959

RURAL REDEVELOPMENT AREAS PRESCRIBED BY THE HOUSE BANKING COMMITTEE IN PROPOSED AREA REDEVELOPMENT ACT

NOTE.—The bill recommended by the House Banking Committee declares that among the rural redevelopment areas "shall be included * * * any county (1) which is among the 500 counties in the United States ranked lowest in level of living of farm-operator families, or (2) which is among the 500 counties in the United States having the highest percentage of commercial farms producing less than $2,500 worth of products for sale annually."

The counties listed below conform to these categories:

Alabama

Congressman and Rural County

ANDREWS: Barbour, Bullock, Coffee, Geneva, Henry, Houston, Lee, Macon, Russell.

BOYKIN: Choctaw, Clarke, Marengo, Monroe, Washington, Wilcox.

ELLIOTT: Blount, Cullman, Fayette, Franklin, Lamar, Marion, Pickens, Walker, Winston.

GRANT: Butler, Conecuh, Covington, Crenshaw, Escambia, Lowndes, Montgomery, Pike.

JONES: Jackson, Lawrence, Limestone, Morgan.

RAINS: Chambers, De Kalb, Etowah, Marshall, Randolph, Tallapoosa.

ROBERTS: Autauga, Clay, Coosa, Dallas, Elmore, St. Clair.

SELDEN, Jr.: Bibb, Chilton, Greene, Hale, Perry, Sumter, Tuscaloosa.

Arkansas

ALFORD: Conway, Faulkner, Perry, Pope, Yell.

GATHINGS: Clay, Crittenden, Greene, Lee, Phillips, St. Francis.

HARRIS: Ashley, Bradley, Calhoun, Clark, Columbia, Hempstead, Howard, Lafayette, Little River, Miller, Montgomery, Nevada, Ouachita, Pike, Polk, Sevier, Union.

MILLS: Cleburne, Fulton, Independence, Izard, Lawrence, Monroe, Randolph, Sharp, Stone, White, Woodruff.

NORRELL: Chicot, Cleveland, Dallas, Desha, Drew, Grant, Jefferson, Lincoln, Lonoke.

TRIMBLE: Baxter, Boone, Johnson, Logan, Madison, Marion, Newton, Scott, Searcy, Sebastian, Van Buren.

Florida

MATTHEWS: Baker, Gilchrist, Hamilton, Lafayette, Madison, Suwannee, Union.

SIKES: Calhoun, Holmes, Jackson, Jefferson, Leon, Okaloosa, Walton, Washington.

Georgia

BLITCH: Appling, Atkinson, Bacon, Brantley, Charlton, Clinch, Coffee, Echols, Jeff Davis, Lanier, Pierce, Telfair, Wayne.

BROWN: Elbert, Greene, Hart, Lincoln, Oglethorpe, Taliaferro, Warren, Wilkes.

DAVIS: Rockdale.

FLYNT, JR.: Butts, Carroll, Clayton Coweta, Fayette, Heard, Henry, Lamar, Meriwether, Newton.

FORRESTER: Clay, Dodge, Harris, Marion, Quitman, Randolph, Stewart, Taylor, Wilcox.

LANDRUM: Fannin, Gilmer, Rabun, Towns, Union, White.

MITCHELL: Chattooga, Dade, Douglas, Haralson, Murray, Walker.

PILCHER: Baker, Brooks, Decatur, Early.

PRESTON: Bryan, Burke, Evans, Liberty, Long, Montgomery, Screven, Trattnall, Treutlen, Wheeler.

VINSON: Baldwin, Crawford, Glascock, Hancock, Jaseph, Johnson, Twiggs, Washington, Wilkinson.

Illinois

GRAY: Hardin, Johnson, Pope.

Kentucky

CHELF: Adair, Green, Metcalfe.

NATCHER: Allen, Breckinridge, Butler, Edmonson, Grayson, Hopkins, Ohio.

PERKINS: Breathitt, Carter Elliott, Floyd, Greenup, Johnson, Lawrence, Lee, Magoffin, Menifee, Morgan, Pike, Rowan, Wolfe.

SILER: Clay, Clinton, Cumberland, Jackson, Knox, Laurel, Monroe, Owsley, Pulaski, Rockcastle, Russell, Wayne, Whitley.

SPENCE: Lewis.

STUBBLEFIELD: Crittenden, Graves, McCracken, Marshall.

WATTS: Casey, Estil, Powell.

Louisiana

BROOKS: Bienville, Claiborne, De Soto, Red River, Webster.

McSWEEN: Avoyelles, Grant, La Salle, Natchitoches, Sabine, Vernon, Winn.

MORRISON: East Feliciana, Livingston, St. Helena, West Feliciana.

PASSMAN: Caldwell, Catahoula, Concordia, Franklin, Lincoln, Morehouse, Richland, Union, West Carroll.

THOMPSON: Beauregard, Evangeline, St. Landry.

Michigan

BENNETT: Iron.

CEDERBERG: Alcona, Clare, Iosco.

GRIFFIN: Wexford.

Minnesota

BLATNIK: Itasca.

MARSHALL: Aitkin.

Mississippi

ABERNETHY: Alcorn, Attala, Calhoun, Chickasaw, Choctaw, Clay, Itawamba, Lee, Lowndes, Monroe, Noxubee, Oktibbeha, Pontotoc, Prentiss, Tishomingo, Webster, Winston.

COLMER: Covington, George, Greene, Jefferson Davis, Jones, Lamar, Lawrence, Marion, Perry, Wayne.

SMITH: Bolivar, Coahoma, Holmes, Humphreys, Issaquena, Leflore, Quitman, Sharkey, Sunflower, Tunica, Washington.

WHITTEN: Benton, Carroll, De Soto, Grenada, Lafayette, Marshall, Montgomery, Panola, Tallahatchie, Tate, Tippah, Union, Yalobusha.

WILLIAMS: Adams, Amite, Claiborne, Copish, Franklin, Hinds, Jefferson, Lincoln, Pike, Walthall, Warren, Wilkinson, Yazoo.

WINSTEAD: Clarke, Jasper, Kemper, Lauderdale, Leake, Madison, Neshoba, Newton, Rankin, Scott, Simpson, Smith.

Missouri

RANDALL: Vernon.

BROWN: Douglas, Ozark, Stone, Taney, Wright.

CARNAHAN: Carter, Dent, Howell, Iron, Madison, Oregon, Reynolds, Shannon, Washington, Wayne.

JONES: Bollinger, Butler, Ripley.

New Mexico

MONTOYA: Mora, Rio Arriba, Sierra.

MORRIS: San Miguel, Socorro.

North Carolina

ALEXANDER: Alexander, Alleghany, Ashe, Stanly, Watauga.

BARDEN: Duplin, Onslow, Pender.

BONNER: Hyde, Tyrrell, Washington.

FOUNTAIN: Halifax, Warren.

HALL: Buncombe, Cherokee, Clay, Graham, Haywood, Jackson, Macon, Swain, Transylvania.

JONAS: Avery, Burke, Catawba, Lincoln, Mitchell.

KITCHIN: Anson, Davidson, Montgomery, Scotland, Wilkes.

LENNON: Bladen, Brunswick, Columbus, New Hanover.

SCOTT: Caswell, Person.

WHITENER: Cleveland, Madison, McDowell, Polk, Rutherford, Yancey.

Ohio

HENDERSON: Guernsey, Noble.

MOELLER: Gallia.

Oklahoma

ALBERT: Atoka, Choctaw, Latimer, Le Flore, McCurtain, Pittsburg, Pushmataha.

National Military and Space Activities

EXTENSION OF REMARKS

OF

HON. JOHN STENNIS

OF MISSISSIPPI

IN THE SENATE OF THE UNITED STATES

Monday, January 25, 1960

Mr. STENNIS. Mr. President, the American public is becoming increasingly aware of our national effort in space. Next week the Senate Aeronautical and Space Science Committee and the Preparedness Investigating Subcommittee of the Armed Services Committee will hold joint hearings on national military and space matters. While the Congress can investigate, recommend, and urge that the national space program be accelerated until our Nation is second to none, nevertheless the President, as the representative of the whole Nation is the one who can effectively speak out for American participation in an all-out space race.

In an article appearing in the January 24 edition of the Washington Sunday Star, Mr. William Hines, Star science writer, discussed this problem. I think Mr. Hines' analysis is worthy of the attention of every Member of this body; therefore, I ask unanimous consent that the article, entitled "Space Race Is More Than Money," be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SPACE RACE IS MORE THAN MONEY

(By William Hines)

There will be a reappraisal of the Nation's space program in the coming weeks. It is sure to be an agonizing one, to use a Dulles phrase, in light of what can only be regarded as a niggardly increase in the space budget in fiscal 1961.

The word "niggardly" is used advisedly. Contrary to advance billing that the space effort would be approximately doubled in the budget, the increase is marginal. The best measure of the space program's expansion is shown in the accompanying Budget Bureau chart—a 22 percent rise in "Outer Space Activities" over fiscal 1960.

In the course of the reappraisal, many politicians and oracles will assert that money is the root of all evil as far as our space troubles are concerned. Adherents to this view contend that without money—lots of money—all is lost, and that with money nothing is impossible.

DOLLARS AND THE MOON

The first half of this contention is valid beyond debate. The only way an American will ever get to the moon is by being propelled there by the combined force of a great many millions of dollars.

But the other half stands up less well under scrutiny. Not lack of money, but lack of impetus seems to be the greatest single deficiency in space today. While impetus alone cannot secure victory in the space race, it is an equally harsh fact that money alone will not do the trick, either.

To mobilize the financial, material, and spiritual resources of the country behind the space race requires, first of all, an acknowledgement that such a race is in progress. There is, perhaps, an implicit acknowledgement to this effect, but that does not seem to be enough.

Dr. William H. Pickering, director of the National Aeronautics and Space Administration's Jet Propulsion Laboratory, is one of the most eminent to call publicly for top-level impetus. A leading scientist of the nonpolitical variety, he recognized that only the President can proclaim American participation in an all-out worldwide space race.

A DESPERATE RACE

But today, more than 2 years after sputnik and 2 months after Dr. Pickering's remark, Mr. Eisenhower still has not stated publicly that we are in a race. Most other Americans, including the President's principal aide for cosmic affairs, NASA Administrator T. Keith Glennan, recognize that a desperate race is in progress, and that the United States is in second place.

Under Secretary of State Livingston T. Merchant, at the outset of House Space Committee hearings Wednesday, said the United States "clearly concedes" Soviet superiority in space. Last Friday George V. Allen, Director of the U.S. Information Agency, said that in the eyes of the world the Soviet Union is between 5 and 10 years ahead of this country in space.

The two officials, like the space Administrator, agreed that the race is desperate and there should be more impetus behind it. But second-echelon statements of emergency are not enough.

Mr. Glennan represents only a Federal bureau with a vested interest in space. Mr. Merchant is concerned with our diplomatic-political posture vis-a-vis the Soviet Union's. Mr. Allen's chief interest lies in seeing the United States place its best foot forward at all times.

Senator JOHNSON of Texas, Democratic leader of the Senate and chairman of the Space Committee of the Upper House, designed his view of the emergency in a seven-point statement last month. But his views, too, can be regarded as colored by his position on Capitol Hill and his status as an aspirant for the Democratic nomination for the presidency.

All, in short, are special pleaders. None speaks for the whole people or even for the Government. The views of each must necessarily be taken as parochial, and therefore biased to some extent.

Without an expression of concern from the one source representative of the whole Nation—the President himself—the space program must of necessity rock along as a matter of secondary or tertiary importance.

There is another thing to be considered in any presidential definition of the situation. A mere statement is not enough; the public must be told why anything as expensive as space activity is important. In a day of high taxes and high living costs, talk of the "great challenge," the "high adventure," and the "intellectual stimulation" of space rings rather hollow in the average American's ears.

Public discussion of defense aspects up to now has degenerated into gobbledygook because (1) so much of weaponry is highly secret and (2) the line between myth and reality is fuzzier in space than almost anywhere else. So, while there may be a good national defense case for spending in space, it would be hard to sell in terms the public could understand.

NEED FOR ALLIES

Probably the most forthright, understandable, and candid—and therefore effective—explanation would be couched in commercial and ideological terms. Most Americans would concede the Nation's need for both customers and allies abroad. The explanation might go thus:

The Soviet salesman of commodities might point out with immunity from refutation that:

1. A sputnik is harder to build than an icebox or an automobile.

2. The Russians to date have bigger and better sputniks than the Americans have built.

"So," the salesman might say, "why not try Soviet products for a change?"

A Soviet salesman of ideas (who might or might not be the same individual) could point out with equal immunity from contradiction that:

1. A generation ago the United States led the world in science and technology, and the Soviet Union was an intellectual slum.

2. Today the Soviet Union is markedly ahead of the United States in some fields, equal in others, and gaining in most of the other areas of science and technique.

"We did it in a single generation under our political system," he might say to his uncommitted and ambitious listeners. "Why not try the Soviet way for a change?"

Those who seek a Presidential statement of urgency would have him point out that our prestige in space is important because our pocketbook and political position are profoundly affected by our standing in other nation's eyes.

With such a statement as background, the public could come to grips with the ques-

tion: "Is space really necessary?" Without such a statement, even the modest sums now financing the space work are being spent in a vacuum (no pun intended).

If the program is vital, it is probably worth much more than the $8009-odd million allocated to civilian space work in the coming year. If it is not vital, the money now being spent would probably be better applied to medical research, schools, roads or (as is high on the President's priority list) reduction of the national debt.

Man of the South for 1959

EXTENSION OF REMARKS
OF
HON. JAMES C. DAVIS
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. DAVIS of Georgia. Mr. Speaker, on December 14, 1959, an outstanding group gathered in Charlotte, N.C., for the purpose of honoring Mr. Norman Atwater Cocke, who was elected "Man of the South for 1959" in the 14th annual poll conducted by Mr. Hubert F. Lee, founder of the South's Hall of Fame for the Living, and editor of the Dixie Business magazine published in Decatur, Ga. Dr. A. Hollis Edens, now president of Duke University in North Carolina, was one of the principal speakers on this occasion. Dr. Edens is a graduate of Emory University in Atlanta, Ga., and also served as vice chancellor of the University System of Georgia in 1947.

Under unanimous consent to extend my remarks, I include Dr. Edens' remarks in tribute to Mr. Norman A. Cocke, "Man of the South for 1959" herewith:

TRIBUTE TO NORMAN A. COCKE, MAN OF THE SOUTH FOR 1959

(By Dr. A. Hollis Edens)

I am pleased to have the privilege of speaking to you for a few minutes about our friend, Norman Cocke, and about the Duke Endowment and Duke University, with which he is associated. Clearly it is not possible within a few minutes to do justice to the subject. I can merely sketch a few thoughts. As a matter of fact, it happens that I have occupied twice before the position I hold tonight in honoring Mr. Cocke. The first occasion was a dinner of appreciation for him in 1953 after he had been made president of Duke Power Co. The second occasion some years later, was at a dinner of Charlotte Duke Alumni and friends honoring him. On these two occasions (many, perhaps most of you, were present at one time or the other), my observations were personal in appreciation of his modesty, his devotion to his profession, his generosity, his genial enjoyment of his friends, his sensitivity to human need, his sense of humor, his capacity for friendship, and his other personal attributes. On one of these occasions I engaged in what was intended to be a bit of friendly kidding about his Virginian ancestry, his honorary doctors degrees, his homemade halo which we were fashioning for him that night and about my relationship to him as one of my bosses.

Tonight, I would like to be entirely serious and speak generally about his relationship to Duke University and to the Duke Endowment, which foundation is such a vital part of the life of Duke University. Indeed, his relations with the two are so close as to be inseparable.

Knowing Mr. Cocke's innate modesty, I am sure that he would say that the work of the Duke Endowment and its impact on the University and on the people of our region is the product of many hands. This is always true of any great accomplishment. But it is also true that guidance and the making of policy over a period of years, in the hands of a few persons, may create the history of a people.

You may recall that James B. Duke designated a group of 12 associates to administer The Endowment when it was established in 1924. It may surprise you to reflect, as I have, on the fact that today, some 35 years later, only four of those original trustees remain active on the Board. They are Mr. George Allen, Mr. Alex H. Sands, Jr., Mr. Bennette Geer and Mr. Norman Cocke. Therefore we may narrow our appraisal of the leadership that has been exercised over a period of some two generations.

The man we honor has participated at the highest level in the administration of Mr. Duke's gift to our people. As vice chairman of the Endowment since 1934 Mr. Cocke has lived daily with the life of the Endowment, has weathered the economic tides, has helped make the necessary adjustments of policy and operation to constant change. In short, it has been his responsibility and opportunity, with a few others, to create all of the history the Endowment has had. To paraphrase Mr. Churchill—rarely have so few men been in a position to do so much for so many.

Now it is clear that the force of the Endowment in our region has contributed to an explosion of learning and healing. This being a political year, let us for a moment take a look at the record.

I have recently examined some of the Endowment's reports which summarize its distribution of income since 1924. I hesitate to quote the figures for fear that my information is incomplete. But the figures show that four educational institutions in the Carolinas have received more than $100 million; that 240 hospitals and 56 orphanages have received more than $36 million; that superannuated preachers and rural churches together have received $5½ million. In all, through December of 1958, the Endowment had distributed and allocated a grand total of $146 million.

The words "grand total" may be taken in their broadest meaning here because the intangibles probably are more important than the dollars. In a sense the Endowment follows men through their lifetimes, assisting them at the critical times, beginning with their education and struggle to maturity, standing ready at the point of illness and crisis and continuing through to retirement. Who can measure the chain reaction that has been initiated? What is the worth of an outstanding professor whose employment or retention is made possible by Endowment support? How can one estimate the number of lives saved in hospitals receiving Endowment aid? What is the worth of human resources developed in orphanages? In essence, then, the Endowment always has been concerned not with dollars, but with people.

Mr. Cocke and his associates also have been pioneers. In 1924 they entered a field where there were no precedents, no established machinery. As has often been said, it is a most difficult thing to spend money wisely. Let me remind you that in the area of hospitals alone, 1924 was a long way from 1959. There were about 6,000 hospital beds in the two Carolinas; today there are more than 20,000.

There was need for advice in maintaining accounting and clinical records; for education and information; there was unnecessary duplication; there was need for uniform business procedures. There was no Blue Cross. The pioneer leadership of the Endowment in these areas and others may be said to have set off many of the lesser explosions that have followed.

Indeed, some maintain that the Endowment's role in initiating what has happened to medical care in the Carolinas has had great influence on what has happened at the national and international levels.

Insofar as Duke Hospital is concerned, it is well known of course that it is the Endowment which has nurtured the young university, has stood at its side through the years and has helped it to grow and mature. It is not for me to claim credit for the university; it is, I believe, obvious, however, that the development of Duke and the other benefiting colleges has altered the face of the southeast and beyond.

The force of fresh ideas, the scope of enlarged services, the very presence of stronger colleges has widened the vision of others and enhanced the progress of us all. Mr. Cocke has seen this happen too and has helped it happen. He has been a member of the Duke University board of trustees since 1947 and its chairman since 1954. In these positions he has stood in a key position from which to observe and to give counsel and support.

I do not know when in the course of time the history of the Endowment and its beneficiaries will be written. I merely hope that it will be. When the story is told those who come after us will be able to understand more fully the dimensions of service rendered by Mr. Duke's legacy as administered by his trusted friends.

We honor tonight one of those friends who has spent his life fulfilling the injunction to make men through the Endowment and Duke University. The record I have sketched is not only a monument to the founder, it is also a living tribute to Norman Cocke himself and of his associates who join us in honoring him tonight as Man of the South.

The Item Veto

EXTENSION OF REMARKS
OF
HON. FRED SCHWENGEL
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. SCHWENGEL. Mr. Speaker, the merits of the item veto, will be discussed pro and con again this session, and it is my feeling that Congress should deal with this matter forthrightly so that the people who support this great Government of ours through their taxes will be assured that it is not being shunted aside or swept under the rug, so to speak.

There has been considerable interest in favor of the item veto among the people I represent. One of the latest manifestations of that interest was an editorial in the Burlington (Iowa) Hawk-Eye Gazette on January 13. Under leave to extend my remarks, I ask consent that the editorial appear in the Appendix of the RECORD.

The editorial follows:

THE ITEM VETO

The Iowa Taxpayers Association rightly has fingered a major culprit in the never-ending growth of Federal spending—the lack of an item veto.

The President must either sign all of an appropriation bill, or toss it out the window

entire. This is what happened to last session's public works measure. Eisenhower objected to a few projects in this bill, but could not eliminate those. So he vetoed, and the result was passage of a new bill worse in most respects than the original.

No excuse can be offered for not providing an item veto. It doesn't happen because of pork barreling. A Congressman with a pet district project, which may have no validity in the national picture, gets it inserted in an omnibus bill, confident that the President must either accept it or veto some necessary appropriations.

This means more money, often foolishly spent. The item veto should be a major goal of the new Congress.

The Liberal of Today

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. ALGER. Mr. Speaker, a constituent recently sent to me an editorial from the Shreveport Journal of September 29, 1959, by Bomar Jaymes entitled "The Liberal of Today." This interesting comparative analysis of the liberal of today and the liberal of bygone days is worthy of the attention of every Congressman, it seems to me, particularly in view of the controversies that exist today between those who are known as conservatives and liberals respectively. This article speaks for itself:

AIN'T WHAT HE USED TO BE—THE LIBERAL OF TODAY

(By Bomar Jaymes)

The political liberal of today ain't what he used to be.

He has changed his colors and reversed his field.

The liberals who wrote the Declaration of Independence, the Constitution of the United States, the Bill of Rights and who fought in the Revolutionary War had nothing in common with the liberals of today.

These wise Colonial forebears believed in human rights and personal liberties, and they pledged "their lives, their fortunes and their sacred honor" to the protection of these rights and liberties.

They supported their beliefs with deeds as well as words.

But, the liberal of today professes one thing and then practices something entirely different.

He talks big, loud and long about his dedication to the protection and preservation of human rights and personal liberties.

And then he proceeds to advocate and support legislation that imposes upon the people regulations, restrictions and controls which curb their rights and freedoms.

One of the principal earmarks of today's liberal is the unwavering dedication to the spending of other people's money, disguised as Federal funds. And the bigger the spending, the better he likes it.

He is a confirmed believer in government handouts * * * in a wide variety of government services, in government aids and in so-called government benefits. This is his principal stock in trade.

He professes to believe that a person has a right to enjoy the fruits of his labor. But at the same time, he advocates and supports legislation which consumes a sizable portion of the people's income.

He is dedicated to the principle that the Government has a right to take a portion of a person's income and freely hand it out to persons who did not earn it.

He does not profess this, of course. He merely practices it.

He speaks glowingly of spending billions of dollars of Federal funds for the benefit of the people, when he knows that these Federal funds must come out of the pockets of the people he professes to aid.

He knows that the term "Federal funds" is a deceptive misnomer; that what he is taking about is taxpayers' money, since the Government has no money except that which it takes from the people in the form of direct and hidden taxes.

But the liberal is careful never to mention this. By his words, he leads the people to believe that they can get something for nothing, so long as they get it from the Government.

The liberal of today poses as a great humanitarian dedicated to the promotion of the people's welfare while, at the very same time, he pilfers their pockets by the enactment of heavy tax levies.

The liberal long since has ceased to believe that thrift and economy in government is a virtue to be practiced.

Whenever there is a conflict between thrift and spending, you will always find the liberal on the side of spending.

Deficit spending by the Federal Government does not concern today's liberal. Neither does inflation.

He may publicly profess otherwise, but his actions speak louder and more convincingly that his empty words.

In the past 30 years, the liberal has taken no firm or positive step to curb deficit spending, which is one of the primary causes of inflation.

He goes on his merry way, posing as the people's benefactor. Meanwhile, he appropriates and spends their money for various so-called aids, benefits and services which are calculated to influence their votes, but which actually consume a portion of their income.

The liberal professes to have the interest of the people at heart. However, he has supported a policy of big Government spending which has stimulated an inflationary spiral that has destroyed half of the purchasing power of the dollar in the past 20 years.

He has advocated and supported an agricultural program costing the taxpayers approximately $45 billion since 1932, and currently is costing them upward of $6 billion a year.

In supporting the agricultural program of farm price supports, the liberal has contributed to deficit spending, to increases in the cost of foodstuffs and to increases in the taxes levied upon the income of the people.

The liberal professes to believe in the free enterprise system. Yet he consistently badgers, criticizes and condemns businessmen, particularly the successful ones.

He acts as if he is dedicated to the proposition that the successful should be penalized and the unsuccessful rewarded.

While he poses as an advocate of the free enterprise system, he usually supports socialistic schemes which tend to weaken and penalize the free enterprise system.

A few cases in point: The TVA, the REA, hydroelectric plants, and many other socialistic government-provided services which compete in various ways with taxpaying private enterprises.

The liberal of yesteryear believed that the Constitution guaranteed man the right to work where he pleased, when he pleased, and for whom he pleased so long as he could secure employment.

The liberal of today believes that the right of a person to work when, where and for whom he pleases is a union-granted privilege, not a God-given right.

He believes that wages should go up * * * that the prices of goods and services should go down * * * all at the same time. Yet he knows, or should know, that wages constitute the major cost of producing goods and services and that when wages go up, prices also and inevitably must go up.

The liberal believes that a business or industrial monopoly should be subject to the antitrust laws. But he also believes that an equally big and powerful labor organization should not be subject to the same antitrust laws.

He believes that a monopoly is not a monopoly when it is a labor organization.

The only true and accurate way of judging people, including politicians, is by what they do, not by what they say.

This simple formula reveals the liberal of today in his true light.

He is not a friend of the people, even though he piously poses as their great benefactor.

By his acts, he has been a major contributor to Government deficit spending, to inflation, to a labor movement that increasingly imposes its will upon the Congress and often resorts to coercion and crime to subjugate resisters.

The liberal of today believes in big government, big spending and big deficits, and in the philosophy that you can get something for nothing so long as you get it from the Government.

He does not publicly profess to believe in these things. But a political liberal, like everyone else, must be judged by what he does, not by what he says.

The liberal of bygone days cherished, above everything else, his God-given rights and personal liberties.

He was willing to stand up and fight for these rights and liberties. And he did that time and again down through the glorious history of our Nation.

That is the kind of liberal we need today.

That is the kind of liberal we must have if we are to enjoy once again the rights and liberties envisioned by our Founding Fathers and incorporated by them in the Declaration of Independence, the Constitution and the Bill of Rights.

Do we have in our Nation today liberals of that stature * * * liberals who are willing to say, as did their illustrious forebears, "with a firm reliance on the protection of divine providence, we mutually pledge to each other our lives, our fortunes, and our sacred honor" that these rights and liberties shall not perish?

The moving hand of time eventually will write the answer.

Danger Points to Public Power in 1960

EXTENSION OF REMARKS
OF
HON. HAROLD T. JOHNSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. JOHNSON of California. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following speech by Senator CLAIR ENGLE before the Electric Consumers Information Committee Legislative Workshop, Monday, January 18, 1960:

You and I have been working together toward a common goal for a good many years—so I am glad to have this opportunity to appear before the Electric Con-

sumers Information Committee. I want to talk to you a little about electric utility policies and politics. We both know these subjects rather well. I hope that I can add something to your already extensive information on these subjects.

I am glad that this legislative workshop is working in the interest of the consumer. The consumer is the least represented element in our society today. Under this administration, which took over as a businessman's administration, the consumer has been pretty well ignored. The private power companies of American picture the consumer as a downtrodden taxpayer who is systematically being forced to pay two power bills—his own and that of the fellow who gets power from public projects. We know that the consumer is not only a taxpayer but also a ratepayer. He pays the rates set by the utility—a fact which the private utilities choose to ignore and which this administration has not yet discovered.

In the kind of environment we have had in recent years, it is particularly important that the Electric Consumers Information Committee be more active and vigilant than ever. The groups that support your organization are entitled to special commendation. I speak particularly of the National Rural Electric Cooperative Association, headed by my former colleague in the House of Representatives, Clyde T. Ellis. The American Public Power Association, with Alex Radin, has done fine work. The AFL–CIO has recognized a legitimate interest in the welfare of the consumer. The Farmers Union and the National Grange, as farm organizations, have taken more than ordinary interest in consumer affairs. The Northwest Public Power Association is active and vigorous as was the Hell's Canyon Association during the difficult struggle for that project.

It is necessary for these organizations to keep on the statute books a public power policy that is beneficial to the power consumers of America. These power policies have not received the support of this administration. Congress has been deluged with proposals to water down the laws that make power cheaper throughout the land. Whenever possible the administration of existing laws has been distorted to impair the established national power policy as imbedded in the statute books. So far, none of these laws have been repealed. Sometimes they haven't been executed as they should. But they are still on the books. A Federal Power Commission has been appointed that does not agree with the power policy written by the Congress. The present Federal Power Commission is not interested particularly in protecting the consumer. The Bureau of the Budget has taken a stranglehold on new projects. Federal public power development has been either completely stopped or delayed because the officials in this administration are not in favor of public power.

This will be an active and busy session of Congress. We will have to be adjourned by July 1 or thereabouts to attend the national conventions. In the rush of getting through the appropriation bills and major legislation demands by the administration, it will be necessary for all the electric consumer organizations to be especially alert that some proposal adversely affecting their interest does not get by undetected. There are some matters that will be of particular importance. I will mention them.

First, we may again be faced with a proposal in one form or another involving the so-called "partnership" program advocated by this administration. You will recall that this proposal took specific form first on the Trinity River project in California. Just to refresh your memory: The administration proposed that a private power company be permitted to build the powerhouses on an otherwise completely federally financed project. This would accomplish economy, in the mind of the administration, by saving the cost of the powerhouses to the Federal Government. It is hardly necessary for me to emphasize that the consumers would pay for the powerhouses in any case. In the end, the private power company instead of the Federal Government would own the powerhouses, and the consumer would pay nearly twice as much for the power. This is a costly way of avoiding creeping or crawling socialism.

Last session we defeated the partnership program when the House Interior Subcommittee tabled the bills which would have put it into effect. Congress then proceeded to appropriate $2,400,000 to start Federal construction of the powerhouses. But this isn't enough to firmly nail down the proposition. We will need at least $20 million more for fiscal 1960 to really get these powerhouses beyond the planning and design stage. A California newspaper last week quoted a vice president of the Pacific Gas & Electric Co. as saying: "Our faith in the partnership concept of water and power development is undiminished. We intend to continue our advocacy of this principle on Federal, State, and local projects within our territory of service * * *."

This indicates that the power company hasn't given up. Some effort may be made this year to block the Trinity funds for the powerhouses. Accordingly I welcome the continued attention of your membership to this particular issue.

Another question directly involving public power to the consumer is the proposal to build an intertie line between the Columbia River powerplants and the Central Valley project in California. These are two Federal power systems. This administration now proposes to tie them together with a private line built by a private power company. This scheme, of course, will make the private power company the tollkeeper. A contract was prepared last year to put the proposal into effect, but we stopped it. I am not sure how long it will stay stopped. It is our belief that a Federal line should interconnect the two Federal systems. Power that cannot be used in the Central Valley system or by preference customers can be wholesaled to the private power company on the same basis that nonfirm power from the Central Valley project itself is now sold to the private power company. Let me emphasize that this proposal would not divert power from the Columbia River system for which that system has any need or use, but would provide revenue to that system for kilowatts now going to waste. For the preference customers in California a Federal construction of the intertie is the only method by which their preference can be preserved. In 1951—the 82d Congress—I introduced a bill to provide for a Federal intertie between the Columbia River and the California Central system. The private utilities fought it tooth and nail. Now they are for it, provided they can do it. The economic justification of this intertie has never been in question. The only issue has been whether or not the Federal Government would be permitted to interconnect those two systems. The private utilities defeated legislation to permit that to be done. Now they are for it, provided they can do it. I doubt that the President would sign legislation providing for a Federal intertie. The best we can hope for is to prevent the execution of a contract which permits it to be done by private utilities until after the first of next year—when I hope we will again have a Democratic President.

Third, we want to make sure that none of the pending proposals to wreck the REA achieve the status of law as a part of the last will and testament of the dying Eisenhower administration. The REA can be economized into oblivion by hoisting the interest rates on REA loans or driving the cooperatives toward high-priced money markets of Wall Street. This is clear from the Republican program embodied in legislation pending before Congress. I refer specifically to S. 133 and H.R. 797, among others. At the present time neither of these bills has gotten out of committee, and I hope we keep them there. I suggest that you read the editorial entitled "REA and Tight-Money Policy" in the January issue of Rural Electrification. It points out that the drive to raise REA interest rates is a part of a carefully planned administraiton tight-money policy. The editorial concludes: "As inflation medicine, this policy is poison." There is growing pressure on public power agencies to make them accept higher interest rates. That pressure will be increased during this session of Congress.

The purpose of these administrative and legislative actions is to reverse the national power policy laid down in the REA Act and other Federal legislation. That policy provides for the lowest possible rates for power produced at public dams consistent with the repayment of the cost of the project. It has, further, historically provided a preference to public power for cities, municipalities, public agencies, and irrigation districts. We have not forgotten that when the President was called to give an example of socialism he named the TVA. The Administration has clearly been alined with the private power companies during the past 7 years. This year may be their last chance to get in their licks.

As part and parcel of the effort to cut back public power development, we have been faced consistently in recent years with a no-new-starts policy. This has been dressed up as an economy measure. The projects which produce Federal public power have been special victims of this no-new-starts policy. We authorized some 32 projects last session by overriding the veto of the President of the United States. I am not sure, however, how fast they are going to start because the Bureau of the Budget can impound the money appropriated to build these projects. Some of the more controversial new starts have not as yet been able to get underway.

For example, Yellowtail Dam on the Big Horn River was authorized in 1944 as part of the Missouri Basin program. Congress has repeatedly confirmed its decision with reference to the need for this project. Each and every year for the past 7 years this administration has found new reasons for not going forward. The people of Montana and Wyoming need this project, both for its water and for its power.

There are a great number of authorized smaller Missouri Basin projects which would yield power but have not been started by this administration—and will not be started unless continuous pressure is exercised.

The seven Colorado River States have a vital interest in the power to be developed in the Upper Colorado River storage project. This administration inherited that project from its predecessor—fully engineered and ready for authorization. The Congress authorized this project under reclamation law, including public transmission lines. Now, as soon as the project is underway private utilities are prepared to help the administration economize and save some money. In this case the economy consists of turning over the public power to the private utility companies who would provide the transmission lines. Here again, as in the Columbia River situation, this power would in the process be freed of the preference clause and would be subject to distribution by a private power company.

In summary, we are fighting a defensive battle in Congress and with the administration to retain what we have in the public power policy of this Nation for the benefit of the consumer.

The executive branch has teamed up with the private utility and the banks to make it tough on every phase of public power. Power producing projects have been the victim of the no-new-starts program. Money has been tightened up on REA cooperatives—and the interest rates have been raised. The so-called partnership has been actively pushed to take the Federal Government out of power production at federally built projects. The power preference for public agencies has been challenged in national advertising by the private power lobby—with the cost of the advertising written off as a business expense. The President described TVA as the best example of creeping socialism—and this attitude has permeated his whole administration. This was the most direct and powerful assault on the electric consumer in the past 30 years.

On the whole, we have sustained the attack rather well. We have lost no major legislative battles—no laws have been repealed. Some have been watered down. We have been hurt, but not ruined.

We can fight 1 more year. We will be vigilant and active in defense of the interests of the electric power consumers. And we can look forward after 8 long hard years to a new administration that will support and implement the 50 years of Federal legislation beneficial to the electric power consumers of America.

Minnesota Labor Leader Wants Congress To Prohibit Strikes and Boycotts by Medical Profession

EXTENSION OF REMARKS
OF
HON. JOSEPH E. KARTH
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. KARTH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from R. A. Olson, president of the Minnesota AFL–CIO Federation of Labor, and attached article which appeared in the Evening Star, January 11, 1960:

MINNESOTA AFL–CIO FEDERATION OF LABOR,
St. Paul, Minn., January 18, 1960.

The Honorable JOSEPH E. KARTH,
Congressman, Minnesota Fourth District, House Office Building, Washington, D.C.

MY DEAR CONGRESSMAN: You may recall that when I was in your office there were some letters from doctors and their wives urging you to support a law to take care of the racketeers, labor bosses, etc., that were running the unions today.

These letters must have been inspired by someone interested in the complete destruction of the labor movement, as in all of my experience with doctors I have never run across one who professed to know, or care, anything about how labor unions were run. Now they are suddenly vitally concerned about how the poor members of the unions are being taken in by their labor leaders.

We in Minnesota are plagued with a law prohibiting strikes by hospital employees. This law was passed at the instigation of the doctors.

I am enclosing a copy of an article I clipped from a paper in Washington recently. You will notice that the doctors went on strike when the chief of surgery was suspended. When a union threatens strike in any line over an issue such as this, the union is charged with interfering in the prerogatives of management. In hospitals, striking is prohibited by law. These doctors further insist that the administrator be dismissed. We don't even dare attempt to tell employers who to hire to run the joint, but the doctors do. They boycott the hospital so effectively that they will probably have to close, and subject many people to the loss of their hospital and may even risk their lives.

So, Mr. Congressman, I feel that it should be possible to have Congress investigate this case with the object in mind of passing a law prohibiting doctors from going on strike and carrying on a boycott. At the same time, it may be well to investigate the terrific charges and other practices of some of these holier-than-thou gentlemen of the medical profession.

Sincerely yours,

R. A. OLSON,
President.

[From the Washington Evening Star, Jan. 11, 1960]

HOSPITAL STRIFE SPLITS EASTERN SHORE TOWN

CAMBRIDGE, MD., January 11.—Churches in this eastern shore town stayed open yesterday afternoon so residents could pray for an end to the community strife over their hospital.

The question is whether Cambridge-Maryland Hospital will resume normal functions of housing and caring for the ill and disabled, or become a vacated building.

For days this eastern shore community has been stirred by the pulling and pushing over the way the institution is being run.

The bitter battle came to a head December 7 when the directors suspended indefinitely Dr. John Mace, the chief of surgery.

The doctors protested. They want Dr. Mace reinstated. And they want the hospital administrator, Harold Costen, discharged. They contend there is too much interference with the hospital's medical duties.

A boycott by the physicians has slowly emptied the hospital rooms. Last week it was announced the loss was $500 a day. There were indications this couldn't go on much longer.

The protesting doctors declared they would use Cambridge-Maryland for treatment of emergency cases only. There haven't been many of these. Persons needing hospitalization have been taken northward to Easton Memorial Hospital or down the shore to Salisbury's Peninsula General Hospital.

The doctors have to decide by tonight whether they'll reregister as members of the medical staff for the coming year. The hospital directors in a notice said that if enough applied, and were approved, the hospital will remain open.

Should the doctors ignore the deadline and not reapply for privileges, the directors' statement implied the hospital would be closed.

All the doctors indicated over the week end they would reapply.

Today also is the day for election of new members to the 18-man board of directors.

In another development, Baltimore Attorney Hyman Pressman, frequent critic of public officials, today urged Governor Tawes to intercede in the Cambridge-Maryland Hospital dispute to "prevent catastrophe."

In a telegram to the Governor, Mr. Pressman said the threatened closing of the hospital was "an intolerable situation which must be prevented."

In Annapolis a spokesman for the Governor said Governor Tawes had not received Mr. Pressman's telegram and therefore could not comment on it.

Questions About Disarmament

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 13, 1960

Mr. COHELAN. Mr. Speaker, an article by William Stringer, chief of the Christian Science Monitor's Washington Bureau, raises a number of questions about whether or not the United States is being entirely practical in the disarmament talks at Geneva.

Under permission to extend remarks in the RECORD, I submit this commentary for the attention of my colleagues. I do not wish to suggest that the answers to the questions raised by Mr. Stringer are clear, any more than he does himself. My thought is that these points must be given our most thorough attention:

First. Would underground nuclear testing be as sinister and as technically effective as we have imagined?

Second. Would the Soviets risk the massive international condemnation that would result from violation of an agreement to ban underground testing?

Third. Are there not very real objectives realized in a ban with limited inspection?

The article follows:

STATE OF THE NATIONS—MUST IT BE FOOLPROOF INSPECTION?

(By William E. Stringer)

WASHINGTON, D.C.—The first, toddling efforts to achieve a forward march in the disarmament arena are not progressing very well at Geneva. The conference of Soviet, British, and United States negotiators, aimed at achieving an agreed and inspected prohibition on the testing of nuclear weapons, has run into repeated stalemate.

In Washington's official view, this is the fault entirely of Moscow. Other experts, not at the Pentagon or the Atomic Energy Commission, wonder if the United States is being as reasonable and as wise as it might be. Has Washington—administration and Congress—listened too intently to the voice of no accommodation, which is the voice of Dr. Edward Teller?

Certainly the Americans are right in bringing forward new seismographic evidence at Geneva, some of which indicates that it's easier than previously thought to touch off a small underground nuclear detonation—in a round cavern—and disguise it as an earthquake. This is held to render inadequate the earlier American proposal for a system of 180 monitoring stations to detect underground explosions. Washington now wants free inspection of any and all seismic events.

President Eisenhower is aware that the current stalemate gives the Soviets an international test ban without inspection—just what they originally wanted—as long as no power resumes testing. He has condemned what he calls unwillingness on the part of politically guided Soviet experts to give serious consideration to the new seismic data. Unwilling to see the Geneva talks fail, Washington is reported ready to consider a phased ban on nuclear testing: agreement now on tests in the air and at the earth's surface, agreement later on underground tests when better detection methods have been perfected.

Washington's caution is understandable. Congress isn't likely to approve a test-ban treaty where inspection isn't awfully tight. Yet the question needs to be asked: Is this the best that can be done?

Those few who think otherwise make a number of points worth pondering:

1. Will small underground nuclear explosions actually help any nation very much to improve its nuclear arsenal? Actually, one of the few improvements the United States needs to make in its atomic weaponry is the development of a more powerful warhead for its forthcoming solid-fueled, intermediate-range missile the Polaris.

Perhaps—perhaps—by some kind of massive scaledown and computer calibration, a small-bore explosion in a spherical hole can help build a more formidable Polaris warhead, but this kind of testing should really be done in the atmosphere.

2. If Washington thinks the Soviets are stalling on a Geneva agreement, Moscow has reason to think that Washington is stalling. Twice the United States has put forward new inspection proposals; once the Soviets came round to agree to the new techniques. But right away the United States discovered new scientific data and upped its demands. To a suspicious Soviet mind, this looks as though Washington didn't want an agreement.

3. The United States is insisting on perfection in a field where perfection is unattainable. Is the risk that Moscow would attempt an underground test in violation of a treaty very great? "Probably not," is the comment. "The Soviets would need to conduct a series of tests, not a single burst, to amass any usable data. With a series, there is far greater risk of discovery. And think of the massive international condemnation that Moscow would reap, and the perilous new spurt in the arms race that would be touched off, if Moscow sneaked and got caught."

4. Even a limited inspection system would commit Moscow to control and detection centers on its own soil, thereby "opening up" the Soviet Union to a degree—a very worthy objective.

Do these arguments add up to sufficient reason for shifting American policy at Geneva, for taking a "calculated risk" and concluding an agreement based on 180 monitoring stations—perhaps subject to revision as new detection data came to light?

This would not be an easy decision for the President to make. He is certainly not being urged in this direction by nuclear adviser Lewis L. Strauss, nor is Congress by Dr. Teller. Both of them are very "strict constructionists" when it comes to test-ban agreements with Moscow. Perhaps they are right. Yet meanwhile the stalemate continues, and each side charges the other with being unreasonable.

Our Farmer Can Now See a Ray of Hope

EXTENSION OF REMARKS
OF
HON. BEN F. JENSEN
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. JENSEN. Mr. Speaker, as you know, on November 16, last, I wrote President Eisenhower recommending the soil bank withdrawal plan, as explained in my remarks to the House on January 7, at which time I said I would send the plan to many Americans in all walks of life, which I did, and I am now pleased to report that the response and support of that plan has been most encouraging, from Members of Congress and nationwide.

I have just received the following letter from President Eisenhower:

JANUARY 22, 1960.

The Honorable BEN F. JENSEN,
House of Representatives,
Washington, D.C.

DEAR BEN: I have your recent letter regarding the soil bank withdrawal plan, which has been given serious study here. CHARLIE HOEVEN is also interested in this general approach.

A number of people in the executive branch are working actively on this proposal; a position on it will be firmed up shortly. The plan as you have outlined it is quite clear and is well understood and I appreciate your constructive interest.

With warm regard.

Sincerely,

D. E.

Hence, Mr. Speaker, we can now at least see a ray of hope for our farmers for the first time during the past several years—for if this plan is made law, to pay liberally in kind for effectively reducing production of the costly price depressing surpluses, of not only corn and wheat, but also of cotton and tobacco, it will reduce the surpluses to normal size in about 2 years and will tend almost immediately to stabilize all farm prices on a higher profitable level without added cost to our taxpayers, farmers themselves being substantial taxpayers.

Now we can only hope that President Eisenhower will urge—yes, even demand—that this plan be enacted into law, just as he recommended in his farm speech to Congress on January 9, 1956.

Damon Runyon Cancer Fund Awards to State of Washington

EXTENSION OF REMARKS
OF
HON. WARREN G. MAGNUSON
OF WASHINGTON
IN THE SENATE OF THE UNITED STATES
Monday, January 25, 1960

Mr. MAGNUSON. Mr. President, the Damon Runyon Fund for Cancer Research has honored me by asking me to present a check for $10,000 to the Children's Orthopedic Hospital in Seattle for cancer research.

This fine institution, as Mr. John H. Teeter, executive director of the fund points out in his letter to me, has received splendid support from the Seattle Variety Club, and the award represents, as he states, recognition of the consistent help given to the fund by show business in the area.

Previously, $132,475 has been awarded by the Damon Runyon Fund to other Washington State hospitals and institutions for cancer research, and on several occasions it has been my privilege to present the ever-welcome checks.

I think it is worthy of note that the Damon Runyon Fund is the only private agency devoting its entire resources to cancer research, and also that all operating costs are paid by the Walter Winchell Foundation, for which I have an equally high regard.

I ask unanimous consent that Mr. Teeter's communication to me be printed in the Appendix to the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

Senator WARREN G. MAGNUSON,
U.S. Senate, Senate Office Building,
Washington, D.C.

DEAR SENATOR MAGNUSON: We are honored to include among the cancer pioneers you and your former colleague, Senator Homer T. Bone, from the State of Washington.

The original enabling legislation in 1937, by you and your colleagues, created the first Government appropriation for cancer. The original bill (1937) stated $750,000 for a building and $700,000 to start a research program.

Due to the depression, only $400,000 was appropriated, one-half of which was for the purchase of radium. This modest beginning has grown to an allout attack against cancer, embracing the Government's National Cancer Institute, the Atomic Energy Commission, the American Cancer Society, and the Damon Runyon Fund.

The National Cancer Institute appropriation for the fiscal year July 1, 1959–60 was $91,250,000. Of this total $37,068,000 has been ear-marked for research projects.

"The Damon Runyon Fund is the only agency devoting its entire resources to cancer research. There are never any deductions for expenses from contributions to the Runyon Fund. The Walter Winchell Foundation pays all the costs of operating the Damon Runyon Fund.

To date $13,304,788 has been allocated in 999 grants and 446 fellowships in 267 institutions in 48 States, the District of Columbia and 23 foreign countries.

Of this grand total $132,475 has been allocated to the following institutions in the State of Washington:

Sacred Heart Hospital	$5,400
Seattle University	7,000
State College of Washington	10,000
Tumor Institute of the Swedish Hospital	22,075
University of Washington	88,000
Total	132,475

The Fund is also the recipient of 619 bequests by will amounting to over $2,580,000.

Since the introduction of your original cancer legislation, some of your distinguished colleagues have died of cancer. Others now serving in the Senate have come to know cancer personally and have met its challenge with courage and direct action. Your distinguished colleague, Senator NEUBERGER, has by his courage, nailed his banner on the masthead as a cancer fighter.

We wish at this time to announce an additional grant in the State of Washington and ask your assistance in presenting a check for $10,000 for cancer research to the Children's Orthopedic Hospital in Seattle, a project of the Variety Club of Seattle.

The Damon Runyon Fund, cognizant of the consistent help given it by Show Business, is by this grant adding its vote of confidence to a fine hospital in Seattle, Washington—your home State.

Sincerely yours,

DAMON RUNYON MEMORIAL FUND.
JOHN H. TEETER,
Executive Director.

Mr. MAGNUSON. Mr. President, I further ask unanimous consent that there be printed in the RECORD a geographical breakdown of cancer research allocations by the Damon Runyon Fund as of November 30, 1959.

There being no objection the compilation was ordered to be printed in the RECORD as follows:

Damon Runyon Memorial Fund for Cancer Research, Inc.

Geographical breakdown of allocations, Nov. 30, 1958

Crisis of the Commuter Railroads: No. 1

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. IRWIN. Mr. Speaker, the commuter railroad conditions in the Fourth Congressional District of Connecticut, which I represent in this House, and those of other metropolitan areas have reached the critical point. Dwindling passenger traffic has resulted in shrinking revenues for the commuter railroads which in turn invite disaster while further worsening traffic and financial problems of our major cities. The importance of rail commuter service to a strong economy, to national defense, and to our security warrant the attention of the Congress to problems of the commuter railroads. To help focus attention on these problems, I shall submit a series of articles, statements, and other matter bearing upon the subject. Pursuant to permission granted, I insert into the Appendix of the CONGRESSIONAL RECORD, a letter published in the Ridgefield (Conn.) Press of January 21, 1960:

REPRESENTATIVE IRWIN REVIEWS COMMUTER PROBLEMS

To the Editors:

I appeal to you as readers of this paper to let me know your views on the New Haven Railroad commuter service problems.

You know the difficulties, indeed you have to live with them. What you want, need, and deserve from the commuter service has deteriorated and nobody knows it better than you.

In the Fourth Congressional District of Connecticut live some of the most talented people in the country. They have proven this in countless business successes and I want to call on them. They can provide invaluable help and insight into the commuter issue to supplement findings from my personal studies and inspections of the railroad's operations.

The overall problem is simple to state: How do you transport some 35,000 persons to New York City in the morning and return them at night with safety and on time. This isn't being done.

A look at highway travel as an alternative emphasizes that it must be done.

To carry the 35,000 commuters, say with car pools of four in a car, would take 8,750 cars—a bumper-to-bumper line from Bridgeport to Greenwich, about 28 miles. Imagine what would take place in Westchester and picture the scene at the New York bridges? Go a step further into the city—traffic experts estimate conservatively it would take more than 50 acres to park the 8,750 cars. Where do you find 50 acres in the middle of New York or near the middle of the city?

Railroad commuter transportation is the only way to do the job.

Now, in my studies of the commuter issue, I have come upon some startling facts. Take the commuter service breakdowns. Railroad officials frankly admitted to me that the trains don't get proper maintenance. For this, they said, every car should have a thorough renovation every 6 years. Motors, running gear, electrical equipment, interior fixtures, seats, windows, and so forth would be inspected and repaired or replaced if necessary * * *.

But the passenger deficit eats up funds, leaving nothing for proper maintenance work, the New Haven authorities claimed. They added that proper maintenance hasn't been given in the past and isn't being given now.

What are the results? You commuters know what the lack of proper care has done to interiors of the cars. The railroad officials confirmed what you have undoubtedly believed—that the breakdowns occur largely because of poor maintenance. For example, it isn't uncommon in bad weather for water to leak into electrical equipment because of bad gaskets and cause short circuits and stall trains. Gaskets, the train officials said, would be inspected and kept in good condition had the trains been getting the 6-year renovation work.

Failure to provide the work has had a cumulative effect. The authorities told me the renovation jobs would normally cost $10,000 per car. Now, they say, it would cost $66,200 for each motorcar and $52,700 for each without a motor to put them in top-notch shape. They said it would be necessary to "remanufacture" the cars.

The New Haven's 100 new stainless steel cars, purchased in 1954, wouldn't need remanufacture but are due this year, under normal circumstances, for the 6-year renovation work. It doesn't look like this will be done.

Breakdowns, in addition to causing distress by resulting in delays, are serious hazards. I cannot overemphasize this. The railroad people at New Haven contend that they aren't hazards. I ask you, what is a breakdown on tracks crowded during the peak commuter hours?

The railroad has installed certain safety devices in its control towers to regulate switches and signal lights. They also have devices to indicate the position of trains in the vicinity of the switches.

But the switches are not automatic. In addition, there are no speedometers in the multiple-unit cars. One engineer told me experience must serve as the engineer's speedometer. I believe there is too much room for human error to regard breakdowns, especially during busy periods, as anything but hazards to safety.

The recent accident at Rowayton proves the point. It was caused by a human error—the engineer of a train coming to the aid of another that had stalled was misinformed by a dispatcher, so the Public Utilities Commission said, as to the location of the stalled train and the result was an accident. It could have been far more serious.

The conditions on the New Haven have an obviously bad effect on morale of the employees. They appear to have little or no interest in promoting the railroad. I believe that better conditions, and some places where the employees work are very depressing, contribute to morale improvement and see employees do a better job.

Railroad management has told us its commuter line deficit wouldn't be anywhere near as bad if taxes weren't so high. This can't be disputed. Last year, for example, the New Haven paid some $10 million in taxes, mostly to New York. About $600,000 of this went to Connecticut in earnings taxes on passenger operations, the management has pointed out, an amount equal to the cost of giving 60 cars the 6-year renovations.

Whether New York, with its tremendous financial problems, could be of much help in the way of tax relief, if any at all, remains to be answered. Tax relief, admittedly however, isn't the only answer.

Fare increases which might be justified in some instances won't put operations back in the black and reportedly tend to drive away commuters—if the increases are applied without improvements in trains and services or even a guarantee that conditions won't get even worse.

There is also a question of equitable taxation—other forms of transportation don't bear proportionately equal tax loads. These other means of transportation also enjoy enormous amounts of financial aid, from local governments and the Federal Government.

The commuter railroad problem won't be answered by massive grants of Federal aid alone. A Federal transportation policy covering the commuter lines is essential.

Railroads are private businesses that must make profits to survive—and they are here to stay. They will increase in importance with the growth of our cities and suburban areas. Answers to the commuter service problems must be keyed to a long-range program for orderly development of good economic mass transportation systems which include highways, air facilities and other means of travel.

Representative DONALD J. IRWIN.
WASHINGTON, *January 15.*

Government Should Set Example

EXTENSION OF REMARKS
OF
HON. LEO E. ALLEN
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. ALLEN. Mr. Speaker, under leave to extend my remarks, I include the following editorial, entitled "Government Should Set Example," which appeared in the Rockford (Ill.) Register-Republic of January 21, 1960:

GOVERNMENT SHOULD SET EXAMPLE

President Eisenhower's annual Economic Report to Congress was largely a rallying cry to the Nation for a renewed battle against inflation. He was able to report that the average number of Americans with jobs in 1959 was well above that a year before, that total income went up 5.5 percent during the year, and that the real buying power of Americans gained 2.2 percent.

But the difference between total income and purchasing power shows that the cost of living has also gone up, thus pointing clearly to the importance of a strong fight against inflation. The President, in an effort to get people to think in terms of national solvency, urged industry and labor to exercise self-discipline in cutting prices and keeping wages in line. But the improved efficiency and greater output per worker which are necessary if business is to hold the price line will not come about if the public's interests are ignored in the settlement of labor-management disputes.

The President apparently believes that there can be greater efficiency in the steel industry in the coming months to offset the extra costs of the new contract signed recently with the union. But there are well-founded doubts that the steel price line can be held, in view of the settlement which provides increased wages and benefits during the next 30 months and postpones action on working rule changes which would bring about greater productivity.

A sure-fire approach to the inflation problem would be for the Government to take the lead in cutting costs—a step which was not indicated in the proposed budget for the next fiscal year. The actual increase in nondefense spending in the President's budget for fiscal 1961 is about 5 percent; although 57 percent of total spending will be for major

national security, the $45.6 billion earmarked in this area is actually $82 million less than will be spent this year.

This means that, although the overall spending next year will go up 2 percent, the increase in the nondefense items amounts to 5 percent; it could be higher because the President assumed that Congress will boost postal rates and did not include the $554 million in his budget which would come from that source.

The call for business and industry to hold the price line has been heard frequently. So has the advice to consumers to shop carefully for price and quality. But the Federal Government itself must take the lead in the fight against inflation. The battle against unnecessary spending which was so enthusiastically supported by the public last year must be joined again.

The Simple Question

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. UTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I wish to include and article which appeared in the Westminster Herald, Westminster, Calif., by the editor and publisher, Mr. Lloyd Thomas, on the subject of the affiliation of teachers with the Communist organizations:

THE SIMPLE QUESTION

(By Lloyd Thomas)

An emotional furor is being whipped up over dismissal of a Westminster High School teacher, Harold Collins. Collins recently refused to answer questions about possible Communist affiliation put to him by trustees of Huntington Beach Union High School District, to which Westminster belongs.

In the smoke of this emotional furor, it occasionally appears that the basic issue is being camouflaged. Further, it appears some of the camouflage may be deliberate. This would be serious because such intent could be only to undermine confidence in our laws, our system of government.

We believe the issue can be reduced to simple terms. We'll try to do it.

The teacher is a citizen, entitled to all the freedom of a citizen under our Constitution. But when a teacher seeks and accepts employment and pay from the public, he assumes obligations to the public beyond those of a non-public-employed citizen. These obligations are clearly spelled out in the education code which sets forth conditions of employment for public school teachers in California. Every teacher is aware of these conditions.

One of the conditions of employment is that teachers must, if asked, give direct answers to questions about possible Communist affiliation.

Two general types of people will refuse to answer such questions: (1) Communists who will neither reveal themselves nor deny Communist affiliation for fear of perjury charges; (2) people who believe that the questions invade their privacy and rights granted under the Constitution, who refuse to answer as a matter of principle.

We can quickly decide that we do not want the first type, the Communist, in our public schools. But what about the second type, the honest person acting from principle?

And here is the point the smokescreen tends to hide; that the condition of employment at issue was not established for frivolous or trifling reasons. The condition—that teachers must answer questions about Communist affiliation—is perhaps the most vital weapon school boards have in the battle to keep communism out of our public schools. So the honest person acting from principle is, in effect, saying to the school board: "My personal rights are more important to me than your need for a strong weapon in the battle against Communist infiltration into public schools."

The only possible answer is that we want neither Communists nor such confused, misguided, or utterly selfish people as the second type in our public schools, where they come in daily contact with young people of impressionable ages.

It is as simple as that.

We have noted through the years that one of the marks of maturity is the ability to respect authority, to obey, to live by established laws, to work and play by the rules. This is harder for some people than for others. In some instances, for some people, it is apparently impossible. And in recent years a few loud groups have arisen to help dissidents who flout the law in the name of principle and freedom. Some of these groups have been active in the Collins case.

All thoughtful citizens must be distressed by the Collins case. It reveals a painful situation. But most painful, to us, is the vociferous help by some of the "principles freedoms liberties" groups which always seems loudest for those dissidents who just don't want to answer that simple question: "Are you a Communist?"

The Federal Minimum Hourly Wage Rate

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. ADDONIZIO. Mr. Speaker, I am proud to call to the attention of the House of Representatives a resolution of the city of Newark, N.J., memorializing the 86th Congress to adopt necessary legislation to increase the Federal minimum hourly wage rate from $1 to $1.25 adopted on January 20, 1960.

The governing body of the city of Newark realize the importance of increasing minimum wages to help boost the purchasing power of the broad masses of the population and support our ever-increasing capacity to produce. It is estimated that 180,000 low-paid workers in New Jersey would be affected by the proposed legislation, with an increase in their purchasing power of $49 million a year. As the resolution points out, the adoption of the legislation would "inure to the benefit of countless thousands of citizens in the city of Newark in the way of increasing their standard of living." This holds true, of course, throughout the country, and I hope that our other municipalities will join with my home city in pressing for early action on the issue.

The resolution reads as follows:

Whereas the passage by the Congress of the United States of the minimum wage law establishing a minimum hourly rate of $1 did much to improve the standard of living among the laboring people throughout the country; and

Whereas during the years since the enactment of that law the cost of living has been increased in very substantial proportions, diminishing the purchasing power of the dollar very materially; and

Whereas the 86th Congress of the United States will be called upon to act upon the passage of a measure to increase the minimum hourly wage rate from $1 to $1.25; and

Whereas the adoption of such legislation would inure to the benefit of countless thousands of citizens in the city of Newark in the way of increasing their standard of living: Now, therefore, be it

Resolved by the Municipal Council of the City of Newark, N.J.:

1. That the Members of the 86th Congress of the United States be and they are hereby requested to support the law to increase the minimum hourly wage.

2. That the Members of the United States Congress from the State of New Jersey be urged to use their best efforts in bringing about the adoption of the new minimum wage law.

3. That a copy of this resolution be forwarded by the municipal clerk of the city of Newark to each Member of the present Congress of the United States from the State of New Jersey.

Line's Busy

EXTENSION OF REMARKS
OF
HON. ROBERT W. HEMPHILL
OF SOUTH CAROLINA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. HEMPHILL. Mr. Speaker, under leave to extend my remarks in the RECORD, I desire to include therein the following editorial taken from the Wall Street Journal of January 20, 1960:

LINE'S BUSY

Mr. Eisenhower, who believes that the States and localities should depend less upon the Federal purse for their needs, twice in recent years suggested that the 10 percent telephone tax be relinquished by Uncle Sam and thus made available to the States. He hoped that the States would then take care of such problems as vocational rehabilitation and water pollution.

The States were happy to have the President make that recommendation, and last year Congress passed a law under which the phone tax will expire on June 30 this year. Governor Rockefeller of New York, who plans a $100 million hike in school revenue for the year beginning next September, had counted on taking over the phone tax to help his school program. Other Governors also had their eye on the tax windfall.

But the President, whose anxiety for a balanced budget and a surplus is well known, somewhere along the line decided Uncle Sam had to retain the tax for another year. So he asked Congress, in his budget message, not to let it expire.

Now we can understand the dilemma of both the White House and the Governors, who from what we hear are keeping the long distance phones busy planning pressures to induce the administration to give up the tax as scheduled. For one thing, if the States took it over it would permit them to increase present services or maybe create new ones without additionally taxing their constituents. But the White House knows that to

relinquish this tax would cut its revenues by more than it wishes now to lose.

But it seems to us that there's another party on this line who's got a right to speak his piece. And that's the taxpayer who has paid his phone tax ever since it was first enacted to help out in World War II—which ended almost 15 years ago.

We wish the taxpayer luck. But knowing that governments, whether Federal, State, or city, look with the same distaste on any suggestion that the taxpayer ought to be allowed to keep a little more of the money he's earned, we're pretty dubious concerning his chances. About all he'll get from our political supervisors will be busy signals and wrong numbers.

Ukrainian Independence Day

SPEECH
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. DADDARIO. Mr. Speaker, whenever freedom is born anywhere on this earth, it should be the pride of freemen to celebrate it. Freedom, like human life, is a precious thing. When it is first born, it must be nourished and protected against its enemies, the harsh realities of power or climate and disease. Often this protection is not enough and the spark of life is extinguished.

Such a tragedy occurred 42 years ago in the Ukraine. When the Czarist empire was in the throes of revolution as World War I ended, the people of the Ukraine established a Republic, in the right of all men created equal to choose their own form of government. The proclamation of an independent, free, and sovereign state was issued by the Rada on January 22, 1918.

While these formalities were in process of expressing the hopes and aspirations of the Ukrainian people, Soviet Communist forces were already in the process of destroying the efforts of democratic government, as they had betrayed the hopes of the people of Moscow and St. Petersburg. In December 1917, the Russians had boken with the Ukrainian Government and set up a puppet People's Republic. The pattern the world has seen so often since and has noticed repeatedly since the end of World War II was followed in Moscow's support to its henchmen, and the Ukrainian People's Republic in the principle of self-determination.

Then followed months of disorganized warfare. Hunger, typhus, and other diseases swept the Ukraine. Eventually the Communists choked out this young nation and by 1920, the Communists had subdued the people.

Despite the long years since the Soviet Ukraine was proclaimed, those who cherish liberty have kept alive the memories and liberties that were nurtured for such a short time on Ukrainian soil. Many Americans of Ukrainian descent look to the day when the Ukraine will again be free to control its own destiny. It is fitting that all Americans pause this week to mourn those who have been the victims of oppression and tyranny.

We honor not only the Ukrainian people who are held prisoners in their own homeland, but also those who have sought new lives in new lands, and who actively contribute to the cultural growth of their adopted homes. It is inspiring to witness how these people struggle against the superior might of Communist Russia in a valiant attempt to preserve their national indentity.

The tragedy of that first abortive attempt to establish a sovereign Ukrainian National Republic is past and familiar history, but it shall never be forgotten. Its commemoration persists as the symbol of the indefatigable spirit of all freedom-loving peoples. The Soviet fiction that the Ukraine is today a free republic is a vain and ludicrous attempt to deceive the world.

The American people share the dream that one day the Ukraine will, in fact, be free and independent. Until that day we must encourage, by words and deeds, the ambitions of these valiant people.

Colorado Attracts Meteorologic Skills

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. JOHNSON of Colorado. Mr. Speaker, it is my privilege to represent a district which, because it combines the mountains and the plains, is making a foremost contribution to man's knowledge of weather.

Furthermore, we are gaining additional benefits as they accrue from the interchange of findings and hypotheses by those meteorologists who conduct their research in our one area.

We owe much to these men, for I cannot overestimate the importance of our improving the accuracy of weather forecasts in this country. When poor forecasts result from our inadequate knowledge of the weather, the consequences can be serious to individuals and to the whole economy.

Farmers, in particular, suffer from the weatherman's errors. Oncoming blizzards, when unforeseen, have often cost our ranchers and cattlemen substantial loss of livestock. Certain crops, such as sugar beets, can be frozen into the ground and lost. With advance warning, much loss could be prevented.

Although he is a writer, few men know more about weather and the atmosphere than Roscoe Fleming. Author with Irving P. Krick of the book "Sun, Sea, and Sky: Weather in Our World and in Our Lives"—Lippincott, 1954—Fleming speaks with knowledge of this subject. Other reports of his on atmosphere related subjects have appeared in Science Digest, the Nation, Popular Mechanics, Collier's, and other publications. An article by Roscoe Fleming in the Christian Science Monitor of January 11, notes Colorado's importance in the atmospheric sciences. Capsule accounts of the work of nine research centers are given. All are helping us to get better knowledge of weather.

The article follows:

COLORADO ATTRACTS METEOROLOGIC SKILLS

(By Roscoe Fleming)

FORT COLLINS, COLO.—Colorado quietly is becoming a national center of the sciences dealing with the atmosphere and the weather, and with the vital water supply they produce.

Colorado State University here has announced a new division of meteorology to be headed by Dr. Herbert O. Riehl, one of the Nation's leading meteorologists, and for many years installed at the University of Chicago.

The division will be part of an expanded program dealing with all natural resources related to water, from the clouds that flow over the State to the thrifty disposition of the last drop of water they afford.

The famed hydraulic laboratory of CSU, which has done much work for the United States and foreign governments, will be relocated in the Rockies foothills just west of Fort Collins, in a new $635,000 home.

JETSTREAM BOOK DUE

Dr. Riehl is an authority on tropical meteorology, and is the author of a forthcoming textbook on the jetstream, and the upper atmosphere and its role in weather.

He said he is coming to Colorado partly because it's a joy to live here, and professionally because of the relatively untouched field of mountain meteorology, with the Rockies and the adjoining Great Plains constituting a meteorological province unique on earth.

He will start with general courses for undergraduates and eventually, he hopes, CSU will build a division which will offer both master's and Ph. D. degrees. As a land-grant college, CSU graduates farm, forest, range-management, and watershed-management specialists, to all of whom weather is vital.

SOLAR STUDY CENTER

But Dr. Riehl is only Colorado's latest talent acquisition. Dr. Bernard Haurwitz, formerly head of the department of meteorology, and oceanography at New York University, has removed to Boulder, where he is a member of the staff of the University of Colorado's High Altitude Observatory.

Established only a score of years, this observatory already has taken its place as one of the world's leading centers of sun study, and works closely with another almost as well known, the Sacramento Peak Observatory of the Air Force Cambridge Research Center in New Mexico. Here the world's newest coronagraph is turning out breathtaking pictures of sun phenomena.

INFLUENCE ON EARTH SOUGHT

The high altitude observatory is building a new $275,000 headquarters building in Boulder, which will become a world repository for sun data gathered during the International Geophysical Year. Also it will install in 1960 its own new coronagraph of advanced design at its station on the Continental Divide at Climax, Colo.

More and more its interest is trending into the area of direct solar influence on earthly weather, a field in which Dr. Walter Orr Roberts, its director, has become an authority. In fact, the observatory is almost as much in the weather field as in that of solar physics.

Just across the highway from the high-altitude observatory are the Boulder Laboratories of the National Bureau of Standards, which have accumulated an enormous lot of data on the way the atmosphere works, as

part of its activity in atmospheric radio physics.

GEOLOGICAL OFFICES, TOO

Down this highway a score of miles are the national engineering and research facilities of the U.S. Bureau of Reclamation, which again have an enormous interest in how water reaches the ground, as well as what to do with it after it gets there. One foremost project here is in the field of evaporation-control—preventing stored water from floating uselessly back into the atmosphere.

In Denver also are regional U.S. Geological Survey offices for the study of underground water and stream flow, and the specialists who did much of the preliminary work for Project Plowshare, the first controlled underground nuclear explosion.

Back at Fort Collins, the U.S. Forest Service long has maintained its seven-State research facilities which explore every means of developing and saving water supply that comes from the heavens. Included are selective cutting of forests, obtaining "snow-storage" on the mountains, and many other such devices all of direct interest in the semiarid West. Scarcely less interest is being displayed in other areas which are beginning to feel the pinch of water scarcities.

There are other public institutions which do work in the same general fields, also, such as the Denver Research Institute of the University of Denver. And there are private weather-specialists such as Dr. Irving Krick, who maintains a private forecasting and weather modification company with headquarters in Denver.

There is a new era of interest in weather coming, and Colorado is ready to help lead the region, and the Nation, into it.

Ukrainian Independence Day, January 22

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. MULTER. Mr. Speaker, the Ukrainian people have fought valiantly for their unquestioned right to freedom and independence. Their devotion to such a noble and righteous cause is recognized by the whole free world, and perhaps that is one reason why all free peoples, particularly the people of this country, feel so intensely about the sad fate of the Ukrainians in their homeland.

For centuries these sturdy and stout-hearted people have struggled, often against forbidding and insurmountable odds, for their freedom. In 1918 they attained their long-cherished national goal: they proclaimed their national independence on January 22, 42 years ago. Then for a brief period of about 2½ years they were free. But the forces of oppression and destruction were lurking around them even then; the bloodthirsty troops of the Red army were on the march. Late in 1920 they invaded the Ukraine, occupied it, and put an end to all forms of freedom there. During almost 40 years of misery and suffering some 42 million Ukrainians have been oppressed and enslaved under Communist totalitarian tyranny.

Today on the observance of Ukrainian Independence Day, the peoples of the free world, and of course we in this country, rededicate ourselves to the responsibilities that are ours as free people.

Quality Education Requires Local Support

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. PELLY. Mr. Speaker, a 4-percent increase in the public school enrollment in my State of Washington as compared with a year ago has meant that the classroom shortage and kindred problems of my school administrators is continuing.

In Seattle the disproportionate growth in certain sections far above the general trend of an exploding population has brought on especially acute situations with resulting oversized study classes coupled with unsatisfactory portable and temporary school housing.

By public support at the polls on February 9 a special tax levy for Seattle schools could alleviate the problem, but with continual statements of those favoring Federal legislation such as the Murray-Metcalf bill, the voters are apt to ignore the urgency of school needs in favor of Federal aid. A voter could well argue why make a local sacrifice if Uncle Sam is going to solve our financing problem?

I have been urging for a long time that the Federal Government preempt certain sources of revenue to the States so that the States could meet their own educational needs as they see fit and thus avoid the danger of Federal control of education. However, with a school bill reported out of the House Labor and Education Committee and considering the organized pressure on Congress to enact school legislation at this session, I realize that my responsibility at the moment concerns the provisions of a Federal bill and I must assume that a school bill may be considered soon.

Therefore, I urge that any aid, if we do have a bill, be limited so that no funds can go to any school unless there is an actual proven need. The following letter is from a man who has devoted his life to education. Here is the sound thinking of a dedicated friend of our schools and an authority on Federal-State relationship in the school field:

STATE OF WASHINGTON,
SCHOOL EMERGENCY CONSTRUCTION COMMISSION,
Olympia, Wash., January 20, 1960.

Hon. THOMAS PELLY,
Washington, D.C.

DEAR MR. PELLY: Bills have been and are being intorduced in Congerss for Federal aid to schools, especially for school building construction. It is noticed that the bills getting the greatest support favor Federal aid to States regardless of their financial need for it. Such a plan violates the real argument for Federal Aid, which should be only for the States that can demonstrate they are unable, due to lack of local funds, to maintain an adequate school system.

The State of Washington gives State aid for school building construction to a school district only after a careful study shows it is unable to provide adequate funds itself. The State aid in districts will vary from zero to 90 percent. The plan has worked splendidly and has been given overwhelming support by the Legislature. The standards set up make it easy to operate.

The strength of the American school system rests on its local support and administartion. The day the Federal Government grants a wholesale plan for school aid to States regardless of their needs, local interests is bound to lessen—which will be most unfortunate for the schools.

Very sincerely,

THOMAS R. COLE,
Chairman, State School Building Commission.

Deliberately Slanting the News

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. COAD. Mr. Speaker, Mr. M. B. Crabbe, editor of the Eagle Grove Eagle of Eagle Grove, Iowa, and I do not often agree on matters regarding politics. But Mr. Crabbe has recently exposed a situation regarding the unethical and dishonest intent of Time and Life magazines for which he should be commended. I want to take this opportunity to congratulate Mr. Crabbe and state that I wish more editors would look objectively about the farm problem and what is happening to our farm families than there are at present.

The article follows:

[From the Eagle Grove (Iowa) Eagle]

DELIBERATELY SLANTING THE NEWS

This writer dropped his Time magazine subscription about a year ago after 15 or more years of reading the publication. We did so because in every instance that Time covered a subject on which we had certain knowledge the Time article was so slanted and colored that the total picture they created was entirely wrong.

We now have further proof that we were correct in not being able to trust them for an unbiased account of a situation covered in their columns.

Time was one of two magazines that contacted extension directors in this area for help in getting special farm pictures they wanted.

The picture they wanted was not to be of the bountiful harvest we have enjoyed nor of a typical farm scene. They wanted a picture of a large pile of corn going to waste while the farmer lived on Government subsidy.

Of course Time editors as well as Midwest residents know that corn piled in the yard is not corn going to waste. It is the corn being fed to livestock. And we have corn piles in the farm yards every year. There are more of them and they are bigger this year but it is not a unique situation for 1959 alone.

However the Time article intended to show the corn going to waste while the farmer lived high on a Government subsidy.

A second big city slick paper magazine Life also contacted extension directors in this area asking for help in getting pictures of farmers who drive big cars, (Cadillacs, Lincolns, Buicks, etc.) belong to country clubs, spend winters in Florida or California and have piles of corn and cribs of corn that are paid for by the Government.

We want to compliment Aaron Bowman and the other extension directors who refused to give these photographers help in lining up their slanted pictures.

Had they been looking for typical farm situations or had they wanted to tell a true farm story it would have been different. But they were not even starting on the program objectively nor were they by their own admission attempting to find a true account of the farm story. They were starting out to get a picture story that would give city readers an untrue picture of the farmer and his problems.

World Peace Through Law Held Idle Dream

EXTENSION OF REMARKS
OF
HON. JAMES B. UTT
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. UTT. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article which appeared in the January 4, 1960, issue of the Los Angeles Times on the subject of the Connally amendment:

WORLD PEACE THROUGH LAW HELD IDLE DREAM

An address by Vice President NIXON last April before the Academy of Political Sciences and the announcement in November by the President that he intends to urge Congress to repeal the Connally amendment have focused attention upon a serious constitutional issue.

Without the Connally amendment, the United Nations Charter would never have been ratified. Now, leftist radicals are seeking to bring about the repeal of this amendment. A national clique of lawyers led by Attorney General Rogers, has influenced both Mr. NIXON and the President to support a policy that can lead only to world government and the surrender of our national sovereignty.

World peace through law may be attractive to some from the standpoint of phrase making, but the slogan is too visionary and illusive to represent a workable idea.

World government and enforcible world law are unreal slogans in an age when the East and the West are separated by insurmountable barriers of thought. Ours is not a world in which the Christ-idea and the anti-Christ can be brought together to coexist in harmonious relations.

To bring about peace through world law, there must first be a meeting of minds between the Communist and non-Communist countries as to what world law means.

The organized American bar, which has so scathingly opposed many court decisions which have greatly aided our Communist enemy, would certainly not approve of vesting unlimited power in a world court on which we would have but one member and on which a majority of the members would be Communists sitting in the garb of justices.

Have we considered what, if any, attention would be given to our principles of constitutional government if we should decide to submit questions of internal and domestic policy to an international court on which Communists would be in the majority?

It would be error on our part to repeal the Connally amendment of 1946 and surrender to an international court, a product of the United Nations organization, the right to decide complaints based on treaties, which might not be subject to the jurisdiction of such a court.

Under improper judicial interpretation, our country has moved from the original concept of federalism ever closer to a centralized state working to destroy American federalism. Under American leadership, federalism is the only device by which our political institutions can be kept.

Centralization of power in a world court would upset our constitutional balance and destroy all local self-government. A study of Roman history illustrates the fallacy of attempts to convert our federal republic into an American empire and participant in some form of world government.

W. JEFFERSON DAVIS.

LA JOLLA.

School Legislation Chances Are Good

EXTENSION OF REMARKS
OF
HON. LEE METCALF
OF MONTANA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. METCALF. Mr. Speaker, in an article in the January 17 issue of the Washington Sunday Star, George W. Oakes has done an excellent job of pointing out the choices which confront us in meeting the crisis in our classrooms.

We can vote for Federal grants or for a 20- to 30-year bond proposal which is unsound, uneconomic, and unavailable to many of the districts which need it most.

As Mr. Oakes says:

Administration approval and enactment (of meaningful education legislation) may depend on whether Vice President NIXON's political influence outweighs both President Eisenhower's economy-mindedness and Minority Leader HALLECK's opposition to a school bill.

Mr. Oakes' article follows:

SCHOOL LEGISLATION CHANCES ARE GOOD
(By George W. Oakes)

As Congress faces the election, passage of meaningful education legislation for school construction and college housing appears favorable.

Administration approval and enactment may depend on whether Vice President NIXON'S political influence outweighs both President Eisenhower's economy-mindedness and Minority Leader HALLECK'S opposition to a school bill.

The Democratic congressional leadership seems to have decided that only a Federal grant program for school construction can and should pass this session. If it should be vetoed, then the Democratic leaders believe they will have a popular issue to present to the voters during the campaign.

The major education debate will shortly begin in the Senate where the McNamara bill, S. 8, was reported by the Labor and Public Welfare Committee last September. This provides for a Federal expenditure of $1 billion in grants over a 2-year period to build a total of 50,000 classrooms. Federal funds would be made available to the States on a matching basis on the basis of per capita income, school-age population and the State's own school financing efforts so that the neediest local school districts should benefit the most.

THE FINANCIAL ISSUE

The fundamental conflict between the Democrats and the administration is over the issue of how to finance the needed classrooms.

Secretary of Health, Education, and Welfare Flemming has reported that there is a current shortage of 132,400 classrooms and that we are losing ground in our efforts to overcome the classroom shortage because the number of schoolchildren is increasing. He estimates that the number of pupils enrolled in excess of normal classroom capacity rose from 1,850,000 in the fall of 1958 to 1,883,000 last fall.

In addition, he has pointed out that State and local bond sales tend to be concentrated in only a few States.

The administration proposal provides for a 20- to 30-year school construction bond issue floated by local authorities. The Federal Government and the States would share the debt service charges. The Democrats argue that such a program would mortgage our grandchildren to meet current needs in the face of rising school requirements during the period of the proposed bond issue. Estimates show that the total elementary school attendance will increase by 13.4 percent in the years from 1958 to 1965 while the increase at the secondary level will be 47 percent for the same period. By 1980 it is estimated that the present school age population, 5 through 17, will increase 60 percent from 41.8 to 67.7 million students.

LIKELIHOOD OF COMPROMISE

The Democrats are not likely to accept any compromise which, to meet the administration's financial views, involves bond issues by local school districts. Such a proposal, they believe, relieves the Federal Government, best able to finance classrooms, of the major share of the burden and places it on the States and local communities who are least able to afford it. In addition, they point out that additional debt service charges might well cause States and local communities to reduce teachers' salaries.

The Democratic view is that more classrooms will be built sooner and at a lower total cost even if another year's wait is required to enact a big Federal grant program.

Present indications are that Congress is not likely to approve Federal funds for teachers' salaries. The chief proposal for this purpose is the Murray-Metcalf bill which, in amended form, was reported by the House Education Committee last year. It provides $1.1 billion of Federal grants a year for 4 years to be used at the discretion of the States either for school construction or teachers' salaries.

The Senate Democratic leadership is convinced that opposition to Federal money for teachers' salaries is so great, particularly in the House, that it would impair the chances of any school bill this session. Most Republicans and many Southern Democrats who would accept Federal funds for classrooms rebel at their use for teachers' salaries.

AMENDMENTS SEEN

Although amendments will be introduced in the Senate to include teachers' salaries, Democratic leaders will attempt to beat them down in order to avoid endangering school construction through bitter debate on the highly controversial teacher salary issue.

There are two other amendments which Senate Democrats fear will stir the religious and racial issues, which in past years have

beaten school construction bills. One is the amendment to provide $75 million of Federal loans for private school construction involving parochial schools. The other is the Powell-type amendment to deny Federal funds to segregated schools. However, it is believed that the Senate liberals will be able to block this more serious threat because they realize that such an amendment would, if passed, end all chances for a school construction measure.

One reason why Senate Democrats think that a classroom building might not be vetoed is that if enacted this session, its financial impact probably would not occur until 1961 when there may be a budget surplus. Also, it is argued that Vice President NIXON might well consider the administration veto to be a handicap to him in the coming campaign.

On the House side, Democratic supporters for education will wait to see what action is taken by the Senate. If the Senate should reject teachers' salaries, then House Democrats will probably concentrate on school construction. The chief hurdle will probably be to get the bill approved for floor debate. If the Rules Committee should fail to report it, then attempts will probably be made to obtain a discharge petition, which one leading Democratic Congressman says has now become fashionable.

Time for a Showdown on Farm Prices

EXTENSION OF REMARKS
OF
HON. CLIFFORD G. McINTIRE
OF MAINE
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. McINTIRE. Mr. Speaker, for long we have been seeking a solution to the farm problem without very much success. The January 16 issue of the Packer carries an editorial commenting on a proposal submitted by Dr. George W. Luke, a Rutgers University farm economist. I commend this article to the attention of my colleagues.

In the same issue of the Packer appeared an article on the potato chip industry. This is indeed interesting, for it illustrates very graphically how one processed food has been expanding its markets and, in effect, chipping in to chop down on potato surpluses.

The articles follow:

TIME FOR A SHOWDOWN ON FARM PRICES

A Rutgers University farm economist says it is high time that all sides of the food industry sat down and considered what's happening to farm prices in this country.

Dr. George W. Luke, chairman, agricultural economics department, Rutgers, says the serious downward slide of farm prices will go from bad to worse if something does not happen to halt the trend.

The farm economist, especially concerned over the state of affairs with agriculture in the northeast, says:

"In the northeast, where urban influences are overwhelming, it is a difficult uphill battle for farmers to establish their viewpoint within our economist system. As a result, it has been most difficult to establish reasonable values for the labor of the farmer in an economy in which all other sectors are enjoying great prosperity."

Dr. Luke made these observations at a farm policy forum January 5 at the Rutgers College of Agriculture campus, New Brunswick, an affair which drew more than 100 farm leaders and spokesmen for the farming industry in the State.

In Dr. Luke's opinion, the chainstores, the executives making chainstore policy, the big buyers for the chains, the policymaking spokesmen for processors, canneries, and other big factors; in fact, all important links in the food industry, would do well to get together with producers to examine the farm price situation.

"Farmers can't go it alone." Dr. Luke continued, "We need above all the cooperation of all within the food industry to get better incomes. Perhaps the most logical approach to our agricultural problem, if farmers are to maintain any measure of control over it, is to get together with everybody in the food industry and discuss the problems that confront us in the future."

Dr. Luke made no suggestions on just how the various groups of the food industry—chains, processors, buyers, wholesalers—could be induced into meeting on the problem. But he is certain that the need is urgent.

"The pass-it-back-to-the-farmer attitude," he said, "has prevailed too long. Sellers have found it easier to push back added costs on to the farmers rather than pushing them ahead to the consumer."

This practice, according to the Rutgers farm expert, was at the root of today's farm price problem.

Dr. Luke's talk noted that today farm net income was reaching new lows with the fall-off of 15 percent in 1959 against 1958, and with the farmers purchasing power now the lowest in 19 years.

If the industry will not consider the farmers' plight in terms of price and income, said Dr. Luke, "then danger signals may very well lie ahead."

"If we do not do this, an agricultural program may develop which not only rigidly controls the farmer, but there may be strict controls on the final sellers of that particular product, so that no one in the food industry in the future will be exempt from controls by government," he warned.

Dr. Luke stated that, despite great production efficiencies which have benefited the consuming public, "per capita income on farms has not kept pace with per capita income earned in other sectors of the economy. This is despite the fact that a considerable amount of agriculture has been controlled over the last 20 years. Farm policies which cannot get at price and income matters within agriculture, which really are the ultimate indicators of the well-being of farm people, will not be accepted by agricultural groups in the next decade."

"Farmers should not be expected to play the roll of Good Samaritans forever," said the Rutgers economist. "Economic progress at the expense of exploitation of American farmers is inconsistent with equality and justice within that economic system."

Farm prices have continued low, he said, even though great technological changes have occurred in the past decade in farming, providing food abundance through increases in production efficiency.

"What farmers want—what the economy needs—is a new policy for agriculture. Many of the old farm programs have made a real contribution to agriculture in the United States. Other programs have failed to achieve their goals. Despite all the activity of the last 20 years, we still are confronted with the finding of a solution to better farm income and better prices for northeastern agriculture."

Dr. Luke spoke before a meeting considering marketing orders and marketing agreements for New Jersey and whether orders could be expected to help growers. In this respect, he made this point: New Jersey agriculture does not produce or have enough control over the supply of any one commodity so that producers could control in a way "that they can affect prices by a quality control program."

Therefore, he said, "if any program is to work in New Jersey agriculture where marketing agreements are to be imposed or market orders utilized, its success will depend upon the cooperation of other States producing the same commodity. Without their cooperation, without regional participation in any of these programs, we will fall short of our primary objectives."

BOOMING POTATO CHIP INDUSTRY

A $50 million increase in potato chip sales in 1960 was predicted here at the close of the 23d annual conference of the Potato Chip Institute International at the Netherland-Hilton Hotel in Cincinnati.

George R. Johnson, general sales manager for the film operations of the packaging division of the Olin Mathieson Chemical Corp., in making this prediction, noted that in 1959 sales were more than double those of 1950. His company, a major producer of packaging materials, sells large amounts of cellophane to potato chippers throughout the United States. It has just completed an analysis of sales trends in the potato chip industry.

Within the next 10 years, potato chips will be a billion-dollar-a-year industry, double present sales totals, Mr. Johnson declared.

Reasons for the past growth and optimism for the future, the analysis revealed, lay in changed living patterns and population increases. Increased TV viewing has meant greater consumption of snacks, such as potato chips. More leisure time, with added opportunities for picnicking and recreation, has further increased demand.

Advertising and promotion by the potato chip industry, Mr. Johnson noted, have played a role in making potato chips a year-round food instead of the summertime edible they were formerly.

Forty-second Anniversary of Ukrainian Independence

EXTENSION OF REMARKS
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. HALPERN. Mr. Speaker, January 22 was the 42d anniversary of Ukrainian independence in the 20th century. It is, however, far more than just a solemn commemoration for a latter-day event. It justly is emblematic of the solidarity and dedication of a people who had established their own government and society on the rich western steppes when Europe was still in the Dark Ages, centuries before William the Conqueror commanded his armies to cross the channel and assault the Saxon strongholds in England.

The Ukrainian struggle for independence and self-determination today springs from the ages-old tradition of a proud people who have never relinquished their dream despite decades of suppression and adversity.

Those of us who are free call out to you who are in bondage, "Do not despair. We are striving to create a world where justice and peace shall prevail, when once again we shall welcome you as brothers in the legions of the free."

America: The World's Good Samaritan

EXTENSION OF REMARKS
OF
HON. JAMES J. DELANEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. DELANEY. Mr. Speaker, under leave to extend my remarks, I include "America: The World's Good Samaritan," an address delivered in Rome, on October 13, 1959, by His Eminence Francis Cardinal Spellman, on the occasion of the centenary of the founding of the North American College.

AMERICA: THE WORLD'S GOOD SAMARITAN

(Address of His Eminence Francis Cardinal Spellman on the occasion of the centenary of the founding of the North American College, Rome, October 13, 1959)

"The sun never sets on American charity." This, dear friends and brother alumni, is a statement made in the United States only 2 months ago by Archbishop Joseph Gawlina, Ordinary for Poles in exile. "I am myself an exile who has traveled around the world," the Archbishop continued, "and therefore I am able to speak as an expert when I say that America is a living symbol of Christly charity—for the American Nation has taken upon herself the tremendous responsibility of feeding, clothing, and caring for the sick, the starving and suffering, the destitute and exiled of the world."

And just a few weeks earlier during his visit to America, Cardinal Ottaviani declared that "the United States is the hope of the church throughout the world." His Eminence also spoke as an expert, for as Pro-Prefect of the Supreme Sacred Congregation of the Holy Office, Cardinal Ottaviani is profoundly aware of the grave and grievious problems of the church in the entire world.

Yes, our beloved America, generously and mercifully sharing her blessings with her burdened brothers has become the world's good samaritan—"symbol of Christly charity to the world's bereft and exiled." "Hope of the church throughout the world."

Each time there is a retelling of the tale of the samaritan who was moved with compassion for the despoiled and half-dead traveler on the wayside between Jerusalem and Jericho, a special aspect of its meaning is highlighted—that normally there was no contact between the people of Israel and the Samaritans. Their beliefs were at variance. Their centers of worship differed as between the Jerusalem temple and the temple atop Mount Jerizim. Longstanding and strong ill feeling separated them. Only the call of charity could create a bond between the members of two such groups separated by so wide a gulf.

Over the centuries charity has reached across barriers of culture, and even the chasms of hatred, to bring to life the reality of love of neighbor. But never before has the call of charity come from so many and such far distant places of human anguish. The route of today's samaritans runs not alone from Jerusalem to Jericho, but criss-crosses the world, spanning seas, crossing mountain ranges, following rivers, traversing jungle trails, winding its way along the paths of villages and the roads of towns as well as the pavements of great cities. Among the constant travellers are the people of our Nation born less than two centuries ago from out of yearning of men for a society in which each, as a child of God, could live in freedom, in peace, and in mutual respect. Moved with compassion for those who have been despoiled and lie helpless at the roadsides of the world, we have been ready to bind up the wounds of peoples with whom our only bond is one of pure charity, based on the fact that the sorrowing and suffering were children of God, and our brothers.

Accepting the role of good samaritan toward the peoples of other nations is a role so new that many refuse to believe that in peacetime the people of one country should or could help to bear the burden of another country. And there are many who flatly deny that there can be anything but self-interest which could impel one nation to become good samaritan to another nation. Alliances of mutual aid and action in time of war are understandable—but in such alliances each nation involved is usually warding off a real danger to itself. The world became accustomed to the might of America in a war which unleashed forces of destruction never before imagined. To some it does not seem to be equally understandable that, when hostilities were over, America returned to her traditional task of placing her resources at the service of the needy and dispossessed, and employed her productivity and energy in a worldwide battle against famine, pestilence, homelessness and want.

The origins of America's role as good samaritan lie in the very nature of her first beginnings. They lie in the backgrounds as well as the beliefs of her peoples—peoples from many different lands who became one—not in an ethnic oneness but in the unity of a shared blessing. This unique national role can be traced to those concepts of God-given rights and responsibilities upon which America's form of government was conceived.

America's first settlers from the outside were refugees from religious and political persecution. There has hardly been a wave of persecution or oppression in the world that has not broken in some measure on the shores of our United States. Its most recent settlers have been from those groups of people who, in the wake of World War II were driven from their native homelands—displaced persons from the countries of Eastern Europe, many of them spokesmen for the Church of Silence; the expellees of German origin; the small but significant stream of Asian refugees; the flood of Hungarians who streamed out of a nation battered into physical submission by the tanks and arms of an empire of slavery and death. The primary concern of the United States of America has always been, and I pray it shall ever be, the inviolable dignity of man, especially he who must stand alone, unprotected against violent, godless forces that threatens to crush him.

God's magnificent largess has left America with a huge store of surpluses of foods and fibers, a condition experienced by few nations in history, since, up to now, people could not produce much more than they could consume. It is this background, these abundant blessings of God that have enabled America to give such stupendous help to the governmental aid programs since World War II. All of us here know the nature of the Marshall plan and the extent and scope of the American foreign-aid programs. We know too how tremendous have been the educational, medical, and other humanitarian benefits provided by the great American philanthropic foundations of Ford and Rockefeller.

We know of the economies that have been stabilized through American help—roads, dams, mills, factories, and even entire industries that have been built with American aid. We know also that the focus of these economic aid programs has been and still is shifting from those areas which have now recovered from the ravages of the Second Great War to those less-developed lands of the free world whose standards of living are comparatively low and whose opportunities, ambitions, and goals remain largely unrealized.

Every year new foreign aid legislation is passed by the Congress of the United States in the name of the American people. The billions of dollars thus voted—$1,700 million to India alone—for economic aid overseas represent a personal contribution by every working American, who through his taxes assumes part of the burden of want, of sorrow, of unfilled hopes that lies so heavily on the people of poorer lands. By willingly taking on this burden, the American, whatever his belief, is putting into action the glorious concept of St. Paul: "He that had much had nothing left over, and he who had nothing had no want." Thus, each American becomes an individual Samaritan, making it possible for his America to be Good Samaritan to the world.

This action of our Nation has met with puzzlement and incredulity by those who unjustly ascribe ulterior motives of economic imperialism to our efforts, for never in the history of civilization has any country offered to help so many at such great cost to itself—asking so little in return. It is a shock to many of our friends when they visit the United States to learn that we are not merely giving away our surpluses, but are truly sharing our necessities, and that the burden of taxation for foreign aid falls heavily on our working population, as does the weight of our national debt.

Not so well known are the significant people-to-people programs conducted under the auspices of the voluntarily supported agencies of the American people. Since World War II there has arisen a unique partnership between the American Government and the voluntarily supported oversea aid agencies. Government and people-to-people agencies draw from the same enormous stores of American abundance, and work side by side to deliver refugees from exile, to relieve human misery, and to feed, clothe and nurse the countless needy of many far and foreign lands in the hope and effort that they may be enabled to return to self-sufficiency.

Of such voluntary agencies, there is one with which I am intimately familiar and of which I am immensely proud. I refer to the worldwide work of Catholic relief services—National Catholic Welfare Conference, the official oversea relief agency of the Bishops of America. This organization of American Catholics which, among others, evolved out of the agencies of World War II has, since its inception in 1943, shipped around the world more than two and a half million tons of relief supplies valued at three quarters of a billion dollars. Last year alone the agency shipped to 51 countries more than 1 billion pounds of foodstuffs, clothing and urgently needed medicines valued at $800 million. Included in these totals are the products of American abundance—including grains and dried milk—which are made available without charge to voluntary agencies, like Catholic relief services, which serve people on the basis of need alone, without reference to race, creed, caste, politics or any other factor. Here is a united effort of international charity by a religious organization which I believe is without parallel in the annals of the Church.

In the journeys I have made to nearly every country of the globe I have had ample opportunity to see at firsthand the vast amount of good that is being accomplished by this huge program of voluntary aid that has attracted to itself so much in the way of government and intergovernmental assistance.

When in 1954 the Geneva Truce Agreement divided Vietnam at an arbitrary boundary at the 17th parallel, Catholic Relief Services—NCWC was the only American agency with a program of relief in that country torn by occupation and an everlasting war. The President of Vietnam dispatched a cabled appeal to the agency's

headquarters in New York begging for help for the refugees already pouring out of the northern provinces. The gripping story of their flight into exile, many on frail rafts through the open sea to be picked up by American and French troopships, is too well known for me to repeat it. Theirs was a flight for their faith into freedom.

In response to the plea of President Diem, Catholic Relief Services wrote a glorious chapter in the history of the charity of the church in those early days of the new republic of South Vietnam. Almost overnight, the American Bishops' Agency set up a network of emergency feeding stations to help the neediest of the 860,000 refugees who fled southward. The agency made available to them brickmaking machines to help establish their villages. Funds for the rebuilding of churches, schools, and community centers for these highly literate and gifted people were channeled in record time to hundreds of new communities. Cooperatives and little industries were established. Soon a new life had begun for these courageous exiles in the cleared jungle areas of free Vietnam.

During the height of the flight of the Vietnamese, I was invited aboard a vessel bringing hundreds of weary refugees from the Tonkin area. When they started out, they might perhaps have gone to mass and then taken to the road singing hymns—since exile often began like a pilgrimage. But the long marches, the waiting in the crowded refugee shelters of Hanoi, the passage on the jampacked open deck, had utterly exhausted these heroic people. Many of them were lying on the deck helpless and sick. Their lot could be eased only if compassionate hands were to be held out to them. And they were. America had once again been good Samaritan to a nation in her gravest hour.

In Hong Kong, a million Chinese refugees managed to keep alive from day to day only by incredible industry and ingenuity. These proud people who have fled to Asia's doorstep of freedom to escape tyranny, must beg for their daily rice. In front of them they often have their credentials carefully lettered, "I am from Shanghai. I am here as a stranger. Help me to keep alive." Catholic Relief Services sent shipment after shipment of usable clothing, so that the Chinese exiles, beggared by the cruel fate that overtook the mainland, would be decently clothed. Then followed housing projects to replace the tin and paper huts that crawled up the 19 hillocks around the city.

Government funds were channeled through the agency to provide safe shelter for thousands of families. Rehabilitation projects were begun, including weaving, textile and garment making. In order to supplement the diet of families who work from dawn to dark and even then cannot fill the family rice bowl, Catholic Relief Services brings to Hong Kong shiploads of flour and cornmeal donated from U.S. Government stocks, and then processes them into noodles so that they can be cooked on the tiny fires of the one-room huts of the exiles.

When torrential rains and landslides in Hong Kong demolished their shacks and swept away their meager belongings, more than 11,000 refugees were left without shelter or food. Fifty tons of American relief supplies—food, clothing, medicines, and household goods—were delivered promptly by the aircraft carrier U.S.S. *Shangri-La* to aid these thousands of destitute families. This disaster, which occurred at the beginning of this World Refugee Year, dramatized the plight of Hong Kong's million poverty-stricken refugees from Red China, and the tireless and merciful work of the Maryknoll Priests, Brothers, and Sisters throughout the refugees' world of loneliness, sickness, misery, and want.

When the worst flood in 50 years with its 5 days of continuous rains inundated half of Formosa, Catholic Relief Services sent 700 tons of dried milk, flour, and corn meal into the stricken areas. Again the Maryknoll missioners helped to lessen the anguish of survivors, cared for the sick, fed and housed the homeless. They carried out their Mission of Mercy made possible by the good Samaritan—their own beloved America—America whose soil was sanctified by the blood of early missionaries who first raised the cross in our land. In turn American blood has been poured out in other lands, and we already have an American martyrology.

Our sons and daughters, with the full encouragement of their Catholic parents, have gone to the four corners of the missionary world. Prayerfully, pridefully we recall that 7,000 men and women from America have left their native land and are presently serving under the missionary banner of Christ—Jesuits, Franciscans, and Passionists, Dominicans, Redemptorists, Vincentians, and Missionaries of La Saletts, Columbans, Fathers of the Divine Word, Religious of the Holy Cross, Salesians, White Fathers, Oblates, and a litany of other religious congregations—hundreds of them already buried in simply marked graves in Africa, Asia, Oceania, Latin America, and the frozen north.

We Americans are a practical as well as a charitable people, and we know that missionaries and missionary institutions cannot exist on air. There is a continuing and constantly increasing need for money. How then are the American Catholic people supporting the missions of the world? A few months ago the Sacred Congregation of the Propagation of the Faith announced that it would distribute to the missions the sum of $17 million. At the same time the Society of St. Peter the Apostle announced that it would contribute $3 million to seminaries in mission areas.

Where did this money come from? Approximately 70 percent was contributed by American Catholics, exclusive of their donations given to the missions of the Oriental Church. Last year the Propagation of the Faith Society in the United States contributed $10½ million toward the support of our missionaries. And Catholic Relief Services contributed a hundredfold more than this to assist the missionaries in their providential ministry, attested by thousands of expressions of gratitude from missionary priests and religious from all parts of the world.

In addition to the places already mentioned that have been aided by the Catholic relief organization, there is still another pocket of misery that I have visited, and which haunts many of us by its seeming insolubility—the mass of pitiful refugees around the Holy Land. In Jordan and packed into the tiny Gaza Strip, there are still close to a million homeless Arabs. From the barbed wire areas that mark new boundaries, they stand and stare at the villages that were once their homes, the fields they once tilled in the rhythm of the seasons, the groves they once tended. They are caught up in a tragedy of history which they do not comprehend, for in those lands are the persecuted of many nations who come out of the valley of the shadow of death and see now only the brightness of the fields and groves.

Through the Pontifical Mission for Palestine, American Catholic aid in the form of medicines, food, and clothing comes to the tents and barracks of the Arab refugees, but the bread of their exile is exceedingly bitter, and a seething discontent permeates their encampments.

Catholic Relief Services carries on its varied works of mercy in 61 countries, notably in Korea that tragically disordered and most victimized of nations; India with its millions of refugees; the hard-pressed countries of South America; the regions of Africa emerging into freedom and the challenges of the modern world. The roll call of countries in which America is serving as a samaritan reads like a gazetteer of the free world.

Since we are gathered in Rome it may be of interest to outline the extent of the cooperation of Catholic Relief Services with the Pontificia Opera Assistenza, the charitable organization begun after the last Great War by His Holiness, Pope Pius XII, and presently sponsored by Pope John XXIII. Since World War II, this organization has developed a charitable network that extends into the most remote villages of the Basilicata, Calabria and Sicily. It is the agency that strengthens the humane element in every forward step of the Italian social system.

During the period from July 1, 1959 to June 30, 1960, Catholic Relief Services will ship to Naples 100,000 tons of foodstuffs and clothing for free distribution in its program of assistance for approximately 7 million men, women and children. From the North of Italy to the southern tip, in Sicily and Sardinia, children in summer camps, play centers and schools, tenant farmers and hired hands in agriculture, the underemployed and war veterans, as well as every single professor and every individual seminarian in every regional seminary will receive, as supplementary rations, products made of the flour and dried milk shipped by Catholic Relief Services as a gift from the American people. In addition to supporting these programs of foreign aid, Catholic Relief Services, with the assistance of resettlement committees organized in every diocese in the United States, has assisted in the resettlement of more than 300,000 refugees and uprooted persons.

A monumental work of charity such as this might be in danger of passing over the difficult works of mercy needed to help the special individual. Just one of a thousand instances of compassion and help for an individual will serve as an example. It was brought to the attention of the American Bishops' agency by the Caritas of Chile. The face of a 10-year-old boy had been almost obliterated by a fall into a charcoal burner, and yet miraculously he lived. The indistinguishable mass of burned flesh remaining after this tragic event was composed of hardly more than two slits for the youngster's eyes, two tiny holes for the nostrils that were no longer there, and a tiny opening for a mouth.

What would—what could—his future be, this faceless youth, the sight of whom caused even the nuns entrusted with his care to blanch?

Could the agency of the American bishops help? It could. It did.

The child was flown to New York and the services of two of America's leading surgeons were enlisted. The largest Catholic hospital in New York City agreed to provide hospital and convalescent care for the boy for as many years as necessary. That was little more than a year ago. Already 14 operations have been performed, and while more are anticipated, the child is well on his way to becoming an accepted member of society, and the eventual success of his surgical treatment is assured. The route of the good Samaritan truly, in this instance, extended from Chile to New York.

This agency which reaches out to rescue and heal one of God's afflicted as well as the multitudes, is basically supported through an annual collection in every Catholic parish in the United States on Laetare Sunday. During Lent, little children in the thousands of parochial schools absorb a dawning concept of the mystical body through donating the money saved by their Lenten sacrifices to the needy of the world. The blessed money of the children often reaches as high as one-fifth of the receipts of the entire col-

lection. Its program likewise commands the support of American Catholics each Thanksgiving, when they are asked to "give thanks by giving" their clothing, blankets, and shoes to those in want overseas. More than 100 million garments have been collected during the past 10 years, and next month America's Catholics will again respond to a similar appeal under the leadership of their bishops and priests. Thus America shall be enabled to continue in her providential mission, helping and healing those hapless, often heroic, peoples caught in the measureless immensity of human miseries that characterizes our times.

However, as long ago as 60 years, America was called the providential Nation by a great patriot and great priest, the archbishop of St. Paul. "I have called America the providential Nation," said the fiercely American Archbishop John Ireland, "for even as I believe that God rules over men and nations, so do I believe that a divine mission has been assigned to the Republic of the United States. That mission," the archbishop continued, "is to prepare the world, by example and moral influence, for the universal reign of human liberty and human rights. America does not live for herself alone, the destinies of humanity are in her keeping."

That, dear friends, is our wondrous, free, and blessed country: "Symbol of Christly charity to the world's bereft and exiled." "Hope of the church throughout the world"—America, the world's good samaritan.

I'm From New Jersey

EXTENSION OF REMARKS

OF

HON. HARRISON A. WILLIAMS, JR.

OF NEW JERSEY

IN THE SENATE OF THE UNITED STATES

Monday, January 25, 1960

Mr. WILLIAMS of New Jersey. Mr. President, we of New Jersey are fortunate in many ways, but we are particularly fortunate in having a journalist who appreciates the rich variety of scenes in the Garden State. Mr. John T. Cunningham of the Newark News has, since 1948, written more than a million words about New Jersey. His stories, feature series, and books have described our industry, our forests, our farms, and seashore, the people who came from other nations to settle in New Jersey, the meadows that still stretch out like a low jungle within a few miles of Manhattan, and many, many other corners of the State.

In the January issue of the National Geographic, Mr. Cunningham proudly proclaims in a copyrighted article that "I'm From New Jersey." His article is further testimony to the undeniable fact that the Garden State has far more to see than many persons realize. In terms of historic and beautiful sites, variations of origins among its people, and in contribution to the industrial power of the Nation, New Jersey offers much to everyone who lives or visits within her borders.

I am informed by the Public Printer that the article will make approximately 4⅔ pages at a cost of $378. I ask unanimous consent that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

I'm From New Jersey

(By John T. Cunningham)

Each day hundreds of thousands of visitors speed across New Jersey's narrow waist, their visits usually last exactly as long as it takes train or automobile to run between New York City and Philadelphia.

Few tarry, but they think they see New Jersey: a factory-lined flatland, characterized by smokestacks, steel rails, and express highways. Such a land is easy to forget.

REPORTER COVERS A STATEWIDE BEAT

Occasionally Jerseymen encounter these visitors, say in New England, where great numbers of New Jersey people go each summer in search of change and quiet. The casual question, "Oh, you're from Jersey?" can put the Jerseyman on guard; he is uneasily aware that the other probably means no compliment.

I know. As a native of New Jersey I used to find myself constantly on the defensive—explaining, for instance, whence the nickname "Garden State." I usually failed, because I, too, knew little of the real New Jersey.

Then; one April day in 1948, the State became for me a full-time job. To my surprise and delight I found the land beyond the railroad tracks well worth the knowing.

It was this simple. My newspaper, the Newark News, assigned me to write a series of articles on New Jersey's history and vitality. Now, some 350 articles and a million words later, I'm still at it—and I'm not on the defensive.

The years have taken me across every one of New Jersey's 7,836 square miles, through hundreds of factories, across thousands of acres of farmland, into the offices of 30 college presidents, and along 130 miles of Jersey shore in every season of the year.

I've seen giant machines spew forth beer bottles and bridge cables, and I've watched painstaking fingers make a gold brooch. I've seen corn picked under floodlights at 4 a.m., and I've seen Miss America crowned at midnight. I've been with muskrat trappers in the lonely Salem County marshlands, with trackwalkers in the crowded Hudson County railroad yards, with an orchid grower inspecting his seemingly endless hothouses in Middlesex Borough, with farm boys driving cows homeward on deserted Sussex County roads.

Giant trucks hem me in on the superhighways, but I know country lanes that lead to mountains and back roads that end at Atlantic beaches. Along these roads I've seen maple trees tapped for sirup in the spring, blueberries plucked in summer, cranberries harvested in fall. If I despair at weekend traffic, I try to remember the New Jersey has been a pathway for 300 years, one of the most strategic, most fought over, of the Thirteen Colonies in the Revolution.

Certainly I neither scorn nor dismiss the familiar view of New Jersey from a train window. Those smoking factories, freight-clogged rail yards, and crowded highways all add up to economic importance, even if they obscure the fact that off beyond eye's view there is both quaintness and charm for the finding.

Visitors who cross New Jersey by air see some of its 2 million acres of forestland. Invariably they exclaim: "Why, it's a beautiful State. I wouldn't have believed it had so much space."

New Jersey's personality still is difficult to spell out, even for one who knows it as well as most men know their backyards. Actually there are two Jerseys, in fact, if not in name: "north" Jersey and "south" Jersey—as dissimilar as day and night.

North Jersey is a land of low mountains and dairy farms, commuter towns and lake-dotted forests, bubbling trout streams and rivers dashing down to sea over boulder-strewn beds.

South Jersey, in contrast, is flat truck-crop farmland and ocean-front vacation land, covered in its central core by nearly 1,900 square miles of pine wilderness. From these Pine Barrens cedar-colored streams meander slowly east, west, or south, heedless of direction, ignorant of time. Through these same pines, and scarcely seeing them, speed millions of July and August vacationists headed for the Jersey shore.

Differences go deeper than topography. They go as deep as the New England Puritans who first arrived as colonists in 1665 and left behind in many north Jersey towns a heritage of New England-like village greens and tall church spires. Or as deep as the Quakers who built the scores of brick homes still standing in much of south Jersey after 200 or more years.

Between north and south slants a 15-mile-wide corridor on a diagonal between New York and Philadelphia, holding more than three-fifths of New Jersey's 5,740,000 residents. Here are some 60 percent of the State's 12,000 factories, most of its 500 industrial research laboratories, and all but 6 of its 38 colleges and universities.

Away from that teeming, often frenetic, strip is the New Jersey where I find escape—sometimes as simply as knocking at the doors of the past.

MORRISTOWN WORSE THAN VALLEY FORGE

My family and I often go back to relive Morristown's striking role in the American Revolution. Twice General Washington led his weary troops to this colonial town for winter quarters. A casual glance at a relief map shows why: At his back Washington had hills filled with iron ore for munitions; before him he had the natural earthworks of the Watchung Mountains.

The American Army first found sanctuary in the town in January 1777, after victories against heavy odds at Trenton and Princeton. Washington returned in the winter of 1779–80 at a time when fortunes ebbed even lower than the despair of Valley Forge. Long afterward, Washington's biographer, the late Douglas Southall Freeman, wrote:

". . . the winter of 1779–80 at Morristown and Jockey Hollow was a period of far worse suffering than the corresponding months of 1777–78 at Valley Forge.

"This evidence is not going to upset tradition . . . though one finds it somewhat perplexing to know why the hunger and shivering of Morristown have been so nearly forgotten while the miseries of the gloomy camp on the Schuylkill are known to every child in the fifth grade."

DID MOLLY REALLY BRING A PITCHER?

Dr. Freeman was pessimistic; Morristown isn't forgotten. Each year more than half a million people visit Morristown National Historical Park. Nor is the brilliant episode at Trenton on Christmas night, 1776, a faded thing.

Washington had little reason to expect success that night. His army on the Pennsylvania side of the Delaware River was ragged, hungry, cold, low in morale. The Hessians in Trenton were comfortable, perhaps too comfortable. The Americans crossed the ice-clogged river, marched nine miles over snow-covered roads, and struck the dazed Hessians at dawn. Then, victory won, the troops marched north and crossed the icy stream back into Pennsylvania.

But Washington wasn't always cold in New Jersey. In the Battle of Monmouth both sides suffered as much from summer temperature as from enemy fire.

The savage sun brought to the fore an American heroine of legendary proportions—Molly Pitcher. Molly busied herself bringing water to the parched soldiers, and when her soldier-husband John fell, she took his place

at the cannon and blazed her way into immortality.

Was there a Molly Pitcher? There was; her name was Mrs. Molly Haya. Did she carry water? Probably. At least it was hot enough, and I've been shown two spots where "she dipped her pitcher."

New Jersey's Revolutionary War significance hinged on its location between the vital ports of New York and Philadelphia. That placement is still of utmost significance. New Jersey is an industrial State of top importance—only six States turn out more goods annually—and that importance is in large measure due to those nearby cities, offering both markets and unexcelled transportation facilities.

Industrial variety is almost endless in New Jersey. I've seen jewelry and machine tools and beer and sharkskin leather goods made in Newark. I've watched filmy nightgowns and workaday shirts being sewed in Paterson, sulfa drugs packed by the hundredweight in Bound Brook. My tours have carried me through Trenton plants making dolls and exquisite china and brake linings and light bulbs.

In a single day I saw in Camden the making of soups and aircraft carriers, pen points and electronic brains. I've toured giant petroleum refineries in Bayway and Perth Amboy and copper refineries in Middlesex County. I've stood by machines rolling off adhesive tape by the mile near New Brunswick.

What does New Jersey make? Pipes, snuff, cigarette paper, cigars. Wall-to-wall carpeting, linoleum, electric trains, bowling balls. Hot dogs, automobiles, television sets, suspension bridges, soap, sulfuric acid, airplane motors. Perfume, rocket engines, sewing machines, kitchen sinks, and yachts.

Recently, before a high school assembly, I said, "We make just about everything—from lipstick to explosives." The teenage audience laughed—on the premise, I suppose, that lipstick and explosives aren't far apart at all.

WHOLE WORLD SIRED THE JERSEYMAN

But there was seriousness when I talked of another facet of New Jersey: the many countries that from the start have contributed their sons and daughters to this State. Rare is the New Jersey gathering, junior or senior, where widely different nationalities are not represented.

The Dutch first gave the region attention, when Henry Hudson in 1609 sailed his *Half Moon* up the river that bears his name. Soon after, on lower Delaware Bay, the Dutch and the Swedes and Finns vied for supremacy. They vied in vain; by 1664 the English gained control of the entire colony. They named it New Jersey after the island of Jersey in the English Channel.

German ironworkers came before the Revolution. English and Scotch arrived in Paterson by 1800 to make the machine shops hum. The Irish built the railroads and canals between 1830 and 1860, and another wave of Germans came at the same time to make wine in south Jersey and beer in Newark.

Others arrived through the years: from England and France and Italy to make Paterson's silk, from Armenia to make Freehold's carpets and rugs, from Scotland to make Kearny's linoleum. They came from Switzerland to establish in Union City a schiffli-loom embroidery industry, and from the Slavic countries to be the muscle of Jersey's ceramics industry.

During World War II displaced persons came to work at Seabrook Farms near Bridgeton, including Estonians from Europe and Japanese-Americans forced to evacuate their west coast homes. Many of the Nisei returned to California at war's end, but hundreds of Japanese families stayed on.

COLLEGE COMES TO THE CHICKEN COOP

The story of the small business and professional men who fled persecution in both Russia and Germany and started chicken farms in Cumberland, Monmouth, and Ocean Counties is especially intriguing. A poultry specialist at the Rutgers University College of Agriculture introduced me to their story:

"They knew nothing about poultry. They figured that if a man could make a good living out of a thousand laying hens, he could make 10 times as good a living out of 10,000—just as in making suits or overcoats."

Poultry experts were appalled. Until then the best advice had been to limit flocks to 2,000.

Many of the newcomers succeeded despite their ignorance. Rutgers helped them—by giving poultry lectures in foreign tongues and by translating poultry bulletins into several languages. Thanks to these people's daring, chickens and eggs today account for a third of all New Jersey farm dollars.

With M. A. "Mac" Clark, veteran Monmouth County agricultural extension agent, I visited several of the refugee chicken farmers. On one farm we caught an aromatic whiff of chicken cooking in the kitchen. Mac sniffed appreciatively.

"That's a wonderful smell," agreed the farmer. "In the old country when you smell chicken cooking, it means one of two things—either somebody is sick, or the chicken was. Here, is nothing; chickens are healthy—and so are we."

Settled among the refugee chicken farmers near Farmingdale in Monmouth County are New Jersey's most recent newcomers, the Kalmuks, direct descendants of western Mongol tribes who fought against the all-conquering armies of Genghis Khan.

How pitifully true is the word "Kalmuk," meaning "remnant" in their language. Today the known world population is only 135,000, and some 250 of them live on the 30-acre Kalmuk tract near Farmingdale.

"REMNANTS" BECOME GOOD JERSEYMEN

I came to know Freewood Acres' Kalmuks through a pleasant-faced, stocky young man wearing a sweatshirt on which the faded words "American University" were imprinted. His smile revealed splendid white teeth as he introduced himself: "I'm Alexey Ivanchukov, chairman of the Kalmuk Society in the United States."

The sweatshirt? "That's my kid brother's; he's a senior at American University, in Washington, D.C.," he explained. "I'm attending Columbia."

Alexey proudly showed me through the little Buddhist temple his group built 4 years ago. The brilliant colors of ceiling hangings and altar decorations made the interior glow even in the light of flickering candles. A solemn priest fingered his prayer beads near the altar. He paused to smile hospitably as Alexey presented me, but he did not speak.

"Please sign the guestbook," my guide urged as we left the temple. I did—directly beneath the names of three visitors from Calcutta, India, who had been there the day before.

Outside the temple with its centuries-old traditions, I could hear the roaring symbols of the 20th century as automobiles sped to and from the Jersey shore on crowded U.S. Route 9. A late-model car stopped. Alexey leaned through the window to remind three pretty Kalmuk girls of a picnic on Saturday.

A priest walked slowly around the temple exterior, revolving a prayer wheel. The elders strive mightily to preserve their Buddhist teachings, and many young people, such as Alexey, seek to help them.

Materially, the Kalmuks are doing well. Americanization is everywhere: in late-model cars, in TV aerials atop ranch houses, in gum-chewing, teenaged Kalmuk girls reading movie magazines, in little boys playing marbles, and in a lay leader wearing a faded college sweatshirt like any other college boy home for the weekend.

The Kalmuks and all these other varied peoples have found room in tiny New Jersey—and it is tiny, a fact impressed on me by a visitor from California.

"Why," she said, "I think San Bernardino County could hold all of New Jersey."

I went to an encyclopedia. She was right. San Bernardino could hold all of New Jersey—and have room left over for Massachusetts, Rhode Island, and Delaware.

WATERFALL BUILT A CITY

I usually take visitors through the north Jersey forest and lake country. To make the contrast between well-known industry and little-known upland charm most striking, we drive to Garrett Mountain above Paterson.

Here the Watchung Mountains dive precipitously to the plain. At this fall line the Passaic River plunges 70 feet down through a rocky gorge. The furious power of Passaic Falls prompted Alexander Hamilton to found Paterson in 1791 as America's first planned industrial city.

Paterson grew by the falls, following a path of recurring boom and bust. Cotton, railroad locomotives, silk, airplane motors—each of these has dominated the city in turn. Now hundreds of small industries hum in the old brick factories that once gave Jersey's third-largest city an all-eggs-in-one-basket economy.

Paterson always attracted men of vision. Samuel Colt manufactured his first revolver in the Paterson Gun Mill in 1836. Eccentric schoolmaster John Philip Holland sent his first submarine on a trial voyage in the Passaic River in 1878. In Paterson's West Side Park the *Fenian Ram*, Holland's successful 31-foot submarine built for the Irish Fenian society in 1881, today rests as a monument to the inventor.

After its tumbling fall at Paterson, the Passaic becomes placid again, eager to serve the hundreds of industries clustered along its banks as it winds to a quiet merger with the salt waters of Newark Bay to the south.

But let's face it, a person quickly can get his fill of industry. We leave for the nearby Ramapo Mountains, scarcely less wild today than they were in the days when Revolutionary War outcasts found a haven there.

Halfway up from Oakland, the Skyline Drive takes a curve. Ahead, a raccoon leads her brood across the road, letting a mere autoist know that her kind was there first.

RATTLERS ROAM THE RAMAPOS

I stop the car. Wilderness surrounds us. Off to the southeast, some 20 miles away, the skyscrapers of New York seem to grow out of the trees between. My guests scramble to pick the daisies among the boulders. That's not wise: I remember the advice of the guide who first took me through the Ramapos.

"Place is full of rattlers and copperheads," he said. "Stick to the roads."

We pick no daisies. Instead, our car rises to where the drive dips down to the west. Patches of deep blue in the valley below dot the hardwood forests.

These wooded highlands, where streams run clear and cold, give water to several north Jersey cities. That closest patch is Wanaque Reservoir, 7 miles long and capable of supplying 85 million gallons of water daily.

Reservoirs are numerous because water is everywhere in these highlands. The very names of rivers make it evident that the Indians knew them, too: Musconetcong, Passaic, Raritan, Pequannock, Pequest.

Dozens of lakes snuggle in glacier-built pockets. The largest is called Hopatcong,

loosely interpreted as "honey water of many coves."

Lake Hopatcong, only 6½ miles long, has so many coves and inlets that the shoreline winds some 35 miles. In summer the white wings of sailboats dot the surface; in winter iceboats skim the frozen lake. Scores of ice fishermen cluster in River Styx Cove. Dense woods close in on the lake; from the air it is a sapphire in a setting of green.

Loftiest spot in New Jersey is High Point, close to where New York and New Jersey touch borders. At 1,803 feet, High Point perhaps rates as little more than a foothill to a Colorandan, but it is rugged and steep enough to test neophyte mountain climbers.

The Appalachian Trail runs down the backbone of the Kittatinny Mountains between High Point and Delaware Water Gap. At Sunrise Mountain, a craggy ledge easily reached by automobile, we hikers on wheels can park and, by walking a few paces, get a magnificent view.

Sunrise Mountain looks eastward across the Kittatinny Valley, a region of lush dairy farms. Harry Dorer, retired Newark News photographer who talks about New Jersey the way really boastful Texans talk about Texas, first took me to Sunrise Mountain.

"Wonderful, wonderful," Harry said, as he always does. "Look at those barns. You know, Sussex County has more cows than people, and that's good."

PEOPLE AT LAST OUTNUMBER COWS

Whether it's good can be debated, but from Mr. Dorer's viewpoint, the county has slipped. The latest figures show more people than cows in Sussex, by several thousand head. Nevertheless, life still revolves around milking time. Often I've waited while sun-tanned farm boys or girls drove cows barnward across the road in late afternoon.

Between the Kittatinnys and the Delaware is a land few outsiders visit, a fertile land of independent folk. There I go whenever I seek a leisurely pace and a measure of self-sufficiency. There, near villages like Flatbrookville and Wallpack Center, men still trap and hunt and gather in country stores to swap yarns beside wood-burning stoves.

Joe Taylor, of Columbia, considered a kind of Paul Bunyan among trappers along Big Flat Brook, has led me through the area. Joe is an intelligent, articulate State trapper whose job is to catch beavers and deer and muskrats and raccoons in areas where they aren't wanted and to transfer them alive to spots where they are welcome.

One fall day Joe showed me how he traps foxes. We walked down a woods road where foxes run seeking food. Joe knelt down, carefully placed a trap and lure, expertly sprinkled dirt to conceal the trap.

He looked up. "Did you know most foxes are right-footed?" he asked.

"No," I replied doubtfully.

"Yup. I put a little scent on the right side of the trail and the trap on the left. While Mr. Fox digs for the scent with his right paw, he puts his weight on his left—square into the trap."

Little things like that escape the beginner. Little things like that also make a day with Joe Taylor something for which I will return to Wallpack Center at every chance.

Three centuries ago Dutch miners came down this valley and mined copper at Pahaquarry in the Kittatinnys. They lugged their ore overland to what is now Kingston, in New York State. Some authorities claim that the Old Mine Road, built in the mid-1600's, was the first true highway in the United States. The old copper mine is still open, though today it is part of a Boy Scout camp.

OLD MINES STILL YIELD "BLACK STONE"

Those Scouts hear Indian tales of the days when the country was young, when the Delaware River took on the rocky Kittatinnys and wore them down. That victory gave an everlasting gift to scenery: the Delaware Water Gap, a thing of beauty, where the river twists betwen craggy, tree-covered slopes.

In days long past the north Jersey mountains near Dover served ironmasters; more than 200 iron diggings were worked after the first "black stone" was mined in Morris County about 1710. Weeds now choke the entrances of all but a few of the mines. Still, more than a million tons of ore is extrated each year; mines at Mt. Hope and Mine Hill go down more than 2,700 feet—two of the deepest mine shafts in the East.

A million tons of iron ore is as nothing to the needs of New Jersey industry. Actually, the State's natural resources cannot begin to satisfy Jersey industry's enormous appetite. Transportation is the greater equalizer, the link in the beginning with sources of raw materials and the link in the end with markets the world over.

New Jersey relies on its outlets to the sea. Docks jut into the Hudson River at Jersey City, Hoboken, and Weehawken, calling for trade in rivalry with the docks of New York, just a river width away.

Wharves as far up the Delaware as Camden likewise lure ocean ships. Heavily laden hulls supply the State's many chemical plants.

Three plants, two in Perth Amboy and one in Carteret, provide a third of the Nation's copper refining capacity. The basis of this major New Jersey industry is simple: copper concentrates come in by boat; the refined metal goes out by barge.

On a visit to one of the plants, I heard constant talk of "byproducts" in the copper concentrates. "Byproducts?" I asked.

"You know," said a spokesman, "gold, silver, platinum, iridium. Things like that."

Totals generally are closely guarded secrets, but I learned that in 1958 one Middlesex County plant recovered gold and silver worth $36 million. Byproducts, indeed.

SALT MARSHES FEND OFF A CITY

Traffic in Jersey's industrial corridor probably is unrivaled. The New Jersey Turnpike alone carries a million vehicles a week. Between New Brunswick and Jersey City runs some of the heaviest rail traffic on earth.

Fortunately, nature left a great open area for maneuverability—the Jersey Meadows, 30,000 acres of scarcely conquered swampland within full view of skyscrapers in both New York City and Newark.

Once the bottom of a glacial lake, the Meadows now are flooded daily by changing tides. Sedges 7 feet tall wave like a green lake in summertime, turning to crisp, dry stalks in winter. Billboards scream the merits of New York hotels and Broadway plays. Beneath them, muskrat trappers roam.

The Meadows are ringed now with industry tied to hundreds of rail sidings. Transportation pulls out all the stops at Port Newark, which only 50 years ago was muskrat marshes and garbage dumps. Sea, truck, railroad, and air facilities meet at the port.

Similarly, transportation accounts for the industry of Jersey City, Bayonne, Hoboken, Elizabeth, Linden, Rahway, and half a dozen other cities within 10 miles of Newark. It accounts, in substantial measure, for Newark's unquestioned position as the financial, business, and industrial heart of the State.

Newark is the nerve center of Essex County, where nearly a fifth of all New Jersey people live. Founded 296 years ago, the city eyes the future; more than a billion dollars in public and private funds has been committed since 1955 to build a new Newark.

COLOSSUS OF BAUBLES AND BEER

Newark boasts that it is unmatched anywhere for the variety of its manufactures—a claim not easy to prove or to disprove.

Much of the production goes on in ancient buildings, many containing 10 or more small industries. Some 300 types of goods are made in the city, from delicate electronics instruments to gaudy plastic toys, from electrical machinery to chemicals, from leather to paint.

Out of the welter of products, I know Newark industry best for two things—gold jewelry and beer.

Just as Providence, R.I., is noted for its costume jewelry, so Newark is recognized as the center of the country's fine gold jewelry manufacture. Few realize this, even in the city, because most of Newark's work is done in unprepossessing old buildings along the railroad tracks.

Once Newark jewelers stamped "Paris" or "London" on their wares. Such guile is no longer necessary. "Newark" in the trade today carries just as much assurance of quality.

Consider, too, Newark's beer.

The city's big breweries always smell good to me, reminiscent of hot bubbling cereal. The cereal in the highly burnished copper cookers ultimatly winds up in 6 million barrels a year of Newark-made beer and ale—making Newark a Milwaukee of the East.

Six million barrels is a lot of brew. One day a white-haired brewmaster fixed that firmly in mind for me. He turned to me as we stood by a bottling line in P. Ballentine & Sons, a Newark brewery since 1840.

"Offhand, now, do you know how many glasses of beer there are in 6 million barrels?" he asked. I shook my head.

"About 3 billion glasses," he replied.

"That's startling!" I exclaimed.

His blue eyes twinkled. "Positively staggering, you might say," he responded dryly. Obviously I wasn't his first straight man.

Newark's foaming eminence answers one of two questions put to me by a foreman in a Bridgeton glass factory. We stood by an automatic bottle-blowing machine in the Owens-Illinois Glass Co. plant, where hundreds of thousands of bottles of jars are made daily.

This hot July day the hissing, clattering machines pounded out beer bottles. Molten white metal dropped into molds, machines clanged, and beer bottles streamed out. My face must have shown my awe. The foreman spoke up:

"I stand here myself for 5 minutes and wonder where all the bottles go. Who in the world drinks all that beer?"

I could tell him that millions of bottles go to Newark. But who in the world drinks all that beer I still don't know.

Jersey industry, I discovered, thinks nothing of production in millions. Take, for example, the Joseph Dixon Crucible Co., of Jersey City, across the Hackensack and Passiac Rivers from Newark. A pioneer in writing implements, the company turns out more than a hundred million pencils a year.

SPINACH PICKERS AND TICKLY BENDERS

New Jersey seems much longer than its 166-mile length. Cape May Point is on the same latitude as Washington, D.C.; High Point is on a line with New Haven, Conn. Hence, on an early November day when spinach is being plucked in Cumberland County, Sussex County boys may be running tickly benders—footraces—on the first ice of north Jersey's lakes.

Occasionally I get the feeling that New Jersey is really a northern State with a southern accent, a feeling most keen when I delve into the State's role in the Civil War.

One-third of New Jersey is below Mason and Dixon's line (or where the line would be if it extended from the Maryland-Pennsylvania border to the Atlantic). That sets a tone, but the reasons why New Jersey twice refused Abraham Lincoln full support go deeper. The State had been a major sup-

plier to the South, and its political leanings were heavily Democratic—and thus antiwar.

Princeton University was known in the 1850's as the northernmost of the southern universities. After Fort Sumter, the students split almost evenly between Blue and Gray.

The first time I toured Nassau Hall, Princeton University's 200-year-old administration building, Dan Coyle of the university's staff stopped me in front of a panel honoring Princeton's 70 Civil War dead. "Fascinating thing," said Dan. "Thirty-five of them were Union, thirty-five Confederate. That tells as much as anything about how things were here during the war."

GHOST TOWNS HIDE AMID THE PINES

North and South merge in the Pine Barrens, about 1,900 square miles of little-used south Jersey pine and scrub oak growth.

Botanical literature of the Pine Barrens tells of trees and flowers seldom found south of New England growing side by side with trees and flowers rarely found north of the Carolinas. I have seen, for one, the delicate southern yellow orchis in the barrens, 250 miles north of its normal habitat.

Few get to know this frontier, covering nearly a fourth of the State. Broad highways slice its dense walls of trees, and along those highways speed millions of people bound to or from the Jersey shore. Rare is the traveler who struggles up the narrow side roads to its ghost towns. It's just as well; those sandy tracks can be as treacherous as a country lane after a blizzard.

A few natives still lead the simple life deep in the thickets. They gather sphagnum moss in the cedar swamps, pick and gather laurel and pine cones, or sometimes cut a load of pulpwood. They find their markets where they can, and they leave other people alone, asking only to be left alone in turn.

On one trip to the Pine Barrens I heard of Asa Pitman of Mount Misery. "Rattlesnake Ace" he was called, because he caught and sold rattlesnakes for a living.

Ace had a story which merits—and gets—much retelling. "The missus and me had just got into bed," said Ace, "when I hear a noise in the garrett. My snakes was loose. I shook the missus and we went up there in the dark and all. Had a devil of a job gettin' 'em all back without hurtin' none of 'em."

The Pine Barrens call me back at all seasons of the year. Especially is this true, however, in the spring, when there is a richness of bloom and beauty, and in Indian summer, when chattering birds harvest wild berries and seeds amid fall foliage.

On such a bird-chattering day I ventured into the Barrens to look at the Wharton tract—95,000 acres of State-owned forestland northwest of Atlantic City. Joseph Wharton, the Philadelphia "nickel king" who once controlled America's supply of that metal, began putting the big tract together in the 1870's. He hoped to use the area's water for Philadelphia, but New Jersey law thwarted that ambitious plan. In 1954–55 the State bought the land to protect the water rights of its citizens.

Joseph J. Truncer, general manager of the Wharton tract for the State Department of Conservation and Economic Development, waited for me at Batsto, the old village of early ironmasters and glassmakers. When I arrived, Joe was carefully sorting a pile of recently acquired blacksmith tools and fittings. His face shone like a small boy's at Christmas; with such equipment Donald Streeter, a veteran blacksmith from Vineland, has fitted out the blacksmith shop almost as good as old.

BOG IRON SMITHY ECHOES THE PAST

"Batsto is from an old Indian name, Baatstoo, meaning 'bathing place,' " Truncer told me. First it housed the ironmakers who smelted the bog iron ore—a variety of limonite—from the nearby swamps and streams. Later, when that industry died, glass blowers occupied the settlement.

Batsto's Mansion, or "big house," still stands on the hill. "We'll preserve it as a reminder of how people lived years ago," Truncer said as we walked toward it.

Between the big house and the company store I noticed a walk with flagstones of odd sameness. I said as much.

Truncer laughed. "Those flagstones are pieces cast from bog iron," he said. "They used it for everything—including headstones in local cemeteries."

Forty miles of canoe streams twist through Wharton tract. On those streams—the Mullica, the Batsto, and Wading Rivers—there is rare peace and quiet, despite the fact that only minutes away motorists jam the highway between Camden and Atlantic City.

Truncer bounced me over a woodland road in a much-abused jeep, heading for a meander in the Mullica. Only canoeists, tract wokers, natives—and an occasional writer—ever reach the spot. There we watched the river moving slowly seaward through the bayou. The dark, rippled water looked like highly polished mahogany.

GARDEN SPOT OF THE GARDEN STATE

My route lay west to Hammonton, where spring turns the landscape into a sea of peach blossoms and where, in July, Italians throughout the East gather to celebrate the Feast of Our Lady of Mt. Carmel. Hammonton is on the edge of a broad arc north and west of the Pine Barrens, an arc in which the soil is rich and deep.

This is New Jersey's garden spot of the Garden State, a region cutting across parts of 10 counties. Here is a land that produces fruits and vegetables for markets and packinghouses from the time the first tender dandelions are cut in March until the late spinach is plucked in November.

Color always brightens this garden. In the spring the fields are green with asparagus shoots and yellow with lettuce. June brings rich strawberry color, and, as that fades, the brilliant yellow of tomato blossoms glows on hundreds of thousands of vines. Always there is color: the blue-black of the eggplant, the rich crimson of the pepper, the delicate pink of the peach.

Farming is big time in south Jersey. Plantings are so widespread and harvests so vast that a sizable army of migrant workers must move into the State every summer. Twenty thousand migrants compose the army; half of them are flown from Puerto Rico to New Jersey in a giant airlift between the island and south Jersey airports.

Jersey farming reaches its apex at Seabrook Farms near Bridgeton, one of the Nation's largest mechanized vegetable gardens. The giant concern processes crops—both its own and those of contract farmers—from 41,000 acres, a fourth of New Jersey's total vegetable acreage.

The mechanization at Seabrook Farms is hard to believe. Machines do almost everything: Dig beets, slice off spinach, pluck ears of corn, thrash peas and lima beans from their vines. Crop-dusting planes sweep over enriched fields, tilled by 75 tractors. I'm especially fond of south Jersey in August and September, when long lines of trucks, piled fantastically high with baskets of tomatoes, rumble endlessly over darkened streets on the way to canneries in a dozen towns.

Aromatic spices and herbs fill the damp night air to make a visitor sleep well—or, if he doesn't like catsup, to make him see red.

Far and away the largest tomato user is the Campbell Soup Co. Campbell was founded in Camden in 1869; today the company has plants in nearly a dozen States and in Canada, England, and Italy.

EXECUTIVES DOUBLE AS FOOD TASTERS

Politely turning aside questions on production statistics, Campbell constantly stresses quality. Each day Campbell plants throughout the country speed samples of their output to Camden by air. Each day the samples are tasted by experts, who often are joined by company brass in a longstanding company tradition. If the slightest flaw is detected, out goes the faulty item.

Campbell influence in tomato growing is widespread. An executive told me that "half the tomatoes grown for processing in the United States today can be traced to our research."

Agriculture remains vital in south Jersey, but since World War II industry and home development are rapidly encroaching upon this land once reserved solely for crops. The pace has picked up markedly since completion of the New Jersey Turnpike in 1952.

Some of the industry has jumped clear across the Pine Barrens to locate close to the shore, a prime illustration being the new multi-million-dollar plant of Lenox China Co. in Pomona, near Atlantic City.

POTTERS LEARN WHAT THE POLISHERS DO

Lenox maintains its old plant in Trenton, where Walter Scott Lenox began making fine china in 1889, but in the Pomona installation, opened in 1954, a cup or saucer takes less time to make. Stepped-up operations mean no lessening of quality. However, the long one-story building spreads out its intricate operations so widely that the company sometimes wonders if the front end of the building knows what the back end is doing.

One morning H. Norman McCullough, Pomona plant manager, showed me through the huge plant—through the mounds of raw materials, past the spinning potters' wheels, by the long lines where hands molded the green clay.

We watched the chinn being fired and then skillfully decorated. As I handled a finished plate it seemed a far cry from the unsightly raw materials.

McCullough smiled. "You've discovered something that worried us," he said. "We know that the people who are working with the messy green clay can't have a clear idea of what they are working toward unless we show them. That's why we have a constantly changing exhibit in the cafeteria—to tell everyone along the way that what he is doing is a part of making fine china."

South Jersey has not had to wait until now to claim diversified industry. For years the area has boasted of production "from pen points to battleships." That would be Camden, home of Esterbrook pens, and the New York Shipbuilding Corp.

CAMDEN: FROM PENS TO PROUD SEA GIANTS

Rare is the middle-aged American unacquainted with Esterbrook points; the company made 325 million of them in the peak year of 1919. Now in its 102d year, Esterbrook still makes millions of carbon-steel points for worldwide distribution, but the bulk of production is in fountain pens, including hundreds of thousands of desk pen sets.

If Esterbrook deals in numbers, however, the New York Shipbuilding Corp. specializes in bulk. When I stopped by the shipyard at Camden, the first vague outlines of the huge carrier *Kitty Hawk* were taking shape in a deep, specially built graving dock. Far below, men swarmed like ants over the giant steel skeleton, affixing great steel plates with precision.

A shipyard is a place of many sights and a place to test a man's endurance. I hustled for hours after my long-legged guide as we climbed up and down and across the long

ways—each 850 feet long, the only covered ways of such size in the country.

One held the beginnings of a submarine. Nearby, a merchant ship was only days from launching.

Eventually we reached the drafting room. As far as the eye could reach, men sat under fluorescent lights working at drafting tables.

"How big is this room?" I asked.

"Oh, about an acre or so," my guide said offhandedly, as if all industries had "an acre or so" of draftsmen.

SCIENCE WORKS TOMORROW'S WONDERS

Painstaking research and planning builds ships in Camden. Such research is a New Jersey hallmark, the State's link with tomorrow's industrial production. Roughly a tenth of the country's industrial research laboratories are located within the State's borders.

Research activity is especially intense at Princeton, partially because of the university's noted graduate school and partially because of pure scholarship at the Institute for Advanced Study.

Founded in 1930 through a $5 million grant from the Bamberger family in Newark, the institute has become an acknowledged gathering place for the world's top thinkers. It awards no degrees and holds no scheduled classes. Its work centers in two broad areas—mathematics and historical studies.

Poet T. S. Eliot wrote part of his play "The Cocktail Party" at the institute, and Arnold Toynbee worked there on his 10-volume "A Study of History." In all, some 4,000 publications have been partly or completely produced at the institute, including works by Noble Prize winners.

Another famed New Jersey institution is the Bell Telephone Laboratories on a hilltop at Murray Hill, one of the world's largest industrial research laboratories.

Naturally Bell research concentrates on communications—on such things as telephone handsets, wire, and telephone poles—but it knows few bounds. Out of Murray Hill has come basic work in synthetic crystals. There, too, was developed the transistor, which won its three-man team of perfecters the Noble Prize in physics in 1956.

NICKEL PLAYS EDISON'S FAVORITE TUNE

Organized research in Jersey began in 1876 when Thomas A. Edison and his team opened a laboratory at Menlo Park. Edison received patents for 300 items developed at Menlo Park, including the incandescent lamp and the phonograph, before he moved to West Orange in 1887. That West Orange laboratory, now part of the National Park System, is open for all to see.

Visitors can listen to an Edison jukebox (a nickel in the slot produces music), hear his favorite recording of "I'll Take You Home Again, Kathleen," and see his original movie equipment. Nearby stands a reproduction of his "Black Maria," the tarpapered movie studio that pivoted to face the sun and give insensitive films of Edison's time the greatest possible amount of light.

Edison's desk is just as he left it at his death in 1931, crammed with thoughts and ideas. The cot where he napped so sparingly is in a corner. A model of the original incandescent lamp stands on the desk. Significant is Edison's chemistry laboratory, where before his death he had extracted rubber from goldenrod.

Chemical research meant Edison was abreast of a phenomenon of the 20th century: the incredible rise of the American chemicals industry. Nowhere has that rise been more marked than in New Jersey, where chemicals manufacture has as many branches as an untrimmed crabapple tree.

Representing more than a billion dollars annually in the State's economy, the industry centers in Hudson, Essex, Union, and Middlesex Counties. Most noteworthy, however, is the E. I. du Pont de Nemours Chambers Works at Deepwater in semirural Salem County, near where the New Jersey Turnpike approaches the Delaware Memorial Bridge by the banks of the Delaware River.

Du Pont began the Deepwater plant in 1917 and risk $42 million in 10 years without a cent of profit. "Deepwater, for sure," grumbled stockholders. "There's no bottom to the need for money." But today Deepwater prospers as one of the largest chemical plants in the Western Hemisphere.

Edison's work stimulated early electronics production in New Jersey, and World War II bounced it high. Electronics manufacturers are found now throughout New Jersey, but the largest of all is Radio Corp. of America, with division headquarters in Camden and branches at 40 other sites throughout the State.

RCA's beginning involved an enterprising machinist, one Eldridge R. Johnson, of Camden, to whom Emile Berliner brought a talking machine in 1896. It sounded, Johnson wrote, "like a parrot with a sore throat," but he became interested "as I had never been interested in anything before."

So interested, indeed, that he founded the Victor Talking Machine Co. in 1901. Receipts totaled a tidy $100,000 the first year; then, as Johnson relieved the machine's sore throat, income rose astonishingly to about $1 million by 1905—a jump of 900 percent in 4 years.

Today nearly 20,000 men and women work for RCA in the Camden area. Production at this original site no longer includes "talking machines" or phonograph records, but instead ranges from pocket-size two-way radios to mammoth electronic computers, which anyone with the need and $1 million or so in ready cash can buy.

In looking ahead, RCA has not turned its back on its heritage. The famous old trademark of Nipper with an ear cocked to "his master's voice" still stands in the tower of one of the buildings where it has served as a landmark for nearly 60 years.

Much of RCA's future will derive from its neatly landscaped David Sarnoff Research Center in Princeton, where such things as the electron microscope, an atomic battery about the size of a matchbox, and a solar battery to harness the sun are being perfected.

HUMAN TIDES FLOOD THE JERSEY SHORE

Sooner or later most Jerseymen—be they north or south, factory workers or farmers or researchers—go to the Jersey shore. There they become part of a throng from all over the land.

What the visitor seeks he can find at some 60 resort towns along the New Jersey coast. If he wants bustling boardwalk life, tense with noise and excitement, he goes to Atlantic City, Asbury Park, Long Branch, Point Pleasant, Wildwood, or a dozen smaller resorts.

If he wants comparative quiet, perhaps even a bit of Cape Cod or Newport atmosphere, that's available in a score of locations—Cape May, Avalon, Stone Harbor, Long Beach Island, Bay Head, Sea Girt, Deal, Spring Lake, Ocean Grove, to mention a few.

Nearly a quarter of all Jersey shore visitors find their way to Atlantic City. I prefer a quieter spot in summer, any of half a dozen Cape May County resorts. In winter, quite the other way, I like Atlantic City very much.

That's because Atlantic City knows how to entertain. Nothing is too big, nothing is too small, for the city of amusement. All fall and winter, when other resorts hibernate, Atlantic City stays alive, catering to every species of conventioneer doctor, lawyer, labor leader, industrialist, policeman, legionnaire.

Atlantic City impresses me by its ability to take the crush of a crowd, then recuperate and leave no outward sign that anything unusual has happened. Last fall I sat with 300,000 others in specially erected boardwalk bleachers to watch the Miss America Pageant parade. We dropped papers, tossed away programs, shelled peanuts, let gum wrappers fall.

Late that night, as I walked to my hotel, the crowd had vanished, leaving behind only its debris. Crews of workers moved silently through the night, putting the boardwalk to rights. By morning nothing remained to indicate that even an early-morning bather, much less a huge crowd, had passed that way.

Miss America symbolizes Atlantic City's devotion to promotion. As Miss Ada Taylor of the Claridge Hotel once put it to me:

"We live on ocean, emotion, and constant promotion."

After seeing earlier pageants via TV, I didn't know if I could enjoy this continuing bit of seashore folklore (it has been going on since 1921). But I did.

Three preliminary nights dragged, true, but as the finals moved to a close in the tremendous auditorium on Saturday night, the emotional atmosphere heightened. A blase New York newspaperwoman leaned over toward me as stately Miss Mississippi walked alone down the runway, the newly crowned Miss America of 1959.

"By gosh," said the writer, almost in amazement at herself, "she really is a queen."

BEAUTY OF MANY SORTS CROWNS JERSEY

Miss America is beauty to be remembered year in and year out. But the man who takes the trouble to discover New Jersey finds inspiration in many other things as well.

He finds it in the big oyster fleet which sails at dawn each day in season from Bivalve into Delaware Bay. His imagination is quickened by tramping across the Salem County marshes, where trappers each year bag tens of thousands of muskrats. He thrills to the sight of herons and egrets coming home against the setting sun to roost in the holly trees at Stone Harbor's sanctuary. Certainly he finds beauty in the north Jersey orchid greenhouses, where more than 2 million orchids blossom annually. Many a young Texan or Californian has taken a bit of New Jersey with her to her first ball.

Traveling back-country roads can bring a man to Hope, Harmony, and Tranquility, all close together in the hills of Warren and Sussex Counties—and those three villages are as pleasant as their names would imply. Equally, however, a man can find double trouble in Ocean County, although the cranberry bogs bordering the village scarcely deserve the ominous title.

There are always surprises in New Jersey—and at times it takes an outsider's viewpoint to bring the lesson sharply home. Driving through the State with B. Anthony Stewart, chief photographer for the National Geographic, I told him of New Jersey's reputation for breeding fine thoroughbred horses. He seemed interested, but not impressed: he had photographed Kentucky's blue-grass country.

One golden September day Tony Stewart and I went down to the Helis Stock Farm in Jobstown, northeast of Mount Holly. Miss Peter Cole, field secretary of the Thoroughbred Horse Breeders' Association of New Jersey, took us across the 1,500 acres of pastureland and showed us stables with stalls for more than 200 horses. We saw a half-mile covered track where horses can be raced year round. Outside, white fences contrasted handsomely with lush green grass where brood mares and colts nibbled. I liked it, being a New Jersey enthusiast, but

Tony Stewart needed only to react with polite professionalism.

Instead he said softly, "I've seen horse country in a dozen States, but not like this."

New Jersey never seemed better.

The World Bank Loan to the United Arab Republic

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 14, 1960

Mrs. SULLIVAN. Mr. Speaker, a few days prior to this date I received a communication from Mr. Morris Kraines, president of the St. Louis Council of the American Jewish Congress, which I feel deserves to be included in the CONGRESSIONAL RECORD for the information of all Members of Congress. It deals with the matter of the loan recently extended by the International Bank to the United Arab Republic for the purposes of making improvements in the Suez Canal.

I am, of course, very much aware of the fact that the International Bank is not an agency of the U.S. Government. Thus we are not in a position to dictate its policies or decisions except as we can influence our own Government's representation to the Bank to seek in turn to influence the Bank's policies. Nevertheless, I am also aware of the fact that in one of his recent press conferences, the President himself referred to the World Bank as, in effect, an instrument of Western policy. This very much raises the question of what free world policy really is on this question of illegal discrimination in the use of the Suez Canal.

Mr. Speaker, I submit for the Appendix of the CONGRESSIONAL RECORD and for the attention of the Congress the communication I received on this matter from Mr. Kraines, as follows:

ST. LOUIS COUNCIL, AMERICAN JEWISH CONGRESS,
St. Louis, Mo., January 7, 1960.

The Honorable LEONOR K. SULLIVAN,
U.S. Representative,
Washington, D.C.

DEAR REPRESENTATIVE SULLIVAN: It was disheartening to read that the World Bank has decided to grant a $56 million loan to the United Arab Republic. Though the bank has claimed that its decision was determined by strictly economic factors, it is the feeling of the St. Louis Council of the American Jewish Congress that the political effects of the loan far transcend those of the economic.

Extending a loan to the United Arab Republic, at this time, represents an encouragement of dictatorial irresponsibility, as well as a negation of American policy as enunciated by President Eisenhower in 1957. At that time, President Eisenhower said that if Egypt attempted to blockade Israeli shipping through the Suez Canal, it would be dealt with firmly by the "society of nations." Since then numerous attempts have been made, largely by the UN, to deal with this problem, and for a while it seemed as if some kind of agreement had been reached by Mr. Hammarskjold and Nasser. However, Nasser's recent actions have belied those efforts.

Granting aid to a country which brazenly reneges on its own promises to the U.N. and and which stubbornly remains indifferent to its obligations for peace, will inevitably be interpreted by totalitarian nations as a green-light to lawless actions, as well as a symbol of the undecisiveness and weakness of democratic nations. The World Bank's purpose should rightfully not serve as a political sledgehammer, but neither should it serve as a de facto subsidization of international aggressiveness.

We certainly recognize the need for peace and prosperity in the Middle East and support wholeheartedly attempts to achieve it. For that reason, we urge that a policy be adopted along the lines of the 56 U.S. representatives, who a few weeks ago sent a joint telegram to the President of the World Bank. We believe the State Department should continue its opposition to the illegal blockade of Israeli shipping, and should also urge deferment of the loan until the United Arab Republic guarantees unrestricted freedom of passage for the shipping of all nations. There is sufficient precedent for such action—for example, in 1955, the bank refused a loan to Nasser for the Aswan Dam until he settled the sharing of the Nile with Sudan. Similarly, in 1957, the United States froze Egypt's assets in the United States when the matter of reimbursing Suez stockholders was in question.

In short, we respectfully urge you to do whatever you can to reaffirm our traditional American policy of justice and peace in the Middle East.

Sincerely yours,
MORRIS KRAINES,
President.

Interest Rates

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. CURTIS of Missouri. Mr. Speaker, on permission to extend my remarks in the CONGRESSIONAL RECORD, I wish to call attention to an editorial which appeared in the St. Louis Post-Dispatch of January 13, 1960, entitled "Politics and Interest Rates." It is as follows:

POLITICS AND INTEREST RATES

President Eisenhower's renewed request for legislation lifting the 4¼ percent interest-rate ceiling on long-term Government bonds does not promise to fare too well in Congress. Some Democrats, notably Representative CHESTER BOWLES, of Connecticut, are already urging that the request be rejected again, as it was last summer. Their reasoning does not seem too persuasive to us, and we hope the Democratic leadership will think twice before accepting it.

Mr. BOWLES appears to agree with the administration that the interest ceiling should be raised. But he says it should not be raised until major reforms in other phases of monetary policy can be put into effect. To authorize higher interest rates on long-term bonds now, he says, would tie the hands of the administration taking office next January—"an administration which we hope and expect will hold a more dynamic view of America's economic future."

One can agree with Mr. BOWLES on the need for a more imaginative approach to the problem of accelerating economic growth, but it is hard to follow him when he argues in effect that the interest ceiling should be lifted only by a Democratic administration.

The Democrats expect to make a campaign issue of high interest rates, but that is not a sound economic reason for turning down the President's request. As a matter of fact, whether Congress grants or rejects the request will have very little to do with the total cost of carrying the national debt.

Keeping the ceiling at 4¼ percent does not mean keeping the interest rate down. It only means that the Treasury must issue short-term securities, on which the ceiling does not apply, instead of long-term bonds, for which there is no market at the present limitation. A slight increase in the long-term rate might actually permit the Treasury to borrow at a lower cost than it now must pay for short-term paper on which it has to offer more than 5 percent.

Short-term securities create a maximum inflationary potential, long-term bonds a minimum one. If it is desirable to shift some of the national debt into the latter category, as it is, and has been for some years, then there is good reason to lift the ceiling now rather than to await a new administration.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. ALGER. Mr. Speaker, as is my practice every Monday, I put my newsletter in the RECORD so that my colleagues as well as others who read the CONGRESSIONAL RECORD may know my views if they are so disposed.

The budget message is of great interest to all of us. For my part, I decided to write the President a letter of commendation well deserved, as my newsletter for this week:

WASHINGTON REPORT BY CONGRESSMAN BRUCE ALGER, JANUARY 23, 1960

THE PRESIDENT:
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: Good for you. Having studied your budget message, I feel compelled to write you this letter. Moreover, I believe that a majority of Dallas citizens would join me in these thoughts. Undoubtedly numberless others throughout the land feel the same.

Yours is no easy task. We all know that. Presenting and preparing a year's budget for our National Government is tough, but hardly more so than a long list of difficult things that, by law, we require you as President to do. On top of the all important military expenses, there are countless Government functions that must be paid for.

Besides recommending action, you have to assemble, from all branches of Government, estimates of what it will cost to carry out the laws Congress has passed. Congress may than accept or ignore your recommendations, but the chances are that you will be blamed for any inaction by Congress, as often as not by the very Congressmen responsible. Worse yet, many of our people simply do not understand the respective functions of the Congress and the President.

In addition to the necessary expenses, there are endless numbers of costly pet projects that Congressmen, pressure groups, and individual citizens think are needed right

now. It's easy for any of us to lose sight of basic objectives and the overall picture. You, of course, must not. It's easy for some to figure that the other fellow's needs are not so important as their own. Easy too, to demand some particular, even worthwhile, spending project—"after all, it doesn't cost much"—without fitting that demand into the whole nationwide framework. In fact, it would probably be hard for many people to realize just how much restraint, self-discipline, and willpower it takes to withstand the pressures for greater spending when preparing the budget. Maybe, over the years, that's why the Government often spends more than it takes in.

Well, we of Dallas, want to compliment you and to encourage you in the statesmanlike attitude toward spending shown by your budget message. You have offered us a balanced budget. You have suggested that we pay down the debt, tipping our hats to our children who will inherit it. You ask us to look forward to the possibility of a tax cut, if we follow this responsible course you have charted.

To do this, you have chosen to delay your request for some of the money for Federal building that is under way throughout the Nation. So, the shoe is pinching us in Dallas. We have high hopes for our Federal building conceived and based on sound economic principles. We expected speedy construction. Now it will be delayed since no money is provided in the current budget, beyond buying the site and preparation of plans, which are going ahead full speed.

Perhaps it would be expected by some, even demanded, that we now solicit you to include the funds necessary for immediate construction of this building, justified by persuasive arguments. It would be easy to forget the national picture and just demand this admittedly worthwhile project.

However, sober consideration and understanding of Federal spending is not new to the people of Dallas. We have on other occasions declined to request Federal aid when we might have had it under the law. From time to time, as a Representative, I have voted, in the name of Dallas people, against boondoggle bills, even when it meant voting against some Dallas project included in a bill. We were prepared then and are now to be self-disciplined and responsible in our attitude toward Federal spending.

It is possible that in this moment of history, under your leadership, responsible people everywhere will rally around your sensible economic course. We, in Dallas, hope so. Surely, it is not too much to ask that we delay some construction, however worthwhile, to accomplish the objectives of sound fiscal policy. We know that it is time we got our house in order. We must not spend more than we take in. We must cut our debt. We should reduce the tax burden on our people.

We cherish our freedoms as dearly as any generation of Americans ever did and we know to what degree they may hinge on our maintaining a sound dollar. Hence, we demand only what we have a right to demand—sound money management.

In a larger sense some may even feel, as I do, that we are at a turning point in history. We should count the blessings of a free society and turn decisively and resolutely away from the false charms of a regimented planned economy resulting from crushing taxation and the big spending that occasions it.

We're behind you and want you to stand firm while we face up to the economic facts of life. Thank you, Mr. President.

Sincerely,

BRUCE ALGER,
Member of Congress.

South Dakota Cities Work Together

EXTENSION OF REMARKS
OF
HON. GEORGE S. McGOVERN
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. McGOVERN. Mr. Speaker, most Members of Congress have at one time or another found themselves caught between the competing claims of two or more cities for the location of a Federal installation within a particular State. Ordinarily, local self-interest takes precedence over the welfare of the State as a whole in such controversies.

It was thus most refreshing to those of us in the South Dakota congressional delegation when one of our chief cities threw its influence behind the efforts of a smaller South Dakota city relative to a proposed relocation of a Federal agricultural experiment station.

Some time ago a Senate study recommended the relocation and upgrading of the experiment station presently located at Newell, S. Dak. Rapid City has been mentioned as a possible site for the station. Yet, when a delegation of Newell citizens called on the Rapid City Chamber of Commerce, they were met with a friendly suggestion from Rapid City that they join with Newell in efforts to keep the experiment station at its present location.

Because of this kind of cooperation and unity between the two cities and with the enthusiastic support of the State's congressional delegation, it now appears that the proposed relocation of the station will be dropped. The Newell station needs additional budget support, however, to do the expanded work that is needed. Here again strong backing from the entire State and its representatives will help bring this to pass.

I include at this point a fine editorial from the Rapid City Journal of January 19, 1960, commenting on the cooperation between Newell and Rapid City:

[From the Rapid City (S. Dak.) Journal, Jan. 19, 1960]

TAKING THE BIG VIEW

Rapid City's view of the big picture impressed some men from Newell recently. If more residents of the Black Hills and the adjacent West River area including all the communities will look at the big picture we can have a solidarity of interest which can be even more impressive.

Jealousy and antagonism between the Black Hills communities swells and diminishes through the years. We can be closely knit for common causes, then discover division where one town is thought to have an advantage.

The internecine warfare isn't necessary. We all should work for the general good of our area—there is a community of interest.

The editor of the Valley Irrigator at Newell, F. Lyn Gladstone, commented on the action by Rapid City businessmen:

"Cooperation between the big city and the small town is not only possible, but practical and worthwhile, a Newell delegation noted at Rapid City where they received wholehearted and friendly support in the current effort to save and secure increased appropriations for the U.S. Newell Field Station.

"As was hoped, the Newell delegation reported, it was the joint thinking of both the Agricultural Council of the Rapid City Chamber of Commerce and of those from here that the economy of the use of existing facilities should be a primary consideration.

"However, it was Rapid City's view of the big picture which most impressed those from here.

"Rapid City businessmen realize that efficient use of water on the Belle Fourche irrigation project, prevention of soil erosion on Pennington county ranches and use of shelterbelts to stop soil blowing on fields near Ardmore affect the economy as much on the main street of their own city as well as of Newell, Wall or Hot Springs.

"Just as completion of the surfacing of U.S. 212 has brought more business into the Black Hills with no loss to Rapid City, they realize that establishment of a new business in Belle Fourche or Custer means nearly as much to Rapid City as to those towns themselves; and, conversely, that loss of a business in Nisland or Hermosa would also be an economic loss for the area's principal distribution center.

"In the drive to retain the Newell Station and also to secure increased appropriations (its operating budget has remained unchanged for many years while farm operating as well as all other costs have increased tremendously) to expand agricultural research there. Newell will now solicit the support of other communities.

"—And, for economic benefit to all of South Dakota, southwestern North Dakota, northeastern Wyoming and southeastern Montana, there is no reason why the Newell Station cannot be designated the research center of soil and water conservation research in Region V such as that proposed in Senate Document 59 which is an appraisal of such research needs for all of the United States."

The jealousy which shows among the towns in the Black Hills arises from complacency in most instances. The threat that Newell would lose the big experimental station brought reaction and some community action for Newell and the neighbors.

No community needs to sit back and gripe. What have you got? Sell it to yourselves first and then sell it to the neighbors and explain your problems and the programs.

United we stand.

Ukrainian Independence Day

SPEECH
OF
HON. JAMES A. BURKE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. BURKE of Massachusetts. Mr. Speaker, 42 years ago the centuries-old hopes and aspirations of the Ukrainian people were realized, and their national independence had become an accomplished fact. They had proclaimed the establishment of the Ukrainian Republic on January 22, 1918, and at last, by asserting their inalienable right of self-determination, they had become masters of their fate. Unfortunately that was for a very brief period only, for by the end of 1920 their republic was no more. They were robbed of their freedom and brought under the heavy heels of Soviet Russia's Communist totalitarianism.

Today, after almost 40 years, some 42 million helpless, innocent but stout-hearted and liberty-loving Ukrainians

are suffering under Communist tyranny in their beloved homeland. On the celebration of the 42d anniversary of their Independence Day, I wish to assure them that they have millions of cordial and sympathetic friends in the free world, and, of course, in this country, who hope and pray for their freedom.

Fair Trade: Inflationary for All

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert in the RECORD an editorial from the Los Angeles, Calif., Times of December 11, 1959, regarding the fair trade legislation pending before this session of Congress. This article reflects the uniform and unanimous newspaper editorial sentiment in opposition to such measures. If this legislation is enacted it is estimated it will cost consumers $10 billion per year. Every Government agency has recommended its defeat, because passage would mean pro tanto repeal of the antitrust laws.

The editorial follows:

FAIR TRADE: INFLATIONARY FOR ALL

Under the guise of fair trade, price-fixing of retail goods is being agitated again at the Federal level. If one or another of the bills which Congress will consider next session is passed, it could cost the average family another $250 a year—$10 billion in all.

Already the proponents of fair trade have advanced bills in both Houses of Congress.

ARGUMENT ADVANCED

The argument in favor of fair trade or retail price-fixing is that the manufacturer, dealer, and consumer have a common interest in setting a retail price that cannot legally be undercut by cutthroat competition. If big retailers, such as discount houses, undersell smaller dealers, runs the argument, the latter will go out of business; then the survivors can raise prices and stick the consumer; moreover, small business might disappear, and with it a cornerstone of our economic system.

In contrast, those against fair trade contend that the greatness of America is based on free enterprise and competition. They recall that the original State approach to this problem, made in California, was a depression baby in 1931, to help preserve small business. Under the present booming economy they see no competition that would put too many manufacturers or dealers out of business. In fact, the survival of competitive shopping as we know it depends upon heading off the bills in Congress. It also calls for re-reversing the situation in the many States whose legislators have yielded to minority pressure while the majority ruled by unconcern.

THE COSTS ARE HIGH

The most compelling reason to rise against this many-pronged fair-trade campaign is found in the survey that showed how much price fixing would cost us immediately. The primary targets are H.R. 1253, now in the House Rules Committee, following hearings pushed by Representative OREN HARRIS, Democrat, of Arkansas, chairman of the House Commerce Committee; and S.R. 1083, its counterpart, which is due to come up in the next session before the Senate Commerce Committee. The only Californian on either group is Senator ENGLE, Democrat.

Thirty States have fair-trade laws. The peak was reached in 1953, when 45 States had fair-trade laws or price-fixing statutes binding even upon retailers who had not signed price agreements with manufacturers.

The nonsigner clause was the salvation of the fair-trade movement. Showing up first in a 1933 amendment in California, the clause binds every retailer to sell a brand at a designated price, even though the manufacturer had signed a price-fixing contract with only one retailer in the State.

By 1938 the clause was on the books of 45 States, and Congress had passed the Miller-Tydings Act. The latter exempted fair trade from the Sherman Antitrust Act.

From 1938 to 1951, opposition to fair trade stemmed mainly from supermarket operators and department stores. Along with discount houses, they were involved in most of the court cases testing fair trade. By 1951, fair trade was almost ended, after nonsigner clauses had been declared unconstitutional by the U.S. Supreme Court.

Nevertheless, in 1952 Congress passed the McGuire Act, over vigorous opposition including the Antitrust Division of the Department of Justice. Now all States are permitted to bind retailers to fair-trade prices whether retailers agreed to them or not.

CHOICE LIMITED

Since 1953, however, State courts have declared the nonsigner clause invalid. That is the burden of bills now before Congress. Under them, manufacturers would be able to stamp retail prices on their brand merchandise at the factory. No retailer could sell this brand for less. No longer would the consumer have a choice between higher prices with extra retailer services or lower self-service prices.

Even under wartime price administration there were differences recognized in price-fixing between stores with smaller volume than others; prices were generally lower when the volume was higher.

But if many consumers are asleep to the danger of price-fixing, the organizations that speak for them are alert. Much of the Nation's press, Vice President NIXON, the President's Council of Economic Advisers, the Federal Trade Commission, the Departments of Agriculture, Commerce, and Justice, the Bureau of the Budget, the General Federation of Women's Clubs, the AFL–CIO Executive Council, and the National Association of Consumer Organizations are against fair-trade laws.

PRESENT DANGER

The danger is that the 1960 session of Congress will be so bent on adjourning early that the obnoxious bills may be passed without adequate hearings or public attention.

That was the situation in 1952. President Truman, who had commendable reservations about fair trade, nevertheless had to sign the District of Columbia appropriations bill with the McGuire bill as a rider in order to get money to run the capital.

More grassroots consumer attention is needed.

Garrison Diversion Unit

EXTENSION OF REMARKS
OF
HON. QUENTIN BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. BURDICK. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Minot Daily News, Minot, N. Dak.:

BIG CONTEST LIES AHEAD

It is the history of reclamation projects throughout the Nation that none of them was born without a lot of labor pains and we now know that the Garrison diversion project is to be no exception.

The Bureau of the Budget, all powerful as it is, came up this week with its report on the project, listing objections but leaving the door open for the Department of the Interior, which approves and supports, to do so in Congress.

While obstacles have been raised, it goes without saying that North Dakota's congressional delegation and the reclamation leaders in North Dakota have no intention of surrender.

Perhaps all the time too many North Dakotans have been too optimistic. What now has happened will awake those who have taken the diversion project for granted, and they, too, now will shoulder arms.

A military man might describe the situation as needing a regrouping of the forces for a new assault—and most certainly this is going to be done, and Congress is the battleground.

Or maybe it should be said that a skirmish has been lost, or an advance has been stopped. But the war isn't lost.

North Dakotans and our friends in the Midwest and elsewhere know the Garrison project is sound and will benefit the State and the Nation. Some of the objections constitute a short-range view, not a long look as has to be taken at such an undertaking with its multitude of benefits.

There always have been objectors, even to the things which have made the Nation great, more powerful, and economically strong, as will the Garrison project when it becomes reality. Fortunately, there always are others, and North Dakota possesses them in goodly numbers, who don't know the meaning of the word "quit."

One thing for which North Dakota can rejoice—the report has finally been released by the Bureau of the Budget after one of the most exasperating delays ever encountered.

It will soon be in the hands of Congress where committees are conversant with the issues involved and where moral obligations will, we hope, be recognized.

Young Man of 1959

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the Wilkes-Barre (Pa.) Record of January 20, 1960:

YOUNG MAN OF 1959

We salute Frank J. O'Connell, Jr., Wyoming Valley's "Outstanding Young Man of 1959." This title in recognition of leadership through community service was bestowed upon him last night in Hotel Sterling at the 14th annual distinguished service award dinner sponsored by the Greater Wilkes-Barre Junior Chamber of Commerce.

O'Connell has demonstrated leadership ability in many community service fields—educational, youth, charitable, civic, religious, and political.

Last year alone he helped reorganize the Kingston Boosters Club; initiated the placement of March of Dimes containers in taverns throughout the valley; worked diligently on the endowment fund drive committee for construction of the Catholic Youth Center; and served on the Convention Committee of the Greater Wilkes-Barre Chamber of Commerce, a committee responsible for getting five major conventions for Wilkes-Barre.

He is presently serving as an executive board member of the Wyoming Valley Council of Scouts and captain of the Camp Acahela development fund drive.

His leadership ability was recognized last May when he received the nominations of both parties in his bid for election as councilman in Kingston. He received the largest write-in vote and was the youngest man in the borough's history to become elected to that position.

O'Connell has given many man-hours of devoted support and service to Little League Baseball, United Fund, Advance Gifts Division, West Side Catholic High School, Kingston Borough Ambulance drive, St. Michael's Industrial School, Kingston Centennial, Wilkes-Barre Sesquicentennial, Kingston Businessmen's Association.

Other affiliations include Boy Scout Troop 154 committeeman; American Legion Post 395; VFW Post 283; Knights of Columbus, Council 309; Elks; member of the Fourth Degree, Bishop Hafey Assembly, Knights of Columbus; Main Street PTA; Independent Hose Co. volunteer; Franklin Club; King's College development board; Greater Wilkes-Barre Chamber of Commerce.

Ukrainian Independence Day

SPEECH

OF

HON. SAMUEL S. STRATTON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 21, 1960

Mr. STRATTON. Mr. Speaker, we Americans have always cherished our freedom and have demonstrated on many occasions that we are even prepared, if necessary, to die for that freedom. Because we cherish freedom so much for ourselves we also deeply respect the desire of other peoples to be free, and as a nation we have long since established it as one of our fundamental principles that we are always prepared to support and to defend other countries which are fighting for their freedom.

Today, January 22, commemorates the anniversary of the independence of the Republic of the Ukraine, which was created on January 22, 1918, exactly 42 years ago. We know the long struggle which the Ukrainian people put in to win this freedom and to lift from their backs the yoke of Czarist Russian oppression. Time and again the Ukrainian people fought for their independence; and 42 years ago today they believed they had finally achieved it.

Alas, that freedom proved to be all too short lived. In the space of a little more than 2 years the Ukrainian people were once again subjected to tyranny and despotism at the hands of their new Communist oppressors.

However, Mr. Speaker, the fight for freedom on the part of those who long for it and who have once tasted it never dies out. Just as we in this country must forever remain vigilant and strong in order to preserve the freedom which we have succeeded in winning, so the people of the Ukraine have continued over these long years to keep alive in their hearts and minds the ultimate objective of freedom to which they are so strongly committed.

Today all Americans, I know, join with the 42 million Ukrainians who are still under the domination of Communist tyrants, as well as with thousands of Ukrainian-Americans, in not only commemorating this anniversary of Ukrainian Independence Day, but in reaffirming our conviction that as Americans we stand beside these people in their fight for lasting independence and again pledge them our support, with the renewed hope that the day will not be far off when this freedom will truly be achieved.

Ukrainian Independence

SPEECH

OF

HON. ROBERT N. GIAIMO

OF CONNECTICUT

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 21, 1960

Mr. GIAIMO. Mr. Speaker, 42 years ago, on January 22, 1918, the Ukrainian Nation was born and was welcomed by all freedom-loving people as an independent state. Sadly, the hope that this young Republic would enjoy a prosperous future was shattered when, 2 years after celebrating its birth, the Ukrainian National Republic was destroyed and its people were subjugated by Communist Russia.

It is fitting that we in America take time to reaffirm our spiritual affinity for the brave souls who have kept the hope of Ukrainian freedom alive. It is particularly appropriate that we join with our Ukrainian friends in saluting the memory of Stepan Bandera, leader of the Ukrainian Nationalist Organization who was killed by Communist agents in October of last year. A devoted patriot, Stepan Bandera fought both Nazi and Communist tyranny as these successive waves of oppression washed over his beloved homeland. After the war with Nazi Germany ended, he brought leadership and funds to partisan armies which gallantly fought to carve a free Ukraine out of the confusion at war's end. It was Nikita Khrushchev who was assigned by Stalin to suppress the embattled Ukrainians and, in 1949, he finally succeeded. But Stepan Bandera never abandoned his lifelong dream of an independent Ukrainian state. He continued until his death to devote his whole energy and strength to the cause of liberation for his country and her people.

The fate of the Ukrainian Republic, the subsequent enslavement of the Ukrainian people and the murder of their leaders should serve as a tragic warning to any nation that would look to Soviet Moscow for friendship. Similarly, the unrelenting struggle of 40 million Ukrainians against Russian domination stands as proof, once again, that the spirit of freedom cannot die even in those areas which have been under the Communist head for more than a generation. It is my sincere hope that the flame of freedom which continues to glow in the hearts of the Ukrainian people shall light a new Ukrainian Independence Day in the not too distant future.

Forty-second Anniversary of Ukrainian Independence

SPEECH

OF

HON. GORDON L. McDONOUGH

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 21, 1960

Mr. McDONOUGH. Mr. Speaker, today marks the 42d anniversary of the independence of Ukraine—independence which was hailed by the Ukrainian people as final deliverance from oppressive and cruel Russian domination.

For 300 years the people of Ukraine have steadfastly struggled against tyrannical enslavement. With a limitless love for their homeland, a burning desire for freedom and political independence, and unswerving faith in the ultimate achievement of their goal regardless of how great the sacrifice to attain it, the Ukrainian people have relentlessly sought to end domination of Ukraine by foreign oppressors and to establish their nation as a free and independent state.

The first opportunity to realize their dream of independence came to the people of Ukraine in 1918 at the close of World War I, and on January 22, 1918, Ukrainian leaders proclaimed their national independence.

This marked the formal and official restoration of the independence of the Ukrainian nation.

Freedom, however, could be held only for a brief span of 2 years by the people of Ukraine, and in 1920 Ukraine was attacked by the Russian Communist forces, overrun by the Red army in a fierce and bloody struggle, and incorporated against the will of the Ukrainian people into the Soviet Union.

But the hardworking, industrious, and courageous people of Ukraine have not accepted Russian domination, and the desire for freedom burns bright in their hearts.

The people of the United States join with the people of Ukraine this day and with those of Ukrainian descent in the United States and throughout the world in prayer on this anniversary of the independence of Ukraine for the ultimate liberation of Ukraine from Soviet enslavement.

Forty-two million Ukrainians are held in bondage in the largest captive non-Russian nation in the U.S.S.R. and behind the Iron Curtain. The plight of

these people is a matter of grave concern to the people of the United States who are dedicated to the principle of individual liberty and national freedom, and to the people of all the nations of the free world.

On this 42d anniversary of the independence of Ukraine, it is our sincere hope that the day of liberation for the Ukrainian people may be close at hand, and that the independence of Ukraine may be reestablished.

Surplus Property Disposal

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. CURTIS of Missouri. Mr. Speaker, October 7 of last year TelePrompTer Corp. conducted for the Department of the Army an experimental closed-circuit television auction of surplus Department of Defense materials. The results of this auction are worthy of the attention of this House as this system may offer one way of improving the return to the Government on the sales of its surplus materials. The Department of Defense alone has some $26.7 billion in salable surplus property, according to the report of the Committee on Appropriations on the 1960 Department of Defense appropriation bills, and an increase of return, however small—even 1 or 2 cents on the dollar—on this property would be of real economic significance.

This auction was conducted simultaneously in six cities, with bidders in each city competing not only with one another but with those in the other cities. Goods for sale were being offered from three locations, making a nine-station circuit to serve this sale. The obvious advantage of this system is that it permits a larger number of potential buyers to enter the bidding for the goods on sale, it expands the market and thereby the competition for these goods.

Goods of an acquisition cost of $2,614,000 were sold in this auction for $534,556, a return of 20.5 cents on the dollar. The overall average for Defense Department surplus sales is in the range of 3 to 5 cents; an estimate of the materials in this sale, including heavy machinery, clothing, and marine engines and machinery, put their likely maximum return at 15 cents. The auction ran for over 8 hours without interruption for technical failure.

As a member of the newly-created Subcommittee on Defense Procurement of the Joint Economic Committee, I find these figures quite interesting. This one experiment, of course, does not prove this as the way in which to dispose of all surplus property, but it does justify further experimentation with it. I would also raise the point that this process might better be turned over to the General Services Administration which, with its experience in the field and its charged responsibility in disposal of surplus Government property, would be best qualified to make use of it.

In connection with the last statement, I would like to enter a partion of a letter of evaluation of this sale written to me by the Honorable Franklin Floete, the Administrator of the General Services Administration:

DEAR MR. CURTIS: * * * The subject sale was conducted by the Department of the Army as an experiment deisgned to test the effectiveness of this medium in DOD surplus selling. The sale was planned as a departure from traditional, conventional Government sales methods, with a view toward attracting new buyers through a mechanic to broaden market appeal. General Services Administration personnel observed the sale at all property and selling locations.

The contractual services rendered by the TelePrompTer Corp. were efficient and in keeping with good professional standards. It should be reported that the attendance of 479 buyers distributed between 6 viewing locations was less than anticipated, but was adequate to produce spirited intercity competition among bidders. The sale provided valid experience concerning the types of property suited and the geographical and market considerations which are involved in televised selling.

A preliminary evaluation of the test indicates that the application of television to sales of Government property must be limited to select situations. Additional testing may be required before a reliable, conclusive evaluation can be completed.

One important consideration in planning future uses of televised broadcasts is the heavy cost attending the transmission service and equipment.

Sincerely yours,

FRANKLIN FLOETE.

It Is Perilous To Forget the Crimes

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an editorial entitled "It is Perilous To Forget the Crimes" by the distinguished journalist, Mr. Phil Slomovitz, editor and publisher of the Detroit Jewish News, in that fine newspaper.

The article very well sets out the grave danger of racial and religious bigotry:

[From the Jewish News, Jan. 22, 1960]

IT IS PERILOUS TO FORGET THE CRIMES

Our people would do well to study the editorial opinions that have appeared in newspapers throughout the world in protest against the reemerging Nazi spirit that has been in evidence not only in Germany but in communities throughout the world.

The unanimity with which Christians have condemned the psychopaths, referring to them as sick minded and deluded, is heartening. It offers encouragement that rationally minded and clear-thinking people can not condone hate and vandalism, no matter where they occur.

Deploring "the work of malcontents and ne'er-do-wells" and the fact that "there seem always to be a few who wish to make the Jews the scapegoat of their miseries, and their sick minds strive to spread poison in all directions," the Boston Catholic weekly, The Pilot stated:

"Christians should examine their consciences, search their hearts, and analyze the society that can produce incidents of this kind so soon after all the world learned the lessons of depravity practices by the Nazis against the Jews. Certainly we can believe that the present actions are the work of a small group of troublemakers who hope to gain notoriety, and we know, too, that decent people in every land abominate their hate-mongering. But even a few people of this type are already too many."

We were especially impressed by the scholarly editorial in another Catholic magazine, Commonweal, which stated, after a review of the "Specter of Nazism":

"There can be no question of forgiving, of course. It is not for us to forgive. But it is perilous for us to forget. We must remember, as we have not remembered, and so must the German people, as they have not. For only if we admit its existence can we hope to exercise the evil which took such hold of men. What happened in those decades? How did it happen? Why? These are the questions we must face. German and non-German alike, not for the sake of blame and accusation, but to save ourselves now."

It is not only Munich and Vienna and Berlin of the 1930's and 1940's that must not be forgotten. We cannot possibly forget the poisons that emanated from Dearborn and Royal Oaks in the 1920's and 1930's. There still are among us people who believe that they are imbued with a great spirit when they preach a "forgive and forget" policy. No sane person would propagate vengeance or retaliation, but students of history surely must agree that in order to prevent the recurrence of massacres the memories of the past must not be erased. The neo-Nazis of the present time are proving the truth of it. Commonweal emphasizes it anew when it declares that it is perilous for us to forget.

That is why it is so distressing to know that when the neo-Nazis, for a number of years now, since they had begun to be conscious of a reemerging German military power, had begun to ridicule the historical fact of the murder of 6 million Jews by their fuehrer, there were too few to set them straight and to prove anew—as if proof anew were necessary—that the wholesale massacre by the Hitlerites is a tragic historical fact.

That is why it is equally distressing now to read in accounts in Commonweal and the New York Times that 5 million Jews were murdered. Even the unbiased already have bargained down a million souls in the record of Nazi genocide. And the record is so vital if the shame and the crime of nazism is to remain a rejection of genocide for all time to come.

Too many of those who now condemn the resurgence of nazism were available when, for more than a decade, Arab propagandists, among them many Christian supporters, were maligning Jews and Israel, as they still do. That poison, too, had left its mark and undoubtedly contributed toward the current international wave of hatred against Jewry.

We retain confidence that anti-Semitic manifestations, or the frequent reappearance of haters against Catholics, Negroes and others, are passing phases in the life of a people or of many peoples. But even the minutest evidences of bigotry call for repudiation, and it is good to know that the rejection of hatred in the press is the general policy of the majority of the peoples everywhere. It is the guarantee of nonrecurrence of such atrocities that we strive for, and there is heartening evidence now that people of good will, among all faiths, are ready to work together, recognizing that it is perilous to

forget the crimes of the past, and that it is humanity's duty, remembering the tragic events in history, not to permit the gory head of bigotry to raise itself anew.

Meanwhile, regrettably, the causes for concern are mounting. Instead of keeping the records open for public perusal, it has become difficult, if not impossible, for newspapermen to study the backgrounds of Nazis who now are again powerful in West Germany. The United States is a party to such censorship, and it is deplorable that public opinion should thus be stymied by the withholding of facts.

In a letter to the New York Times, Robert Major expresses the view that the Nazis are rather moderate and restrained, in the light of what had transpired previously. But he accuses the press of having failed to report earlier Nazi demonstrations and he points out:

"When the Nazi Reich collapsed, its propaganda was moved to other centers and continued there: Austria, England, Sweden, the United States, and Argentina, among other countries. These governments do not hesitate to fight so-called smut and pornography—even if written by Aristophanes, Voltaire, Mark Twain, Joyce, or Lawrence. They also attempt to exercise control over certain types of imported political literature. But faced with instigations to race hatred and mass murders, these countries observe the rule of absolute freedom of thought. Sweden, for example, in 15 years has been unable to check the flow of the literary productions of Aberg and the Malmo group."

There can be no doubt about the correctness of the latter claim. That one of the freest countries in the world—Sweden—should be the headquarters for an international anti-Semitic organization is an indication of a weakness in democracy to tackle the tragedy of anti-Jewishness.

Thus, with hatred in evidence in the hearts of many people, a hatred that developed into an international flame in the past few weeks, no amount of vigilance is sufficient; and we need not worry about memories of bigotry: the anti-Semites quite evidently are seeing to it that we will have no occasion to forget it because they have no occasion to end it.

Ukraine Anniversary

SPEECH
OF
HON. PHILIP J. PHILBIN
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. PHILBIN. Mr. Speaker, very frequently throughout the years this House is called upon to observe the anniversary of independence or to celebrate the birthday of the Government of some great people now behind the Iron Curtain.

On Friday, January 22, it will be the 42d anniversary of the independence of Ukraine. It is a great nation of 42 million people destined to be free by the Almighty, earnestly and ardently desiring freedom in its heart, prepared to protect and foster democratic institutions and freedom of the individual, and yet violently dragged behind the Iron Curtain, its millions of people compelled to live under the oppressive heel of a godless, military dictatorship.

Whatever may be said in the high councils of state, or by those who like smaller nations to be merely pawns in a great international game, the plight of Ukraine, like that of many other nations who have had their liberties cruelly suppressed by the Soviet, must be of greatest concern to every believer in the free way of life.

This great nation, born in freedom, consecrated time and time again by the blood of its sons shed to preserve that freedom, could never under any circumstances, acknowledge that denial of freedom to Ukraine or any other nation desiring it, could be morally, ethically or politically justified.

The power and terror of modern missilry may deter those who might be disposed to make war. But the Marxist conspiracy, so long as it operates under the principles upon which it is established, and the program which it has set out to follow, insures nothing but an indefinite, uneasy, restless peace.

The theory behind this tactic is that if it is continued long enough and persistently enough, universally enough, that, in time, the forces of Democracy will weaken from economic inanition or sheer moral and physical collapse and leave the world to communism. This is one of the tragic fallacies of Marxism.

I could never bring myself to believe that the human race or at least that portion of it committed to free institutions could ever fall so low in moral strength and courage as to surrender the great free heritage which has been responsible for a western civilization based on freedom and for history's most fabulous progress.

Is the fiber of the American people being weakened? Is their morale being undermined by propaganda, by promises of an easy life? I do not believe so. I think that as long as this world lasts there will be Americans—and they will constitute a great majority—who will be willing to fight and die, if necessary, to preserve the fountainhead, principles and shrines of human liberty that exists here in this great country of ours.

But we must be resolute; we must be determined; we must be more tough-minded in our attitude than ever before. If we follow the tempting pathway of appeasement, we will be lost forever and our great Nation will follow the same course as other great nations and majestic powers of world history which allowed strength, plenty and abundance to dull their morale and weaken their purpose to preserve their government.

A great scholar wrote me recently and I shall never forget what he said. It is worth repeating here. "I am not worried about the courage of the American people," he said. "I feel that our country's chief danger lies in its own careless heart." This great thinker was right, we cannot afford to be careless in our heart about our freedom. Certainly we must have the courage, come what may, to defend it.

Let us therefore, pledge to the people of Ukraine, and other subject peoples held captive in cruel bondage, our sincere sympathy for their plight and our desire and intention to do everything in our power to open again for them the pathway to freedom and justice.

Gettysburg—Heritage or Horror

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. QUIGLEY. Mr. Speaker, under leave to extend my remarks I would like the privilege of inserting in the RECORD an editorial from the Harrisburg (Pa.) Patriot of last Thursday, January 21, in which the need for cooperation among all Americans in both their private and public capacity, and at all levels of local, State, and National governments is stressed if our national shrines are to be preserved from commercial desecration. This editorial highlights the recently formed Gettysburg Battlefield Preservation Association, an organization of private citizens constituted to bend its collective efforts to save the Gettysburg battlefield from the fate of unrestrained commercialization.

The editorial also raises the question about what the State government in Pennsylvania, and the local Adams County and the Cumberland Township officials are doing to protect the battlefield site. The editorial follows:

PRIVATE-PUBLIC TEAMWORK NEEDED TO SAVE SHRINES

In 1958, more than 20 million persons visited historical shrines maintained by the National Park Service. They went to see the battlefields and other places that have figured in the remarkable development of a raw, new world into a powerful, respected nation.

In a shocking number of cases what they see are cheap souvenir stands and housing subdivisions crowding right up to the edge of Government-owned land.

Pennsylvanians need go no farther than Gettysburg to see the process at work. If any spot in America should be treated as sacred soil it should be this place where one of the most decisive and bloody battles in our history was fought; where Lincoln uttered his few words that have become a classic article of faith in democracy. Yet the main highway through the battlefield is lined with motels and souvenir shops. Tracts all about the national park stand in danger of becoming "tourist traps."

Whose duty is it to protect our historical shrines from commercial encroachment? Conrad L. Wirth, Director of the National Park Service, says it should be a joint venture by Federal, State, and local governments with private organizations and individuals chipping in.

As far as Gettysburg is concerned, this appears to be the only way that the battlefield can be protected adequately. The last session of Congress came through with a $450,000 appropriation to buy land but tied up the funds with the stipulation they be used only to get property that has already been commercialized.

The Gettysburg Battlefield Presevation Association has come into being to help fill the gap left by this rather shortsighted Federal legislation. It has incorporated for the purpose of raising funds to buy land in danger of commercialization. Already several thousand persons have sent contributions to the organization's headquarters in Gettysburg.

The Federal Government and private individuals are doing something toward preserving Gettysburg. What about the State

government? And officials of Adams County and the townships about Gettysburg? It would seem that both the Commonwealth and the local officials have a strong duty to protect the area. Airtight zoning laws by the localities and cooperative purchases of land by the State would plug up the gaps.

As the National Park Service points out in a recent buletin, more and more people are discovering history. The growing numbers of visitors to places such as Gettysburg is a big reason for the threat of commercialization. It would be tragic if this rise in the public's appreciation of a rich American heritage should become blunted by quick-buck artists.

I would also like, Mr. Speaker, to insert my testimony given today before the Interior Subcommittee of the House Appropriations Committee, in which I think I point out that all of these local officials are at least making an effort to solve the problems which exist at Gettysburg. I believe, Mr. Speaker, my testimony makes it quite clear that we are still a considerable distance from a solution but as of the moment, I do believe that everybody involved deserves a big A for effort.

It's been my experience that when I am in the Gettysburg area I am asked "Why doesn't Congress do something about the battlefield?" And when I am in the Congress I find myself being asked "But isn't the problem at Gettysburg a local one?" I would suggest, Mr. Speaker, that if preserving the Gettysburg battlefield as a sacred shrine is a national problem it is one that cannot be solved by the Congress or the National Park Service without the full and complete cooperation of all of the local governmental units as well as the local citizenry. By the same token, if the preservation of the Gettysburg battlefield is, in fact, a local problem, it is a problem that cannot be solved by the efforts of the local citizenry and the local governmental officials without the help and cooperation of the National Park Service and the Congress.

In the interest of solving this problem rather than placing the blame for a lack of a solution, I join with the editorial writer in urging private and public teamwork until a satisfactory answer is finally reached.

My testimony follows:

TESTIMONY BY THE HONORABLE JAMES M. QUIGLEY, DEMOCRAT, PENNSYLVANIA, ON THE INTERIOR DEPARTMENT APPROPRIATION FOR 1961 BEFORE THE INTERIOR SUBCOMMITTEE OF THE APPROPRIATIONS COMMITTEE, HOUSE OF REPRESENTATIVES, MONDAY, JANUARY 25, 1960

Mr. KIRWAN, members of the committee, I appreciate this opportunity to testify on the Interior Department, and more specifically the National Park Service, appropriation for fiscal 1961.

Quite specifically, I am here to speak about the Gettysburg National Park which, as many of you know, is located in my district. I think perhaps the best service I can perform is to bring this subcommittee up to date concerning what has happened at Gettysburg since last year.

Without trying to open any old wounds or expressing my own opinion, which varies somewhat with my next statement, let me point out that a minor furor was raised in the Gettysburg area when, last year, Congress as much as said that Gettysburg should protect its own future with zoning and that Adams County, in which the battlefield lies, could help preserve the Nation's shrine by preserving its own holdings there.

Once the understandable disappointment over lack of immediate Federal funds disappeared, Gettysburg and its friends began to work, slowly but in earnest. The second battle of Gettysburg which started with skirmishes in the public press settled down to a serious long-range attack of the problem on four separate fronts. Those attacks are local action with planning and zoning, nationwide action with a privately sponsored fund-raising campaign, executive action in the form of a proposed land exchange and, I hope, further congressional action with appropriations.

Surveying the battlefield front by front, let me tell you about the status of zoning first. Admittedly, as of this moment Gettysburg and the adjacent jurisdictions are still some distance from passing an effective zoning ordinance as stipulated by Congress last year in giving an appropriation for the battlefield. Legally it takes time to set up an effective plan for the future, but I would like this committee to know that the steps have been started. A temporary setback ordinance has been passed by Cumberland Township, which encompasses approximately 95 percent of the battlefield. The enactment of this ordinance was in the nature of a hold-the-line action.

The Fels Institute of the University of Pennsylvania has begun work under a contract approved by the Housing and Home Finance Agency. A comprehensive growth plan for the future will be presented to Cumberland Township in the near future, a plan which I feel certain will contain protection for the battlefield.

Now let me say that I think Gettysburg, which incidentally has its own planning commission, and Cumberland Township, and perhaps Adams County, will eventually all enact planning and zoning laws. They will do this not because of the battlefield, nor because Congress would like them to do so, but because people generally are beginning to realize that planning for the future is the only way to protect their own investments and provide for an orderly development of their communities.

The second front is actually under the command of a military man. It is a front which has received the least publicity thus far and may in the long run do the most good. This is the Gettysburg Battlefield Preservation Association whose president is Maj. William M. Haller, currently stationed at Fort Meade. This group was founded last August and incorporated last month with its nucleus among students of the Civil War. This group has already raised a sizeable amount of money and its forthcoming national campaign should raise a great deal more. Its sole aim is to preserve the battlefield in the best way possible, aiding either with mony or land donated to the National Park Service. Here is a group of dedicated citizens who are in the forefront of urging congressional action, yet at the same time they are putting their money where their mail is by following up their letters to their Congressmen with their own donations to the Battlefield Preservation Association.

Then, within the Park Service itself, I'm happy to report that there is in the process of formulation a possible exchange of some historically less valuable property presently owned by the Federal Government for some historically very valuable property owned by Adams County. Just to digress here a moment, may I insert into the record of these hearings the county commissioners' statement of their dilemma in which they find themselves unable to legally donate their land to the Government, much as they possibly might like to do so. I might add they have a further dilemma in that they also have hopes of gaining some money from land sales to help pay for their new and much-needed county home for the aged. And this is where a land swap might help out a great deal. Further, it would satisfy one of the congressional complaints that the Park Service has enough land already. However, I must point out that there is just a limited amount of land that is suitable for swapping and for this reason I would not suggest that a land swap is the full and easy answer to the problem.

The commissioners have thus far been patient, and in their way cooperative men. They have delayed their final actions as long as possible. But this year they must either swap or sell or give up the idea of a new county home. This is why I sincerely hope that the idea of a land swap may be approved soon. And approvals aplenty it will take—like congressional and county court action after the Park Service and the commissioners agree.

On the fourth front I can only hope that you gentlemen will respond to the needs of history and a growing appreciation of the Civil War.

Last year when Congress set aside $450,000 for this purpose it said the money could be used at Gettysburg and Manassas provided they met the stipulations of the Congress. Unfortunately for Gettysburg, Manassas has enacted what is considered to be an effective county zoning ordinance which the Park Service is urging them to make even stronger. Thus there is the probability that all of the money may be used there, for it is in keeping with both the spirit and the letter of the law.

Gettysburg is moving in that direction, successfully, I think on three fronts. I sincerely trust that you gentlemen will provide the fourth front by giving the Park Service the necessary money so that the Federal Government can do its fair share in this worthwhile public effort.

Congress Is the Culprit

EXTENSION OF REMARKS

OF

HON. FRED SCHWENGEL

OF IOWA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 25, 1960

Mr. SCHWENGEL. Mr. Speaker, in an attempt to make some political hay some of our erstwhile candidates for high office are delving into all manner of departmental operation to see what tidbits they can uncover to place before the electorate and thus enhance their chances for election.

They seemingly make these great exposés without considering that they perhaps had a hand in any abuses which they are anxious to bring to light and deplore.

The grain storage investigation is a case in point, and in this connection, I ask consent to place in the Appendix of the RECORD, an editorial from the Burlington (Iowa) Hawk-Eye Gazette, which places the responsibility in this matter exactly where it belongs—with the Congress itself. The editorial follows:

CONGRESS IS THE CULPRIT

Investigating Senators have been told that some grain elevator operators are making profits as high as 167 percent in storing surplus grains for the Government.

One witness has testified that it cost him less than 7 cents a bushel to store the Government grain, and he receives almost 17 cents a bushel for safekeeping it. This nets him a return of almost 150 percent on his investment.

Additionally, the fast tax writeoff he has been permitted on new storage facilities has worked to his advantage. And the tacit guarantee that his bins would be kept filled makes his operation almost riskproof.

There is no occasion to dispute the statements made by these witnesses before a congressional committee. The best proof possible of their accuracy is the mighty wave of new elevator construction throughout the Plains States in recent years.

But neither is there any reason to criticize the elevatormen for making the killing they have. They have not played fast and fancy with the Government. Rather, the Government has dropped these nest eggs into their laps.

This committee is not exposing the grainmen but Congress itself. On the evidence, Congress has cost the Government millions by authorizing the high storage charges, the full bins, and the tax writeoffs it has.

Insurance Coverage for Astronauts

EXTENSION OF REMARKS
OF
HON. EMILIO Q. DADDARIO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. DADDARIO. Mr. Speaker, at the start of this session, I introduced a measure that would authorize the National Aeronautics and Space Administrator to procure insurance in the amount of $100,000 on each of the astronauts participating in the Mercury man-in-flight program. I did so in recognition that financial reward plays little part in the determination of the young volunteers from our services for this flight, but also in the feeling that this country owes something more than words to back up and support them.

Since that time it has been brought to my attention that a service publication, the Army-Navy-Air Force Journal had discussed the need of such insurance coverage for volunteers on tested missions. This editorial appeared while Congress was in recess, but I request that it now be reprinted in the RECORD.

The journal suggested that the Defense Department and NASA should sponsor such extra coverage. These agencies will have an opportunity to express their opinions on H.R. 9316 and I hope that they find merit therein. Certainly, as an expression of the feeling of people who are close to service life, I believe the editorial entitled "Insurance Coverage for Servicemen's Families" shows that there is a need for this type of coverage.

The editorial follows:

INSURANCE COVERAGE FOR SERVICEMEN'S FAMILIES

The Department of Defense and the National Aeronautics and Space Agency should join in asking Congress to vote legislation which would authorize special insurance coverage for families of service people who volunteer for aircraft test and space missions.

The journal reported last week the concern of space program officials that highly qualified members of the Armed Forces may be reluctant in the future to volunteer for duties which will make them noninsurable by commercial companies at premiums which they can afford to pay.

Some formula needs to be devised whereby the Federal Government would provide extra coverage for such persons or perhaps help underwrite private insurance policies.

Men who volunteer for duty as test pilots or as astronauts should be free of worry that, in event of accident, their families will be denied insurance coverage available to others in uniform. We think Congress would be sympathetic to a space insurance legislative request jointly sponsored by the Pentagon and NASA.

Why America Can't Win the 1960 Olympics

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter of transmittal from one of my constituents, Mr. J. T. Mayock, of Forty Fort, Pa., with which he forwards an article from the American Weekly of January 17, 1960, written by Mr. Irving Jaffee, on the prospects of the United States winning the winter Olympic games at Squaw Valley, Calif., February 18 to 28:

JANUARY 17, 1960.

Congressman DANIEL J. FLOOD,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN: The Reds are all set to clobber us in the coming Olympics and then claim it as a great victory for their way of life. And it will be mighty effective propaganda particularly among the so-called underdeveloped countries as well as in all parts of the world.

And it will be, of course, hypocrisy because of the subsidies granted outstanding athletes by the Soviet Government. It would be like pitting Notre Dame which has a good team against the Baltimore Colts which is also a good team. The Irish would get clobbered. They are just not in the same league. Amateurs are amateurs and pros are pros.

Remember how Jim Thorpe was forced to give back all his Olympic medals because they found he had received a few bucks for playing baseball one summer. The Russkies can just laugh up their sleeves at our strict standards.

In order to offset or counteract the Reds we should first denounce their paid amateurs and then suggest that since Russia insists on sending professionals to compete against amateurs let the competition be opened to all—amateur and professional alike.

This must be done before February 18 when the winter games open at Squaw Valley, Calif., so that the issue doesn't sound like one of those "we-wuz-robbed" or "sour-grapes" complaints.

I am aware that the games have no official status and that it's not nation competing against nation in the true tradition of Olympic games but rather as individuals and teams against individuals and teams. But we're not dealing with gentlemen subject to twinges of conscience but we are dealing with a ruthless and power-hungry ideology which must be fought on all levels of endeavor.

I am enclosing an article which speaks on this subject more eloquently than I. It is not a new idea, of course, but the issue has never been raised on a loud, international level. Maybe the time has come.

Sincerely,

J. T. MAYOCK.

WHY AMERICA CAN'T WIN THE 1960 OLYMPICS

(By Irving Jaffee)

While you're reading this article, the strongest, most fearsome army of athletes the world has ever known is being trained for the 1960 Olympic games. Unfortunately, it belongs to the Soviet Union. This awesome juggernaut makes its first appearance in the winter games at Squaw Valley, Calif., February 18 to 28. Then it will steamroller into Rome on August 25 for the summer games.

The Reds are treating the Olympic games not as a sporting event but as a major battle in the cold war. They are out to prove communism produces better athletes than the capitalists.

The Reds didn't even enter the Olympics till 1952. Afraid a loss would disgrace the Soviet State, they waited until they could make a decent showing.

They were losers in 1952 and controversial winners in 1956, but now the Bear is strong and cocky. Every sports victory he scores will be hailed as if it were a territorial conquest.

To build this army the Commies have drafted athletes from every walk of Russian life. A Spartakiada—national sports meeting—is held in a 100,000-seat stadium in Moscow where players are selected for most of the teams. Once picked, they go through a grueling training program.

We patted ourselves on the back when we topped the Reds in 1952, but the monster Russian sports plant was only in its embryo stages. Since then it has grown to an enormous size. They're closing in on us all the time—even in our forte, track and field. They study our tricks, improve on our techniques and are devoted athletes.

Being a former Olympic competitor and presently coach of some of America's Olympic speed skaters, I am most acquainted with what we must beware in the winter games. Let me warn you—it looks like the United States is in for a beating.

Russia will surely clobber us in men's and women's speed skating, ice hockey, all of the endurance ski events and ski jumping. The only competition we can hope to win is figure skating, because the Reds haven't taken it up seriously yet.

What the world will see at Squaw Valley will be the culmination of Russia's 8-year winter sports plan. Since 1952 the Communists have trained thousands of speed skaters, skiers, and hockey players. These athletes do nothing but compete for the glory of the state. If one breaks a record, he is rewarded as a "master of sport." This entitles him to a prize of from 15,000 to 20,000 rubles, a lucrative job connected with sport, a home, and preferential treatment for his children. The same holds for athletes in Red satellites.

Miroslava Nachodska, the Czech figure skater, is a good example. She was ostensibly employed by her government as a "recreation adviser" with the Czech Army construction engineers. She admitted she paid only rare visits to her office. Her income was 900 crowns monthly for her job and 600 crowns as an achievement award for her skating. Her total income was more than the engineers received.

Not only does the Russian Government pay high for its athletes, it also provides them with the best equipment, at no cost. There are 400 Olympic-size skating rinks and 10,000 registered speed skaters in the Moscow area

alone. In New York City there are only two publicly supported artificial rinks, and the city refused to build a third until a philanthropist donated $300,000 for it. How can we match the Russians without facilities?

Some of our athletes could be easy gold medal winners if they had half a chance to train as the Russians do. Take Don McDermott, of New Jersey, our best speed skating prospect. Don builds houses during the day so he can go to college at night. His Olympic workouts are held from 11 at night till 1 in the morning. The Government does nothing to make the grind easier for him. I should know; I have coached him since 1950. Can you imagine a Russian skater going through a grind like that?

I know, overall, we have never done much in the winter Olympics. But in 1932 at Lake Placid I won the 5,000- and 10,000-meter speed skating events and Jack Shea won the 500- and 1,500-meter events. And Eddie Eagan, who later became New York State Boxing Commissioner, was on our championship bobsled team and we were second to Canada in hockey.

Believe me, we won't do that well in 1960, because this country restricts itself to a more honest interpretation of the amateur code than the Russians, who just laugh at it and win.

Take my own case. I won at St. Moritz in 1928 and Lake Placid in 1932. But I had to make a living, so I was forced to turn pro before I really hit my peak. This happens to many of our prize athletes. In Russia I would have been given a phony job in a state factory, and kept on the team.

I have painted a bleak picture for the winter games because I want to be honest. I am happy to say, however, our prospects for the summer games are brighter. We are still tops in men's track and field, and that's the cornerstone of the modern Olympiad, not the minor sports and women's events which have fattened Russia's scores in the past.

But Russia will make a determined effort to overtake us in even this stronghold this year. Five years ago they didn't have a pole vaulter who could reach 14 feet. Now they have a guy who does 15 feet. They're coming at us like that all down the line. And they're improving faster than we are. Who would have thought the Russians would beat our pole vaulters or set a hop-step-jump record against us, as they did in the big dual meet in Moscow in 1958?

I wish I could say that the Russkies are the only out-and-out pros in the Olympics, but I can't. Most of our boys and girls are pure quill amateurs, but we're not exactly 100 percent ourselves.

Quite a few of our "amateurs" are on college scholarships strictly because of their athletic talent. And we have "amateur" basketball teams like the Phillips Oilers who, in reality, are paid to play basketball. But let's be fair to ourselves. College athletes who flunk their exams are tossed out of school, and even the Oilers pay their way, public relations-wise, for a dollar-conscious private company—not an official Government agency with unlimited funds and a strictly political aim.

In fact—though Avery Brundage would have hung me if he'd known it—I was subsidized by a group of brokers on the New York Curb Exchange while training for the Olympics. I only worked a couple of hours a week, and practiced the rest of the time. My family couldn't afford to subsidize my training. Like hundreds of other Olympic candidates who come from modest homes, I was forced to be a hypocrite. But eventually, as I have pointed out, I had to turn pro.

You may ask, how come Russians who pull that openly are amateurs, while any of our boys who get caught are disqualified? Well, each country sets its own amateur standards—and all other countries accept that. A Red "amateur" gets away with legal murder compared to ours.

Our officials don't seem to know—or care—that sports have become part of the cold war. I say they've got to wake up.

There is a solution, as bold as the first sputnik—just stop kidding ourselves and drop that old-fashioned term "amateur." Why not let pros, as well as amateurs, enter the Olympics? No more our amateurs against their professionals. Instead, a fair match among every nation's champions—paid or unpaid—in the best Olympic tradition.

In international politics, we battle the Russians on a mature and realistic level. Why should be be ostriches in that important propaganda tool, the Olympic games?

The National Debt

EXTENSION OF REMARKS
OF
HON. LAWRENCE BROCK
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. BROCK. Mr. Speaker, primary concern for our fiscal responsibility does not entirely rest with the membership of the Congress nor does it rest in the hands of the bankers and the investment brokers of the Nation. Indeed, there are many other Americans, in all walks of life, who feel this responsibility in a measure also rests on their shoulders as well. Our increasing national debt, with the tremendously increasing annual interest charges, affects people of all classes—in the places they feel most—the pocketbook and the ofttimes meager budget.

They naturally look to the Congress, as their representatives, to solve this problem of the mounting national debt, to do something immediately and constructively regarding reduction of the staggering load. They cannot understand our methods of fiscal juggling, as well as our failure to set aside each fiscal year a given amount of income toward reduction of the debt and interest. They cannot understand why we have to try and spend every cent of increased national income, even before it reaches the Treasury.

One such person has written me explaining his position with respect to this aggravating problem. He is Dr. Ivan M. French, who conducts the Wahoo, Nebr., Medical Clinic. I believe that his message is worth reading and reflecting upon in this era of record high governmental financial transactions.

May I, therefore, under leave to extend my remarks, commend to your attention the views expressed by Dr. French:

WAHOO CLINIC,
Wahoo, Nebr., January 19, 1960.
Representative LAWRENCE BROCK,
House Office Building,
Washington, D.C.

DEAR MR. BROCK: With Congress again in session it seems worthwhile to advise you of my feelings on current legislation. Although I do not know specifically the various bills that will be taken up in this Congress my primary concerns lie in the direction of fiscal responsibility.

I would define fiscal responsibility as living within one's income and if one has been forced to contract debt using at least one-fourth of one's income to retire that debt and not to be thinking of Utopia until one's present debt was retired.

In regard to Utopia which appears to mean socialization I think that if we conduct our fiscal policies in a safe and sane manner we will not need to worry about socialization.

I would like to go on record and say that it appears to me that much of the irresponsibility in Government and by the individuals in our electorate is directly due to three things: one, the withholding tax which makes the average wage earner feel that it is his employer who is responsible for the large deductions from his check; two, graduated taxes which makes the average wage earner feel that he is not paying his share of Government schemes but that his slightly more fortunate neighbor is paying for these schemes, and, three, social security and other do-good schemes which takes the worry and disgrace of improvidence away from some people who might otherwise still cling to the traditional American ways of thrift and hard work which made our country great.

I trust that these few observations will be of some help to you as you vote upon the multitude of bills which will come before the next Congress.

If they can meet the test of sound fiscal policy, meaning living within our current income at the same time that we use a minimum of 25 percent of current income to pay off past obligations, and if they fit within the policies which made our country great, i.e., individual responsibility for self and family, then I am for them. If, on the other hand, they fall within the classification of any possibility of not living within our income or decreasing individual responsibility for self and family, then I am opposed.

Need I name specific bills?

Can you really get something for nothing? Can the other fellow always pay your way and if he could is it the function of our Government to encourage this sort of thing?

Sincerely yours,

IVAN M. FRENCH, M.D.

Ukrainian Independence Day

SPEECH
OF
HON. CHESTER E. MERROW
OF NEW HAMPSHIRE
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. MERROW. Mr. Speaker, on January 22, 1918, 42 years ago, the Ukrainians established their independence. This day marks a great historic event and although the Ukrainians were able to maintain their national independence for only a short period of time, it is fervently hoped that the day will come when they will regain their freedom. It is fitting that we pause on the 42d anniversary of Ukrainian Independence Day to observe this great event.

We extend our best wishes to the people of Ukrainia and express the hope that the time will come when they will regain their independence.

Happy and rare is the lot of those nations that can enjoy their national in-

dependence for a long unbroken period of time, and still happier are those who did not have to struggle against forbidding odds for its attainment. The Ukrainians, one of the largest ethnic groups in eastern Europe, and among the most sturdy and stouthearted fighters for liberty and freedom, have not been fortunate in this respect. Centuries ago they lost their national independence. They regained it in 1918, only to lose it again in 1920.

For the 42 million Ukrainians who have been suffering under Soviet totalitarian dictatorship for 40 years, and who still long for their freedom, the 2-year happy, but short, period of liberty was the most memorable and unforgettable years in their modern history, for then they enjoyed their freedom in their homeland. Today those of their kinsmen who are fortunate enough to live in the freed world celebrate their 42d Independence Day. I am glad to join Ukrainian-Americans in the commemoration of this historic and memorable anniversary.

A Farmer's Views

EXTENSION OF REMARKS
OF

HON. VICTOR A. KNOX

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 25, 1960

Mr. KNOX. Mr. Speaker, under leave to extend my remarks, I would like to include in the CONGRESSIONAL RECORD, a letter I have received from Mr. Howard Hillier, of Dafter, Mich. I do this so all Members of Congress will be aware of my constituent's views on the farm program.

The letter follows:

DAFTER, MICH., *January 5, 1960.*

DEAR SIR: Because of the strong response to the soil bank program, the present administration would be led to believe it is a success.

We speak only of northern Michigan and our Chippewa County of northern Michigan where there were more applications then could be accepted, we understand. We do not grow any of the so-called basics, namely, corn, cotton, wheat, peanuts, rice, and tobacco. Farmers in northern Michigan, and I believe it takes in the northern half of the counties of southern Michigan, have made their livelihood from dairy and beef cattle, raising their own oats, hay, some wheat for home needs, and also a little flax. Never was there a surplus of anything here but second-grade hay. Last year was the only year there was enough local oats produced without having some shipped in by elevators, this crop almost a complete failure. Most farmers grew more hay than was needed for home feeding and of course this was offered for sale. Some that was good quality brought fair returns at one time, but second-grade hay was hard to place even at a bargain.

Ten years back the area was a thriving agricultural area with farms averaging in size from 160 acres to probably 300 acres some which was not all tillable due to bushland. As time went on and the sharp increase in labor, wages, farm machinery, and repair, together with freight rates almost doubling in the past years put the small family-sized farm with its back to the wall with an income so small it didn't meet the necessities of life. It is our belief the small family-sized farm is the salt of our Nation and should have some protection for their survival. We operate one ourselves and have records to show the net profit about one-quarter of the workingman and most of these farms being equipped with $10,000 worth of machinery. There never was any surpluses only second-grade hay, but nature usually provided for that where there was a drought somewhere. If hay was carried over 1 year it would go the next, but not at profitable prices due to above stated: high labor, machinery, and freight rates. It just can't be entirely blamed on railroads as high labor costs forced them to it. Now read where some of them are in financial distress.

When the opportunity presented itself to sign with the soil bank where they could receive near the high bracket from $12 to $14 an acre, it surely was an inviting proposition. It gave them as much or more than if they worked it under present conditions. Who does not take something for nothing? It also released them to go and get another off-farm job bringing in a double income, while some laborer who had depended on work from operating farmers for years were out of a job and income.

It is not our intention to condemn the program in its entirety as agriculture needs a program as well as the many other industries which receive Government help. But speaking for northern Michigan only, we would like to see a constructive program that would build a future. As we understand the intended nature of the program was to reduce the amount of the commodity offered to the point where the price of what was available would be forced up. That would be good if it would work, but the originator of that idea does not understand the resistance of the American consumer. Too high prices sometimes drives a commodity off the market with no takers. Consumers find other substitutes to take care of their needs or do away with the operation that used the commodity, its price being too high. Again, we emphasize, not the producer's price but high labor, machinery, and freight costs makes it prohibitive on distant markets at a high figure. That is now where the farmer who desires to keep his operation going needs some help. Some who do not want to see their farms go wild to weeds and no cultivation and would rather operate than let it stand idle if they can survive until—if and when—normal times return again. Our farmers who are in the soil bank realize and admit it is no good for this area, but with the money being thrown around why not get it. An off-farm job can be secured part time or enough so they can draw unemployment benefits in winter months and the inactive farm also bringing in a year-round income. Why can't something be done for the operating farmer so he can survive these inflation times until normal conditions return again? Say, an acreage subsidy of $10 in northern Michigan. Forced short supply to make high prices is going to defeat itself in the end.

It is the belief of many that all subsidies should be done away with to lighten the burden on the taxpayer. After reading a pamphlet recently issued by the Government Printing Office, "History of American Subsidies," showing so many different businesses getting subsidies, agriculture would be discriminated against if they shouldn't receive one; also high support prices, the high storage costs, Government controls on acreage planted, and return to free market. It is our belief, and many others, that it would make a better way of life and higher living standard for all classes of American people as some necessities are priced that they cannot be afforded on the average, income family table. Butter is one instance. There is more oleomargarine used now due to the fact butter is priced out of reach. Many other items are also priced out of reach of the average, income family.

It is pretty near as wide as it is long, as we see it. Every handout you get, the Government has to bring in revenue in the form of tax to meet the expense. But a lot of us do believe an acreage subsidy to all farmers, doing away with all controls and supports, leaving the amount produced in the hands of the producer to regulate it to market demands, will straighten itself out in the end. Yes, it might bring lower prices but isn't the American public entitled to a higher standard of living by being able to buy the needed necessities of life; that is, if the farmer receives enough to put him on paying basis. As farmers ourselves, we believe an acreage subsidy of $10 an acre would give him security if some years prices were low. If we would just stop to realize these surpluses are a blessing which could be taken away from us any time. Waste and misuse of the land I fear will bring us punishment.

One more item and that's all. We surely would like to see the farms preserved for the next generation and unless something is done the weeds are going to take over. Some land bank farmers clip their meadows which keep the weeds from spreading so rapidly; others don't and it will grow up into a young wilderness. When the time comes that it will have to be restored, it will be costly. They cannot be called back into operation over night. It will have to be plowed twice to restore it to grass land. It is estimated it costs $20 an acre to plow, prepare the seedbed, sow fertilizer and grass seed for an acre of land in this area. It would take three years to put it back to normal. No individual farmer will be able to afford it and will be another Government expense to restore. It's high time for some deep thinking when the lawmakers convene in the next session of Congress.

It is the belief of many that if the Government would give the farmer an acreage subsidy for security and return to free markets, he would gage his production to what the market would take and still be secured with income necessary to survive. But at the same time he would retire 25 percent of his tillable acres to weed control every year by spraying, the next year another 25 percent out of production and treated for weeds. In the matter of around 5 years he would be around his farm and have it built up to meet the emergencies that are bound to come. We'll not always be blessed with productive years if history repeats itself. It would be a constructive program and not a destructive one as the soil bank now is. We mention this northern Michigan area again, but expect all areas probably are pretty much the same.

There is no better spender than the farmer when he has the money. He employs a lot of seasonal help which helps out the economy. With farms out of operation he is out looking for employment himself which further burdens the now hurting labor market. There are many other sidelines that tie in with farming. When farmers are in full operation it makes prosperous times by higher employment. It all adds up to the fact that everything has to operate to make prosperous times for everyone.

When you lawmakers meet this session of Congress, it is hoped you can come up with a constructive farm program that will benefit all in all areas. It's going to be costly from both angles, but to keep everyone operating and keep the Nation strong is what we all should strive to do, forgetting the political side of it and working to the best interest of all.

Since starting this letter, the writer has had the opportunity to talk to one of our

local men who is employed with the soil bank statewide at an attractive salary. In our conversation, I asked him what he thought of these uncut weedy meadows. His answer was he didn't like them but the Conservation Department was stepping in asking that they not be cut to make game cover for wildlife. He also admitted in 2 or 3 years these uncut meadows would grow up to such coarse stalks a mower couldn't cut them and eventually would have to be grubbed out. He hasn't his farm in the soil bank, but stated if he had he would request it be clipped to keep it green. When inquiring from him the possibility of the restoration and cost of these farms that are out, his answer was, "Yes, I know, no individual farmer could do it. It will be up to the Government to finance it." The Government finances it out then finances it back in. Isn't that a little too much for good government? In our suggestion for some program that would help the operating farmer also, his answer was that is what a lot of people want. We like to hear people's opinion on it. He said at their meetings no one seems to take the objective until after the meetings then have some complaints. When asked his opinion about an acreage subsidy, he believed $10 an acre was more than the traffic could bear. If a figure between $5 and $10 could be arrived at, it might be considered. Also he spoke favorably of every farmer retiring 25 percent of his cultivated acreage each year to weed control. This should work as much acreage out at the present soil bank. But he did speak of the cost of policing a policy like that. He stated the present plan is policed for the air. A farmer getting a deal like that shouldn't need policing, but it should be handled successfully by each individual township supervisor at a very little extra cost.

He also stated it wasn't the intention of the soil bank originators that it would turn out as it has—making ghost towns of some communities, overloading the labor market, working hardships on some and more prosperity on others. If in these high infiltration times this acreage subsidy would be enacted it would make the farm attractive enough to keep the farmers on the farm and leave labor the jobs, making better economy for everyone. Also there would be a loud howl if acreage control and high support prices on the basis were to be eliminated. It seems to be the opinion of many it is the only way production will be geared down to consumptions needs and at the same time the farmer protected by the acreage subsidy. Also there might be a resistance from other classes of people that the farmers would be getting a subsidy. Is it any different to subsidize other business listed on the pamphlet, "History of Government Subsidies," or the tax-free unemployment benefits labor gets when laid off a seasonal job? We hope some constructive program will be worked out that will help all lines and not just a few corporation farmers. The small family farm has to have some help to survive.

Yours very truly,

HOWARD HILLIER.

Federal Lamb Grading

EXTENSION OF REMARKS
OF
HON. O. C. FISHER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. FISHER. Mr. Speaker, under leave to extend my remarks I include a letter to the editor of the Washington Post which appeared in that paper on January 13, 1960. It was written by our colleague the gentleman from California [Mr. MILLER]. I commend it to your reading, because it contains some sound advice on an important subject. It is good food for thought. The letter follows:

UNGRADED LAMB

Your January 9 editorial on lamb grading is worth some comment. I imagine all of us feel the need for proper quality standards of all food products. In this day and age, the individual is helpless to do the job himself.

However, it may as well be noted that such standards, unintentionally, of course, are very frequently of no help and may actually harm the consumer. In the case of lamb, prime grades now require prescribed amounts of fat along the back-lining of the animal.

This surplusage must be paid for by the consumer though it is no possible use to anyone. To feed the lamb up to grade requires keeping past its prime, into the second year. This is not young lamb at all. So, as a result of lamb grading we pay added costs which serve no purpose, and we lose out in flavor, and delectability.

This general thesis can be extended to other agricultural products. It is easy to see the imposition of unnecessarily high grading standards as an instrument of monoply and high price structure. The farmer takes the rap because his good product is turned down at the plant unloading dock as below standard.

Witness what is happening in the fruit industry, peaches, apples, pears. Consumers share the costs of this restrictive wastefulness with the farmer; only the middleman gains.

This is the other side of the grading coin. As our society becomes wealthier and feels it can afford restrictive practices which are wasteful, we do not seem to comprehend that the added costs are ours.

CLEM MILLER.

Real Estate Is Emphatically Not Being Condemned to Death—A Leader in the Real Estate Industry From Pittsburgh, City of Urban Renaissance, Looks With Vision at Urban Renewal

EXTENSION OF REMARKS
OF
HON. WILLIAM S. MOORHEAD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. MOORHEAD. Mr. Speaker, today in Washington during a panel discussion under auspices of National Association of Real Estate Boards Stanley W. Arnheim, former president of the Real Estate Board in Pittsburgh and a leader in the real estate industry in that city which I am privileged to represent, had some enlightening things to say about the private property owner and urban renewal.

To the often posed question "Is real estate being condemned to death?" Mr. Arnheim answered a resounding no.

Mr. Arnheim's remarks were factual and informative. They drew upon Pittsburgh's leadership in urban renewal and urban redevelopment to present, in down-to-earth terms, the benefits of urban renewal as measured by new jobs, new business and increased local tax revenue.

Problems of property owners in an area scheduled for redevelopment were not overlooked in Mr. Arnheim's remarks and neither were their solutions.

He told how displaced residents found new housing better than they had ever known before—one-third of these people in public housing and two-thirds in private homes with resultant benefit to the private real estate and building industries.

These remarks are doubly important now, early in a session which I hope will see more obligational authority authorized for urban renewal and more public housing units authorized for construction. This is why, under leave to extend my remarks, I include the remarks of Mr. Arnheim and commend their reading to all of my colleagues:

IS REAL ESTATE BEING CONDEMNED TO DEATH?
(By Stanley W. Arnheim, Pittsburgh, Pa.)

OWNERSHIP PROBLEMS IN URBAN RENEWAL AREAS

The city of Pittsburgh, which is my hometown, has undoubtedly established itself as one of the foremost cities of the Nation which have tackled the problem of urban redevelopment. I don't think any city has received as much favorable publicity in as many national magazines as has Pittsburgh for the amazing job we have done in rebuilding our city.

For a town sick unto death from floods, smoke, slums, blight, hardening of traffic arteries, inadequate parking facilities and a consequent utter and complete lack of civic pride we have emerged into one of the glittering new cities of the Nation with clean air, no flood problems, a reduction (but not elimination) of slums, a dazzling network of new roads, glistening skyscrapers, smart new apartments and hotels, public parking garages and a citizenry bursting their buttons in price as they tell visitors "Look what we've done in Pittsburgh."

This reformation in what people used to refer to as the "Smoky City" was due not to just one single phenomena but to several. High on the list of effective agents, however, was the urban redevelopment program. In just 10 years this redevelopment program has instilled a new spirit in the community, a sense of pride, of participation, of belief in the future of Pittsburgh as a place for living, for working and for private investment. I must answer the question asked in the title of this panel discussion, "Is Real Estate Being Condemned to Death?" with a resounding "No." For Pittsburgh it has been the resurrection, not the death, of real estate values.

Let me point out several things which urban redevelopment has accomplished in the past 10 years and which, if properly approached in your city, will produce similar results:

1. A total of 266 acres (1 percent of the city's buildable area) has been recaptured from the grips of blight and decay and restored to usefulness; 500 acres more are currently in the mill.

2. In a city that had experienced no substantial new real estate investment for nearly a quarter of a century, almost $200 million in private funds have been spent within the boundaries of eight project areas. Nearly 90 percent of the new construction is taxable.

3. Hundreds of new job opportunities have been provided and thousands more have been preserved. In Gateway Center alone nearly 15,000 workers will be employed by the large

corporations which are located in those buildings. Payrolls will exceed $100 million a year. What a beautiful way to be condemned to death.

4. Downtown has been strengthened enormously. The Gateway Center and Lower Hill developments provide a solid launching platform for the future growth of the central business district. This is not to say that Pittsburgh has no central business district problem. We have very critical ones but with redevelopment plans there is hope for their solution. Without redevelopment it would be a hopeless task.

5. Tax returns to the city, school and county have been doubled and tripled in the effected areas. The 23 acres around Gateway Center produced almost a million dollars a year more taxes in 1958 than did the entire 59 acres from which Gateway Center was carved before the project was undertaken. And this was before the new Hilton Hotel and Gateway No. 4 was built.

6. Redevelopment has caused the relocation of 2,556 families, nearly all into better housing than they formerly occupied. Almost a third went into public housing and two-thirds into private housing, whether sales or rental.

7. Independent of the program of the Pittsburgh Parking Authority, redevelopment has created more than 3,800 off-street parking spaces in once-congested areas.

8. Redevelopment has been a tremendous stimulant to the construction industry. Thousands of skilled craftsmen and laborers have been employed on redevelopment job sites and thousands more have helped produce the materials required for construction.

Do these suggest that owners of property in Pittsburgh, whether or not in the project area, have suffered?

If this picture of redevelopment is so bright and rosy, why then are we here talking about real estate being condemned to death? Is there another side to all this? A less attractive side? Certainly there is. Redevelopment is not a painless process and many families, business proprietors and real estate investors have felt a few pangs of physical and financial discomfort as this has been going on.

The three biggest problems facing owners in renewal areas seem to be these:

Problem 1: Once an area is reported under serious study for redevelopment, whether or not it has been officially cited for taking, it is quite possible that tenants may relocate immediately rather than face sudden eviction at some future date. New tenants are then difficult to find to replace them. This depends very largely upon whether this is a commercial, industrial or residential area. It is doubtful if this is as serious a problem in the residential district as it is in the industrial and commercial area where it is expensive for new tenants to start operations and consequently there is less likelihood that the outgoing tenant will be replaced. In residential areas, however, this is not as serious a problem and vacancies are frequently blamed on the urban renewal plan that existed in like quantity before the plans were announced. But the problem is none the less a real one. Until the actual time of taking, a vacant property is a financial drain.

Problem 2: Both tenants and owners are reluctant to make major improvements to property except those of emergency character because they are not sure how long they will be in the property to benefit from these improvements. Failure to maintain these properties adds to the deterioration of the neighborhood which again reduces values. This is a real problem but the fact remains that if most of the properties were not rundown and neglected, with a high vacancy factor, there is little likelihood that the area would have been considered as an urban renewal project in the first place. The authority is frequently made the whipping boy for owners and tenants who would not have done this work anyhow. On the other hand there are many valid examples of people who are stymied in their plans for improving their property by the vagaries of the redevelopment process. This is to be regretted. One must point out, however, that when the property is finally taken it is the value at the time of taking that counts, not what it was when the project was first announced. If, during this interim period, improvements will increase a property's value commensurate with the cost of the improvements, there is no reason why the owner should be reluctant to make them.

Problem 3: Once the exodus starts, values decline more rapidly so that when actual condemnation takes place owners are likely to receive less for their property than they might otherwise have received. This factor depends again upon the time element involved but it is my opinion that most property owners receive from condemnation at least as much as they would have received from a private sale and all too often they receive a great deal more.

These are the three major but certainly not the only problems facing the owners of property in a redevelopment project. You may be thinking of others which you have experienced, such as the inability of owners to find adequate substitute quarters for the market value of their present property or the time element involved in moving to new quarters before their property is taken and razed. These are not to be minimized but I don't believe these come under the scope of the problem I have been asked to discuss. The solution to the three other problems lies in the realm of speeding up the takeover process and the shortening of the period between the announced study and the final takeover. It is important that every effort be made by Urban Redevelopment Authority officials to improve this situation. The problems do not suggest, however, that urban redevelopment is being overdone.

Let me also point out that not all properties in an urban renewal project are condemned, the buildings razed and the land reused for other purposes. In many projects there are sections in which owners may retain their property if they rehabilitate them in conformance with the overall planning for this section. Financing for such remodeling is available and the return on the revitalized property should justify the improvements. Here real estate men who are specialists in property management have the greatest opportunity to serve their clients by analyzing the potential highest and best use of the property and its possible operating profit after the rehabilitation.

To return to the title of this panel discussion, "Is Real Estate Being Condemned to Death?" I must conclude that at least in my humble opinion the answer is definitely "No." Quite the contrary, in most instances property owners have been thrown a lifeline just before going down for the third time in the sea of economic distress. For every hurt that the urban renewal process has caused through the unfortunate time lag between the announcement and the final taking, thousands of property owners who have been trapped with their life savings in these declining areas have been provided a fair price for their investments and enabled to make fresh starts in other neighborhoods.

No community can afford to stand still. To ignore decay is to court disaster. Urban Redevelopment offers every segment of a community, its owners, its tenants, its merchants and industrialists and, not the least, its realtors a golden opportunity to improve their status by neighborhood rebirth. The difference between economic life and death is not a mandate of an Urban Redevelopment Authority, it is a choice to be made by the citizens.

Scranton City Council Again Urges Congress To Pass Area Redevelopment Legislation at Present Session

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, January 25, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following:

CITY OF SCRANTON, PA.,
January 19, 1960.

DEAR DAN: Scranton has again placed its legislative support behind your bill for area redevelopment.

We have forwarded about two score copies of the attached resolution of our city council to prominent congressional and national leaders seeking their influence in pushing through the present Congress an adequate bill.

Regards to your office.

Cordially,

JAMES T. HANLON,
Mayor.

RESOLUTION FOR EARLY ADOPTION OF THE FEDERAL AREA REDEVELOPMENT PROGRAM

Whereas news reports indicate the possibility of early consideration of the Federal area redevelopment program by the Congress; and

Whereas leadership in the House of Representatives have given assurances that the Flood-Douglas bill now held by the House Rules Committee would be reported to the floor; and

Whereas Mayor Hanlon and this council have passed similar resolutions and memorials during recent sessions urging adoption of this same legislation; and

Whereas area conditions today reflect the same level of unemployment present during the past decade; and

Whereas regional economic conditions, particularly since the Knox mine river disaster almost 1 year ago, are more aggravated; and

Whereas the area redevelopment program offers, in addition to needed industrial development financing, several other assistance programs, provide for public works and improvement to cities such as Scranton; and

Whereas the chronic labor surpluses of Scranton and similarly situated regions demand substantial effort on the part of the Federal Government to supplement and expand local community improvement programs such as have been manifest in Scranton and other communities: Therefore be it

Resolved by the Scranton City Council, That this important message be laid before the 2d session of the 86th Congress to petition this Congress to pass at the earliest moment the Federal Flood-Douglas bill; and be it further

Resolved, That copies of this resolution be forwarded to Congressman STANLEY A. PROKOP and DANIEL J FLOOD, Speaker SAM RAYBURN, Floor Leaders JOHN MCCORMACK and CHARLES HALLECK, and Rules Committee Chairman HOWARD SMITH; and be it further

Resolved, That informational copies of this resolution be laid before the President of the United States, Dwight D. Eisenhower, Vice President Richard Nixon, Senators Joseph S. Clark, and Hugh J. Scott, Secretary of Commerce Frederick Mueller, Secretary of Labor James Mitchell, and Gov. David L. Lawrence.

JEROME E. PARKER,
President, Scranton City Council.
JAMES T. HANLON,
Mayor, City of Scranton.
FRANK DESARRO,
City Clerk.

JANUARY 13, 1960.

Forty-second Anniversary of the Independence of Ukraine

SPEECH
OF
HON. ROY W. WIER
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. WIER. Mr. Speaker, the history of the people of Ukraine is a long record of a determined struggle for freedom which has won the respect and admiration of liberty loving people in all parts of the world.

After the collapse of the Russian Empire in 1917, these people seized their chance to form a national republic. The Bolsheviks in Ukraine were disarmed, and as a consequence of these two acts the Bolshevik government declared war. They set up a puppet government in Kharkiv which did not in any way represent the Ukrainian people, and proceeded to invade their country under the leadership of a Russian in command of a Russian Army. By force of arms as well as the activity of the fifth column, the people of Ukraine were forced to accept Soviet rule.

The Ukraine is still known as the granary of Europe and it contributes more to the Soviet empire than any other country behind the Iron Curtain. Its agricultural production is one of the highest in the world, even though handicapped by inefficient Soviet methods, and it is one of Europe's richest and most highly developed industrial countries. Its coal and metals production amounts to more than 80 percent of the entire Russian output. In addition, it has the best railway system in the U.S.S.R., important oil wells, hydroelectric plants, and is heavily industrialized. The people of Ukraine are thrifty, hard working and highly individualistic, and they have kept up a long and determined resistance to the forced collectivism of the Red regime.

Ukraine has a population of over 40 million people, and is the largest non-Russian country dominated by the Soviets. Its value and importance as a production center cannot be overemphasized, and the spirit of its people in their continuing fight for liberty cannot be too much praised and admired. It stands as one of our most important and natural allies in the eventual destruction of Soviet imperialism. Its place as a sovereign and equal partner in the mutual construction of free Europe must be assured if the foundation of permanent peace among freedom loving nations is to be impregnable.

The indomitable will of the Ukrainian people to achieve national freedom still survives in undiminished strength, despite the toll of the millions of lives taken by the Russians in purges, mass murders, and manmade famines. Its rich traditions and culture, centuries old, are still alive and continuing to grow, regardless of the attempted destruction of its religion, science, and learning by its Soviet rulers.

Let us do all we can to aid these valiant people in their efforts to throw off the scourge of the Russian regime and its attempts to force them into communism. The strength and power of their unbending determination and passion to become a sovereign, free, and independent nation, deserves all the help and encouragement we can give them.

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

Appendix

Mr. Sam's Dream

EXTENSION OF REMARKS
OF

HON. CARL ALBERT

OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 26, 1960

Mr. ALBERT. Mr. Speaker, a very interesting article on the Sam Rayburn Library at Bonham, Tex., appeared in the Sunday, January 24, 1960, issue of Oklahoma's Orbit, Sunday magazine section of the Daily Oklahoman, Oklahoma City, Okla. It was written by a resident of my district, Dr. Bernice Norman Crockett, a member of the staff of Southeastern State College, Durant, Okla.

Under unanimous consent, I include this article in the Appendix of the RECORD, as follows:

MR. SAM'S DREAM

People in this section of the United States who do not have the time or the opportunity to visit the National Capital, with its libraries, museums, archives, and Halls of Congress, have access to a representative collection of like Americana in the Sam Rayburn Library at Bonham, Tex. The library was opened to the public October 9, 1957, with a standing-room-only attendance Proof that the interest evidenced in such a project in the south central part of our country is genuine and sustained is available in the visitors' books, which show more than 12,000 signatures.

A veritable shining palace—the Georgia white marble of which the building is constructed has a definite glow—this beautiful building is constructed along classical lines. It tops the summit of a softly rising knoll on U.S. 82 four blocks west of Bonham's downtown business district and gleams a Texas welcome that cannot be denied. Here, on a 4.3-acre tract, the library faces the highway which passes the Rayburn home a short distance to the west. A one-story structure with full basement, the library is constructed of concrete and steel, faced with marble.

Contents of the library produce even greater enthusiasm with its treasure trove of thousands only-one-of-its-kind of historical papers and documents, original pieces of furniture from the halls of Congress, identical duplication of the Speaker's rooms, original portraits and paintings, objects of art and hundreds of mementoes from the life of one man—SAM RAYBURN, and the life of a nation—the United States.

In the case of the Sam Rayburn Library, one sees the culmination of a long cherished ideal and dream. When, where and how Mr. SAM'S dream of a memorial library first began is—like most dreams—surrounded by any number of stories and legends. The one with the most popular appeal, and probably the one which is most accurate, is described in the dedication issue published by the Bonham Daily Favorite.

One sees SAM RAYBURN as a 10-year-old boy, astride a long fence on a Fannin County farm, deciding to enter politics just as soon as time and opportunity permit. As one of a family of 11 children, educational advantages were hard to come by for the ambitious young dreamer. It was probably the deprivation of books and opportunity for an education which furnished the youngster with the determination to sometime be able to provide for other young people some of the advantages which were denied to him.

There was little taught in the way of politics and government in the little one-room Flag Springs School where SAM got his elementary education. There were more than a hundred boys and girls enrolled and only one teacher. Small wonder the most important bit of equipment was an ample supply of fresh bois d' arc switches. Nor did the East Texas Normal, which SAM entered with only $25 for expenses, have much in the way of library. The desire to sometime be of service to his fellowman was the dream which carried Mr. SAM through the completion of a college education. The first year in college he got his board on credit, ringing the bells and making the fires for his tuition.

"I swept the public schoolhouse for enough money to pay for my washing. When I finished there, I afterward went to the State university," the dedicated young man told voters in a campaign speech for Congress in 1912. The same dream of service sustained him through term after term in the office of Congressman for the Fourth District of Texas. His efforts to improve conditions for the people of his district, extended to his entire home State, and became national in scope.

As he continued in public service, Mr. SAM'S files and his accumulation of material on political and governmental history became increasingly abundant. It became so abundant, in fact, that it became quite a job of preservation and storage, since much of the material he was collecting was both unique and irreplaceable.

Probably the idea for a library and a museum arose because of this need for housing for papers which trace the history of the United States. Realization of a way to accomplish such an endeavor came in 1948 when Mr. RAYBURN won the $10,000 award given by Collier's magazine to the Nation's outstanding Congressman. This money provided funds for buying the 4-acre plot in the west side of Bonham.

When word got around that Mr. SAM proposed starting his new library, donations began pouring in. The permanent record book, prominently displayed in the main reading room, lists the names of more than 8,500 individuals and firms who sent money that Mr. SAM'S dream might at last come true.

Come make a quick tour of Mr. SAM'S library. We will pause at the big double doors, not only because it takes a bit of muscle to pull them open, but to stop and stare with awed delight at the spectacular beauty of the chandelier which hangs in glittering majesty in the Speakers' room. It is hard to decide which way to go first; probably we should go to our right, across the beautifully paneled foyer and into the main library and reading room.

Here, the floor-to-ceiling window on the east furnishes much light and beauty for this room. From it part of the town of Bonham is visible, almost down to the town square. The window looks out on the location of a proposed formal garden which is to be developed in memory of Miss Lucinda Rayburn, Mr. SAM'S sister, who served as her famous brother's hostess for many years until her death in 1956. An exquisite object of art and antiquity which one sees immediately upon entering the main library stands centered on the first shelf of books one comes to—it is a 3,000-year-old Grecian urn, which was presented to RAYBURN in 1949 by the Grecian Government.

In this room are shelved encyclopedias, almanacs, world books, Bibles, and histories. There are histories of nations of the world and Toynbee's Study of History. There are histories of France, England, Germany, Russia, Asia, Palestine, the Philippines, Korea, Hawaii, Africa, India. There are the American Historical Association reports and the American heritage collection.

The Rayburn Library has about 5,000 books at present. Also in the main library are histories of political parties, women's suffrage, the Constitution; there are the American State Papers, the history of coinage, three or four shelves of Texas history, and an entire top shelf given over to histories of the various States. Another tier of books includes sets of books on all the Presidents of the United States, from George Washington to Dwight D. Eisenhower.

More than half the shelves in the reading room are filled with the records of Congress. Journals of the Continental Congress cover the time from 1774 through 1789, while the period from 1789 through 1824 is covered by the Annuals of Congress. From 1824 up to 1835 is covered by the Congressional Debates, while the period from 1835 up through 1873 is covered by the Congressional Globe. These forerunners of today's CONGRESSIONAL RECORD are brought up to date by a complete set of the CONGRESSIONAL RECORD from 1873 up to the present.

The Rayburn Library has about a hundred autographed—to RAYBURN—copies of books, headed by Winston's Churchill's "History of English-Speaking Peoples," and Carlos P. Romulo's "Crusade in Asia." President Eisenhower's book, "Crusade in Europe," is autographed: "For Mr. SAM RAYBURN—Speaker of the U.S. House of Representatives and veteran legislator of 45 years. With warm regard from his friend, Dwight Eisenhower." The date is March 6, 1957.

In "Memoirs," by Harry S. Truman in his "Year of Decisions" is written: "To the Honorable SAM RAYBURN with affectionate regards and with highest appreciation of his friendship and service as the greatest Speaker the House ever had, from Harry Truman."

A copy of Wendell Willkie's "One World" is inscribed: "Although we have disagreed much, I have admired you much."

There is still the most beautiful room in the library to visit, the library office which is an absolute duplicate of the Speaker's Capitol office, from the pattern on the tile floor to the vaulted ceiling. The mantle in this room was in the House of Representatives for 92 years. It was acquired by RAYBURN for the library during the 1950–51 remodeling program at the National Capitol.

The exhibit room demands far more time than a casual visit will allow: displays enclosed in glass cases show many of the mementoes Mr. SAM has collected during his more than 50 years of public service. Degrees, gavels, the former by the dozens, the latter by the hundreds, are accompanied by explanatory notes. Silver trays

bearing the signatures of famous men inscribed to Mr. SAM; plaques, plates, cups, figurines, statuettes; the contents of this room reflect the life of a man who has served many.

There is also the first set of books Mr. SAM ever bought, the first present he ever gave his mother, as well as family pictures and papers which show the family man as well as the public servant. Two other items in this room stimulate great interest. One is the white marble fireplace mantle which once graced the Adams Room of the White House. During the White House remodeling, the renovation commission presented the mantle to the library. Above the mantle hangs a recently completed oil portrait of Miss Lu as she appeared during the last of her social appearances as her famous brother's hostess.

The basement houses many more interesting items, among them some of the seats from the Representatives' rooms in the Capitol. The row of four seats is used for a settee for visitors (they are so inadequately cushioned that one wonders why Congressmen occupied them for any great length of time). They have a shelf underneath each chair to hold the Member's papers, and a push button by each seat which was used to summon pages.

In the basement one finds the vault, and here, according to H. G. Dulaney, librarian, is the heart of the library. The vault contains 18 steel filing cabinets filled with the Speaker's official and personal papers which he has collected from the administrations of Woodrow Wilson to President Eisenhower. Also included in this collection are the year-by-year case files, which contain Mr. RAYBURN's correspondence with his constituents in his congressional district, and a second set of files which contain papers related to legislation, politics, national and international affairs. These papers will be made available for scholarly research.

Sunday is the heaviest day of the week where visitors are concerned. There are sometimes as high as 200 visitors a day. The library is open Monday through Friday from 10 a.m. to 4 p.m. On Saturday it is open from 1 to 5 p.m. and on Sunday from 2 to 5 p.m.

On October 9, 1957, the date of the dedication of the library, the first name inscribed in the visitor's book was that of Harry Truman, Independence, Mo. The second name was Bess W. Truman.

It reads like a rollcall of the States, this visitor's book.

Ever so often there would be a little comment added after the signature. One visitor wrote: "This is worthy of you, Mr. SAM." Another said: "We are proud of you." An Oklahoman, not to be forgotten, stated: "We like you in Oklahoma, too." One visitor just wrote one word but it really was accurate: "Beautiful."

The Intracoastal Waterway

EXTENSION OF REMARKS

OF

HON. RALPH W. YARBOROUGH

OF TEXAS

IN THE SENATE OF THE UNITED STATES

Tuesday, January 26, 1960

Mr. YARBOROUGH. Mr. President, the story of the development and the future of the Gulf Intracoastal Waterway is one of the most significant chapters in the history of the growth of our transportation service.

Mr. Dale Miller, executive vice president of the Intracoastal Canal Association of Texas and Louisiana, knows as well as any man the past and the future of the Gulf Intracoastal Waterway.

Mr. President, I ask unanimous consent to have printed in the Appendix to the RECORD an excellent speech on this subject which Mr. Miller made at the last annual convention of the National Rivers and Harbors Congress here in Washington in 1959. His address was entitled, "The Intracoastal Waterway."

There being no objection, the address was ordered to be printed in the RECORD, as follows:

THE INTRACOASTAL WATERWAY

(By Dale Miller, executive vice president, Intracoastal Canal Association of Louisiana and Texas, at the annual convention of the National Rivers and Harbors Congress, Mayflower Hotel, Washington, D.C.)

I admit to some misgivings in accepting this place on your program, being aware of the omniscience of my audience on the subject of water transportation. But the circumstance that my remarks are to be confined largely to the Gulf Intracoastal Waterway gives me some confidence to address you, because with that particular topic I feel at home, in a rather literal sense. We have been products of the same environment, and I have moved within the orbit of its destiny since I was a child in the small community of Corpus Christi, where the principal vessels in those years, except for a few shrimping boats, were the canoes which we youngsters fashioned from barrel staves and canvas.

I want to talk to you a few minutes today about this Gulf Intracoastal Waterway—a navigation facility which has become perhaps the most remarkable artery of transportation in America. I want to talk to you about what it is, what it does, and what it hopes to become. It is a story which goes back a great many years to a time when that crescent of the Gulf from the Mississippi to the Rio Grande was largely a vast and untrammeled wilderness.

It would perhaps be ungallant to refer to the gulf coast in the early years of this century as a wilderness, because certainly its inhabitants were as enterprising then as they have been since. But it is nevertheless true that when the Intracoastal Canal Association was formed in the little community of Victoria on August 8, 1905, much of the vast coastal region in Louisiana and Texas was not far removed from the primitive. For miles along the farflung coast of Texas little could be seen but sage and cedar and mesquite, and life consisted principally of rattlesnakes and jackrabbits and occasional paisanos, with accents of civilization supplied here and there by vaqueros and scattered herds of longhorns.

Indeed, only the audacious optimism which characterizes the frontier could have inspired the document which originated from the little cowtown of Victoria in 1905. "A representative convention" was called, "agreeable to the desires of a great many public-spirited citizens * * * for the purpose of discussing the feasibility, plans and final construction of an intercoastal canal." Terming this proposed canal "a necessary adjunct to the rapid development of the greatest country in the world," this clarion call declared: "This canal will give all the section of country adjacent to same the advantage of direct communication by water with all our deep water ports, and in addition thereto will extend the same advantages to the tributaries of the canal (in Texas), and all the rivers and bayous in Louisiana, and also the great Mississippi River and all its tributaries, which spread over the country like a great hand laid over the face of the United States."

It is apparent, from the rather grandiose phraseology of this call, that no bridle restrained the vivid imagination of these brash adventurers. Indeed, many subscribers to Texas and Louisiana newspapers who read that clarion call could be forgiven if they wondered whether the whole business was some form of mass delusion induced by the heat of a Texas summer. For the idea of digging a ditch 700 miles long through virtually a coastal wilderness no doubt seemed appalling, if not incredible, to many of them.

But the convention was held, scores of prominent citizens traveled long distances to attend, and so contagious was the enthusiasm generated at the meeting that the movement immediately attracted vigorous and widespread support. The drive set in motion at that convention was not only sustained but accelerated. In the following year the meeting was held in Lake Charles, which actually brought Louisianians into active participation for the first time, since their plans to attend the Victoria meeting the year before had been thwarted by a quarantine imposed by a yellow fever epidemic.

I shall not delineate the herculean problems of the ensuing years, the many moments of despair and the occasional times of elation, the bitter tastes of defeat and the fleeting nectars of victory. But the program withal began to burgeon and prosper. Within a few years certain segments of the waterway came into existence, initially at depths of 5 feet and bottom widths of 40. Within less than 10 years from the date of its organization the association had made substantial progress toward the achievement of its early objectives.

As the years went on, however, it became evident that these disconnected segments, while accommodating local traffic, could not realize their full potential until they were integrated into a single system. During those years association leaders experienced considerable difficulty in persuading Congress to evaluate the waterways, not in terms of the circumscribed local benefits developed by each segment, but rather in terms of the benefits of through transportation which would result from their integration into a national transportation system. The position of the association ultimately prevailed, and in the River and Harbor Acts of 1925 and 1927 the Gulf Intracoastal Waterway was authorized as a continuous navigation facility extending from the Mississippi to Corpus Christi, with a depth of 9 feet and a bottom width of 100.

Then began the long and arduous task of bringing to realization the objectives which had been authorized. Rights-of-way for distances of hundreds of miles had to be obtained free of cost under the auspices of the association; changes of route were frequently necessary to accommodate local conditions; appropriations were not always forthcoming, and when they were the funds were often inadequate. It is impossible to describe the difficulties which were encountered, but as the years went on the authorized waterway, 9 feet deep and 100 feet wide from the Mississippi to Corpus Christi, became an accomplished fact.

Long before this project was constructed, however, it became evident that it would succeed to a degree far in excess of the predictions of its supporters. It was authorized by Congress on the expectation that it would develop approximately 5 million tons of commerce a year, but that figure had been exceeded even before through transportation became possible for the first time, and when the canal eventually reached its terminus at Corpus Christi, near the outbreak of

World War II, it was carrying in excess of 17 million tons of commerce a year.

Though the Intracoastal Canal had already established its value to the country's peacetime economy, it was during the Second World War that it made its greatest contribution to the welfare of the Nation. The war was scarcely 6 months old when Congress passed the Mansfield bill, which authorized increasing the depth of the Intracoastal Canal to 12 feet and its bottom width to 125 feet, and extending it beyond Corpus Christi to the Rio Grande. This work went forward during and after the war, and on June 18, 1949, a memorable date in the annals of water transportation, the main channel of the Gulf Intracoastal Waterway was completed to the Mexican border. More than 28 million tons of commerce were moving over the waterway by that time, and that tonnage continued to grow.

Meanwhile, construction on the canal extended eastward from New Orleans through coastal areas of Louisiana, Mississippi, Alabama, and western Florida. The Mississippi River crossroads soon became congested with barge traffic, and the association moved promptly to develop new projects to accommodate the growing commerce. The new Algiers lock was designed to relieve the overburdened Harvey lock at New Orleans. And an improved direct route from Morgan City to Port Allen is now under construction, with a modern lock opposite Baton Rouge to provide new access to the Mississippi. Thus the Intracoastal Canal system, extending and expanding to keep pace with the rapid development of the gulf coast, remains responsive to the needs of the dynamic region it serves.

As we look back today, over this long span of years, we cannot fail to be deeply impressed by the results which have been achieved. What has been created is the most remarkable transportation facility in America—a protected inland waterway extending more than 1,100 miles from the west coast of Florida to the Mexican border—a waterway which is now transporting approximately 48 million tons of commerce more than 8 billion ton-miles a year, a waterway which has been adjudged the most beneficial waterway in the United States.

An official study undertaken by the Corps of Engineers for the Appropriations Committee of the Congress disclosed that the Gulf Intracoastal Waterway has achieved the phenomenally high ratio of benefits to costs of 14.8 to 1, by far the highest in the Nation. In other words, the savings in transportation costs accruing to the users of the Intracoastal Canal amount to $14.80 for every dollar expended by the Federal Government in the entire cost of construction, maintenance, and operation of the waterway. This study further disclosed that the benefit-cost ratio for all our inland waterways amounted to an average 3.17 to 1, and the ratio for the 12 major waterways with which the Intracoastal Canal was compared amounted to an average of 7 to 1. The savings in transportation costs brought about by the Intracoastal Canal amount to $83 million a year, and that figure, for a single year, exceeds all the money appropriated by the Federal Government for the construction of the waterway throughout all the years of its existence.

The metamorphosis which has been wrought in the gulf coast country in recent years defies description. Little of the past remains in that vigorous and productive region to evoke nostalgic reminiscence of those early years. Massive oil refineries, chemical factories, lumber mills, cotton compresses, shipyards and dry docks, sulphur plants, grain elevators, and many other industries too numerous to mention have risen from the sage and chaparral to create what is today America's most astonishing industrial frontier. Spires of steel and stone, symbols of progress, rise from the coastal plains; derricks shoot up from the cotton-fields and the muskrat swamps, standing like colossi athwart the lethargy of the past. A great new empire is in the making.

What has happened, of course, has been the result of the union between the beneficence of nature and the ingenuity of man. Rich natural resources are being converted to useful implements of the human society. But there, as anywhere else, the motivating force of civilization is transportation, without which the interchange of goods and services which constitutes civilization would not be possible. To a degree not often paralleled in other sections of the Nation and the world, water transportation in particular has influenced the transition of the gulf coast country from a sprawling frontier to a bustling industrial and agricultural commonwealth. Nine of the Nation's 15 largest seaports from the standpoint of tonnage now are claimed by the gulf coast, and through them all, coursing its busy way and concerting their economic growth, extends the Intracoastal Canal—threading its silver path through the bayous and the plains, across the rivers and down the lagoons.

It is characteristic of the American spirit to look to the future rather than to the past, to pursue a vision yet unfulfilled rather than to bask in the glow of a dream come true. So the energies of our association are now being directed toward a vast future program which is no less inspiring and challenging than that which motivated the aspirations of the little band of pioneers who met together in Victoria so many years ago. We are developing for navigation the principal streams tributary to the canal along the gulf coast, thus extending the benefits of water transportation into the rich hinterlands. We are developing more access channels outward to the gulf. We are creating bypasses, alternate routes, and other improvements to enhance the value of the waterway. Just as the early proponents of this waterway persisted in viewing the proposed canal not as an isolated and provincial facility but as an integral part of the inland waterway system of the Nation, so do we regard the completed main channel as a framework upon which to build a greater transportation system in the future.

There is another major objective, yet to be realized, which should challenge us all—the opportunity to bring the Atlantic seaboard and the gulf coast into a compatible commercial relationship which it has long needed but still has not fully attained.

The Gulf Intracoastal Waterway extends for more than a thousand miles from the west coast of Florida to the southern tip of Texas, while the Atlantic Inland Waterway of similar dimensions and distance extends from the east coast of Florida to Trenton, N.J. Taken together, therefore, they would constitute a national transportation facility extending more than 2,000 miles along the eastern and southern seaboards of the United States. But they cannot be taken together, of course, because midway along that vast distance is a gap which must yet be closed—the gap across northern Florida. The method of closing this gap through the construction of the cross-Florida barge canal has been approved by the Corps of Engineers and authorized by Congress, but no funds have been provided to initiate construction.

This barge canal, by connecting the existing waterways along the Atlantic and gulf coasts, would effect substantial savings in the transportation costs of a wide variety of commodities, as well as in the movement of dredging and construction equipment, and in the seasonal migration of many commercial craft. And not to be overlooked are the recreational benefits which would accrue from the joining of these waterways into a single system. The use of pleasure boats is greatly increasing, and the cross-Florida canal would stimulate this type of recreational travel from the northeastern area to the picturesque border of Mexico.

Regardless of the commercial and recreational benefits to be derived from the cross-Florida barge canal in time of peace, the unanswerable argument for its construction is its importance to our Nation in time of war. When this project was authorized by Congress in the early months of World War II, hundreds of American lives had already been lost within sight of the coast, as tanker after tanker, and freighter after freighter, became a flaming prey of enemy submarines. Hundreds of ships were lost, and cargoes too precious to be evaluated even in the millions of dollars—and why? Because no safe passage across Florida existed for the barges laden with vital war materials which otherwise moved in a protected inland waterway virtually within sight of the catastrophes at sea. Now, with war clouds still hovering over the earth, and with the submarine menace in the next war much more serious than that in the last, let us not be the victims again of too little, too late.

Another important objective in the years ahead—one which is fascinating to contemplate—is the extension of the Intracoastal Canal beyond the Rio Grande and down the Mexican coast to Tampico and Vera Cruz. This is a project which has long been discussed. In fact, the Mexican Government had an official observer at the first meeting of our association in Victoria in 1905. The coastal terrain of Mexico, so similar to that of Texas, is conducive to the construction of such a waterway, and certainly the economic benefits to be derived by both nations from such an important transportation facility would be considerable. I am sure you will be interested to hear that we have received word from the Mexican Government that the initiation of construction on this project is anticipated this year.

So this busy complex of navigation facilities along the southern perimeter of the Nation—which is the Gulf Intracoastal Waterway and its connecting channels and tributary streams—is fairly bursting at its extremities—to the east, with the connection across Florida; and to the west, with the extension down the coast of Mexico. Already a part of the vast waterway system of the midcontinent area of the United States, it will someday, become the heart of by far the longest waterway in all the world—an international intracoastal canal reaching from the northeastern area of the United States deep into southern Mexico, more than 3,000 miles away. It is a fascinating prospect to behold—and the opportunity to achieve it is a challenge which confronts us all.

The Policeman's Lot Remains Unhappy

EXTENSION OF REMARKS

OF

HON. GEORGE M. WALLHAUSER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 26, 1960

Mr. WALLHAUSER. Mr. Speaker, recently there has been some discussion concerning the use of peepholes in post offices. In this connection, on January 20, 1960, there appeared in the Washington Post an article written by Bill Gold, which seems to aptly describe the

necessity for such procedure. Mr. Speaker, I ask permission that this article be inserted in the RECORD.

The article follows:

THE POLICEMAN'S LOT REMAINS UNHAPPY

(By Bill Gold)

You have to stop and listen when a Congressman rises in the House of Representatives and charges that our Government is using the big brother tactics that George Orwell described in 1984. Representative KEN HECHLER, Democrat, of West Virginia, actually waved a copy of the book at his colleagues this week as he denounced the use of peepholes in post offices. He had just found out about them.

Actually, however, those peepholes have been in use for some 85 years, and they are largely responsible for the enviable reputation for honesty that the Post Office Department has earned. No postal worker can ever be sure whether an inspector is watching him.

Representative HECHLER thinks this is spying, and that it is reprehensible for the Government to pry into a worker's privacy. My opinion is that a postal worker's right to privacy in personal matters does not extend to his discharge of official duties. The right of privacy with which we ought to be concerned here is that belonging to the user of the mails. We must take reasonable precautions to guard against tampering with the mails, or even the temptation to do so.

This is the strength of the present system. The peepholes are not secret. Postal workers know that they are being watched, and I would guess that most of them have clear consciences and aren't the least bit troubled about it.

I am as opposed to police state methods as the next man, but I do think we ought to keep straight as to which are the cops and which the robbers, and with which side our sympathies lie.

As Gilbert and Sullivan reminded us, "When constabulary duty's to be done, the policeman's lot is not a happy one." Let's not clobber the guy who is trying to protect our interests.

America's Cruelest Racket

EXTENSION OF REMARKS

OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Tuesday, January 26, 1960

Mr. WILEY. Mr. President, today the miracles of science and the opportunity for better living are extending the lives of our citizens.

Currently, there are nearly 16 million persons in the country over 65 years of age. Of these, more than 14 million—including over 320,000 in Wisconsin—are receiving benefits under the social security program, as well as others obtaining benefits under private and other retirement plans.

Today, we are faced with the task of further improving the economic outlook for these folks in the mounting age brackets—many of whom have not had an opportunity to lay away a "nest egg" for retirement.

Unfortunately, there are still racketeers and confidence men who attempt to make easy prey of these folks—to steal from them even their modest incomes.

Recently, a new racket has been uncovered. In essence, it goes like this: confidence men, posing as Government representatives, attempt to swindle social security beneficiaries—including oldsters, widows with children and disabled shut-ins—out of portions of their benefits under the social security program.

Under the guise of Federal agents, they demand "refunds" for alleged overpayments, and utilize other tactics to deprive beneficiaries of their checks.

The racket has become so widespread that the Social Security Administration has had to set up its own investigating branch to deal with the hoaxers.

A major way in which such cruel, inhuman rackets can be stopped, of course, is by public education; that is, alerting citizens to such unscrupulous tactics by confidence men. Authorities, too, must make a real effort to crack down on this insidious racket.

The January 24 issue of Parade, in the Washington Post and Times Herald, carried an article entitled "America's Cruelest Racket," outlining the techniques of the swindlers in this nefarious program.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

AMERICA'S CRUELIST RACKET—UNMASKED: A HARDHEARTED SWINDLE THAT FATTENS ON FEARS OF THE NEEDY TO THE TUNE OF THOUSANDS OF DOLLARS*

(By Sidney Margolius)

BALTIMORE, MD.—Hundreds of Americans have been fleeced by the Nation's newest, cruelest, and—until now—least-known racket. And the danger menaces millions.

In many parts of the United States, glib confidence men posing as Government representatives have been sweet-talking social security beneficiaries out of their badly needed payments. Pathetically, the swindlers' special prey have been those who can least afford to lose money. Chief among their victims have been confused oldsters, widows with children, and disabled shut-ins.

In Alexandria, Va., recently, for instance, two men who said they were social security agents visited a widow the day her check arrived. They told her she had been overpaid and demanded a refund to the Government. The frightened woman signed over her check to them as part payment and even offered to take out a mortgage on her house to pay the rest.

In other cases, beneficiaries have been relieved of as little as $5 and as much as $300. Sometimes the representatives outfit themselves with fake Government credentials. Others work in pairs to lend each other authority. One even wore a badge labeled "U.S." However they cloak themselves, these swindlers heartlessly fatten on frightened Americans with little income and a gnawing fear that even that will be taken away.

The new racket is so widespread and so successful that the Social Security Administration here has set up its own investigations branch to deal with hoaxers. More swindles were reported in 1959 that in 1958. Chances are the number will increase. Nearly 14 million Americans now receive social security, and the number is growing. Since many of them are both trusting and confused about social security laws, they could be easy pickings for confidence men. Some, the Social Security Administration believes, have been swindled already and do not even realize what has happened.

Although there are some local—and ingenious—variations, most of the swindles fall into six main categories:

The refund gimmick, in which the beneficiary is told he has been overpaid and must return money to the agent. One imposter working the Indianapolis area was able to persuade beneficiaries to hand over as much as $282 each to settle overpayments. Previously he had used the same scheme in St. Louis.

The bonus offer, in which a person is promised extra payments in return for a fee. In Nashville, Tenn., a con man promised beneficiaries $500 apiece if they first paid $60 to the agent to help veterans. The vets' fund was short of money, the agent explained.

The loan to the Government hoax. Beneficiaries are told social security is short of money (a persistent fear with beneficiaries) and must borrow from them temporarily. In one case in Shelbyville, Ind., a con man got $214 from a widow with this argument. He told her that changes in the law entitled her to more money, but because of the fund shortage she would have to loan money to social security to get it.

DOCTOR'S FEES ONE WATCH

The phony physical examination: Beneficiaries are persuaded to take—and are charged for—a physical examination in order to continue getting payments. One cruel hoaxer in the Midwest used this spiel to prey on terrified recipients of disability benefit. Posing as the social security doctor, he even sold them medicine and persuaded them to discard medicines they already were using. In one case, he demanded a $12 fee from a disabled man, then took the man's watch as security for an additional $84 fee.

The magazine subscription racket, believed to be originated by one young man in Indiana: He told beneficiaries they would receive larger payments if they subscribed to a social security magazine. He collected as much as $15 apiece before he was recently caught.

The inspection team approach, usually used by two men working together: The fake inspectors visit elderly people to learn if they are getting social security. If the answer is yes, the inspectors demand a payment—in one case, it was $110—to continue payments. If the answer is no, a fee is requested "to become a beneficiary for the rest of your life."

HAVE YOU BEEN SWINDLED?

One enterprising operator in Lenoir, N.C., even established his swindle on a mail-order basis. He sent letters to people getting disability payments, advising them that they were "required by Government law to sustain a lifetime benefit at the Disability Security Main Office, Birmingham, Ala." A fee of $25 was demanded to be sent to Security Board, Box 54, Lenoir.

Social security administrators believe there may be other variations still unknown because many victims have not reported them. Some victims may be reluctant to admit they have been bilked. The rest still are not aware of it. If you pay $25 to make sure your benefits continue, and the checks keep coming, you may not realize you've been swindled. Or if you refund an overpayment, and get no more dunning letters, you may assume that the record now is straight.

Both Federal and local governments are doing their best to stamp out the racket. In addition to the Social Security Administration's investigators, the FBI handles cases where Government checks are involved. But authorities say the only real protection

against swindlers is self-protection. If you are receiving social security payments, you should follow these steps in dealing with agents who turn up at your door. Or if your parents or members of your family benefit from social security, you should pass along this advice:

1. Demand official identification from anyone who claims to be a social security representative. Actually this in itself is not enough protection since con men often are canny enough to fake identification.

2. Check with the local social security office by phone to make sure a representative approaching you is not a fake.

3. Have a witness if possible. One operator never returned for a fee he'd been promised because he observed a relative listening to the conversation. Another was caught because a neighbor, hearing the conversation through her apartment wall, tipped off investigators.

4. Use the mails for social security dealings. Occasionally, a social security beneficiary is overpaid, usually if he is working on the side and earns more than the limit on such earnings. But requests for refunds in these cases usually are by letter. Only if correspondence bring no result would a legitimate social security representative call. But even then, you are within your rights to mail the refund to the local social security office.

NO CASH, NO JEWELRY

5. Do not give cash, jewelry, or checks made out to individuals to anyone purporting to represent the Social Security Administration. A legitimate representative would not accept cash or jewelry. And he would insist that checks or money orders be made out to the Bureau of Old-Age and Survivors Payments.

6. Notify the Social Security Administration, or police authorities, if you believe you have been swindled. Only by full reporting of all swindles can the Government learn the real scope of the racket. Unfortunately, if you have been swindled, you'll have to foot the loss yourself. Uncle Sam won't replace the money in spite of your good faith.

WHY THE RACKET SUCCEEDS

The real reason the racket has spread is that many beneficiaries don't understand the basic nature of social security themselves. They confuse it wih State welfare payments, which are based on need. Social security benefits are based on your average earnings during your working life and are fixed by law as firmly as the ground under your feet. There is no way to get an increase because you need more money, or by cultivating a representative's good will. If you think you are entitled to more, the local social security office will recheck your benefit—and at no cost to you.

Nor is there any shortage of social security funds despite beneficiaries' chronic worry about the prospect. Social security benefits are financed by taxes, never by loans from beneficiaries. Nor is there any way to get social security benefits if you didn't work long enough in covered employment, of if your husband wasn't sufficiently covered.

The potential proportions of social security racketeering are immense. Almost every American family now is covered by social security, payments already total $10.3 billion a year, and there are potential victims on every block. Your own folks will be eligible for payments some day, and so will you. All may be easy pickings if they don't guard themselves against bunco men who prey on public misunderstanding of social security laws.

The Missile Gap

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. WILSON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article from the New York Times, Friday, January 22, 1960:

THE MISSILE GAP—HARDHEADED APPRAISALS SUPPORT GATES IN OPTIMISTIC PICTURE OF U.S. DEFENSES

(By Hanson W. Baldwin)

Moscow's claim yesterday of a 1¼-mile circular error in a 7,766-mile rocket flight caused raised eyebrows but no excitement in the Pentagon.

The first of a number of Russian missile shots into a new impact area in the central Pacific, whether or not it was as accurate and as successful as the Russians asserted, is unlikely to influence materially the vigorous and aggressive presentation of the administration's defense policies just initiated.

Secretary of Defense Thomas S. Gates, Jr., Gen. Nathan F. Twining, Chairman of the Joint Chiefs of Staff, and Under Secretary of State Livingston T. Merchant tipped the administration's hand in their opening testimony in Congress this week.

Their composite testimony totaled, in the opinion of some Congressmen, the rosiest picture of the U.S. defense posture presented to Congress for a long time. The balance of military power is still heavily in our favor, Secretary Gates said. Even a Soviet surprise attack with all available missiles could not eliminate our nuclear retaliatory capability.

THE MISSILE GAP

Mr. Gates even cast considerable doubt on what has come by dint of constant repetition to be accepted as a fact by many in the Nation; a missile gap between the United States and the Soviet Union in the next few years. He indicated that if the Russians produced intercontinental ballistic missiles at our present maximum estimate of their potential capabilities they might have a moderate numerical superiority in the next 3 years. But the United States has many other nuclear weapons systems, which, collectively, tip the balance of deterrent power heavily in our favor.

This is an election year. The Democratic opposition is already attempting to make a campaign issue out of the deficiencies in our military posture and is emphasizing particularly the alleged missile gap. The Republican administration, on the other hand, has been aroused and stung by the opposition attacks. The President, in particular, is known to have been greatly angered by the criticisms voiced in "The Uncertain Trumpet," a book recently published by Gen. Maxwell D. Taylor, U.S. Army, retired, who completed 4 years as Army Chief of Staff last June. The President's mood, particularly about defense matters, is typified by his recent heated response to a somewhat pointed news conference question about defense:

"I've spent my life in this, and I know more about it than almost anybody I think in the country."

Is, then, Mr. Gates' testimony rhetoric, the opening guns of the defense in an election year; or is it solidly based on factual appraisal?

A COMPOUND ANSWER

The answer to this question is almost certainly compound. Mr. Gates has too much integrity—he is a public servant who is no politician and owes no man anything—to give other than his honest opinion. But he is aware, as is the White House, that the Pentagon case has not been put skillfully or forcefully in the past.

The administration feels that the public image of relative American weakness that has been created—partly by Communist propaganda, partly by undoubted Communist achievements, partly by the special pleading of the individual services, partly by opposition criticism, partly by inept administration presentations of our strength—is grossly exaggerated. Mr. Gates, therefore, is certainly determined to put his best foot forward, not only for domestic political reasons but also because he is keenly aware that a strategic deterrent is no stronger than the enemy thinks it is.

But at the same time his optimistic statements are based on hardheaded comparative appraisals of our own and of Soviet strength. The Secretary spoke of new intelligence estimates of Soviet missile strength, which he described as very significant.

These estimates were not made public, but in an explanatory conference later, the Secretary got on to slippery ground when he admitted that the new estimates took into account what the Russians intended to do in missile production, rather than, as in the past, merely estimating their capabilities.

In the intelligence field this issue of intentions versus capabilities is one of the oldest of pitfalls, and many experts have come a cropper by trying, in effect, to read the enemy's mind.

Nevertheless, the new intelligence reports do include an estimate of current Soviet long range missile strength and of current Soviet missile production that, in comparison with our own current status, is by no means discouraging.

Oregon Seacoast National Recreation Area

EXTENSION OF REMARKS
OF
HON. RICHARD L. NEUBERGER
OF OREGON
IN THE SENATE OF THE UNITED STATES
Tuesday, January 26, 1960

Mr. NEUBERGER. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an informative article from the Oregonian of January 22, 1960, by Malcolm Bauer, associate editor of the Oregonian, analyzing the bill proposed by Governor Hatfield dealing with the Oregon Coast National Seashore Park, as well as with my own revised bill of last November proposing legislation to authorize the park.

Mr. Bauer's article will supplement my speech in the Senate January 25, when I introduced, by request, Governor Hatfield's bill and explained some of my own observations with respect to it.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SEASHORE ISSUE IN COMPROMISE STAGE

(By Malcolm Bauer)

There are significant differences between the Oregon Coast National Seashore bill drafted by the State committee on natural resources, with Governor Hatfield's approval, and other legislation on the subject pending in Congress. The latter includes bills sponsored by Senator NEUBERGER and by the Eisenhower administration.

The most significant new feature of what may well be called the Hatfield bill is its reception in the area of the proposed National Seashore. The Western Lane Taxpayers Association, of Florence, organized for the express purpose of opposing the earlier proposals, has embraced the new draft as entirely reasonable. It would appear, therefore, that the principle of a National Seashore on the Oregon coast has general acceptance. The issue thus moves from a stage of conflict into the more constructive one of compromise.

Following are points among those that will have to be settled:

The Neuberger bill provides an alternative of life tenancy for owners of private residential property located within the boundaries of the National Seashore. The Hatfield bill would extend this privilege to owners of commercial properties, with the provision that, to be maintained in the area, they must be, in the view of the Secretary of the Interior, compatible with the purposes of the act.

The Hatfield bill would provide for Federal payments in lieu of taxes to the affected counties, school districts, and other taxing districts over a period of 25 years. In each of the last 20 years, the payments would be reduced by 5 percent. This schedule is drawn directly from the provisions of the act that created Grand Teton National Park in Wyoming, but it is much more liberal than other such agreements. This is one for the Budget Bureau to chew on.

The Hatfield bill would require administration of the National Sheashore to conform to rulings of the Oregon Water Resources Board and Oregon laws on water use and fish and game management. Officials at both State and Federal levels are inclined to be sensitive about overlapping authority in such areas.

The Hatfield bill would require the consent of the agency concerned for the transfer to the National Seashore of any Federal or State lands. This points to a natural area of compromise. But there appears to be no good reason for the omission of provisions such as those included in the Neuberger bill to permit the Federal Government to agree on exchanges of property with owners in the area. Such provisions would provide a solution for timber and tree-farm owners.

A major objection to the earlier legislation would be removed by the adoption of the idea that the area's limits be specified by legislation rather than by administrative direction. Uncertainty over the exact boundary lines is a basic source of opposition on the coast. It is not at all certain that either Congress or the national administration would look kindly on the draft's provision that both the Governor and the Legislature of Oregon would have veto power over any subsequent extension of the boundaries. But it is not unreasonable to hold that State authorities should have some word in such a matter, say, as the subsequent inclusion of Sea Lion Caves, which the State is now considering for possible acquisition.

It is no more than fair that the Federal Government should, as provided in the Hatfield bill, bear the costs of relocation of U.S. Highway 101 if that should be made necessary to developing the National Seashore.

As for a small point, the name suggested in the draft bill—Oregon Coast National Recreation Area—is more descriptive than the earlier Oregon Dunes National Seashore Area. It has become apparent that National Park Service authorities are interested more in the fresh water lakes than in the dunes as a resource for recreation.

Unfortunately, in election year, the process of legislative compromise—even on the subject of recreation—cannot escape undertones of partisan politics. Thus it may be that a dispassionate consideration of the major differences will not be possible until the next session of Congress, although this should not be necessary if public, rather than political, considerations get first call.

Baring Reveals 1958 Highway Spending Binge

EXTENSION OF REMARKS

OF

HON. WALTER S. BARING

OF NEVADA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 26, 1960

Mr. BARING. Mr. Speaker, under leave to extend my remarks in the RECORD, I include a copy of my speech that was recently broadcast in the Reno, Nev., area relating to the 1958 highway spending binge. The speech follows:

BARING REVEALS 1958 HIGHWAY SPENDING BINGE

Friends and citizens of Reno, I have been invited to address you on a subject of vital interest to not only you who are concerned with the routing of the Interstate Highway through or around your city, but to all of the people of this country who have been taxed to support the most gigantic program ever undertaken by our State and Federal Governments or, for that matter, by the governments of any country in the world.

I refer, of course, to the construction of the Interstate Highway System under the Federal-Aid Highway Act of 1956, implemented by the Federal-Aid Highway Act of 1958. The integrity of our Federal Government has already been impaired by reckless highway spending. Back in 1954 it was estimated the Interstate System basically would cost $23 billion. This estimate was revised to $27.6 billion in 1955. Now the program has been revised and the estimate raised to $39.9 billion to complete 40,000 miles in the System.

Several months ago a special committee of the House of Representatives was formed and authorized to investigate the Nation's highway program. The committee hired Walter May, former FBI agent, as its top counsel. It also hired Carmine Bellino, John Konstanty and Sherman Willse. You may recall these names. They were the investigators who produced sensational evidence before the Senate Rackets Committee. The committee was appointed by House Public Works Chairman CHARLES A. BUCKLEY, Democrat, of New York, in the wake of bitter House dissension over passage of the one-cent-a-gallon increase in the gasoline tax. I might say here that the President has announced he will demand an additional one-cent-a-gallon hike in gasoline tax at this session of Congress.

During 1958, in the name of recession, Federal spenders abandoned the highway pay-as-we-go policy and gorged themselves on authorizations and allocations, knowing full well they were exceeding the ability of the trust fund to meet the bills. In a plea to the Secretary of Commerce, under a provision of the Highway Act which requires that the Secretary make a new estimate of the Federal highway program situation in all its aspects and report its findings and recommendations to the Congress immediately after it convened in January of 1961, Senator BYRD described our present situation as the morning after the 1959 binge. He said that: "No one involved with the suspension of the highway pay-as-we-go policy or the exploitation of the suspension can escape blame for what was done * * *. Our great highway programs were never before precipitated into such an inexcusable mess. The trust fund was broke and the integrity of the Federal Government was impaired. State highway programs all over the country were seriously disrupted and threatened with chaos." Senator BYRD is Chairman of the Senate Finance Committee and he wrote Secretary Mueller in his official capacity.

Those, ladies and gentlemen, were his exact words, but he said more. He said: "It would be unfortunate if some States, seeking more Federal dollars for less State money, yielded to the temptation to divert their funds from 50–50 ABC roads to 90–10 interstate projects. Do you remember when the Bureau of Public Roads rejected the plan submitted by Huston Mills, as then head of the State highway department, because it could not support the department's request for 90–10 Federal assistance to build railway underpasses? Do you remember Mr. Mill's public statement that followed? It was to the effect that there was more than one way to skin a cat and that these underpasses would be built with funds diverted from the primary and secondary road systems. Let me again read the Senator's quotation, "It would be unfortunate if some States, seeking more Federal dollars for less State money, yielded to the temptation to divert their funds from 50–50 ABC roads to 90–10 interstate projects."

The Senator reminded Secretary Mueller that rights-of-way acquisition costs are proving to be a tremendous item, running to billions of dollars, in the interstate program. The temptation to grab land, hike prices, and profiteer is inherent in such a multibillion-dollar, multiyear, 90–10 program. And there is the possibility of collusion and fraud, he said.

There is a growing feeling of concern throughout the Nation because of the reckless spending of billions of dollars of taxpayers' money. Members of Congress share this concern and as a Member of Congress I, too, am very much concerned. No one person is responsible for the curtailment of highway construction in Nevada. No one person is responsible for the curtailment of highway construction in every State in the United States. The slowdown came possibly as the result of trying to anticipate requirements too far in advance and the building of whole systems too fast on borrowed money. The barrel was empty, and in order to meet the crisis Congress had to enact legislation to temporarily divert funds from our general revenue to the highway trust fund and to temporarily increase our gasoline tax.

The program will continue and Nevada will receive its fair share of Federal money to complete its segment of the Interstate System. There has never been a time that highway construction could not have moved forward in Nevada, linking urban areas over undisputed sections. There is no legitimate reason why a disputed section of highway through the Reno area, less than 20 miles in length, should hold up construction of the

entire highway system across Nevada. I think it is quite significant that this section involved the acquisition of some $30 million worth of property, boosting the entire cost of the section to close to $50 million.

In its column "Heard Around City Hall," the New York World-Telegram and Sun said: "Robert Moses' $2 billion block-busting highway program for New York City may become the prime target of a Federal investigation now being made into the Nation's huge Interstate Highway program. President Eisenhower himself said this week he was concerned over growing complaints that the nationwide program was shot through with waste and that too much money was being spent for highways within cities rather than for linking those cities."

Have I been wrong in charging reckless Federal spending? Let me read you from Secretary Mueller's reply to Senator BYRD. He says: "The events of the past year have taught many of us a great deal about highway problems, and have shown us the need for more thoughtful consideration of the fundamental background of highway policy. * * * During the past year, as you have observed, our man problem was to get out from under the chaos resulting from the Federal-aid Highway Act of 1958, an act which suspended provision for 'pay-as-you-go' financing and which raised authorizations for highway aid far beyond the revenue capacity of the highway trust fund." He went on to say: "We cannot afford to allow another such highway crisis. To avoid another such affair we must bend every effort to improve the direction of highway policy and to revamp the entire system of financial management.

As you know, I have been critical of the Bureau of Public Roads in their highhanded methods. I charged the Bureau with influence peddling in connection with the Verdi Route J selection. This charge was definitely supported by the Blatnik investigating committee. Now listen to what the Secretary had to say on the subject: "It cannot as in former years, be considered exclusively the affair of one committee in each House, or of one bureau in the executive branch. Highways and Federal highway expenditures touch the fiscal policy of the Nation in a major way, they touch the basic formulation of budgets and appropriations, and they affect our national transportation policy as well as our whole manner of national living. * * * In the administration, highway policy has claimed an increasing share of the attention of the Secretary of Commerce, the Director of the Bureau of the Budget, the Secretary of the Treasury, the White House staff, and the President himself."

Yes, ladies and gentlemen, the job was too big for the Bureau of Public Roads and it bogged down under its own weight. I am proud that I have been able to represent the expressed interests of some 85 percent of the people of Reno in their opposition to the Third Street routing. You, who stood firm in your opposition to such flagrant and unwarranted expenditure of millions of dollars for elaborate geometric highway design over your city, are to be congratulated. You and other people all over the United States are primarily responsible for bringing these matters to the attention of the Congress and even to the President. It is because of your efforts that the Secretary of Commerce now admits that highway policy cannot be formulated by a single bureau, but rather it is the concern of the entire Department as well as the Bureau of the Budget, Treasury Department, and the White House.

The Department of Justice has informed me that highway violations have to its knowledge occurred in Arkansas, Georgia, Illinois, Missouri, Tennessee, and Texas. Criminal prosecutions are pending in these States which involve allegations of fraud and conspiracy. Senator BYRD pointed out to the Secretary of Commerce that: "Witnesses took the fifth amendment more than 200 times in Senate hearings on landgrabbing on only a few projects in one State."

I fervently hope that the special committee of the Committee on Public Works will make a complete and thorough investigation of the entire highway program which will result in the fulfillment of a sensible Interstate Highway System moving traffic between urban areas as intended.

I hope there will be an investigation of the Bureau of Public Roads from stem to stern, and that controls will be placed on that Bureau to limit any recurrence of the 1958 fiasco.

I am hopeful that the Bureau's 1958 approvals of elaborate geometric interchange designs and expensive superstructure planning will be reviewed and that within the overall efficiency program Third Street selection of the Interstate System in the Reno area will be killed forevermore.

Recognition for the Italian-American War Veterans of the United States

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, January 26, 1960

Mr. KEATING. Mr. President, on March 25 of last year I joined with my distinguished colleague from Rhode Island [Mr. PASTORE] in sponsoring S. 1531, to provide that the Veterans' Administration recognize representatives of the Italian-American War Veterans of the United States to present their cases before the VA. This measure would give a congressional stamp of approval to this outstanding organization and would provide its agents the opportunity to appear before VA rating boards in behalf of its members on various matters.

I am extremely hopeful action will be forthcoming in this session on this measure, which is presently pending before the Senate Finance Committee. The great interest of the Italian-American War Veterans in this bill is reflected in the resolution adopted at their 24th annual national convention, which was held in Fall River, Mass., September 4–7, 1959. I ask unanimous consent that the resolution adopted by the convention be printed in the Appendix of the RECORD.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

RESOLUTION SUBMITTED BY DEPARTMENT OF RHODE ISLAND

Whereas during the past 10 years the Italian American War Veterans, Inc. of the United States have repeatedly sought national recognition by the Congress in order to permit its representatives to appear before VA rating boards in behalf of its aggrieved members, and for other purposes; and

Whereas failure to grant such recognition has proven to be a formidable deterrent to our growing and dynamic veterans organization; and

Whereas Senate bill 1531, cosponsored by U.S. Senator JOHN O. PASTORE, of Rhode Island, and U.S. Senator KENNETH B. KEATING, of New York, has been introduced in the 86th Congress and will, if enacted, confer long-sought national recognition upon the Italian American War Veterans of the United States: Now, therefore, be it

Resolved, That the Italian American War Veterans at their national convention held in Fall River, Mass., September 4–7, 1959, do urge the Congress to enact Senate bill 1531 into law, be it further

Resolved, That copies of this resolution be sent to the majority and minority leaders in the House and Senate; to Senators JOHN O. PASTORE and KENNETH B. KEATING; and to the national adjutant for incorporation in the 1959 ITAM Vets National Convention.

General MacArthur Observes 80th Birthday

EXTENSION OF REMARKS
OF
HON. DON L. SHORT
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. SHORT. Mr. Speaker, today marks the 80th birthday of General of the Army Douglas MacArthur. There will be greetings from all over the world as the general observes the occasion in New York City.

General MacArthur is possibly the most decorated soldier in history. He has been described as a hero of St. Mihiel, Bataan, Corregidor, New Guinea, Manila, and Inchon.

As we pause to observe the birthday of this great American, we might well contemplate his contribution to another event—the signing of a 10-year mutual cooperation and security treaty by President Eisenhower and Japanese Prime Minister Kishi. The treaty removed remaining traces of Japan's former occupation status, and in effect will bring that country into alliance with the United States as an equal partner.

The treaty signed last week was in effect another tribute to the general. The conduct of the occupation by General MacArthur, during which time he completely revised and reoriented a former Japanese warlord government toward democracy, and the high principles to which he adhered during the transition, are marked by the huge measure of good will the United States enjoys in that country today. General MacArthur did not enter Tokyo as a vengeful conquerer, but as a partner in rebuilding a country battered both materially and spiritually by war.

History may someday record that the manner in which General MacArthur conducted the occupation of Japan was his greatest contribution to the country he has served so well.

It seems particularly appropriate to call attention to these facts about this outstanding American today on his 80th birthday observance.

President's Committee on Government Contracts—A Career Break for Non-Whites

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Tuesday, January 26, 1960

Mr. CASE of New Jersey. Mr. President, the sixth report to President Eisenhower from the Committee on Government Contracts, which was made public by the White House on December ber 27, is important to all of us who are determined that there must be no discrimination in the employment of workers who perform on Government contract projects.

The significance of this committee report has been widely recognized during the last 2 weeks by the Nation's newspapers and periodicals. An example of this attention is found in a full page article in the January 2, 1960, issue of the national magazine, Business Week, which I ask unanimous consent to have printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

A CAREER BREAK FOR NON-WHITES—EXPECTED SHORTAGE OF SKILLED LABOR IN THE 1960'S IN PUTTING MORE PRESSURE ON THE GOVERNMENT AND ON PRIVATE INDUSTRY TO INTEGRATE MINORITY GROUPS INTO WHITE-COLLAR JOBS

J. W. Adams, a production worker at Lockheed Aircraft's Georgia division at Marietta, believed that he was being discriminated against because of his color. He, therefore, filed a complaint with the President's Committee on Government Contracts.

The company, which has a long record of employing members of minority groups, was mildly astonished. It immediately transferred Adams to the position of illustrator in a formerly all-white department. What surprised the company, perhaps, was the fact that Adams took a 22-cent-an-hour pay cut to get the new job.

The career change made by the 32-year-old Negro may become more typical over the next decade as employers scramble for trained people among workers falling in what sociologists call the prime working group—those between the ages 25 and 44. Here's where most shortages will occur in the 1960's.

New strategy: Labor force statistics also show that job opportunities in manufacturing are dwindling as openings increase in service, finance, and Government.

The Committee on Government Contracts, which polices Government contracts to insure equal employment opportunities, has decided to gamble on these trends within the labor force. This week it announced a new strategy for the 1960's, emphasizing the integration of minority groups into white-collar positions. CGC is doing this despite the fact that most Government contractors are in manufacturing.

Preview: Here's what the committee believes is in store for employers over the next decade:

Companies increasingly will have to tap minority groups for resources hitherto chocked off because of discrimination. Many minority group members are working at jobs that do not fully utilize their skills. The committee's annual report to the President comments that employers who look only for male white workers under 45 will be in trouble in the next decade. These workers will not be available in the numbers required.

Employers will be faced with unusual recruitment and training problems. The American economy, the committee reports, will need an increase of nearly 50 percent in professional and technical occupations, 80 percent in proprietors and managers, 25 percent in the clerical and sales force, 23 percent in numbers of skilled craftsmen, and 25 percent more service workers. The increase projected for semiskilled workers is only 15 percent and no increase is foreseen for laborers.

To supply the demand, employers will have to depend upon the very young as well as older workers, says CGC. The larger part of a projected expansion of 13.5 million workers over the 1960's will consist of workers under 24 and workers over 45. Of this group, a growing number will be nonwhite. Census estimates on the composition of our labor force in 1968 show a very high proportion of Negro men under 20 and over 45. Negro women of all ages have a higher participation rate in the labor force than white women have.

The nonwhites are likely to have less training, especially in the needed skills. Recent Census Bureau data show 80 percent of white children between 14 and 18 are attending high school while only 65 percent of Negro children in the same age group are enrolled.

Employers must act to break through the barriers of custom by initial placements in positions traditionally denied to Negroes. White-collar jobs, the committee notes, have never been readily available to nonwhites. For example, in 1959 only 29,000 Negro women were in sales positions, as compared with more than 1.5 million white women. Fewer than 200,000 Negro women held clerical jobs, in contrast to nearly 6 million white women.

Change comes slow: To change this picture means a lot of slow, hard work. A serious shortage of certain skills, of course, might speed up the process—if Negroes with the right sort of training are available.

CGC, established in 1953 by Executive order of President Eisenhower, is charged with the responsibility for monitoring the standard clause in all Government contracts forbidding discrimination in employment on Government projects on the basis of race, color, religion, or national origin.

Its progress is difficult to measure. Some critics have charged that the committee did little until recently to enforce the no-discrimination clause in Government contracts. In 1957, the committee instituted a compliance survey program. It was both a way to check up on discriminatory practices and a means for applying pressure for a change. For example, the 1958 survey turned up 33 plants that employed no Negroes. These were subjected to special surveys and required to make monthly progress reports on their hiring and upgrading practices.

In 1958, the committee made its first study of the compliance survey program. The picture it painted was dismal, indeed. Few Negroes were found in white-collar jobs, in skilled work classifications, or in apprenticeship or on-the-job training programs. The committee also found that employment practices in plants of multiplant corporations were frequently at variance with the nondiscriminatory policy set down by the home office.

Breakthrough: This year the compliance surveys began to pay off. The committee reports a fair measure of progress. Ironically, the recession provided an off-beat confirmation of the committee's work: In 115 major plants surveyed in 1958 and 1959, total employment dropped 4 percent. However, the decrease of 1.1 percent in the Negro work force was proportionately less than in the total work force. Also, Negro white-collar employment was approximately one-third higher than in 1958.

Other breakthroughs recorded in the committee's report to the President include: Discriminatory items were eliminated from preemployment applications; discriminatory specifications were cleaned out of job orders; written statements of a nondiscriminatory employment policy were included in company regulation, handbooks, house organs, and collective bargaining agreements; recruitment sources were broadened to include minority group schools and employment agencies servicing minorities.

More Opportunities: CGC feels that its emphasis on "direct negotiations" with major contractors in order to get employers to initiate hiring of Negroes in jobs traditionally denied to nonwhites is successful. However, much more remains to be done.

Negroes still find it difficult to enroll in apprenticeship and on-the-job training programs where exclusionist practices frequently prevail. CGC hopes more young Negroes will seek, in continued schooling, skills they will need.

In the future, the committee hopes to supplement these efforts with more pressure on educators, vocational guidance counselors, and employers to see that Negro youth gets wider opportunities for training to fit them for the jobs opening up in the 1960's.

Citizen George Clayton Appointed to Fifth Term as a Member of the Jefferson County Jury Commission

EXTENSION OF REMARKS
OF
HON. GEORGE HUDDLESTON, JR.
OF ALABAMA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. HUDDLESTON. Mr. Speaker, in seeking to inspire citizenship, we often cite records of famous statesmen and popular heroes. Just as inspiring to me and to many of us are stories of little recognized public citizens who day to day make valuable contributions toward the building up of their own communities.

Such a story is that of my constituent, Mr. George W. Clayton, of Birmingham, who was recently appointed to a fifth consecutive 3-year term as a member of the Jefferson County Jury Commission.

The enclosed editorial appearing in the Birmingham News, January 20, 1960, lists the very excellent reasons for his being appointed to this position by the last four Governors of the State of Alabama:

GEORGE CLAYTON'S VALUED EFFORT

An accurate gage to a community's welfare and progress is more often found in the civic contributions of its interested citizens than through professional services, citizens such as George W. Clayton, recently appointed to a fifth consecutive 3-year term as a member of the Jefferson County Jury Commission.

Efforts of Mr. Clayton have made the Jefferson County jury system a model for other States and counties, with continuous screening to keep off the rolls the names of

those convicted for crimes. He was also instrumental in juror pay being raised to $6 a day.

His contributions to the civic welfare of the city have been memorialized with North Birmingham's George Clayton Park, but additional appreciation through appointment to a fifth term to the Jury Commission is fitting. Governor Patterson through his action endorsed the opinion held by every Alabama Governor since Chauncey Sparks. Jefferson County concurs wholeheartedly and only wishes it had more citizens like George W. Clayton.

Alcalde Editorial Asks, Is Texas Losing the Battle for Brains?

EXTENSION OF REMARKS
OF
HON. RALPH W. YARBOROUGH
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Tuesday, January 26, 1960

Mr. YARBOROUGH. Mr. President, it has long been my belief that one of the greatest wastes of natural resources in our Nation has been our failure to more fully develop the brainpower of our young people. An extremely provocative and powerful editorial on this question of education, with emphasis on my home State of Texas, has been written by Jack Maguire, executive director, for the Alcalde, the University of Texas alumni magazine.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD, the editorial entitled "Is Texas Losing the Battle for Brains?" from the January 1960, issue of the Alcalde.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

IS TEXAS LOSING THE BATTLE FOR BRAINS?

(By Jack McGuire)

Trained mind power is being recognized increasingly as not only the Nation's greatest asset, but also as the fuel for its well-being, growth and security.

There is some question, however, as to whether Texas is yet aware of the critical importance of educated men and women to Texas industry, to Texas business, to Texas people.

Brainpower mattered to Texas' past economic boom. It will matter even more in the years ahead. No industrial machine as dynamic and as demanding as Texas' is can continue to run at full speed for many years without a constant supply of new and great ideas to feed it. And there is evidence that the Texas economy now is beginning to slow down largely because of the State's miserliness in providing for the colleges and universities that produce the brainpower new industry must have.

Texas has many colleges—several big, some rich, none really great by national academic standards. Texas also has, as one of its prime natural resources, more than 1 out of 20 of all the college students in the United States. Only California and New York have bigger percentages. However, Texas still hasn't recognized a fact which both California and New York have proved. That higher education brings in far more dollars in wages and salaries than it costs in taxes.

How?

Colleges and universities—really outstanding ones—attract good faculties and good students. The stimulating research opportunities they provide help retain within a State the brains required for economic growth and for the enrichment of the cultural life of the State. They draw laboratories and laboratories draw industry. And industry means more jobs.

This was demonstrated by San Diego, Calif., a few years ago when the city gave free land to General Dynamics Corp. to build an atomic age laboratory. The industry, however, wanted an assured source of brainpower, so the city and the company together went to work to get a full-fledged graduate school of the University of California located nearby.

As a result of this kind of cooperation between business and higher education, 16,000 new jobs have been created at San Diego in the Convair Division of General Dynamics. Other industry, attracted by the research opportunities and the wealth of highly trained people available, is locating in San Diego. During the next decade, San Diego expects to add 100,000 to its population and create 30,000 new jobs—all because it can offer an outstanding, adequately supported institution of higher learning.

And what is happening in Texas?

"The slowdown in Texas (industrial) expansion, now rating articles in national publications like Business Week, is tied to its treatment of education," says the November 16, 1959, issue of the Texas Businessman. "Today's new growth industries—electronics, missiles, etc.—pass by Texas, chiefly because brains are scarce. There is no big reservoir of talent. Cause: A general niggardliness toward support of higher education."

"Every budget for 10 years has been balanced in Texas at the expense of higher education," the Businessman article goes on. "This is Texas' cumulative deficit. In the area of the mind, Texas' niggardliness is showing up, hurting."

The need for growth in higher education which must accompany population and economic growth cannot be met by closing the door to increasing numbers of students. Neither can it be met by altering the principles nor lessening the quality of the institutions most eager to meet the challenge—those institutions that are supported by taxes.

The problem can be met only by massive support of the citizens, and the determination that quality will be maintained as numbers are increased. Such massive support must come largely from increased taxes—and Texans soon must decide whether or not they are willing to pay such an increase.

"During the next century," Dr. James Bryant Conant said when he was president of Harvard, "university education in this Republic will be largely in the hands of the tax-supported institutions. As they fare, so fares the cultural and intellectual life of the American people."

How Texas fares in the future depends on brains. And whether we begin to win, or continue to lose, the battle of brains depends on how much we're willing to invest now in the institutions that are our primary source of brainpower: the tax-supported colleges and universities.

Texas is lagging today in the battle for brains. It need not. And it won't, once Texas realizes that so long as it tries to buy first-class education at cut-rate prices, a second-class economy is the inevitable result.

Aid for Senior Citizens

EXTENSION OF REMARKS
OF
HON. ROBERT E. COOK
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. COOK. Mr. Speaker, under leave to extend my remarks in the RECORD, I should like to insert a letter from Mr. Theodore E. Martins, a resident of the 11th Ohio District. Mr. Martins is typical of many of our senior citizens needing assistance which would be available under revision of our present social security laws. His is an eloquent plea for help which in all consciousness must be heard and heeded.

The letter follows:

CHARDON, OHIO, *January 14, 1960.*

ROBERT E. COOK,
Congress, United States.

DEAR SIR: I would like to have had the opportunity to have talked with you on various topics which are of great importance to all citizens of our grand country.

I am retired and have only my security check to cover all expenses and living. In the first place, I am unable to do any work because of a very bad case of progressive osteoarthritis in my left side, so have no income except my small security check. During the 10 years since I retired, we got a 7-percent increase, while cost of living has gone up all of 50 percent. I have had to give up treatment for my arthritis for lack of funds, and am having to get along on two skimpy meals a day.

My case is typical of hundreds of others. In 1939, my first wife became sick and for 6 years had one operation after another, hospital and doctor bills and nurses almost all the time and finally passed away in 1947.

When she was taken sick we had to dispose of our business and had over $16,000, which had planned for our retirement. After she was finally laid to rest, I had spent $8,000. Then after being single 3 years, I married again in 1950. Everything went along just fine for 2 years, then she had a very bad heart attack and was hospitalized for months. Shortly after she got over that she had to have an operation for goiter which almost cost her her life. Then in 1956, she was operated for cataracts on both eyes and was hospitalized for months. She just got over that and had her sight when in January 1957, she again had a heart attack, which was fatal.

I found myself left with just $575 of the original $16,000 when she was put away in her final resting place, and here I am all alone with a small cottage and a mortgage of $2,500, paying $40 a month, and I have taxes and insurance on top of that, so you can readily see how hard it is for me, as I am not able to do any work. I belong to the Townsend Plan Club, and find about 75 percent of the 500 members are similar to my case, not because of wrong living or negligence but victims of circumstances beyond their control.

I think it is a degrading thing for our rich country to treat the aged people the way our Government is doing. It is about time something is done to help our own and not so much in foreign countries.

We, in the various clubs, are going to try to determine who in Congress are working for and voting for some relief for our aged

people and vote for them regardless of party politics.

Hoping to hear from you on this matter that I may report to my and other clubs, I am very sincerely,

Yours,

THEODORE E. MARTINS.

The Government Corporation in the United States

EXTENSION OF REMARKS
OF
HON. E. L. BARTLETT
OF ALASKA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 26, 1960

Mr. BARTLETT. Mr. President, the summer 1959 issue of Public Administration contained an article entitled "The Government Corporation in the United States," which was written by Harold Seidman, who is Assistant Chief of the Office of Management and Organization, U.S. Bureau of the Budget. The article has found a wide reading audience, and because it is the statement of an expert on a subject of interest to every Member of Congress I ask unanimous consent that it be included with my remarks in the Appendix of the RECORD.

Notwithstanding the fact that the Government Printing Office advises me that the cost will be approximately $263.25, I ask unanimous consent that the article may be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE GOVERNMENT CORPORATION IN THE UNITED STATES

(By Harold Seidman)

(Mr. Seidman is Assistant Chief, Office of Management and Organization, U.S. Bureau of the Budget. His authoritative general survey of the Public Corporation in the United States illustrates some of the difficulties of translating American terminology and practice into British, particularly when shades of meaning are so important as they are in the case of the precise status of a public corporation. In general the "United States," when not used geographically, can, in this context, roughly be translated as the Crown, and "agency" and "bureau" as Ministry and central department. It should also be remembered that "incorporation" and "corporation" usually refer to the limited liability company in the United States.)

A true and complete understanding of the American constitutional system cannot be obtained from a literal reading of the 7 articles and 22 amendments which constitute the written Constitution. Understanding of the "living constitution" requires thorough knowledge of both the written document itself and the body of judicial interpretations, customs, and traditions composing the unwritten constitution. Similarly a realistic appraisal of the U.S. agency known as a Government corporation demands something more than an analysis of pertinent statutory provisions. Indeed, there are no general Federal laws defining the nature, authorities, and immunities of Government corporations. The failure to recognize that the U.S. Government corporation is in large measure a product of precedent, as reflected in the provisions of charters enacted by the Congress, judicial interpretations, traditions, public, agency, and congressional attitudes has led to widespread misunderstandings both in the United States and abroad.

The Government corporation is now the most common form of organization for U.S.-owned public enterprises. The corporate device gained full respectability when President Truman laid down the criteria for the use of Government corporations in his 1948 budget message.[1] President Truman stated:

"Experience indicates that the corporate form of organization is peculiarly adapted to the administration of governmental programs which are predominantly of a commercial character—those which are revenue producing, are at least potentially self-sustaining, and involve a large number of business-type transactions with the public. In their business operations such programs require greater flexibility than the customary type of appropriation budget ordinarily permits. As a rule the usefulness of a corporation lies in its ability to deal with the public in the manner employed by private enterprise for similar work."

There are at present 13 active wholly owned Government corporations, namely, the Commodity Credit Corporation, Federal Crop Insurance Corporation, Federal Savings and Loan Insurance Corporation, Virgin Islands Corporation, Federal Prison Industries Corporation, Export-Import Bank, Public Housing Administration, Federal Housing Administration,[2] Panama Canal Company, Tennessee Valley Authority, St. Lawrence Seaway Development Corporation, Development Loan Fund, and Federal Deposit Insurance Corporation.[3] There are, in addition, 26 mixed-ownership Government corporations, namely, the Federal National Mortgage Association,[4] the Central Bank for Cooperatives, 12 Banks for Cooperatives and 12 Federal Intermediate Credit Banks. Government-owned capital in the Federal Land Banks and the Federal Home Loan Banks has been retired and these have become privately owned institutions subject to Government regulation and supervision.

Acceptance of the Government corporation as an administrative device has had little, if any, ideological implications in the United States. Public enterprises are utilized primarily to encourage, support, and strengthen private entrepreneurs, not to replace them. Government corporations provide assistance to agriculture, commerce, and industry through loans and insurance, operate international utilities such as the Panama Canal and St. Lawrence Seaway, and construct and administer facilities required for the protection and exploitation of certain natural resources. Except in wartime, the Government has rarely engaged in large-scale manufacturing, mining, or other industrial enterprises.

HISTORICAL DEVELOPMENT

The U.S. Government corporation did not emerge full blown in its present form, but evolved over many years from efforts to devise a Government agency which would be fully accountable to the President and the Congress, but possess sufficient operating and financial flexibility to conduct efficiently new types of Government business enterprises first undertaken in World War I and since greatly expanded. All of these enterprises had certain distinguishing characteristics which clearly set them apart from the general run of Government programs: (1) the Government was dealing with the public as a businessman rather than a sovereign; (2) users, rather than the general taxpayer, were to pay for the cost of goods and services; (3) expenditures necessarily fluctuated with consumer demand and could not be predicted accurately or realistically kept within annual limitations; (4) additional expenditures to meet increased demand did not in the long run increase the net outlay from the Treasury; and (5) operations were being conducted within areas in which there were well-established commercial trade practices. Experience demonstrated that enterprises with such characteristics could not be managed effectively under an administrative and financial system designed to control totally different types of governmental activities.

The first solution was to charter Government corporations under the general incorporation (company) laws of the States and the District of Columbia which prescribed forms of organization and financing not particularly well adapted to a public body. While this device provided necessary flexibility, it created new and equally difficult problems. Considerable doubt existed concerning the propriety of subjecting a Federal instrumentality to the provisions of State law. Furthermore, most existing controls to assure public accountability were abandoned without providing satisfactory substitutes. Sporadic attempts were made by the Congress and the Comptroller General to apply traditional budget and audit controls to Government corporations, but the results were such as to discourage further efforts along these lines.

The Government Corporation Control Act of 1945 represents the first official recognition by the Congress both of the need for a new type of Government institution tailored to the requirements of business programs and for a new type of controls over such institutions which would assure accountability without impairing essential flexibility. The purpose of the act was not, as is apparently widely believed, to convert Government corporations into Government bureaus. Indeed, when it enacted the law, the Congress expressly recognized that "the corporate form loses much of its peculiar value without reasonable autonomy and flexibility in its day-to-day decisions and operations. The budget and financial controls imposed upon the Government corporations should not deprive them of this freedom and flexibility in carrying out authorized programs."[5]

Despite the dire predictions of some commentators that the Control Act would eliminate "the features which have made Government corporations useful instruments for enterprise purposes,"[6] the Government corporation as an institution has been strengthened rather than weakened. Corporations are no longer regarded as more or less the illegitimate offspring of wars and emergencies, but have been admitted into the family of public institutions. Since the enactment of the Control Act, the Commodity Credit Corporation, Export-Import Bank, Federal National Mortgage Association, and the Virgin Islands Corporation have been reincorporated under Federal charters and the following new corporations created: Panama Canal Company (1950), Federal Facilities Corporation (1954), St. Lawrence Seaway Development Corp. (1954), and the Development Loan Fund (1958). The Development Loan Fund was incorporated at the express direction of the Congress, which held the view that a Government corporation would provide "the most effective arrangements for administering a long-range development loan program." Proposals to incorporate the Alaska Railroad and the Washington airports are now under consideration.

DIFFERENCES BETWEEN AGENCIES AND CORPORATIONS

While admittedly the Congress could confer the powers normally granted to a Government corporation, except separate legal

Footnotes at end of speech.

status, upon a noncorporate agency, it has been rarely willing to do so. To call an agency endowed with all the powers of a corporation by some other title would serve no useful purpose and result only in confusion. On the other hand, the identification as Government corporations of a separate class of agencies with certain common characteristics distinguishing them from traditional agencies has served to (1) promote public understanding, particularly on the part of businessmen familiar with the corporate form of organization; (2) facilitate the development and application of controls specially adapted to business-type enterprises; (3) make possible the application of uniform standards with respect to payment of interest, reimbursement of costs, etc.; (4) eliminate the necessity for enumerating specific exemptions to general statutes or departmental regulations, which should not be made applicable to corporations as a class; and (5) combat the normal bureaucratic tendency to force all agencies into a common mold, regardless of their special needs and requirements.

The distinguishing attributes of a U.S. Government corporation have been in nowise significantly altered or impaired by the Government Corporation Control Act. These may be briefly summarized as follows:

1. Legal status: As a body corporate a Government corporation has a separate legal personality distinct from that of the United States. A corporation, therefore, does not enjoy the traditional immunity of the United States from being sued without its consent and can sue and be sued in its own name. Property can be acquired in the name of the corporation without automatically involving the complex body of statutes applicable to the acquisition and disposal of U.S. property. A corporation can also be authorized to borrow money in its own name without directly pledging the credit of the United States.

2. Authority to make expenditures: A corporation is usually given power "to determine the character of and the necessity for its expenditures, and the manner in which they shall be incurred, allowed, and paid." A corporation is thus exempted from most of the regulatory and prohibitory statutes applicable to the expenditure of public funds, except those specifically applicable to Government corporations. Although subject to audit their expenditures are not subject to the disallowance power of the General Accounting Office.

Corporations regard the exemption from regulatory and prohibitory statutes and GAO disallowance authority as one of the most important sources of corporate flexibility. Without such an exemption corporate transactions could always be overturned by the GAO. On the other hand, the absence of disallowance authority is believed to account in large measure for continued GAO opposition to Government corporations.

3. Financing: A very great part of the difference between a corporation and an agency arises from the method of financing its operations. Except for those which have revolving funds, agencies are generally financed by direct annual appropriations from Congress and, in the absence of specific statutory authority, unobligated appropriations may not be carried over from one fiscal year to another. Any revenues derived from traditional agency operations must ordinarily be turned over to the Treasury.

A corporation's funds are generally derived from such sources as capital appropriations, which are not subject to fiscal year limitations, revenues, and borrowings from the Treasury or public. Unguaranteed obligations issued to the public are not subject to the statutory limit on the public debt. Except for the Public Housing Administration (contributions to local housing authorities), Federal Crop Insurance Corporation (administrative expenses), and TVA and Virgin Islands Corporation (nonrevenue programs), no corporation receives annual appropriations.

The principle is now generally accepted by the Congress and the public that a Government corporation should, so far as practicable, operate on a self-sustaining basis and recover through user charges all costs of its operations, including interest, depreciation, and the cost of services furnished by other Government agencies, even though there are notable exceptions such as the Commodity Credit Corp. There has been considerable resistance, however, to applying this principle to noncorporate agencies, including those financed from revolving funds, on the grounds that these are no different from traditional Government services properly chargeable, in whole or in part, to the general taxpayer. Opposition to the incorporation of such agencies as the Washington National Airport and the Rural Electrification Administration represents, in fact, opposition to making these agencies self-supporting.

4. Budget: Mixed ownership Government corporations, except the Federal National Mortgage Association, are not subject to any form of budget control. Wholly owned Government corporations are, however, required by law to present business-type budgets which the Government Corporation Control Act provides shall be plans of operations with due allowance for flexibility. A business-type budget includes the usual corporate financial statements together with estimates of operations by major types of activities, administrative expenses, borrowings, and any capital funds which are to be returned to the Treasury. A corporation seeks congressional approval of its budget program as a whole, unlike an agency which requests specific appropriations. Congress is authorized to limit the use of corporate funds for any purpose, but it has rarely chosen to do so, except for administrative expenses. In essence, the business-type budget provides for a qualitative rather than a quantitative review of proposed corporate expenditures.

Under the provisions of the Budget and Accounting Procedures Act of 1950, a noncorporate agency may be required to include business-type financial statements, comparable to those of Government corporations, in its budget presentation. The inclusion of business-type financial statements in a budget does not, however, require the Congress to review and approve the budget in the same way as those submitted under the Corporation Control Act. When an agency is financed from annual appropriations, the business-type statements merely supplement its budget request which is treated in the same way as any other appropriation. The gross expenditures of normal agencies, even though they may have substantial receipts, are classified as budget expenditures. Only the net expenditures of wholly owned corporations and revolving funds are classified as budget expenditures, while those of mixed ownership corporations and trust funds are excluded altogether.

5. Audit and accounts: The Comptroller General is required to make an annual audit of all Government corporations "in accordance with principles and procedures applicable to commercial corporate transactions." A commercial-type audit does not contemplate a review of the legality of each item of expenditure, as does the usual Government audit. The Comptroller General's authority is limited to reporting his findings and recommendations to the Congress for such action as it may deem appropriate.

The Comptroller General has conceived of his audit responsibilities in very broad terms. According to the Comptroller General, "the purpose and scope of the activities engaged in by the agency, the manner in which they are to be conducted, and the extent of the agency's authority and responsibility"[7] all properly fall within the scope of an audit. No hesitation has been displayed in dealing with highly controversial policy issues. Audit reports on the Panama Canal Company, for example, have urged congressional action on such diverse matters as merger of the Panama Canal Company and Canal Zone Government; recovery of interest paid during construction; price policy; cost-recovery formula; and transfer of Canal Zone Postal Service to the Post Office Department.

Information furnished by the audit reports has been of great value not only to the Congress, but also to the President and the corporations concerned. But while the Congress, as well as the corporations, have given great weight to the Comptroller General's recommendations with reference to accounting and systems of internal financial control, they have been considerably less receptive to those recommendations primarily concerned with policy, organization, and management. As a result audit reports in recent years have tended to be much slimmer than the early reports and more modest in their recommendations. Thus the Audit Report on the Virgin Islands Corporation for 1958 contained 22 pages compared with 53 pages for the 1947 audit.

The Comptroller General may make a "comprehensive audit" of noncorporate Government enterprises. A comprehensive audit in many respects resembles a commercial audit, but it also includes a review of the legality of individual items of expenditure. The Comptroller General has the authority to prescribe the principles, standards, and related requirements of accounting systems for noncorporate agencies, but this authority does not extend to corporations.

6. Personnel: Employees of Government corporations are considered to be employees of the United States. Where there is a need for special flexibility in hiring and dismissing employees and establishing wage scales, however, Government corporations may be exempted from some or all of the laws applicable to Federal employees. The Panama Canal Company, Tennessee Valley Authority, Virgin Islands Corporation, banks for cooperatives, and Federal intermediate credit banks are all excluded, in whole or in part, from the applicability of the Classification Act and civil service laws. The personnel systems established by these corporations do not, however, differ significantly from those of other Government agencies.

7. Management: A board of directors was once considered an indispensable attribute of a U.S. Government corporation, due largely to the fact that State incorporation laws generally require the establishment of boards of directors elected by the stockholders. Boards of directors persist in many varieties and forms, but the trend is toward single administrators or single administrators and advisory boards, particularly when the corporation operates outside the areas of banking and finance. The Congress recommended that the Board of Directors of the Reconstruction Finance Corporation be replaced by a single administrator because the board arrangement had resulted in diffusion of responsibility. It was noted that existence of a five-man board of directors had made it possible for individual members to avoid, obscure, or dilute their responsibilities by passing the buck from one to another.[8] Much the same line of reasoning was used to support the vesting of management of the St. Lawrence Seaway Development Corporation in a sin-

Footnotes at end of speech.

gle administrator. Other corporations or quasi-corporations with single heads are the Public Housing Administration and Federal Housing Administration.

The Tennessee Valley Authority, Export-Import Bank, and Federal Deposit Insurance Corporation have full-time boards of directors. The Home Loan Bank Board also serves as the board of directors of the Federal Savings and Loan Insurance Corporation. The Federal Crop Insurance Corporation, Virgin Islands Corporation, Panama Canal Company, and Federal Prison Industries have part-time boards of directors composed of both public officials and private individuals. The Commodity Credit Corporation, Federal National Mortgage Association, and Development Loan Fund have inhouse boards made up exclusively of Federal officials. The banks for cooperatives and Federal intermediate credit banks, which are mixed-ownership corporations, are managed by part-time boards consisting of five directors elected by borrower associations and two directors appointed by the Government.

PUBLIC ACCOUNTABILITY

A. H. Hanson has noted that despite the significant differences from country to country in the legal provisions prescribing the relationships between ministers and public enterprises under their supervision, "the substance of the relations prevailing between ministers and enterprises is determined much more by convention than by law, and that there is a tendency for the convention in one country to be not strikingly dissimilar from that in another."[9] Mr. Hanson's observation is confirmed by American experience. Questions concerning the allowability of different types of parliamentary questions, and ministerial responsibility have, of course, no relevance under the U.S. constitutional system. But the basic issue is the same: How can organizational arrangements and supervisory relationships be established which will assure consistency in Government policy and public accountability without impairing the flexibility necessary for the effective conduct of a public enterprise?

The U.S. approach to the control of Government corporations has been guided by two basic principles: (1) controls should be general, not specific; (2) controls should be positive, not negative. U.S. Government corporations are subject to far fewer controls over specific actions than are public corporations in many other countries. Advance Presidential or ministerial approval is ordinarily required only when a specific action, such as the promulgation of toll rates for the Panama Canal or St. Lawrence Seaway, is likely to involve questions of national and foreign policy. The Treasury has authority to approve the public issue of securities by Government corporations, but it has never utilized this authority to interpose the Treasury's judgment on the need for financing. This authority has been employed solely to coordinate corporate borrowing with Treasury public debt operations so as to avoid costly competition. A requirement for advance Presidential or ministerial approval of such corporate functions as the fixing of rates and prices, appointments, training programs, annual reports, etc., is extremely rare. Controls are not concerned primarily with assuring compliance with applicable laws and regulations. The principal objective is to make certain that the Government and the corporations follow consistent policies and fully support each other in the accomplishment of their mutual endeavors.

RELATIONSHIPS WITH THE EXECUTIVE

Executive power is vested by the U.S. Constitution exclusively in the President. As Chief Executive, the President is responsible and accountable to the people for the conduct of the entire executive branch, including Government corporations. Consequently, limitations cannot properly be placed on the President's general authority to direct and supervise Government corporations.

Not since Mr. Arthur E. Morgan, the first Chairman of the Tennessee Valley Authority, has a director of a wholly owned corporation atempted to challenge the President's overriding authority. Mr. Morgan insisted that he was solely responsible to the Congress, not to the President, and refused to answer questions asked by President Franklin D. Roosevelt.[10] When President Roosevelt removed Mr. Morgan from office, his action was sustained by the courts. Mixed-ownership corporations, however, have from time to time asserted at least a degree of "independence" from both the President and the Congress, and, on occasion, have openly opposed Presidential policies.

Most important is the President's authority to appoint and remove the directors or administrators of Government corporations. Directors and administrators of wholly owned corporations are appointed either by the President or, in a few instances, by the head of the executive department charged with immediate supervisory responsibility. Control over appointments is calculated to assure general sympathy with and support of policy objectives established by the President.

Continuing Presidential supervision is provided mainly through the budget process and clearance of proposed legislation and legislative reports. In the course of the annual budget review, the President, and the Bureau of the Budget acting on his behalf, have an opportunity to scrutinize what corporations have done and what they plan to do and to make such policy decisions as may be appropriate. Each year the President's budget message to the Congress reflects major policy decisions concerning corporate programs. The 1960 budget message, for example, proposes significant changes in the method of financing the TVA and the Federal National Mortgage Association and modifications in the programs of the Federal Housing Administration and Commodity Credit Corporation.

All executive agencies, including corporations, are required to submit legislative proposals, proposed reports to the Congress and testimony on legislation to the Bureau of the Budget for advice as to its relationship to the program of the President. The legislative clearance process is a comparatively little known but extremely effective device for coordinating executive branch policies and exercising presidential supervision.

Direct White House intervention in the day-to-day operations of a Government corporation, while not entirely unknown, would be regarded as most unusual. The President meets infrequently even with the directors of such corporations as the TVA, Export-Import Bank, and Federal Deposit Insurance Corporation who report directly to him. Presidential directives are almost always in relation to matters which affect a broad national interest.

As a general rule, the President looks to the heads of executive departments and agencies for immediate direction and supervision of Government corporations. Corporations are generally made subject to supervision by the department head responsible for the functional area in which the corporation is operating. In the case of the Panama Canal Company and the St. Lawrence Seaway Development Corporation, the corporations are subject to the direction and supervision of the President, or the head of such agency as he may designate. The President retains the power to adjust supervisory arrangements in the light of changes in program emphasis and executive branch organization. When the St. Lawrence Seaway passed from the construction stage to operations, the President shifted supervisory responsibility from the Secretary of Defense to the person with major concern for transportation policy, the Secretary of Commerce. In the case of other corporations the supervisory official (minister) is designated by statute.

Designation as supervisor carries a dual responsibility. It imposes a duty not only to oversee corporate operations, but also to represent the corporation before the President and in the Cabinet and other high policy councils on issues which may directly affect the corporation's interests. So-called independent corporations have paid a high price for their independence by being deprived of an effective voice in the formulation of national policy.

There are significant differences in the relationship of department heads to corporations under their supervision and to the department's constituent bureaus. The special status of Government Corporations has been consistently recognized by exempting them in reorganization plans or other laws transferring the functions of subordinate bureaus to department heads. The supervisory minister cannot abolish a corporation or transfer any of its functions to other departmental constituents, as he can do in the case of most bureaus under his direction. A corporation is thus assured a greater degree of continuity within the limits on succession specified in its charter.

While the words "direction and supervision" can be defined in a legal sense, the substance of supervision defies precise analysis and definition. Department heads seldom supervise corporations by issuing written orders or directives. Informal advice may under some circumstances, however, be as persuasive as a written order backed by the authority of law. The degree of influence exercised by a supervisory minister varies considerably and depends in large measure on his own interests and the impact of corporate activities on other programs under his supervision. The limits of supervisory authority are dictated more by sound management principles than by law. The President has emphasized in delegating supervisory authority that responsibility for detailed management is vested in the corporation.

Mixed-ownership corporations present a distinct class of supervisory problems. As an Assistant Director of the Bureau of the Budget testified before the House Committee on Government Operations, these corporations have "claimed a vested and irrevocable right to the four freedoms—freedom from financial control by the Congress, freedom from budget review by the President, freedom from independent audit by the Comptroller General, and freedom to use Federal funds." These enterprises have demanded all of the privileges of a public agency without being willing to accept the responsibilities. For this reason establishment of any additional mixed ownership corporations is contrary to established executive branch policy. President Eisenhower has recommended amendments to the Government Corporation Control Act which would abolish the present distinction between wholly owned and mixed ownership Government corporations and apply financial control to all corporations which possess authority to use Federal funds, regardless of whether there is some private ownership of capital shares.

RELATIONSHIP WITH THE CONGRESS

Relationships of wholly owned Government corporations to the Congress do not differ significantly from those of other executive departments and agencies. The corporate character of the agencies does not in any way restrict the constitutional powers of the Con-

Footnotes at end of speech.

gress to investigate, appropriate money from the Treasury, and legislate. The Congress has never hesitated fully to exercise its powers with respect to Government corporations.

Corporations come under the jurisdiction of three or more standing congressional committees: the Committees on Appropriations and on Government Operations and the legislative committees concerned with the corporation's area of operations. The most continuing relationships are with the Appropriations Committees which review and pass upon a corporation's annual budget program. Audit reports are submitted to the Government Operations Committees which may call corporations to account for deficiencies reported by the Comptroller General. Both the Government Operations Committees and the legislative committees possess authority to investigate corporations. Each of the standing committees is assisted by a profesional staff in performing its functions and, when necessary, can bring in outside expert consultants to advise it on technical problems.

In many respects the annual sessions with the Appropriations Committees resemble a board of directors' meeting. While some of the hearings are perfunctory, others delve into every aspect of corporate management and operations. The significant conclusions reached by the committee are more likey to be reflected in the committee report, which even though it has no force of law is not lightly disregarded by executive agencies, rather than in formal action on the budget. The House Appropriations Committee in 1953, for example, severely criticized the Panama Canal Company for its "dalliance" in establishing adequate reserve funds.[11] In 1955 the committee took exception to the Company's plan to abandon the Panama Railroad and requested that action be deferred until the legislative committee had had a full opportunity to review the proposal. The Committee on Merchant Marine and Fisheries employed a former official of the Pennsylvania Railroad to study the railroad operations and, based on his findings, recommended that the railroad be reorganized, not abandoned.[12] The Company complied with the committee's recommendation. On some controversial issues, such as increasing toll rates, the Appropriations committees and the legislative Committees, which have different missions and clienteles, may express strongly divergent views with the result that the Corporation is free to choose its own course of action.

Congress has at times used its investigatory powers with telling effects. The Tennessee Valley Authority, Commodity Credit Corporation, Reconstruction Finance Corporation, and Federal Housing Administration have all been the subjects of full-scale congressional investigations. A Senate investigation of the R.F.C. in 1951, for example, disclosed many instances of favoritism, influence, and inefficient business practices and led directly to a complete reorganization of the Corporation.[13] Congressional investigations have been one of the most important instruments in securing much needed corporate reforms.

Corporate autonomy has never been interpreted in the United States to include independence from the Congress. Within the scope of its constitutional powers, and as a separate and coequal branch of Government, the Congress must be and is supreme.

CONCLUSIONS

The Government corporation as such no longer arouses strong emotions in the United States. It has ceased to be the symbol of both the evils of Government in business and the virtues of business efficiency and organization in Government. The Comptroller General has maintained his traditional opposition to the use of corporations, except for the most compelling reasons, because in his view they weaken essential congressional controls. But, in general, the corporation has gained acceptance as a legitimate and appropriate form of Government organization.

---

[1] Has all characteristics of a Government corporation except separate legal personality.
[2] Classified as mixed ownership in Government Corporation Control Act, but now wholly Government owned.

Airmen Servants

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. KOWALSKI. Mr. Speaker, under the able chairmanship of the Honorable MELVIN PRICE, of Illinois, a special subcommittee of the House Armed Services Committee has been studying the utilization of military manpower.

One of the fields under study involves the use of enlisted men as personal servants by ranking officers.

The current issue of the Air Force Times, a highly respected military publication, has an editorial on this subject which urges that the assignment of enlisted men as personal aides be ended.

The editorial does not agree entirely with the position I have taken, but its conclusions are similar to mine.

I congratulate the Air Force Times on taking such a strong position and I trust that its considered recommendation will be adopted by the Air Force.

Following is the text of the editorial from the January 23 issue of the Air Force Times:

AIRMEN SERVANTS

We doubt that the use of enlisted men as servants is as bad as Representative FRANK KOWALSKI paints it, although he may have a point. The retired Army officer turned legislator (a Connecticut Democrat) has been hammering away at the services on the servant issue, charging instances of enlisted men washing dishes, bathing the dog, taking orders from generals' wives, etc.

As for household service being demeaning, as the lawmaker declares, a good many servicemen don't agree. There are many people who doubtless rank it several cuts above such more accepted details as latrine orderly and KP.

However, the real question, it seems to us, is not whether the enlisted aide jobs are degrading, but whether the military services can afford to use men in them and in certain other support areas.

If recruits with high IQ's and technical aptitudes are available in numbers, is it good management to assign them to jobs which use only a portion of their talents? This might also include jobs as drivers, fire fighters, open mess specialists, or in various other backup jobs. A good many of these posts might better be filled by civilians.

It's the full use of the men's capabilities that appears as the important issue, one the services should continually explore (particularly during the present period of severe military manpower economy).

Let's, as KOWALSKI demands, eliminate the enlisted aide jobs, or many of them, and allow military leaders to hire civilian domestics with an appropriate allowance the Government would have to provide. The need for military bosses to have a personal staff is entirely justified.

Substituting civilian domestics for military aides, in addition to being more in line with the maximum-use-of-military-manpower drive, would also render the services less vulnerable to public ridicule and criticism.

Resolution of the New York Chapter of the Associated General Contractors of America

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Tuesday, January 26, 1960

Mr. KEATING. Mr. President, I ask unanimous consent that a resolution of the New York Chapter of the Associated General Contractors of America be printed in the Appendix of the RECORD. The resolution urges Congress to take whatever action necessary to carry out the construction of the Federal Interstate Highway System as contained in the Federal Aid Highway Act of 1956 and as scheduled for completion in 1972.

There being no objection, the resolution was ordered to be printed in the RECORD, as follows:

ASSOCIATED GENERAL CONTRACTORS
OF AMERICA, NEW YORK
STATE CHAPTER, INC.,
Albany, N.Y., January 22, 1960.

The Honorable KENNETH B. KEATING,
The U.S. Senate
Washington, D.C.

DEAR SIR: The following is the resolution adopted by our organization which represents more than 200 highway contractors who build and reconstruct roads in New York State:

"The New York State Chapter, Associated General Contractors of America, at its 34th annual meeting, December 14–16, 1959, urges the Congress of the United States to take whatever action necessary to assure the construction and completion of the National System of the Interstate and Defense Highways in accordance with the statement of policy contained in the Federal Aid Highway Act of 1956, which expressed the intent of Congress to bring the system to a simultaneous completion in 1972."

We appreciate your interest in this vital matter in the past and hope you will continue to consider this problem in future legislative deliberations.

Very truly yours,
LOUIS G. BLACKHALL,
Managing Director.

Views on the Steel Strike Settlement

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. HERLONG. Mr. Speaker, Mr. William Norman Hall of DeLand, Fla., has written me regarding the steel strike settlement, and has expressed the wish that his views might be brought to the attention of my distinguished colleagues. In compliance with his desire, I ask permission for his letter to be printed in the RECORD so that other Members of Congress may have the benefit of his views.

The letter follows:

DELAND, FLA.,
January 19, 1960.

Hon. A. S. HERLONG,
Washington, D.C.

DEAR CONGRESSMAN HERLONG: I, for one, am sorely disappointed with the manner in which the steel strike was settled, and the part played by the Government in the settlement. The "confab" was held on a Sunday p.m. (in desecration of the Sabbath day) in secret without representation from the group of the rank and file of the American citizens numbering something like 60 or 70 million people and with absolute disregard for the interests of that larger group. The group of steel workers whose unreasonable demands were granted numbers only about half a million, and the group of steel executives is comparatively small.

The workers did not need a raise. Before the strike they were getting about $25 per day; now their wages will be close to $28 per day—more than the average salary of professional men. It is more than I received as civil engineer after 50 years of experience, some of it in responsible charge. I had to go through college. Steel workers do not necessarily have to be high school graduates.

No doubt, the employers, the steel mills, will again, as they have done heretofore, "pass the buck" to their customers in the way of increased steel prices. They say there will be "no immediate" increase in steel prices. The term "no immediate" is more or less relative. It may mean "next month" or "next year" or it may mean not until after the next presidential election. It's a safe bet that there will eventually be increased steel prices leading to increased prices for practically everything else, giving another boost to the dreaded inflation spiral, the brunt of which will have to be borne, not by the steel workers and not by the steel executives, but by that larger group, the rank and file of our population, as has been done heretofore.

The steel workers based one of their claims upon the fact that the steel mills had been making high profits and could, therefore, afford to "divy up" with the workers and increase their already high wages. But if that was the case the workers should have brought pressure to bear upon their employers to reduce the price of steel and they should have been willing to leave their wages where they were or even to take a slight reduction in wages. In this way they would have performed a public service, and would have deserved commendation from the public, and, very likely, a let-down in the inflation spiral would have resulted—all of us would have been benefited.

One effect of the steel strike settlement, biased as it was, will be the encouragement given to future strikes and threats of strikes. The railroaders, the longshoremen and others will step forward with the "me too" attitude. More strike trouble looms ahead unless something drastical is done.

I believe practically everybody wanted a strike settlement but not a one way biased settlement—the kind that took place, aided and abetted by the Government—rather the administration. And the Government in this case was represented by Vice President NIXON and Secretary of Labor Mitchell. It's safe to predict that both of them will have "lost feathers from their caps."

So, now, the need for labor reform legislation—the kind that will curb or prevent strikes—is more imperative than ever; and such legislation should be enacted during the early part of this session of Congress.

Very sincerely yours,
WILLIAM NORMAN HALL,
Editor, Volusia Star.

Position of American Legion on Loyalty Oaths

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Tuesday, January 26, 1960

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article appearing at page 2 of the National Legislative Bulletin for January 15, 1960. This bulletin, as is well known to Senators, is an official publication of the National American Legion, which is distributed to Legionnaires throughout the United States.

The article, prepared by Miles D. Kennedy, national legislative director of the American Legion, includes excerpts from a speech by National Commander Martin B. McKneally, which eloquently explains the Legion's reasons for supporting the loyalty oath requirement in the National Defense Education Act of 1958.

Recent newspaper reports would seem to indicate that this issue will be the subject of discussion once again in the Senate, and I feel that the clearly enunciated position of the American Legion will, no doubt, be of interest to the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

THE NATIONAL DEFENSE EDUCATION ACT AND ITS LOYALTY PROVISIONS

In 1958 Congress enacted the National Defense Education Act—Public Law 85-864. The basic purposes of the act are set forth in its section 101, as follows:

"SEC. 101. The Congress hereby finds and declares that the security of the Nation requires the fullest development of the mental resources and technical skills of its young men and women. The present emergency demands that additional and more adequate educational opportunities be made available. The defense of this Nation depends upon the mastery of modern techniques developed from complex scientific principles. It depends as well upon the discovery and development of new principles, new techniques, and new knowledge.

"We must increase our efforts to identify and educate more of the talent of our Nation. This requires programs that will give assurance that no student of ability will be denied an opportunity for higher education because of financial need; will correct as rapidly as possible the existing imbalances in our educational programs which have led to an insufficient proportion of our population educated in science, mathematics, and modern foreign languages and trained in technology.

"The Congress reaffirms the principle and declares that the States and local communities have and must retain control over and primary responsibility for public education. The national interest requires, however, that the Federal Government give assistance to education for programs which are important to our defense.

"To meet the present educational emergency requires additional effort at all levels of government. It is therefore the purpose of this act to provide substantial assistance in various forms to individuals, and to States and their subdivisions, in order to insure trained manpower of sufficient quality and quantity to meet the national defense needs of the United States."

While the act also authorizes grants and loans to States and educational institutions in keeping with its entire scope, our discussion is based upon the student loan provisions only. In brief the act authorized appropriations of $295 million for the period ending June 30, 1962, to be allotted for the purpose of making loans to students who are otherwise qualified to pursue education in an institution of higher learning. They must be in need of the amount of the loan for educational purposes; be capable of maintaining good standings in the courses of study and, have been accepted as full-time students at such institution. The loans are available to undergraduate as well as graduate students.

Loans of $1,000 per year for a maximum of 5 years are available. Repayment is made over a 10-year period which commences 1 full year after student ceases full-time educational pursuit at an institution of higher learning. The interest rate is 3 percent but interest does not begin to accrue until 1 year after leaving school. The Federal Government provides $9 of each $10 loaned, the remaining $1 being matched by the institution.

Before loan benefits can be had under the act, a student must comply with the loyalty requirements set forth in section 1001(f) of the act, quoted below:

"SEC. 1001(f). No part of any funds appropriated or otherwise made available for expenditure under authority of this Act shall be used to make payments or loans to any individual unless such individual (1) has executed and filed with the Commissioner an affidavit that he does not believe in, and is not a member of and does not support any organization that believes in or teaches, the overthrow of the United States Government by force or violence or by any illegal or unconstitutional methods, and (2) has taken and subscribd to an oath or affirmation in the following form: 'I do solemnly swear (or affirm) that I will bear true faith and allegiance to the United States of America and will support and defend the Constitution and laws of the United States against all its enemies, foreign and domestic.' The provisions of section 1001 of title 18, United States Code, shall be applicable with respect to such affidavits."

OBJECTIONS TO LOYALTY PROVISIONS

It came as a great surprise to most Americans when they learned that a mere handful of the elite among educators raised such strenuous objection to the loyalty requirements of the act that it became an issue in the U.S. Senate. A bill was offered which would amend the act by striking from it the loyalty requirement. Debate waxed hot and

heavy, and it was only through the efforts of a determined group of Senators that the amendment was temporarily delayed, at least, by recommitting the bill for further study. This was accomplished by a narrow margin.

Recently, two of the important educational institutions in the so-called ivy league withdrew from the program because of the loyalty provision. Regents of a prominent Big 10 midwestern university have also announced their intention to do likewise.

Recent developments give strong indication that the proposal to amend the National Defense Act by removing the loyalty provision will again be brought before the U.S. Senate.

How does the American Legion regard the loyalty provision? Let's take a look at what our national commander, Martin B. McKneally, has to say about it. When you have read his cogent remarks we think you will want to send a note to your Senators asking them to vote against abandonment of the loyalty provisions of the National Defense Education Act.

"A question of much moment before the American people is the one concerning what is called the loyalty oath.

"The American Legion, by resolution of its 1959 convention, supports the loyalty oath provision of the National Defense Education Act. It does so on this theory: The National Defense Education Act is a part of the enactments of Congress providing for the security of the United States and as such those receiving benefits under it are special persons, they are singled out as special beneficiaries for a special reason and as such their loyalty to the United States and their freedom from the taint of disloyalty is properly an issue.

"To read the debate on the Kennedy-Clark bill which sought, at the last session of Congress, to repeal the section of the act which required every student-beneficiary to sign an affidavit to the effect that he does not believe in and is not a member of and does not support any organization that believes in or teaches the overthrow of the United States Government by force or violence or by any illegal or unconstitutional means is to take an exercise, a lengthy exercise in evasion, begging the question and missing the point. One would think that loyalty to the sovereign state is the exaction of an onerous, burdensome thing to the average American. One would think that subversion was not the Communist business. One would think that freedom, in this desolate age, was not dying all over the world. One would have to conclude that the great States that have been overthrown, since 1945, were not helped to disaster by certain disloyal citizens within their boundaries. The fact of the matter is that loyalty is an issue and the United States must be protected against disloyalty.

"The fact of the matter is that those of us who support this affidavit, and have ourselves taken such an oath gladly, find in it no reflection on our integrity and our loyalty. When we insist upon our position we are disdained as anti-intellectual and as descendants of those who called for a religious test in the Middle Ages. This is specious nonsense.

"A man's traffic with his God is a personal affair and is answerable in a forum over which we have no control. Treason to one's country is another story. A tightly organized society such as our own, exists by virtue of certain understandings, certain compacts: man to man. We are all participants in it and every man is affected by the deeds of his fellows. This principle is indeed part of the tradition of the common law. For instance, I must so use my property that it does not do injury to my neighbor. I may speak freely but I may not expect my freedom to extend to me the right to shout fire in a theater and thereby cause panic and injury to my fellows. Freedom, indeed, is a qualified thing. I cannot in any case commit injury to my fellow citizens without penalty. This is purely a social responsibility and its violation throws me out of step.

"Treason or betrayal of the common good as constituted in a duly authorized way is an act which violates the responsibility of one citizen to another. The average American is unable to follow the tenuous reasoning which identifies a religious test in the Middle Ages with a loyalty affidavit of today, except insofar as it identifies he loyalty oath with something admittedly bad for the purpose of destroying it.

"I have said to you that around the world in this age of brainwashing technique and indoctrination, loyalty is in issue. 'With every dawn,' Camus tells us of our time, 'masked assassins slip into some cell.' Murder is the question before us.' This is the solemn keynote of our time. Shall we fail to heed it? According to the overanxious reasoning of certain college presidents? And in this connection it is worth noting that the hearings in the Senate catered to the opponents of the loyalty oath and entertained not a voice in support of it. It is interesting to further note that not one student voice was heard. After all this bill provides for a relationship between Government and student, and these university boards and presidents who have withdrawn their institutions from it have deprived thousands of American youths of the personal benefits of this program and the benefits to the Nation, by summary action based upon unsubstantial reasoning may charge us with anti-intellectualism (and I am not sure what that term really means) but I do know this: they inspire me with no great admiration for their position.

"The battle against communism is a struggle for men's minds and in this struggle we shall not win by the mounting confusion of words that surround great issues. It has been argued that if the loyalty oath is to be included in a security measure then it should also be included in a farm subsidy law. This is in effect to say that a farmer raising corn is in the same position as a man working in the field of molding men's minds. Let us recognize that teachers and intellectuals occupy an exalted place in our society. They are the ones to whom we look for leadership and for light in this complex world. In short it may be said that they are the ones upon whom we ordinary people must ultimately depend. Are we asking more than they are willing to give in requiring this simple affirmation of loyalty to our country? Surely, no one in his right mind interprets this as a slander or a reflection upon them as a practical proposition. Teachers operating under the New York school system have been taking such an oath for years. No one has thought less of them for taking it.

"Now the subject of this discourse has been in defense of the loyalty affidavit and opposed to the reasoning used in an effort to defeat it. I would give the opponents of the loyalty oath a large measure of credit if they would base their case on the fact that the oath has little practical use in protecting the Nation against subversion instead of trailing off into vaporish, thin skinned expressions of injured pride. Perhaps it is nothing more than a symbol of loyalty. Is symbolism bad? When a man tips his hat to a lady, he uses a symbol of respect; his head bowed in prayer is a symbol of his reverence. His use of the term 'His Excellency,' to a Governor, is a symbol of his submission to the authority of the law. Are these bad? Do we think more of a man if he fails to observe them? The loyalty oath is probably nothing but an expression of devotion to one's country in this day of its darkest peril. But even if this is all that it is, who can deny that such an expression does some good? I have said to you that the battle of communism is one for the minds of men. It must be fought in the classroom.

"But the battle against communism must also be fought on the level of faith, not only across the plains of economic and scientific achievements. Communism proposes that life is material and a man is a product of nature with no purpose, no will, and no soul. This is a harsh doctrine but because they have succeeded in dressing it up with appeals to ideals and equality, they have succeeded in winning in many instances, the battle for the heart and the minds of men. Ours is a society and a system based upon ideals. Our job as Legionnaires is to keep the eyes of all Americans focused on the ideals of our country and our job as Americans is constantly to translate the image of America abroad in terms of its ideals.

"We as members of the American Legion must keep alive the spirit of patriotism, love of country. This is our challenge. To those who have grown listless in their appreciation of individual freedom and the great gift of citizenship in this country let us constantly recount their blessings. They are neatly summed up in a passage written by a refugee—one who came to these shore from Herr Hitler's concentration camps and eventually became a citizen of these United States. He wrote:

"'I am an American citizen, a member of the greatest fraternity on earth, the brotherhood of free men because a million American citizens have died and millions have suffered in the wars of our Republic. I have greater freedom than any other citizen of any other nation in any other period of mankind. I have greater freedom to work, to worship, to love, to learn and to play. Mine is the freedom to compete, to invent, to save, to invest, to create, to promote, to own. I have freedom to choose, to join, to vote, to speak, to travel, and to walk erect with head high. I am free to be my own self as an individual human soul. I am free to glorify God'."

MILES D. KENNEDY,
Director.

A Bill To Authorize the Award of the Congressional Medal of Honor to the Four Chaplains

---

EXTENSION OF REMARKS
OF
HON. PETER W. RODINO, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 26, 1960

Mr. RODINO. Mr. Speaker, I am reintroducing my bill, H.R. 5089 of the 85th, to award the Congressional Medal of Honor to the four chaplains who gave their lives in the sinking of the *Dorchester*.

These brave men of God—Chaplain George Fox, Chaplain Alexander Goode, Chaplain Clark Poling, Chaplain John Washington—displayed faith and courage of a kind which will always remain a challenge and an inspiration to every American.

Their sacrifice was not only one far above and beyond the call of duty; it was a lesson in the essential brotherhood of Americans and the unity of our separate faiths.

The award of the Congressional Medal of Honor can add nothing to the nobility

of their act, or to the greatness of their sublime sacrifice.

But surely this is the least which Congress can do in recognition of this example of selfless devotion to God and country.

Mr. Speaker, unfortunately, no action was taken on this bill in the 85th Congress. I ask the House to act on this bill now as a fitting and proper tribute to the heroes of the *Dorchester*.

Withholding Tax Can Be Repealed by Simple Majority Vote

EXTENSION OF REMARKS
OF
HON. DALE ALFORD
OF ARKANSAS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. ALFORD. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I wish to include an article, volume 6, No. 1, issue of the Dan Smoot Report published in Dallas, Tex., entitled "Withholding Tax Can Be Repealed By Simple Majority Vote."

The article follows:

WITHHOLDING TAX CAN BE REPEALED BY SIMPLE MAJORITY VOTE

(By Dan Smoot)

Ultimately, the senseless squandering of public funds requires higher taxes on the people. How can you prevent rebellion against taxes when they reach such heights that many workers have to pay out more for Federal taxes than for either of the three essentials of life—food, clothing, or housing?

Roosevelt found an answer to this baffling question too: Beardsley Ruml and Henry Morgenthau told him about the withholding tax: force a man's employer to collect the tax before the employee gets his salary check. This does a number of things.

It places the stigma and the expense of tax-collecting on employers rather than on Government; and it eliminates popular complaint against high and rising taxes, because workers do not fully realize that taxes are high and rising.

A man doesn't have to save and manage so that, at the end of the year, he can give Government 25 or 40 or 50 percent of his earnings for the whole year. All of that has been done by the employer, at the employer's expense. The average worker pays little attention to the Federal income and social security taxes taken out of his paycheck. He quickly adjusts himself to the net amount he gets each payday. If that is not enough, he and his family resent the employer, not Government. They do not demand lower taxes: they demand higher wages.

Withholding tax can, indeed, make taxes pleasant. Internal Revenue Service schedules require employers to deduct (more often than not) more taxes than the employee owes. At the end of the year, Government sends the employee a rebate—a bonus, bigger, in millions of cases, than any bonus the employer ever gives. Thus, beneficent Government gives back to workers a portion of the money which employers took away from them.

Of the 61 million (approximate) Federal income tax returns filed for the year 1958, about 36 million claimed a refund from the Government for overpayment.

Many harsh inequities result from the withholding tax system. It would not do—politically—to make wage earners pay taxes as they go, while permitting self-employed persons to wait until the following year to pay their taxes; but there is no way to withhold a tax from someone who does not get wages. Solution? Make self-employed persons anticipate their income for the year, and pay their tax in advance. That's what people who are not on salaries have to do. If business is better than they guessed it would be—that is, if the estimated tax which they pay in advance for a given year, turns out to be less than they finally have to pay for that year—they are fined for having guessed wrong. If their estimate is wrong in the other direction—that is, if they overpay their tax in advance—they merely get it back without interest, 3 or 4 months after the end of the year.

Every year, thousands of small businessmen have to dig into working capital (thus making growth of their business impossible, often making it difficult for the business even to hold its own) or borrow at interest to pay Federal taxes on income that has not even been made yet. Federal taxes force many small businessmen into bankruptcy in years when they suffer a slump in business—because they must pay, during a year of business losses, Federal taxes estimated on the basis of a previous year when there were profits.

The number of taxpayers who are thus painfully conscious each year of the harshness and weight of Federal taxes is, however, relatively small.

WHAT TO DO ABOUT IT

Some employers, who bear the responsibility and expense of collecting the withholding tax and who know that the growing tax load will ultimately crush all vigor and freedom out of our economic system, have tried various ways of making their employees aware of the taxes withheld from their wages.

For example, in 1957, Mr. Walter Knott, founder and owner of the famous Knott's Berry Farm, Buena Park, Calif., began the practice of enclosing a letter with the W–2 Form which he must send each employee at the end of the year. Here are excerpts from Mr. Knott's letter:

"* * * Your W–2 Form * * * tells you the amount we have been required to hold out of your earnings for income tax during 1957. This entails considerable cost. We did not ask for this job nor are we paid for it, nor are we even thanked for it. * * *

"The amendment to the Constitution which made this tax possible was passed in 1913. This law was conceived in immorality because it was the plan to soak only the rich, and there were only a few of them, and they had few votes. Then, the top bracket was only 6 percent, but now the top bracket takes 91 percent of that same rich man's income.

"But here is the joker—when you give the politician the immoral privilege of taxing the rich man's income, soon he is not satisfied with this and is taxing yours, too. While this started out with taxing the rich 6 percent, now the lowest income people are paying 20 percent.

"And more than 80 percent of the total of this so-called rich man's tax is paid by the people whose income is under $6,000 per year. So while the first intention was to 'soak' someone else, we are all paying the penalty now.

"Let's go to work and repeal this thing. Do I hear someone say, 'Where would the Government get the money to run on without the income tax?' Last year the Government took in, in round numbers, $72 billion; $33 billion of this came from personal income tax. This left $39 billion from other sources, which is just the amount that President Truman spent in the most expensive peacetime year of his administration. If we could do with that much then, we could now. * * *

"Every time the Government takes more of our income and does more things for more people, all over the world, it gets bigger and more autocratic, and we, the people, get more regulated, regimented, and less able to do for ourselves. I can prove this. The very fact that the Government makes us take this money out of your wages proves that they do not trust you to manage your own affairs any more; otherwise, they would let you handle your own money and pay it at the end of the year.

"We would be infinitely better off with less government, and the only way we will ever have less government is to take away the money they do not need and are wasting.

"This is your money I am talking about. Look at this enclosed slip and think what you could have done with this money if we could have left it in your check." * * *"

Other employers have tried other methods; and they all do some good, but nothing would have the quick and startling effect that repealing the withholding tax would have.

A man with two deductions who makes $5,000 a year can adjust himself to the $12.60 withheld for Federal income tax each week. But let him take that money home each week and put it to the uses which his wife will help him find for it; and then, at the end of the year, let him and his wife face the problem of raising $665.60 to pay their Federal income tax.

This would undeniably create chaos for the tax collectors. It would cut down on the Government's tax revenue, and it would produce millions of tax delinquents, but it would set the American people on the road to recapturing control of their own Government. If, at the end of 1960, every taxpayer in America had to face the problem of paying the Federal Government the total income tax imposed on him that year, we would find a substantial crop of politicians in the next election year campaigning on a platform to repeal the income tax amendment.

We cannot restore our constitutional Republic until we force the Federal Government to live by the Constitution. We cannot force it to do that until we take the excess money away from the Washington spenders. We cannot do that until we repeal the income tax amendment; and we cannot repeal the income tax amendment until millions of Americans become so painfully aware of Federal taxation that they demand repeal of the whole immoral system.

The best way to start is to demand that Congress repeal the withholding tax. This could be done at any time by a simple majority vote in House and Senate.

Ukrainian Independence Day

EXTENSION OF REMARKS
OF
HON. WILLIAM A. BARRETT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. BARRETT. Mr. Speaker, today many hundreds of millions of people are suffering under Communist totalitarian dictatorship. In the Soviet Union alone there are more than 200 million who are forced to endure the almost unbear-

able yoke of the Kremlin tyranny. And among these unfortunate millions the Ukrainians have borne the brunt of Russian communism. These brave and patriotic Ukrainians have known freedom for only a very short time during the last 300-odd years of their history. That was during the years 1918–20.

Before the end of the First World War the czarist autocracy collapsed in Russia, and this startling event afforded the opportunity for the Ukrainians to regain their freedom. They seized upon the occasion and proclaimed their national independence on January 22, 1918. Unfortunately for the Ukrainians, and for their friends everywhere, that independence lasted for only a short time. In 1920 the country was attacked by the Red Army, was overrun, and the independent Ukraine passed into the pages of history books. Soon the country was incorporated into the Soviet Union, and to this date it remains chained to that union.

There in their homeland 42 million sturdy and stouthearted Ukrainians lead a miserable life. Like prisoners held behind the veritable Iron Curtain, they are deprived of all forms of freedom, and cannot even celebrate their independence day.

We of the free world, and in this great Republic in celebrating the 42d anniversary of that memorable event, hope and play for their deliverance from Communist totalitarian tyranny.

Mr. Gates' Quick, Wise Move

EXTENSION OF REMARKS
OF
HON. BOB WILSON
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. WILSON. Mr. Speaker, the Secretary of Defense, Mr. Gates, recently determined that either he or his Deputy Secretary will hereafter meet with the Joint Chiefs of Staff whenever they are considering matters upon which they are in disagreement, or upon which disagreement is developing.

On December 29, 1959, Mr. Gates issued a memorandum to this effect to the Joint Chiefs of Staff—a document that is certain to become one of the most historic papers ever prepared in that Department.

The Secretary's action has been widely hailed, and correctly so, as the most important single step ever taken by any Secretary of Defense to insure both effective military planning and strengthened civilian control of our vast military effort.

An editorial appearing in the San Diego Union on January 14, 1960 entitled "Mr. Gates' Quick, Wise Move," is typical of the widespread favorable response that has been prompted by the Secretary's mature act of firm leadership. It highlights the vital importance of the Gates JCS memorandum, as it has come to be called, to the need for sound military planning under strong civilian control.

I ask unanimous consent, Mr. Speaker, that this perceptive comment on Mr. Gates' action be printed in the RECORD and commend it to the attention of all Members.

The editorial follows:

MR. GATES' QUICK, WISE MOVE

Defense Secretary Thomas S. Gates, Jr., has taken the punch out of any congressional move this year to reorganize the Defense Department.

Moreover, he has pulled the props out from under Gen. Maxwell Taylor's complaint that the Defense Secretary is isolated and sealed away from what really goes on in the Pentagon.

Mr. Gates a few weeks after his appointment to the top civilian defense post wisely issued a directive aimed at snuffing out any interservice disputes. The Secretary instructed the Joint Chiefs of Staff to report to him immediately if interservice trouble should break out.

If Mr. Gates can't settle an argument with the help of the Joint Chiefs, he proposes to take it to the White House where the President will be the referee in accord with the intent of the National Defense Act.

Mind you, rivalry among the Armed Forces is natural and reflects pride of service, provided it doesn't get out of hand.

The Secretary's unprecedented directive has a manifold aim, not the least of which is to throttle Pentagon family squabbles before they get started.

The Gates directive appears to be the most promising move so far in the direction of sound decisionmaking in U.S. military policy since the Defense Department was created in 1947 under the Armed Forces Unification Act. It reflects his long experience as a military man and as an administrator.

The Defense Department and its Secretary were to have brought the services together into a more closely knit organization. It not always has worked out that way. The Department, instead of acting in the role of an overseer, has burgeoned until it now is a bureaucracy of formidable proportions in its own right. This has made it difficult sometimes for the Secretary to administer his own department and still keep an eye on the other services.

Mr. Gates' directive means that for the first time a Defense Secretary formally assumes full personal responsibility for civilian leadership in top-level policy decisions. The Defense Department was designed to make this possible. And it makes certain, too, that in reaching these decisions he will have given consideration to the views of all his military advisers—the Army, Navy, Air Force, and Marine Corps.

The Secretary leaves no door open for the professional critics of the Pentagon, most of them in the Congress. Nor can the claim of General Taylor, the retired and unhappy Army Chief of Staff, have any validity now that Mr. Gates has moved in swiftly to settle arguments within his official family.

Bomb Explosions on Passenger Airplanes

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. HERLONG. Mr. Speaker, the Orlando (Fla.) Junior Chamber of Commerce, which has the largest membership of any city jaycee group in the world, is deeply concerned—and I share its concern—over recent incidents involving bomb explosions on passenger airplanes. Under leave to revise and extend my remarks in the Appendix of the RECORD I offer a resolution adopted by the board of directors of the Orlando Jaycees, as follows:

Whereas the Orlando Junior Chamber of Commerce has always been intensely interested in measures providing greater safety for the citizens of the community, State and Nation, and

Whereas safe, efficient passage by public airline to and from Orlando is vital to the continued growth and development of the community and the State of Florida, and

Whereas there have been numerous airline crashes caused or apparently caused by the explosion of bombs carried aboard planes by passengers, and

Whereas the faith of the people in public air transportation is being impaired by such events: Now, therefore, be it

Resolved, That the Orlando Junior Chamber of Commerce go on record as recommending to the aviation industry, the Civil Aeronautics Board and all in authority in the field of aviation, that some method of inspection of the baggage and persons of all airline passengers be promptly adopted and used to prevent such tragedies; and be it further

Resolved, That copies of this resolution be sent to the President of the United States, Members of both Houses of Congress of the United States, members of the Civil Aeronautics Board, presidents of all the airlines in the United States, the presidents of all companies selling insurance at all airports, and such other persons and organizations as may be deemed appropriate.

Bryce Harlow Named ROA Citizen of Year

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include an article from the February issue of The Officer, the official publication of the Reserve Officers Association of the United States, entitled "Harlow: Minuteman of 1960."

The article pays well-deserved tribute to Bryce Harlow, Deputy Assistant to the President for Congressional Affairs, who has been named 1960 "Citizen of the Year" by the Reserve Officers Association.

Recognition of the contributions made by Bryce Harlow to his country is long overdue. Quietly and efficiently, he has performed outstanding service both in the legislative and executive branch, and, in each, he has played an important if little publicized role in working out sound solutions to the problems of our day and bringing them to fruition.

I have had the honor to work closely with Bryce Harlow, as have many other Members of the House, and I know they

all join me in congratulating him on the high honor he has received from his fellow officers.

The article follows:

HARLOW: MINUTEMAN OF 1960—CITIZEN OF THE YEAR AWARD GOES TO A "LITTLE GIANT" WHOSE RECOGNITION AS A PATRIOT NO LONGER CAN BE DENIED

(By Col. Jesse B. Stuart)

Usually, when one considers the likely candidates for high office and high honors, the image of a "giant" comes into mind.

This great American weakness for glamour, this continuing invitation to delusion by idols with feet of clay, may plague us down through the future years.

But in 1960, ROA has named for its "citizen of the year" one who, by common standards, has claim neither to glamour, high office, nor giant physical stature.

I first met Bryce Harlow in General Marshall's office in 1943. He was—and is—a little man. But, he had a great brain, and a fine hand, and everyone seemed to recognize that the "little captain" was a right arm and a stonewall as a cog in the great machine the Army Chief of Staff was using.

Bryce had come to Washington as assistant to a Member of the House and along the political paths bringing him to Washington he had picked up considerable "moxie."

It was not until after the Army had promoted him to lieutenant colonel and awarded him the Legion of Merit that I found out his "moxie" had a firm foundation.

At the University of Oklahoma, he had made Phi Beta Kappa for his undergraduate work, and later he had earned his master's in political science.

After our brief acquaintance in the Pentagon, I took off on secret missions, which took me to a place called Normandy, and it was sometime later that I got out of a field hospital at Bastogne and back to Walter Reed. My first visitor was Bryce Harlow, and I'll always remember his thoughtfulness.

In 1945, "Uncle Carl" Vinson demonstrated his brilliance by bringing Bryce into the House Armed Services Committee as staff director, and Col. Bob Smart, who now holds that job and does his work brilliantly, will understand my assertion that nobody ever again will run the committee with the knowledgeable firmness of the "Little Colonel." Bryce saw the groundwork for one postwar military policy laid, including our reserve program, and in 1951, he took off for Oklahoma City.

Life on the Potomac is exacting, and the grind is constant. Bryce simply did what everybody else talks of doing—he quit and went home.

HERE—A REAL DRAFT

In Oklahoma City, Bryce was vice president of the Harlow Publishing Corporation, and was getting along fine.

But Washington was not let him escape for long. After the 1952 elections, one of his wartime associates was preparing to move into the White House. General Eisenhower pointed at Bryce as the one man he wanted to handle congressional relations.

Wilton B. (Jerry) Persons caught a plane to Oklahoma City and stayed there until he had Bryce's promise to get ready to join the new President's staff in January 1953.

In 7 years, he again has demonstrated the gifts of which all Washington has become aware. Bryce has had several titles, including Administrative Assistant to the President, and Deputy Assistant to the President for Congressional Affairs.

Titles don't mean as much as his record of performance. Handling as tough a congressional mission as has ever been given a Capitol Hill man, Bryce has turned in a batting average that is incredible.

Brother Bryce gets the nod for the Minuteman award this year over a goodly company of patriots, anyone of whom would have honored the award. They, of course, remain unrevealed.

The record of his achievements speaks rather eloquently. But the record does not sparkle as does his personality, which carried many a day for a good cause.

It is not as stout as his fine character, which is the bedrock of every good American's nature.

It does not reflect the polish and deftness of his diplomacy, which turned the tide for us many a time when the issues were shadowy, nor the clarity of his intellect which ofttimes cleared the shadows.

So, the ingredients in our Minuteman winner this year include high competence, intellectual stature, diplomacy, personality, and character, and a great many other things which are rather indefinable.

And by our standards those things go into the makeup of a giant among men—the incorruptible patriot. That is ROA's Minuteman of 1960.

High Interest Rates—But Not for the GOP

EXTENSION OF REMARKS

OF

HON. NEWELL A. GEORGE

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 26, 1960

Mr. GEORGE. Mr. Speaker, plans are underway for the erection of a "grandiose club house" and office building on Capitol Hill for the Republican Party. A good feature about this building is that it would be in honor of former Speaker and former Majority Leader JOSEPH W. MARTIN and would bear his name.

To the great majority of the people of America, however, the name and the purpose of this edifice is unimportant, but of overriding importance in connection with this project is a letter signed by the Chairman of the Republican National Committee in which he suggests a method by which the memorial to Mr. MARTIN might be financed, and stated "that the project be financed through the sale of bonds. 'Some of our friends might be willing to take these bonds at a lower interest than the current rate.'"

It is very significant that while under the Republican administration the cost of interest payments on the public debt has increased approximately 50 percent since 1955, or nearly $3¼ billion, the administration is recommending that the Congress remove the interest limitation on long-term Government obligations, which would add to the taxpayers' burden.

While the high interest rate policy of the national administration continues to fan the fires of inflation, the Grand Old Party wants to provide its own with lower interest rates, thereby showing its disregard for the American who desires to purchase a home or borrow money for business reasons. Thus, the Old Guard of the Republican Party expects to obtain preferred treatment from the huge financiers and industrialists who have contributed to the Republican Party since the day it was founded.

The moneychangers have not yet been driven from the temple—the temple of the Republican Party. It is only logical for that party to expect lower interest rates from its huge financial angels in payment for services performed.

The letter of the National Republican Chairman clearly expresses how that party draws a distinction between what is good for the GOP and what is good for the average homebuilder.

The Grand Old Party apparently is expecting another "campaign contribution" from these special interests, which would not be required to be reported under the "clean politics" law, similar to the recent contribution made by the Big Steel interests to the Nixon campaign.

An article by Marie Smith, which appeared in the Washington Post of January 13, 1960, explains the details of the plan to build and finance the super edifice of the GOP, which I ask be included as part of the extension of my remarks:

GOP PLANS JOE MARTIN BUILDING

(By Marie Smith)

Republican plans for a grandiose clubhouse and office building on Capitol Hill with various units named for current Party heroes were disclosed yesterday by Representative JAMES C. AUCHINCLOSS, Republican, of New Jersey, chairman of the board of the Capitol Hill Club.

In a luncheon report to the ladies of the club, AUCHINCLOSS said the building plans are "still unofficial but are so darned near official, I dont' know that you can tell it apart." They have been approved, he said, by both President Eisenhower and the Republican National Committee.

To be erected on the club's present property in the 200 block of First Street SE., without tearing down the present building, the club house will have facilities for a membership of 5,000.

The office building, to be named the Joseph W. Martin Building, for the former Speaker of the House, will be headquarters for the Republican National Committee.

AUCHINCLOSS said an auditorium with a seating capacity of 500, on the first floor of the office building, will be dedicated as a memorial to the late Senator Robert A. Taft, Republican, of Ohio, and his father, President William Howard Taft.

On the first floor of the clubhouse will be the Eisenhower Room, a lounge room with a fireplace at each end, AUCHINCLOSS said. On the second floor the 350-person capacity dining room will be called the Douglas MacArthur Room. Two smaller dining rooms will adjoin. On the third floor will be the Herbert Hoover Library in which will be kept the official papers of former Speaker of the House Joseph W. Martin.

The fourth, fifth, sixth, and seventh floors of the clubhouse will each have 13 double bedrooms with adjoining baths, AUCHINCLOSS said. He added that one or two bedrooms on one floor may be converted to contain a steam bath and beauty salon for lady members.

In the basement of the club house will be a grill room and bar for the exclusive use of men of the club and named the Builders' Room for the first 50 contributors of $1,000 each to establish a fund of $50,000 with which to launch a fund-raising drive, Auchincloss said.

The office building, he said, will be occupied exclusively by the Republican National Committee and related organizations such as the Young Republicans, National Federation of Republican Women and the

House and Senate Congressional Campaign Committees.

Total cost of the project will be $3.5 million with an additional $500,000 needed for furnishings and equipment, he said. "Work will start as soon as sufficient funds are available," he added.

At least $250,000 must be raised for each of the memorials, he said, and donors of these funds will have their names inscribed on tablets to be erected in the rooms.

Auchincloss suggested several plans for raising money for the project. "We hope a situation can be worked out whereby subscribers may exchange subscription receipts for common stock in Capitol Hill Associates, owners of the property," he said.

State quotas will be assigned, ranging from $40,000 to $2,000, and each State that subscribes its quota will be entitled to have a block of native stone with the State shield engraved thereon placed in the facade of the building.

That, AUCHINCLOSS said, should raise a minimum of $60,000 and "we hope to get $1 million in special gifts.

"We hope to get this building in a year or a year and a half," he said, adding, "we will have to finance it and you ladies can help do that through memberships."

AUCHINCLOSS said as soon as the initial $50,000 is raised an executive director and adequate staff will be engaged to conduct a fundraising campaign. In the last 3 days he has raised $12,000, he said, and at yesterday's luncheon Katherine McCook Knox made it $13,000 with a $1,000 pledge.

Republican National Committee Chairman THRUSTON MORTON, Senator from Kentucky, proposed in a letter which AUCHINCLOSS read yesterday that the project be financed through the sale of bonds. "Some of our friends might be willing to take these bonds at a lower interest rate than the current rate," MORTON was quoted as saying.

This is the second set of building plans presented to the club. The first set, which included a printed drawing of the proposed edifice called for a building situated at the corner of Pennsylvania Avenue and First Street. However, the club failed in efforts to purchase the property on which to build.

AUCHINCLOSS said the present plans are for building on the 15,000 square feet already owned by the club which has a current membership of 1,200.

Forty-second Anniversary of Ukrainian Independence

EXTENSION OF REMARKS
OF
HON. LEONARD G. WOLF
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. WOLF. Mr. Speaker, last week was the 42d commemoration of the Ukrainian Declaration of Independence. This occasion has not gone unnoticed. Wherever freemen gather they have marked this anniversary in their minds and hearts for that time when there will be a complete resurgence of freedom in those areas of the world where the spirit and the acts of men are fettered by authoritarian or totalitarian governments.

In the United States we must renew our efforts at home and abroad to encourage dignity and freedom among men no matter where they may be.

Address by Hon. John H. Dent Before Jeannette Rotary Club, November 30, 1959

EXTENSION OF REMARKS
OF
HON. ROBERT N. C. NIX
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. NIX. Mr. Speaker, it is not often that one of our colleagues gets a special note of appreciation from his constituency and especially from his own hometown.

Recently, our colleague, the Honorable JOHN H. DENT, of the 21st District of Pennsylvania, addressed his local Rotary Club, November 30, 1959.

The following excerpts from the Rotary Spokesman is a credit to our colleague and it is with personal pride and pleasure that I submit with the excerpt a copy of his address before this group of local business and civic leaders:

[From the Rotary Spokesman, Jeannette, Pa., Dec. 7, 1959]

All members in attendance last Monday agreed that we can be inordinately proud of our own JOHNNY DENT, who has not only been our own to the town but has been our own in Rotary until the meeting days and makeups got too much for him. Congressman JOHN H. DENT gave not only a masterful address (copies, too, in mimeographed form) to the club last Monday but showed a grasp of this international monetary system that is short of miraculous. With his many activities, miles of traveling, office routine, days in Congress, and multitudious duties in connection with his office, it is a wonder that he maintains any kind of mental equilibrium and emotional stability. But he does it. And in so doing is the same affable, energetic, JOHNNY that makes Westmoreland proud to have him in Washington. Our thanks to Al Condo for tying him down for us.

The address follows:

CONGRESSMAN DENT'S SPEECH TO THE JEANNETTE ROTARY CLUB, NOVEMBER 30, 1959

My subject tonight will be relative to our financial weakness in the field of international finance. The word "blackmail" has come to be used in many different phases of our daily lives. For instance, the labor reform bill was passed by the frequent and ofttimes unrelated use of the word "blackmail" when talking about picketing. It has become the one word that describes pressure applied with a threat of bodily injury, loss of personal reputation, political defeat and in the relationships between nations it has virtually become about the only word that can describe some of our international diplomacy and foreign policy.

It does not take an expert to realize that something is wrong when countries scattered all over the world are scenes for riots and demonstrations against Americans and in some cases our flag is spat and trampled upon. Let us not delude ourselves into a position of false security by the talk of double dealing diplomats.

Our problem is one of an unwillingness on the part of leaders to recognize the need for a complete review of our international position, a reappraisal of our reciprocal trades program and a very searching look at our mutual and foreign aid program.

When I first called for action along these lines in my first month as a Member of the Congress of the United States, I was scoffed at and even ridiculed by many persons and periodicals. It is interesting to note the change and the demand now by national periodicals, editorial writers and even the President, for a reappraisal of our positions on trade and aid. When I first offered my amendment to make the Buy American Act operative I received such an overwhelming defeat that I started to doubt my own conclusions and opinions. However, in the last session it took all the power of the leadership of both sides, Republicans and Democrats, to defeat my amendment and then only by a few votes.

I mention this because recently I attended a meeting of western Pennsylvania Members of Congress with both parties represented. The subject of conversation during the entire afternoon was the question of foreign trade and aid, and in particular the flight of the American gold reserve. For your information, I want to give you a quick analysis of our precarious financial position and some of the suggestions made by men considered to be leaders and thinkers in both our economic as well as our political activities.

It is too much to expect to cover the whole picture of the past 30 years, but sufficient to say that there was a very demanding need for the Marshall plan of foreign aid in the beginning and the only trouble with our situation is that we failed to make a turn in the road when the road signs called for a reappraisal of our program at least 6 years ago. When the Marshall plan was proposed it was intended as a means of stopping the spread of communism by helping our allies and friends to rehabilitate to the level of their economy as it was in the latter part of 1939. Long ago our help passed this goal and we are now embarked upon a program of establishing in practically every country an economy to not only match our won, but actually to surpass us in some fields. We are stretched out so thinly that our military presence in some countries has become a bone of contention rather than an assurance of security.

Our financial position can best point up our weakness because of its dramatic threat of catastrophy. Let us look at our 10-year history of U.S. gold on a short-term position. In 1949, we had a gold reserve of $24.4 billion with a short-term claim on foreign countries of $800 million and a short-term liability to foreign countries of $5.9 billion. This left us a net worth in gold reserve of $19.3 billion. At the end of June 1959 we had a Treasury reserve of gold of $19.7 billion with claims in our favor of $2.4 billion and a liability against us of $15.7 billion. This left us a reserve net worth of $6.5 billion.

This is even worse today because we are losing our reserve at the rate of $4 billion annually right now. If a run is made on our Treasury by foreign claimholders, we find ourselves in a serious difficulty because Congress long ago established a reserve ratio to be maintained by the Treasury which calls for $11.8 billion in order to keep our present dollar volume sound and protected by gold reserve. This means we would be short $5.3 billion, or, in plain words, bankrupt.

In fact, as of June 30, certificates representing beneficial ownership of $19.4 billion of this gold were held by Federal Reserve banks. This was $7.9 billion in excess of minimum requirements of 25 percent required by law against such liabilities. This in itself shows the worst financial picture this Nation has ever been in during our lifetime.

The main reason the foreign claims have not been exercised is because this country has raised its interest rate to the highest in history on short-term borrowing. They, therefore, are content to leave their claims and collect the heavy interest (tax free in this country) while still holding a first mort-

gage on our gold reserve. This, then, is one of the forms of blackmail on an international scale.

We, the taxpayers of America, have to pay high interest in order to keep the foreign claimants from calling for payment of their mortgage. One wonders how much of this money used by these foreign countries to create these claims in the first place come from the American taxpayers by granting foreign aid, preferential treatment in reciprocal trades, and American investments in foreign production factilities.

It is a recognized fact that unless we do something drastic our bankers cannot lower interest rates, our Government cannot lower short-term interest rates because of the blackmail threat of foreign claims to start a run on our Treasury reserve. The $5.3 billion question then is this: What can we do? Frankly, no single person knows the answers, but here are a few suggestions proposed by various groups and individuals.

Stop the outflow of gold to foreign countries by—

(a) Limiting the amounts of American money travelers, tourists, and businessmen can take out of our country.

(b) Making all purchases by foreign stationed American troops and personnel subject to made-in-America orders and even so far as limiting amounts they are given out of their salaries and pay checks to spend for foreign goods.

(c) Making it mandatory that our own military buy all-American supplies, etc.

(d) Limiting all financial aid to all countries and giving only goods and services as mutual and foreign aid.

(e) Reevaluating our trade agreements to allow domestic industry protection at least in the amount represented by taxes and Government-imposed payroll costs on American goods.

(f) Having Congress remove any requirement of gold reserve to back up our own Federal Reserve bank notes.

(g) Increasing the price of gold from $35 to $70 an ounce. (In anticipation of this move Canada and England have put gold bar certificate stock on the market, and a clean-up of billions will be made by the holders of these gold bar certificates.)

(h) Puting into effect drastic restrictions on the American economic front by limiting profits, stopping all wage increases, and increasing production of trade goods.

These are the most prominent suggestions; however, there are many more. Personally, I feel that these moves appear to be an admission of panic thinking, and not, as a whole, a program that can be instituted with any degree of confidence. Time does not permit an analysis of each suggestion, but with your kind indulgence I would like to give a hurried comment on some of the issues involved.

Suggestions (a), (b), (c), (d), and (e) would immediately be put under the heading of "Foreign Policy" since the spending and giving of American money have been the main plank in our platform in our foreign relations program. Castro's actions in Cuba and Egypt's action on the Suez Canal are just a few of the examples of what happens when we refuse or curtail our money aid to our friends.

Again we are faced with a form of blackmail in that when we try to curtail our aid the door is opened wide (by invitation) to Communist Russia. This, then, is a tread-easy path if we attempt to follow it.

Suggestion F would create a situation where Congress and the people would lose all control on the amount of paper money the Federal Reserve System could put into the market because any other restrictive covenant would still be a brake and this solution requires elimination of any reserve.

Suggestion G would not be a very satisfactory answer because nothing would stop the claimant nations from increasing their money price and in fact, would bring on the very thing we are trying to avoid, a run on our Treasury.

Suggestion H speaks for itself. To stop all economic increases in this country would jeopardize our way of life, our national debt service and particularly our world prestige.

All in all, Congress and the people have serious and threatening problems that require immediate attention.

Standing pat because of the national elections next year may be the most dangerous move ever made by our Nation. For fear of being called isolationists, protectionists, and high tariff advocates, many of our powerful voices have been stilled over these past eventful years.

The time has come to face facts and to forget personal ambitions and personal and corporate profits derived from foreign trade and investments. Our financial dilemma can be traced strictly to the balance of trade, foreign aid, military grants, loans, and importations of goods and services which we produce in surplus.

Following this is a hypothetical transaction, indicative of what has been happening all over the world and the direct cause of much of our present crisis in gold. No business in the United States could stay solvent if it treated its competitors in this manner.

I have not touched upon the long-term position simply because no living person can guarantee the obligations of foreign countries to the United States on long-term credits.

Would you guarantee the moneys owed the United States by Cuba at this moment? In this area we are like a football team that goes into the game a 20-point favorite because it looks good on paper, but loses the game.

My friends, I am sorry time and patience will not allow me to continue this all important subject, but one thing is sure. This Nation will have to reevaluate its own economy, determine what standard we want to live under and make up our minds that other countries will have to do the same.

It is one thing to help the family of a friend, relative, or neighbor in an emergency, but an entirely different picture when you take "them to raise."

Incidentally, this poses a question. If you had limited aid to give, to whom would you give it—a friend, a relative, or a neighbor? Think about it awhile.

In closing, let me quote something Abraham Lincoln once said: "If we could first know where we are and whither we are tending, we could better judge what to do and how to do it."

Thank you for listening.

HYPOTHETICAL TRANSACTION

The U.S. Government makes a grant of $3 million to a foreign government to enable it to undertake a specific $3 million project in its own country. The grant is effectuated by the U.S. Treasury's giving the foreign government a check for $3 million drawn on the Treasury's account at some Federal Reserve bank. The foreign government deposits this check in its own central bank, giving that bank a balance of $3 million in U.S. funds.

The project requires the importation of $2 million of materials and equipment from the United States and the use of domestic labor and materials costing the equivalent of $1 million. In making payment through its central bank for the imported materials and equipment, the foreign government uses up $2 million of the U.S. funds that it turned over to the central bank. The central bank invests the remaining $1 million of U.S. funds in short-term U.S. Government securities. (They pay their domestic bills with their own currency.)

In paying for domestic labor and materials costing the equivalent of $1 million, the foreign government draws checks on its central bank payable in domestic money, and through such disbursements exhausts its balance at the bank derived from the U.S. grant.

Such checks are deposited by the recipients in domestic commercial banks and then are redeposited by such commercial banks in the central bank, increasing the commercial banks' deposits in the central bank by the equivalent of $1 million.

Upon completion of these transactions:

(1) The foreign central bank holds $1 million short-term U.S. Government securities which can quickly be translated into a claim on U.S. gold;

(2) the foreign central bank's reserves inclusive of such potential claim on U.S. gold have been increased by $1 million;

(3) the liabilities of the foreign central bank in the form of deposits of domestic commercial banks have been increased by the equivalent of $1 million; and

(4) the ratio of the foreign central banks' total reserves to total liabilities has been strengthened (assuming that it previously was less than 100 percent).

The essence of the entire transaction, as between the United States and the foreign country, is that the United States gave the foreign country $2 million materials and equipment and a claim on $1 million gold.

LIFO (H.R. 6014)

EXTENSION OF REMARKS

OF

HON. NOAH M. MASON

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 26, 1960

Mr. MASON. Mr. Speaker, during the past several months a great deal of interest has been shown in my bill, H.R. 6014, which would ameliorate the impact of inventory depletion caused by shortages resulting from labor disputes in the case of taxpayers using the LIFO—last-in, first-out—method of inventory accounting.

For the benefit of my colleagues I want to give you an explanation of this bill, showing what it purports to accomplish.

My sponsorship of this legislation early last spring was based on my concern over the possible impact that a prolonged steel strike might have on fabricators of steel who utilize the LIFO inventory method. The purpose of my legislation is to permit such individuals to avoid the tax impact that would otherwise occur where the taxpayer has had to liquidate his LIFO inventories because of inability to obtain additional inventory caused by a labor dispute or threat or imminence thereof.

LIFO is a method of identifying inventory items in the taxpayer's closing inventory for the purpose of determining the cost of goods sold. Under the LIFO method, the last inventory additions are the first items included in the cost of goods sold. In a period of rising prices,

the cost of goods sold tends to be higher and taxable income lower under LIFO than would be the case if the FIFO—first-in, first-out—method were used. If, however, a LIFO taxpayer is unable to replace inventory, then to the extent of the liquidation his base stock is depleted and his cost of goods sold will reflect an amount less than the cost of replacement. The effect will be to increase his taxable income over the amount that would properly reflect replacement cost.

H.R. 6014 would alleviate the consequence of the inventory liquidation of base stock because of shortages that are induced by labor disputes affecting suppliers of inventory to the taxpayer.

The bill would provide an election to the taxpayer to treat as if he had in the year of liquidation replaced the inventory, which he does, in fact, replace within the 2 succeeding years. The taxpayer would be able to treat the costs of inventory replacement incurred in the subsequent 2 years as if they had been incurred in the year of liquidation. This has the effect of decreasing taxable income for the year of liquidation in the same manner as would have occurred if the reduction in inventory had not occurred.

If a partial or a complete replacement is accomplished within the 2-year period, the taxable income of the taxpayer for the year of inventory liquidation shall be decreased by an amount equal to the excess of the aggregate replacement cost over the aggregate cost of the opening inventory of the year of liquidation. An increase in tax liability would occur if the opening inventory cost exceeded the aggregate replacement cost. Provision is made that interest shall not apply to deficiencies and overpayments resulting from the operation of this bill.

As introduced, this legislation would be effective with respect to inventory liquidations occurring in taxable years ending after December 31, 1958.

Ukrainian Independence Day

SPEECH
OF
HON. JAMES C. HEALEY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. HEALEY. Mr. Speaker, 42 years ago this week the Ukrainian people gained their freedom by proclaiming their independence for the first time after centuries of oppression and foreign domination. This freedom, unfortunately, did not last and does not exist today. We commemorate this anniversary with sadness and sympathy for the plight of those millions of Ukrainian people who today are the victims of Communist expansion and aggression.

It is difficult for us in the United States to realize what this means and to conceive the sufferings the Ukrainian people have endured since their country was so brutally overrun in 1920 by the Red army.

This anniversary serves as a reminder of the fateful enslavement of 40 million Ukrainians, who have kept alive a spirit of freedom and have sustained faith in eventual liberation. The desire for freedom of these and other peoples suppressed by communism cannot be ignored and I have faith that the day will come when they will once again become free and independent. We must try to encourage them to continue their efforts and hopes toward that day. They deserve our encouragement, and it is my hope that the expressions of sympathy on the part of Members of the U.S. Congress this week will serve to strengthen their courage and kindle their hopes.

Let's Stop Murder in the Sky

EXTENSION OF REMARKS
OF
HON. BYRON L. JOHNSON
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. JOHNSON of Colorado. Mr. Speaker, perhaps no community in the United States feels more keenly the need for further legislation to protect peaceful citizens against wanton mass murder by airplane destruction than does Longmont, Colo., for the plane destroyed by John Gilbert Graham crashed just a few miles from the city of Longmont.

I should like to call the attention of the Members to the leading editorial in the Longmont Daily Times-Call of January 22, in support of Representative JAMES G. O'HARA's H.R. 9777 calling for examination of all articles except mail taken aboard commercial passenger aircraft:

LET'S STOP MURDER IN THE SKY

Murder in the sky continues to take its terrible toll, and unless there is concerted effort to stop it, the toll of human lives will grow.

Since the disaster November 1, 1955, when a United Mainliner was destroyed by a bomb over a Longmont farm, the Daily Times-Call has been trying to get action which would prevent such a thing recurring.

After 44 persons were killed here, the Congress did pass a bill providing the death penalty for anyone placing a bomb on a commercial airliner. Prior to that, there was no Federal penalty, and John Gilbert Graham, Denver, who was responsible for the local disaster, was tried in State courts and executed at Colorado penitentiary.

The Times-Call felt little would be gained by the congressional action, and campaigned for mechanical inspection of all baggage carried on passenger airliners.

This plan to protect all those who fly met stiff opposition in official quarters. William S. Hill, Second District Congressman at that time, told the Times-Call that "to single out the airplane transportation for one type and kind of baggage examination and not include trains, buses, etc., would, of course, cause considerable confusion, difficulty, and possible legal technicalities."

The CAB, whose job it was deciding on airline regulations through its right arm, the Civil Aeronautics Administration, asked manufacturers if they could design a plane so that a baggage compartment explosion would not destroy the plane but merely blow off a door. Of course nothing came of that.

Then there was the time element. CAA officials said, "If you had 60 passengers waiting to board a plane, and you took 3 minutes to open each one's luggage, you'd spend 180 minutes, enough time to fly from New York to Miami."

Other officials felt the possibility of a repetition of the Longmont horror was slight.

However, various instrument makers did come up with mechanical inspection devices which they claimed would aid in detecting explosives in baggage. But nothing came of that, either.

Since the first of the year, 163 persons have lost their lives in commercial airline crashes in the U.S., and two of the planes are believed to have carried bombs. This doesn't bear out official reaction that it couldn't happen again. Now, Representative JAMES G. O'HARA, Democrat, of Michigan, has introduced a measure in the House which would require examination of all articles except mail taken aboard commercial passenger aircraft.

The Times-Call still feels this is the only solution to the problem if people are to be protected against murder in the sky.

The baggage inspection time element could be overcome by requiring baggage to be checked at a certain hour before flights. If it isn't, it could follow on another plane.

Actually there seems to be no valid reason for any more delay in an inspection law. It is hoped the Colorado congressional delegation will get behind Congressman O'HARA's bill. They will if you let them know how you feel. You, your loved ones and your friends are entitled to this protection from wanton killers in the sky.

Is This Trip Necessary?

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Gerald W. Johnson as it appeared in the New Republic, January 25, 1960, issue:

IS THIS TRIP NECESSARY?

As far as is apparent to a superficial observer with no inside information, President Eisenhower's odyssey through the Eastern Hemisphere did no great harm, and in India may have done some good; which is ample reason for heaving a sigh of relief.

But now he is projecting another jaunt, this one through Brazil, Argentina, Chile, and Uruguay, and on the face of the facts this one involves an even greater risk. It is known that there are Communist elements of considerable strength in Brazil and Chile, and a Peronista element in Argentina. All these are hostile to the United States, and also to their own governments. All would welcome a chance to insult the President of the United States; and if by doing so they can also embarrass their own governments, so much the better, from their standpoint.

It is a reasonable assumption, then, that during the President's visit they will make every effort to accomplish this double object.

Some of them are reckless fanatics, and others are wily and resourceful intriguers; so to guard against an unpleasant incident the governments concerned must take extraordinary precautions which will probably involve considerable expense, not to mention the risk to their security officers and ordinary police. In short, the visit of President Eisenhower seems likely to impose upon the host governments a burden heavier than that imposed upon the Government of the United States by the visit of Mr. Khrushchev; and ours was no light one.

The question then arises, what gain is to be expected from this trip that will overcompensate the risk to the dignty of the United States and of the nations that will be his hosts? The results of Mr. NIXON's reckless disregard of sober advice not to visit Lima and Caracas certainly were no improvement in inter-American relations. Aside from his own danger, he almost got the Foreign Minister of Venezuela lynched, which will not be forgotten for a long time by Venezuelans.

But, after all, it is the President, not the Vice President, who is the custodian of the dignity of the Nation, so an insult to him would be 10 times worse than a comparable insult to any other official. No President has a right to assume that risk for any other than compelling reasons of state. Partisan political advantage certainly cannot pass for any such reason.

Hope of materially improving international relations is a reason of state, one that justified the invitation to Mr. Khrushchev, and that will justify the President's attendance at a summit conference wherever it may be held. But that the hope is strong enough to justify a trip through South America, after the mess that NIXON made there, is debatable, to put it mildly. For one thing, it is 7 years late. Mr. Eisenhower is an outgoing, not an incoming, President, and any personal relations he may establish with the leaders of South America will last for only 11 months at best.

For the rest, the American public is not aware of any matter at issue between us and the South American countries that cannot be handled satisfactorily through the usual diplomatic channels without the personal intervention of the President. If a crisis exists, it has been remarkably well concealed; nor have we been informed that the diplomatic machinery has stalled, as it has with respect to Russia.

But in the absence of some such reason one is driven back to the unpleasant explanation that the real object of this expedition is a hoped-for domestic political effect. Something is needed to obliterate, or at least to blur the voters' recollection of the disastrous Nixon tour; and what could do that as effectively as a triumphal tour by the President through the same continent?

That explanation is unpleasant because it would imply that the Eisenhower visit, obviously risky, is being undertaken in the interest of the Republican Party rather than in the interest of the United States. That would be politics of such reckless irresponsibility that to characterize it words fail. It is idle to point out that the South Americans invited the visit. So they did; but any friendly country would issue an invitation on the merest hint that an invitation is desired; and none would have been issued had the authorities involved been informed that Mr. Eisenhower didn't want to go.

There is hardly a doubt that personally he would be glad to get out of it. Such a trip is no fun, it is an arduous ordeal for the President. The galling suspicion is that once again he has been victimized by political advisers who are more smart than intelligent, and who have emphasized his duty to the party so strongly that they have momentarily blinded him to his superior duty to the country and the world.

The High Cost of Drugs

EXTENSION OF REMARKS
OF

HON. JOHN D. DINGELL

OF MICHIGAN

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 26, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the RECORD a thoughtful article appearing in the December 1959 Minutes by the Farm Bureau, giving some reasons why fair trade is not in the public interest.

Over and above this the article entitled "The High Cost of Drugs" in a very interesting way equates how high drug prices have been brought about by the practices within the drug manufacturing industry and how the small pharmacist is now being forced to pay the freight for high industry profits.

Unfortunately, the little corner druggist is being led like a lamb to the slaughter in support of fair trade, H.R. 1253, which will not help him but which is aimed at really preserving high drug profits as set forth in the article.

The article follows:

WHAT YOU CAN DO ABOUT THE HIGH COST OF DRUGS

(By William Meek)

A Columbus, Ohio, pharmacist recently remodeled his store, taking out a profitable gift department in order to double the size of his prescription center. He made the change reluctantly.

"I was making more money on gifts than I'll make on prescriptions," he explained, "but we had to have more shelf space. If the drug companies keep coming out with new products, we'll have to take out the soda fountain next."

He was only half joking. Ten years ago his store stocked some 400 drug items. Now there are nearly 2,000 different drug products on his shelves, and more are added nearly every week.

This inventory problem, shared in some degree by every pharmacist in the country, is one reason the average cost of prescriptions has gone up 75 percent since 1949. It costs money to stock so many products, and of course the cost is passed along to the customers.

Do you benefit from the large inventory you're paying for? It seems doubtful. According to Dr. Claude Forkner, professor of clinical medicine at Cornell University, there are only 3 or 4 useful sulfonamide preparations but 200 different sulfonamide products; 3 or 4 good antihistamine drugs and 130 antihistamine products; 8 to 10 necessary hematinic drugs (used to treat anemia) and 300 preparations on the market.

Drug manufacturers put out 370 new prescription drugs in 1958, 400 in 1957, and 401 in 1956. In an article for the Cooperative News Service, one of a series on the high cost of drugs, Author David W. Angevine pointed out that few of the new products introduced each year contain previously unknown substances. "Nearly all of them," he wrote, "are old drugs in new combinations, in more potent or less potent forms, or in, say, ampules instead of tablets."

Why do drugmakers put out so many products? Obviously, because it's profitable. Also, because they have competitors.

According to Dr. Louis Lasagna, coeditor of the Journal of Chronic Diseases and professor of medicine and pharmacology at Johns Hopkins University. "Drug houses feel they have to come out with new products—or new combinations and forms of old products—to make it appear they are on their toes. When a competitor comes out with antibiotics plus vitamins in one capsule, the conservative firm may think this is a lot of baloney but still may be impelled to follow suit in a fight to retain its share of the market."

In this no-holds-barred fight, drug manufacturers spent $300 million last year promoting their prescription drugs. A recent survey showed that the average physician gets 4,900 drug ads in the mail a year—13 a day. In addition, each company has detail men who visit doctors regularly to explain the benefits of their products. Then there are special activities for doctors, sponsored by drug companies and ranging from golf tournaments, fishing contests, and sport smokers to free trips and entertainment.

This continuous promotion work produces a continuous chain reaction. Doctors, who used to prescribe drugs in certain combinations, now prescribe products.[1] If a new product seems to be better for a certain ailment than yesterday's, some doctors prescribe it and drug stores have to stock it. Pharmacists, who used to compound most prescriptions from basic drugs, now take pills or capsules out of big bottles and put them into little bottles. And the number of big bottles on their shelves grows and grows. The inevitable result: high prices at the prescription counter.

Strangely, the fierce competition among drug makers seems to have little effect on prices. The Senate antitrust subcommittee has just begun hearings into this matter, trying to find if drug prices are administered by tacit mutual consent of the various companies. The subcommittee is particularly interested in the prices of antibiotics. Prices of patented broad-spectrum antibiotics have remained practically unchanged since 1951, while unpatented antibiotics such as penicillin have gone down in price steadily as production has increased.

Another factor influencing drug prices is State fair trade legislation, which enables manufacturers to set fixed prices for their products. A survey made by the U.S. Department of Justice in 1956 disclosed that prices of prescriptions in Washington, D.C., which has no fair trade law, were an average 17 percent lower than the established fair trade prices in other areas. A bill to legalize nationwide price fixing at the retail level was introduced in the House during the last session of Congress. A principal supporter of the bill (H.R. 1253) is the National Association of Retail Druggists.

With so many pressures forcing the cost of drugs up, the lone consumer stands little chance of stemming the tide. Yet there are several things you can do.

First, when your doctor writes a prescription for you, ask him to specify the generic or scientific name of the drug rather than the name of a product. If a product name appears on a prescription, the pharmacist must supply that product; if no product name is used, you may have a choice of several identical products at different prices. Also, you can price the prescription at more than one store. Some stores carry their own brands at somewhat lower prices.

On nonprescription items, choose the lowest priced brand marked "USP." These letters on the label mean the product meets the standard set forth in the U.S. Pharmacopoeia and is as good as any other product of its kind, regardless of price or brand name.

---

[1] According to James Cook, medical writer for the New York Post, prescription surveys show that 89 percent of the doctors prescribe drugs by brand name rather than scientific name.

If there's a group health organization in your community, find out more about it. Several million persons belong to such groups and many not only get better medical care than is generally available but pay less for prescriptions, too. For example, the pharmaceutical center operated by Group Health Cooperative in Seattle serves its members for an average of $2 a year per person for prescriptions.

In some cities, nonprofit drugstores save money for their members by paying patronage refunds at the end of the year. In Maryland, several consumer-owned drugstores save members additional money without breaking the fair trade law. A certain product may come in 100-capsule bottles. If a prescription calls for 25 capsules, the co-op will charge one-fourth of the fair trade price for 100 but not charge the usual professional fee for transferring the capsules to a smaller bottle and typing the label.

Last, but perhaps first in importance, you can write your Congressman. Drug manufacturers have hit a bonanza in antibiotics ($330 million last year, with pretax profits as high as 32 cents on the dollar). Drug lobbyists will be fighting hard for fair trade and the freedom to keep the profits coming. Your voice of protest would help immeasurably to hold the line against soaring drug prices. Enough protest might spark legislation that would cut down on the high-pressure promotion, reduce the annual output of unnecessary products, and even help that Columbus pharmacist keep his soda fountain.

Interest Rate

EXTENSION OF REMARKS
OF
HON. THOMAS B. CURTIS
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. CURTIS of Missouri. Mr. Speaker, I wish to call to the attention of my colleagues an editorial which appeared in the Wall Street Journal of January 21, 1960, entitled "Collapsing Ceiling."

The editorial follows:

COLLAPSING CEILING

Some of the House Democrats are giving a good illustration of how to avoid facts while appearing to face them.

The facts in this case concern the arbitrary 4¼ percent interest rate ceiling on new Government securities maturing in more than 5 years. The facts are incontrovertible; here is how the administration's new economic report expresses them: This statutory limitation made Treasury financing more costly in its immediate effect, and possibly also in its longer term effect, than it might otherwise have been. Still more serious, the interest rate limitation impaired the ability of the Federal Government to manage its debt with a minimum potential inflationary impact.

Most politicians profess to be against inflation, and certainly many Democratic politicians, in particular, profess to be against higher Treasury financing costs. Yet instead of drawing the obvious conclusion that the ceiling must go, a conclusion the administration has been urging on them, these politicians are toying with all sorts of gimmicks.

One is advance refunding, by which holders could exchange unmatured bonds for new ones even if the new ones bore an interest rate higher than the ceiling. The Treasury calls this an attempt to evade the statutory limitation when what is needed is legislation to end it. Another proposed device would be to let not more than 2 percent of the public debt be offered in new bonds exempt from the ceiling. Another evasion, it would seem, besides being not particularly helpful.

We suppose all this should nonetheless be welcomed as evidence of a willingness to compromise. Except that there is danger in compromising with these facts. When a ceiling is plainly collapsing, sensible men do not wait to remove it until it knocks them down.

Communism Versus Capitalism

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Roscoe Drummond as it appeared in the New York Herald Tribune of January 24, 1960:

COMMUNISM VERSUS CAPITALISM

(By Roscoe Drummond)

WASHINGTON.—What is this "contest" between the Soviet Union and the United States we all talk about?

We know we are in it. We know it is deadly serious. But aren't we in a position of playing a form of basketball on a football field without knowing what makes a score? Nothing could be more confusing, particularly to those in the grandstand—the nations and peoples uncommitted and uncertain of their future—than not being able to see what the contest is about.

Premier Khrushchev says that the Soviet Union will shortly show that it can exceed the standard of living of the United States and that as the result other countries will come to choose socialism over capitalism as their way of life.

If that is the contest—and there will be many who see it that way—then the first thing to bear in mind is that Soviet communism is not socialism because it is dictatorship and that American capitalism is not what millions of people who have never been to the United States think it is. The tendency is to picture American capitalism in the image of the reformer's indictment of a century ago—the image of the masses of workers being ground down with long hours at low pay for the benefit of the few—instead of viewing American capitalism as it has actually evolved.

U.S. officials and others, whose duty it is to expound the United States abroad, have often striven for some new phrase to replace capitalism since so many ideas non-Americans have about capitalism are outdated. But what is more important than new terms is new insight into what life is really like under American capitalism and what our kind of economy, call it what you will, actually does for a whole people.

If Mr. Khrushchev wants the world to choose between communism and capitalism, here are some of the facts that show that the benefits of American capitalism are not for the few. They are taken from the report of the President's Council of Economic Advisers which went to Congress last week.

Real income per capita has increased by nearly 20 percent since 1946.

Housing has been increased by 15 million private nonfarm dwelling units since 1946; some 60 percent of all nonfarm dwelling units are owned by occupant families.

The number of bachelor's and first professional academic degrees conferred annually trebled from 1946 to 1959.

In the past decade more than 33,000 doctorates have been conferred, compared with some 27,000 in the 1930's and about 31,000 in the 1940's.

About 58 million persons—87 percent of all those in paid employment—are now covered by the Federal Government's old-age, survivors and disability insurance system.

More than 19 million persons are covered by privately financed pension plans.

The Federal-State unemployment compensation system, which provides a defense against loss of income in periods of economic adversity, now protects nearly 65 percent of all persons on nonfarm payrolls.

This is modern capitalism at work, and it has evolved so radically that it bears little relationship to the exploitive capitalism of the 19th century.

But should we accept Mr. Khrushchev's definition of the contest—that the world must choose between communism and capitalism?

Let's be clear that this is not what we are asking the uncommitted world to choose between. We are inviting people to compare two kinds of societies and choose whether they feel they must develop their resources under an economic and political dictatorship or can develop their resources in an environment of economic and political freedom.

We are not inviting the world to choose American capitalism, although we like it pretty well ourselves. We are inviting the world to choose liberty and to develop an economy as each wishes in an environment of liberty.

As I See It

SPEECH
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. PATMAN. Mr. Speaker, permission having been granted, I am inserting herewith two articles by Mr. E. B. Germany, president of the Lone Star Steel Co., which is located in the district that I have the honor to represent. Eugene Germany is one of our finest and best citizens; he has made the Lone Star Steel Co. a success. It means a lot to the Gulf Southwest and the entire Nation. Without Eugene Germany we would not have this wonderful plant along with the benefits and opportunities it bring to the people of our area.

Mr. Germany edits a column each week in 18 newspapers in the area of Lone Star Steel's plant under the title, "The Way I See It." Articles which appeared under this heading December 17, 1959, and December 23, 1959, were handed to me today by a prominent constituent with the request that they be inserted in the CONGRESSIONAL RECORD. They are as follows:

THE DEATH OF MR. FREEDOM

(By E. B. Germany, president, Lone Star Steel Co., Dallas, Tex.)

PART I

Mr. Freedom was born on July 4, 1776. His birth certificate was the Declaration of

Independence. From birth, he often struggled against great odds, and on several occasions it seemed he might not survive vicious attacks from within and without his country.

Mr. Freedom's first brush with adversity of importance occurred at Valley Forge, where as a mere babe, his blood stained the white snows. Only the superhuman efforts of a small, poorly equipped, half-frozen band of patriots led by the immortal George Washington staved off the ravages of cold and hunger to keep alive the faint beat of Mr. Freedom's heart. With the coming of spring, Mr. Freedom grew stronger, and it was not long until he was able to walk proudly, head erect, shoulders back, a brawling young giant capable of holding his own in any kind of fight.

As the years wore on, violence came to Mr. Freedom with increasing intensity. He fought valiantly during the great conflict between the States, and his blood drenched the battlefields of Bull Run, Shiloh, Missionary Ridge, the Wilderness, Gettysburg, and finally, it was at Appomattox courthouse that there was reached a meeting of minds between two of Mr. Freedom's stanchest supporters, U. S. Grant and Robert E. Lee, and in this settlement of a bitter feud, Mr. Freedom walked from the field of conquest and defense with honor, dignity and respect.

The Spanish-American War left its mark upon the face of this scarred veteran, but here as before, a great American—Teddy Roosevelt—threw the weight of his daring and courage into the melee, and at the end, Mr. Freedom was victorious.

Mr. Freedom's brilliant career was less than a score of years into the 1900's when the first of two great worldwide conflicts drew him into action that produced Chateau Thierry, Battle of the Marne, the Argonne Forest, and others. Afoot, Mr. Freedom was a mud-sloshing doughboy that recognized no man as his peer. In the air, he was a spectacular daredevil cutting and slashing at the vaunted Knights of Baron von Richthofen, and afloat, not even the salt-crusted Briton could match the fury of his attack against the U-boats and the mighty dreadnaughts of the Imperial German Navy. At the end, at Versailles, Mr. Freedom stood as proudly as ever, glorious in victory, gracious and forgiving to them who fought him.

The second worldwide conflagration not only drew Mr. Freedom into action, but virtually disarmed him at one and the same time. It was on that fateful December morning in 1941, that Mr. Freedom was knocked to his knees by a sneak attack at Pearl Harbor, and then for months on end, he reeled like a drunken sailor as he struggled to rise against a relentless, savage, and capable enemy. Mr. Freedom fought valiantly around the globe. His blood seeped the sands at Salerno, and those in his company fell by the thousands at Bataan, Guadalcanal, Guam, in the jungles of India, high over the Hump, at Dunkirk, Battle of the Bulge. His men knew the fatal scream of a kamikaze pilot riding his own death bomb into eternity, and Mr. Freedom's boys knew all of the horror, the cruelty, the suffering of full-blown global warfare. And yet—at the end, Mr. Freedom stood erectly on the deck of the U.S.S. *Missouri* and watched war lords of the East hand over their swords.

In Germany, he saw the forces of Nazi aggression disintegrate before the onslaught of his men.

Mr Freedom was respected the world over for his generosity and sympathy toward those not endowed with the rich heritage that had been his since 1776. For more than 180 years, Mr. Freedom had endured against all types of slavery, against the ideological "isms" that lead away from the dignity of man and to the dungeons of captivity.

Mr. Freedom helped build the greatest civilization known to mankind, and it was largely through his presence that his country was able to develop an economy unsurpassed anywhere. Under his watchful eye, free enterprise gave Mr. Freedom's countrymen the righest standard of living ever enjoyed by any nation at any time. Under him, men had freedom of spech, the right to worship as they pleased, the right to own personal property, the right to work. Men had a voice in the making of rules and regulations under which they would share Mr. Fredom's way of life, and when some erred, even they were guaranteed the right of trial by jury.

In the light of all these accomplishments, the death of Mr. Freedom in a relatively insignificant Minnesota town is the more impressive for its lack of the grand setting. In no global war was Mr. Fredom slain, nor was there a volley of musketry, nor heavy cannonading, nor fiery aerial dogfight to dress the stage for Mr. Freedom's demise. He went to his death without warning and without fanfare. His death warrant was the scratch of pen, his requiem the sound of armed might confiscating private property with gestapo tactics instead of upholding the laws Mr. Freedom promulgated and had protected since 1776.

The deceased leaves upward of 200 million relatives who live in abject fear lest they, too, be sacrificed without warning upon the altar of politics, not policy.

Next: part II, White Cross at Albert Lea, or Murderer in Minnesota.

PART II

As this is written, three Federal judges study the events leading to the death of Mr. Freedom. Here are the salient facts in the case:

On September 1, 1959, a labor contract between the Wilson Packing Co. and the United Packinghouse Workers terminated. The workers continued to work at the Albert Lea, Minn., plant without a contract. Negotiations between the company and the union were broken off on October 29, 1959, when the union members refused to work a 9-hour day. After a few days, Wilson notified the strikers that they would be replaced if they did not return to their jobs. On November 1, 1959, the plant resumed operations with nonunion employees. Violence occurred, and the Governor of Minnesota sent in the National Guard to restore order. The 200 National Guardsmen accomplished this result by simply shutting down the plant. Wilson went to court in an effort to prohibit continued seizure of the plant by the Governor and the National Guard.

It is only coincidental that the name of the Governor who issued the order is Freeman, that the name of the county in which the Wilson plant is located is Freeborn. It is not a coincidence that the name of the victim is Mr. Freedom. In padlocking the Wilson plant, Mr. Freedom was executed through loss of his right to own property, his right to work, and his right to protection from the lawless. Free enterprise was sacrificed on the altar of politics—not policy, not the law of the land, not the Constitution of the United States of America, which had been Mr. Freedom's birth certificate for close on to two centuries.

After the guardsmen, armed with fixed bayonets and guns, locked the plant gates, union strikers were quoted as saying "it makes a beautiful picket line, doesn't it?"

In considering this flagrant disregard for the constitutional rights of the American worker and an American business, it should be emphasized that the merits of the strike are of no consequence. The union acted within its right to strike. The company acted within its right to operate the plant with replacements. To this point, there can be no criticism of either union or plant. Beyond this point, however, regard for law and order broke down, and given the stamp of approval by the Governor of Minnesota, armed soldiers moved in to accomplish the aims and objectives of lawbreakers who should have been arrested instead of supported.

What could have been Governor Freeman's thinking when he padlocked the Wilson plant? He simply said he did it to prevent bloodshed. What law did Wilson violate to warrant punishment? Will the Governor say that to prevent bloodshed we should knuckle under to the Communists? Will the Governor say that to prevent bank holdups, in which people may be wounded or killed, we should close our banks? Isn't it true, Governor, that you accede to the thought that if one man throws a rock into a store window he doesn't like, that man should be arrested and punished, but that if a mob of 300 throws rocks in violation of the law, they should not be arrested simply because they constitute a large group? Did you, Governor, think about politics instead of policy when you closed this plant? Did you think about union votes instead of the rights of the many individuals who chose to work and to earn an honest day's wages in jobs that were quit by the strikers?

Perhaps Governor Freeman didn't know about a Supreme Court ruling down a few days ago. In this case, Quaker State Refining Co. closed its plant after a labor contract ran out without a new agreement being reached. The union charged the Quaker State company with an illegal lockout. The Labor Board held for the union, and now, the Supreme Court upholds the union.

What about Albert Lea, Minn., a relatively unknown little city of 13,500 population, where an American business firm sought to operate, even as the Labor Board and the Supreme Court held in the Quaker State case, after a contract ran out?

Is the union going to charge Wilson Packing Co. with an illegal lockout or is Governor Freeman going to be charged or will the National Guard become the defendant? Is a Governor of any State acting within his lawful rights when he uses soldiers to quell a riot if stopping the violence means winking at the violators while eliminating the constitutional rights of others?

Why, Governor Freeman, didn't you padlock those who threw the rocks? Why did you penalize those who got hit by the rocks and who violated no law? Why, Governor, did you permit the death of Mr. Freedom on the sacrificial cross of politics instead of standing for principal and policy and thereby enhancing Mr. Freedom's chances for being with us for a good many years to come?

I do not believe that the working men and women of this great country of ours support armed intervention in matters of this kind. I think they feel that free bargaining is the only answer to maintaining the free enterprise system. If on ocacsions, emotions run high and some violence occurs, there are legal ways of handling those who run afoul of the law. But soldiers to close a plant and deprive men of the right to work just because some union members got mad and refused to follow the "No Violence" orders of their leaders, never.

That's the way I see it.

The New President of NAREB

EXTENSION OF REMARKS

OF

HON. WILLIAM T. CAHILL

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 26, 1960

Mr. CAHILL. Mr. Speaker, today Mr. C. Armel Nutter is being installed as the

president of the National Association of Real Estate Boards to serve during the year 1960.

I am proud that Mr. Nutter is a resident of the State of New Jersey and an outstanding member of the Camden County and the New Jersey State board of realtors. I have personally known Mr. Nutter for the past 20 years and can understand why he was selected to lead approximately 66,000 realtors of the United States of America. He has been a leader in his field in New Jersey and throughout the country for the past quarter of a century. A glance at his background indicates the firm foundation upon which his ultimate success was established.

He was born in Milford, Del., November 13, 1900. He graduated from the University of Delaware in 1923 and attended Temple University Law School and South Jersey Law School where he specialized in real estate law. He was president of the Camden Real Estate Board in 1936; president of the New Jersey Association of Realtors in 1941; regional vice president of the Mortgage Bankers Association of America in 1947; president of the Philadelphia Mortgage Bankers Association in 1949, and international president of the Society of Residential Appraisers in 1959. During the past 25 years he also served on every important committee of the Camden County Board of Realtors, New Jersey Association of Real Estate Boards, Mortgage Bankers Association of America, Philadelphia Mortgage Bankers Association and Society of Residential Appraisers. He has served in almost every elected capacity on these various real estate boards. In addition to these activities he found time in 1953 to act as chairman of the annual drive for the benefit of Cooper Hospital in Camden, N.J., and to serve as president of the board of trustees of the Moorestown Methodist Church in 1956.

Mr. Nutter is a 32d degree Mason, being a member of the Excelsior Consistory of Collingswood, N.J. He is likewise a member of the Crescent Temple of Trenton, N.J., and the Union League of Philadelphia, Pa.

Mr. Nutter is married and resides with his family in Moorestown, N.J.

His achievement in being elected president of the National Association of Real Estate Boards is evidence of his ability, industry and enthusiasm. It is also a reflection of the esteem in which he is held by his fellow realtors throughout the country and demonstrates the personality, reputation and character of the man. He has brought honor, not only to himself and his family, but to his native State. The National Association of Real Estate Boards is to be commended for their selection of such an outstanding president.

On behalf of all the residents of the first district of New Jersey, I wish him continued success in his new office.

The Late Joe Pearson

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. ANFUSO. Mr. Speaker, the Williamsburg community, which is a part of my congressional district in Brooklyn, is a much poorer community now than it was just a few short weeks ago. It has lost an able leader and a distinguished son, Joe Pearson, a humanitarian and charity worker of the first order.

I had known Joe Pearson for many years, was associated with him intimately in many activities, and particularly in the Free Kosher Kitchen which he established during the depression years to help the poor and the unemployed. He has kept that institution going for nearly 3 decades and it has received wide recognition for its charitable work among the poor and the needy.

During the past few years, Joe Pearson and I were the guests of honor at the annual banquet of the institution which attracted many people from all over the city. This was our way of raising funds for the upkeep of the institution and its activities. In recent weeks, Joe Pearson was busy formulating plans for the 29th annual banquet of the Free Kosher Kitchen, which was scheduled for January 31. Again this year, as in the past, Joe and I were to be the guests of honor.

Now Joe is dead. But those of us who knew him so well and worked with him so closely are going ahead with the plans, nevertheless, because we believe that this is the way he would have wanted it: to maintain his favorite charitable institution.

May this brief words be a tribute to the memory of this great humanitarian, this simple soul who heard the cry of the needy and always responded with deeds and with help. He leaves a wonderful name behind in our community, and a great void in the hearts of many people. May this serve as a consolation to his wife and children.

Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD an article by Harvey Rosenfeld, published in a recent issue of the Williamsburg News, a fine community newspaper:

ABOUT IMPORTANT PEOPLE

(By Harvey Rosenfeld)

"A feeling heart—a helping hand
Does its part, that hope and sunshine again ascend.
A generous soul, a noble mind
Will hear a brother's cry and peace will find
When wounds are healed and hunger stilled,
When hopeless life with faith and love once more filled."

The above poetry was written by Joe Pearson when he founded the Free Kosher Kitchen, 218 South First Street, about 30 years ago. Early last week this minstrel of charity died in his sleep at the age of 63.

In September, Joe Pearson had been busy formulating plans for the 29th annual banquet of the kitchen which was to be held at the Grand Paradise in late January. Congressman VICTOR L. ANFUSO, local Representative in Washington, who was to gain fame for his trip to Russia, and "Big Joe" Rosenfeld, Jr., philanthropist and author, were to be guests of honor for the third straight year.

But in November, ill health forced Joe Pearson to postpone the banquet until early spring. To help start the campaign for the nonprofit and nonsectarian kitchen we went with Attorney Sid Katz to the "Happiness Exchange" program on WABC radio.

The "Happiness Exchange" program is under the care of "Big Joe" Rosenfeld, Jr., who for many years has been the voice in the cold of night that has brought relief to the worried and distressed. From midnight to 4 a.m., he speaks so that when one says "Good morning," they will not be empty words. When we interviewed "Big Joe" it was already 3:30 a.m. But many listeners were to pledge their contributions for the kitchen.

Joe Pearson, however, needed observation and treatment. Those close to him said it was but minor—nothing to worry about. But Joe Pearson was afraid. True, it was only the burning out of a wart on the bladder, but the fear was there.

Yet, there was more devotion than fear. He said that if he went for treatment he would have to stop his charitable work for a while. To cease helping he could not perceive nor desire.

Nevertheless, he was scheduled to go to Long Island College Hospital for observation last Tuesday. That he was not eager was sure; that he was worried was definite. On Tuesday morning at 8 a.m., his wife, Tillie, tried to wake him from his sleep. But it was in vain. His soul had gone up to heaven and had never come down again. Joe Pearson had given to charity of his time, and health, and now had given his life.

The Friday morning before, we had spoken to Joe Pearson for the last time. Though worried and sick, he still was most concerned about us writing a column about the spring kitchen banquet. But now all that remains left of that column is an obituary.

Joe Pearson was all things to all men. In the Democratic organization of the 14th assembly district he was recognized as an unknown but important cog; several times he had been selected as an alternate delegate to presidential conventions. But above all, Joe Pearson was a humanitarian.

The free kitchen was founded during the depression; the many that are poor are still waiting for it to end. Weekly, he supplied both cooked and uncooked food for some 70 families. For Passover, he help many more with wine and matzos.

Yet Joe Pearson realized that man does not live on bread alone; the emotionally unstable need more than food. Thus the kitchen, recognized by the department of welfare, has saved families whose cases were rejected by the latter. Yearly, Joe Pearson helped 25 youths in trouble with the law; reinstated 50 families on the welfare's register; pleaded for the release of many from mental institutions; made sure that the newly arrived immigrant would have less problems to cope with.

This does not include the many favors that he did for people. We will always remain grateful when almost 3½ years ago he promised to send us to the Williamsburg

News. To a 17-year-old it meant a lot that August 20.

Joe Pearson's funeral was a simple one; for Joe Pearson was a simple man. The neighbors of South First Street stopped their work to watch. People leaned out of windows or out of factory windows to observe. Puerto Rican, Negro, Chinese, or Jew—all respected and loved Joe Pearson. A more than capacity crowd fitted into the small synagogue, a synagogue which had been run by Joe Pearson, to hear brief eulogies. Even those who knew no Jewish could have told you the eulogies.

Joe Pearson's legacy to his family is charity. The pile of papers and bills in his living room are reminders that the poor still must eat. Russian-born Joe Pearson, a father of four and grandfather of five, has left the duty to his devoted wife, Tillie, and a 28-year-old son, Ira. It is not any easy duty to fulfill.

And Joe Pearson was no more, for the Lord has taken him.

Port Authority's Failure To Plan Has Created Transportation Crisis

EXTENSION OF REMARKS
OF
HON. JAMES C. AUCHINCLOSS
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. AUCHINCLOSS. Mr. Speaker, I am very pleased to have the opportunity to insert in the Appendix of the CONGRESSIONAL RECORD an editorial appearing in the Asbury Park Press for Sunday, January 17, 1960, entitled "Port Authority's Failure To Plan Has Created Transportation Crisis." This is a most enlightening editorial and I hope the Members of Congress will read it thoughtfully. The growth and power of the various authorities like the Port of New York Authority is something which should have the careful consideration of the Congress to the end that if necessary the public's rights and conveniences should be protected and the operations of the port authority should be confined to the prerogatives given to it under the law.

The editorial follows:

PORT AUTHORITY'S FAILURE TO PLAN HAS CREATED TRANSPORTATION CRISIS

Assemblyman William V. Musto of Hudson County will receive increasing support for his suggestion that a commission investigate the practices of the Port of New York Authority. Even among those who recognize the authority's many achievements there is a growing realization that its lack of vision and planning may have created problems as acute as those it was assigned to solve.

The statute under which New Jersey entered into a compact with New York creating the Port of New York Authority calls upon it to develop "terminal, transportation, and other facilities of commerce." And it specifically provides for a "middle belt line" and other improvements to railroads operating in and terminating in the port district, an area that extends south into Monmouth County. Yet over a period of some 40 years the Port of New York Authority has permitted vital railroad service to deteriorate and it has, indeed, financed competitive facilities that threaten to abolish rail service.

The result of this poor planning has been to thrust into New York City thousands more automobiles daily that it cannot accommodate, create intolerable congestion on highways and city streets, promote an acute parking problem, and force a curtailment of the railroad service that is now generally recognized as the only practical solution to the need for mass transportation in a crowded metropolitan area.

The formula followed by the port authority was as simple as it was ill-considered. It built a maze of bridges, tunnels, and other facilities to accommodate private automobiles and buses and thereby lured millions to drive their cars into the crowded streets and over-crowded parking lots of New York City. This unwise diversion of travel from railroads to automobiles cumulatively created two problems that now cry for solution. The first was to bring into the heart of the metropolitan zone more automobiles than it can accommodate. And the second was to rob railroads of passengers to the point where they were forced to reduce service and facilities that now must be restored if automobile traffic is not to strangle the metropolitan area.

Every student of transportation now agrees on the necessary remedy. Because New York City has no room for the thousands of automobiles that are needed to deliver workers, shoppers, and other daily visitors, an integrated system of mass transportation must be created. The railroads and subways once offered such a system that could have been expanded as the need arose. But by subsidizing automobile competition the port authority has all but wrecked the mass transportation system that is now so desperately needed.

In New York City traffic congestion is so critical that Robert Moses recommends a midtown elevated highway from the Hudson to the East Rivers. Other experts would increase tolls at highway bridges and tunnels built by the port authority to keep traffic out of New York. Certainly no one contemplates an additional facility for dumping traffic into the city, for the port authority has already gone much too far in this direction.

Had it not gone overboard on facilities for automobile traffic, the port authority could have improved and coordinated railroad and subway service in the metropolitan zone. It should have built a gigantic parking lot in the meadows west of Jersey City and tied in with a loop subway line to deliver passengers to all points in New York City, from the Bronx to Coney Island. It should have helped all railroads carry passengers under the Hudson River either through individual tunnels or by transfer to the loop subway. In other words, the port authority, as the enabling statute required, should have developed mass transportation as well as automobile travel into New York City, for only thus can the transportation problem be solved and strangling traffic congestion in New York relieved.

The port authority was not established as a profit-making venture, but it followed a get-rich-quick policy by promoting automobile travel and collecting heavy tolls thereon while it thus robbed the railroads and the subways such as the Hudson tubes of patronage and forced them into virtual liquidation of their service. Now that it is obvious that New York City hasn't sufficient room for the automobiles the port authority's facilities dump into it daily, the need for the mass transportation media, wrecked by the authority's program, has caused a crisis that will cost millions to remedy.

Governors, legislators, and laymen have assailed the autocratic power wielded by the port authority and the arrogant manner in which it has pursued its poorly planned program. Now the validity of their criticism is revealed. Because it was neither representative of nor responsive to the interests of the general public, it has created a transportation problem even more massive than that it was assigned to solve. By subsidizing automobile travel it has all but wrecked the metropolitan area's mass transportation system. We need an authority to rehabilitate the mass transportation that the port authority program has so severely damaged.

Ukrainian National Republic

SPEECH
OF
HON. ALEXANDER PIRNIE
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. PIRNIE. Mr. Speaker, on January 22, 42 years ago, the people of the Ukraine established the free and independent Ukrainian National Republic. Since that time there has been little opportunity for rejoicing over the fact of national determination for the despotic rule of the Kremlin has destroyed all semblance of independence.

However, this oppressive yoke of Soviet tyranny has not destroyed the will to be free nor suppressed the ancient yearnings for independence of the Ukrainian people. Bloody massacres, yearly purges, and deportations to Siberia lend mute testimony to the manner in which the Soviets have attempted to stamp out this ferment of freedom.

All people who prize liberty are aware of the sacrifices which make it possible and keep it intact. The Ukrainians, however, in their heart and/or wherever in the world they may reside, have lost none of this awareness. The more hopeless their cause has been, the more fiercely determined they have become to restore freedom to their homeland. Their love of liberty for all men has led them to fight for this Nation and for other nations who have sought freedom. Their fight has been continuous and unrelenting. In East Germany, in the slave-labor camps of Siberia and central Asia, Ukrainians joined other non-Russian patriots in attempting to rid themselves of the Communist yoke. Most recently Ukrainian men of the Red army sided with the valiant Hungarians in Budapest to write one of freedom's most glorious chapters.

This proud land, an independent and free state from the 9th to the 14th century and again from the middle of the 17th century to late in the 18th century, has writhed under the oppressor for more than 300 years. Its extensive natural resources have made the Ukraine coveted by its neighbors, and its people have been forced to exploit the fertility of their land to feed their masters. The story of the Ukraine is the first chapter in the long history of Soviet enslavement of free nations.

Although the requirements of a realistic foreign policy prevents the United States from dispatching military forces to drive the Red oppressors from the Ukraine, we can continue to do much

to remind these people that their plight is not forgotten. In so doing we can hope, pray, and plan for the day when the Ukrainian people will be free. We salute a people whose representatives have contributed greatly to American life.

Jessie McGaa Craven: Pioneer Dakota Ranch Woman

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. BERRY. Mr. Speaker, under leave to extend my remarks, I wish to insert in the RECORD an article by South Dakota State Historian Will G. Robinson about Mrs. Jessie Craven of Kadoka, South Dakota, one of the pioneer women whose indomitable spirit helped build western South Dakota.

Mrs. Craven recently celebrated her 95th birthday. Those 95 years, as summarized by Mr. Robinson, tell a story of courage, determination, and dedication to family and friends.

The article follows:

JESSIE MCGAA CRAVEN: PIONEER DAKOTA RANCH WOMAN

Cornelius Augustus Craven was born in Burlington, N.J., in 1850 and in 1874 he came west to see the country. He liked it and soon was hooked up with a trail outfit down in Kansas trailing cattle to Wyoming as an assistant to the cook and then, a complete tenderfoot, rode his first horse. He liked the cattle business and by 1876 had three heifers and a butcher shop in Custer. He adopted the open buckle as his brand and put a bar below it and that is perhaps the oldest brand on cows in South Dakota today. He bought with him Mike Dunn, the Richard LaRoque brand from LaRoque's widow down at Ft. Collins, Colo., and hired William Denver McGaa, the first white boy born in Denver, a coincidence that was to bear a lot of fruit, to help them drive new herd to Cheyenne. Later they ended up with their herd on Hat Creek and Craven bought out Dunn, and Rapid City rather than Cheyenne became his source of supply.

While at Pine Ridge he met Jessie McGaa, the young sister of William Denver who had placed her, after their parents died, with the Ben Claymore's. Jessie knew of Gus Craven from her brother Bill and had a favorable regard for him. She was born on December 8, 1865, her father a Scotchman and her mother, Jennie LaRoque, who was three-fourths French and one-fourth Sioux.

Gus and Jessie were married at Cravens' four-room log cabin on Craven Creek down in Nebraska a few miles south of Pine Ridge on November 11, 1881, when he was 21 and she 16, by Reverend Clark, an Episcopal clergyman. Gus was socially minded and hospitable then, as always, and soon invited two couples for a Sunday dinner. That was the first dinner Jessie ever cooked, but it was a good one and for the next 78 years she has always continued to rise to the demands of any occasion.

Craven established a new ranch not far from the Cheyenne on Indian Draw south of the present Creston, S. Dak., and was living there when the Messiah Craze of 1890–91 found the Indians stronghold down south of Sheep Mountain not over 15 miles as the crow flies to their south. Craven was a scout for General Carr who had his headquarters up on the Cheyenne, and his place was General Miles' field headquarters. The troops who stayed there had the place pretty well torn down, worse than a visitation by the Indians, as finally Jessie had taken the three children, Harriett, John, and Ted and gone to Hermosa for the winter.

They never returned to the ranch on Indian Draw and the next year 1891, Craven became the boss farmer over at Kyle, on the Pine Ridge Reservation. Jessie had no ambition to be a schoolteacher but the Indian service built a school at Kyle and drafted her as its teacher, and it was at the Kyle Ranch that Theodore Roosevelt on a visit to the Pine Ridge, stayed for a week.

Craven had a herd of cattle while at Kyle and soon found it necessary to quit as Government farmer and move to a better location to conduct his ranching. He decided on a point on the south side of White River between Eagle Nest and Craven Creeks 6 miles south of Weta Station on the Milwaikee. It was a long way from any white family, with badlands to the south but albeit a good cow country with good water and grass. Craven constructed a fine big house of cedar where the balance of their family was born. While living at this ranch Jessie also taught the Pass Creek school. Their range was about 12 by 20 miles in extent, east from Bear In Lodge Creek and while it contained lots of badlands, it also had lots of fine grassland and water.

The Cravens had seven children, Harriett, John, Ted, Edith, Isabel, Irene and Ben. At times, as they grew up, she lived with them at Gordon and Merriam, Nebr. and at Kadoka during the school year. Craven prospered on the ranch and in the cattle business and his wife made him a good home and reared the children. He had a fine ranch, thousands of cattle, was a director in two banks and from any standpoint was a big cattleman, an important citizen and a great success in life. But in 1920 when the Federal Reserve bank decided that cattle loans must be liquidated almost overnight, Craven who had suffered some losses from storms in 1905, 1913 and 1918, had great difficulty in weathering the storm that brought most of the cattle industry in the west to its knees when forced sales destroyed its market. He was making a comeback when illness overtook him and it was then that Jessie Craven, the housewife and homemaker, became a cattle woman. Even as Gus Craven lay on his death bed in Rapid City, he was sending Jessie and the boys back to the White River ranch to make hay as he was always conscious of the cattle depended on him for their welfare. He died on August 12, 1929, when 79 years old.

Jessie then 64 had to take up the task of running a large operation in the cattle business, somewhat indebted, but not hopelessly so. Her son John was her righthand man. The girls were all married, as was Ted, and Ben a dentist in Rapid City, as the Cravens, both Gus and Jessie had wanted their children to have good educations.

This left the burden on Jessie when Gus died and while John was a cattleman, he did not inherit his father's administrative talent.

The year 1929 was not a good one to take charge of a somewhat indebted cattle empire, but Jessie, as with her first dinner, when she was 16 years of age, was at 64 no less able to take up the burden and brought the Open Buckle herds and holdings through the difficult times of the 1930's, when most of the West was drought ridden, with poor markets for the stock that could be made ready for market. It was Jessie who made the leases, took care of the finances, made out the income returns, and saw to it that the Open Buckle bills were liquidated. She continued to live at the new ranchhouse, 12 miles northwest of Wamblee, on the Eagle Nest Creek, and built it up, as well as fine dude ranch facilities, at the great spring there in the midst of Badland scenery, and even after the death of John, some years since, continued to make the Open Buckle a sound business outfit.

This last year, at 94 years of age, she went up to the easier living conditions at Kadoka, making a weekly trip of 80 miles, to see that her ranch manager was keeping things in shape. On December 8, 1959, at her home in Kadoka with Ted, named for the famous rough-riding President, who had spent a week with them down at Kyle nearly 70 years ago, and Irene Crane, the youngest daughter in attendance, Jessie celebrated her 94th birthday. People came from all over western South Dakota, Pierre, Rapid City, Merriman, Nebr., and points between to help her celebrate her birthday. Aside from difficulty in hearing, Jessie retains her vitality remarkably, and it is doubtful if anywhere in the West there is a woman whose life matches that of Jessie McGaa Craven as a pioneer, as a mother, as a home-builder, and as a ranch manager.

Presidential Advisory Board Supports Blatnik's Water Pollution Bill

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. BLATNIK. Mr. Speaker, no group in the country is as knowledgeable or familiar with the ever-growing problem of water pollution as the President's Water Pollution Control Advisory Board.

This group, composed of the Nation's leading experts on the subject of water pollution control, met recently in Washington and adopted a number of resolutions urging increased Federal activity in the field of water pollution control, including the strengthening of the enforcement provisions of the Federal Water Pollution Control Act. Of greatest significance, however, is the Board's recommendation that H.R. 3610 be enacted. This bill, Mr. Speaker, is now in conference and will soon be presented to the President. It increases Federal funds for sewage treatment plant construction grants to local communities. Many reports have come to my attention concerning the possibility of a Presidential veto of this measure. It seems inconceivable to me, Mr. Speaker, that the President will veto a measure after his own Advisory Board, established by law to advise him, recommends enactment.

Under leave to revise and extend my remarks in the RECORD, I insert the following resolution adopted last week by the President's Water Pollution Control Advisory Board in support of H.R. 3610:

RESOLUTION 1

The Water Pollution Control Advisory Board, after careful analysis of the construction grant program for municipal waste treatment works to control water pollution, as authorized by section 6 of the Federal Water Pollution Control Act, believes that these grants have significantly stimulated

and increased construction of needed facilities. At the same time there has been no slowdown in the rate of construction of such treatment works financed entirely by non-Federal funds.

The Board further believes to safeguard public health and other legitimate water uses, that additional incentives are needed to meet the backlog of municipal waste treatment facility construction.

In view of the fact that both the Senate and House of Representatives of the Congress of the United States have passed bills authorizing the increase of such construction grant funds and in view of the possibility that a bill to accomplish this result may soon be passed by the Congress and sent to the President for signature, the Board urges the Secretary of Health, Education, and Welfare to support approval of the bill.

Election Campaign Spending

EXTENSION OF REMARKS
OF
HON. THOMAS L. ASHLEY
OF OHIO
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. ASHLEY. Mr. Speaker, late yesterday afternoon the Senate passed a commendable piece of legislation which if agreed to by the House will vastly improve the outmoded and inadequate laws which now control election campaign spending and reporting.

The underlying principles of this legislation are no different than those upon which previous laws regulating Federal elections are based, that is, that there should be certain limitations on the amount of money spent or contributed in election campaigns and, secondly, that such expenditures and all contributions should be reported. The proposed bill is simply an extension of the bases of existing law, enacted in 1925, and is formulated in language realistic to the changes which time has wrought in our economic life. It is generally recognized that the existing law displays serious shortcomings. Some have developed with the pasage of time and are due to changes in the cost of services and the rise of prices. Present allowable campaign spending by candidates for congressional offices as well as current limitations on contributions and expenditures of political committees is understandable in terms of price levels as they existed 35 years ago. Since then economic conditions of the country have changed to such a degree that the limitations in existing law can no longer be considered realistic.

In another regard, one which this bill seeks to cure, the reporting requirements under existing law are at the same time too onerous and not sufficiently specific. Existing law, despite its professed philosophy that corrupt election practices can be cured or prevented by full disclosure of campaign financing, fails to provide for a wide dissemination of reports dealing with campaign contributions and expenditures. Only through the media of the press can the public be informed as to the sources and volume of campaign financing.

Without going laboriously into the technicalities of the proposed legislation, I would merely point out that if enacted there would for the first time be a limit on the amount an individual may contribute for political purposes; it would raise the campaign ceilings in both Houses of Congress and increase the amount which our national political committees may expend to direct presidential campaigns. It contains a provision that campaign financial statements be filed not only with the Secretary of the Senate or the Clerk of the House but also with the clerk of the Federal district court thereby disseminating such information on a local level. In short, this legislation, which I earnestly hope will meet with equal success in the House, will vastly improve the election machinery to provide fuller participation and greater publicity and inhibit other excesses in the legislative process.

In a Tropic Paradise—Frozen Assets

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the January 25, 1960, edition of the New York Times:

DR. CASTRO'S WASTED ASSET

No Latin American revolutionary leader ever came to power with a greater fund of good will in this country than did Dr. Fidel Castro in Cuba a little over a year ago. The Batista regime had made itself obnoxious in all the free countries of the hemisphere. The romantic circumstances of Dr. Castro's sudden and spectacular march on Havana stirred the American imagination.

Most of this great asset the bearded man from the hills has now thrown away. He needs American capital and drives it out by confiscating American property; he needs the American tourist trade and makes Havana distasteful and even alarming to many tourists; he needs to sell his sugar here, at a price above the world market, and gives offense to Americans who may vote to have the quota lowered; we send one of our most diplomatic diplomats to reason with him, and this most amiable of men, Ambassador Philip W. Bonsal, has had to be called back to Washington to explain the inexplicable. And indeed this is a deep mystery. Dr. Castro carried American good will with him into Havana. What has he done with it? Why is he wasting it?

We are strong enough to be patient, even under Dr. Castro's abusive words. In this small crisis among the world's great crises, we shall not lose our affection for our old friends and wartime allies, the people of Cuba. We must take no steps that will hurt them or alienate them.

But we cannot help deploring Dr. Castro's extravagant waste of the sympathetic support he himself once had in this country.

Space and Missiles: Two Fields or One?

EXTENSION OF REMARKS
OF
HON. JEFFERY COHELAN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. COHELAN. Mr. Speaker, in the January 26, 1960, edition of the Washington Post, the distinguished commentator, Walter Lippmann had a vitally important comment and criticism to make regarding the policy, or lack of it, in regard to weapons development and space investigation.

I commend this article to my colleagues and especially to members of the Armed Services Committee and, under permission to extend remarks, submit it for the RECORD:

WEAPONS AND SPACE
(By Walter Lippmann)

The argument about our defenses, which is now raging, revolves around what used to be called the missile gap and is now called the deterrent gap. The gap in either version is during the next few years when the Soviet Union will have in operation perhaps three times many long-range missiles as we have.

In this period of time the Soviet Union will be able, says General Power, the commander of the Strategic Air Force, to virtually wipe out our entire nuclear (retaliatory) strike capability within a span of 30 minutes. Theoretically then, the Soviet Union would no longer be deterred since it could knock us out before we could answer back.

The administration's view is that this is an abstract theoretical equation—General Power called it a mathematical probability—which in fact and in reality the Soviet Union could not and would not act upon. For the total retaliatory power of the United States and its allies is to be measured not only in missiles but in manned bombers which can be kept in the air, and by other strategic weapons such as submarines and mobile missile bases.

On the nearer issue of whether we shall soon be at the mercy of the Soviet Union, the administration has, it seems to me, a good case. No doubt General Power is right to insist upon the mathematical probability that 150 long-range missiles and another 150 medium-range missiles could in half an hour destroy the 100 installations and facilities from which we can launch a nuclear reply. But while this is a good and sufficient reason for strengthening our retaliatory force and of spending the money to protect it, there is a bigger issue which we need to ponder and to discuss.

The deep weakness in the administration's position is not that we cannot deter the Soviet Union in 1963. It is that in the general field of rockets and the exploration of space we are not even holding our own. We are falling behind. The administration case, although good enough on the risks of war in 1963, contains within it a great and quite unfounded assumption.

This assumption is that although the Soviet Union is now ahead of us, we are in the process of catching up. This supposes that we are now moving faster than the Soviet Union is moving. There is no reason to think that this is true. Almost certainly the truth is that they are moving faster than we are.

This is the most serious of all the gaps. It is that despite the genius and talent available our science and technology are less good than that of the Soviet Union.

We have all asked ourselves why. My own view for what it may be worth is that our second-rateness stems from a false conception of the whole matter and from a fundamentally wrong decision. The false conception is the President's belief that there are two separate and distinct fields—one for military weapons and the other for exploration of space. From this fallacy stems the decision to leave the development of the missiles to the military services and to treat the exploration of space as a form of boondoggling, of no concern to our safety and with no serious claim on the budget.

From this comes, so I am convinced, the fact that the armed services find it very hard to recruit and to hold on to the very best scientific minds of the country. The very first-rate men will not devote their lives to making a weapon that will soon be obsolete. These same men are often not recruited for the space exploration because the whole effort there is starved for money.

The second-rateness of our performance is due to the fact that our programs—military and for space—do not invite and encourage the very first-rate minds. I am afraid that the reason why the Soviets are ahead of us is that their military weapons and their space rockets are under the control, not of the soldiers and not of the factory managers, but of the scientists.

Men of genius cannot do what they are capable of doing if, as is the case today, they are herded into separate compartments and told to devote themselves to limited aims. They will respond best if they can believe that they are part of a great inquiry and experimentation into the nature of the universe. In all the flourishing periods of discovery and invention the air men breathed stimulated them to look beyond the horizon.

There is no such favoring climate today. Instead we have a Philistinism which supposes that the most original and first-rate minds can be hired for any job that the boss chooses for them. And we have a materialism which regards the exploration of space, and indeed the exploration of the unknown, as less important than the multiplication of consumer goods.

Such Philistinism and materialism are the attributes of a declining and second-rate power, and they are our real cause for concern.

Unfinished Editorial

EXTENSION OF REMARKS

OF

HON. FRANK T. BOW

OF OHIO

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 13, 1960

Mr. BOW. Mr. Speaker, the Washington Post published an unfinished editorial on Monday, an editorial that needed just one more sentence. The final paragraph read as follows:

For all Americans are touched by the public schools. All Americans can see their decay. All Americans can understand that the schools are the essential source of the Nation's security and strength—that the quality of the schools today will determine the quality of scientific and industrial and political performance in the United States a decade hence. All Americans know that from the earliest days of this Republic, the public schools have been its fountain of youth. And they will not choose to let that fountain run dry.

To this, I would add the final sentence:

And each American knows, each in his own heart, that he has the resources and the ability to create the kind of school system he wants within his own school district, city or State, without coming to Washington for handouts from the Federal bureaucracy.

Statement of Principles on Civil Defense

EXTENSION OF REMARKS

OF

HON. CHET HOLIFIELD

OF CALIFORNIA

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 26, 1960

Mr. HOLIFIELD. Mr. Speaker, yesterday the Civil Defense Committee of the Governor's Conference met with the President at the White House to discuss some of the civil defense problems now facing our country. It is my understanding that this conference was arranged at the request of Gov. Nelson Rockefeller, who has sponsored a civil defense program in the State of New York that would require individual home and apartment house owners to pay for the construction of fallout shielding.

Governor Rockefeller and I have exchanged views on this matter, and in a previous address to the House I commented on this proposal at some length, pointing out the serious shortcomings which I believe to be inherent in this approach to the large and complex problem of building a realistic civil defense program in this country.

Last October I had the privilege of meeting with the Civil Defense Committee of the Governors' Conference in Chicago, at which time I presented my own views concerning the civil defense needs of the Nation.

At this time I should like to present to the House a statement of principles on civil defense which I submitted to the President on January 12, 1960, which sets forth the main objectives to be sought in a national civil defense effort and points up the important relationship between civil defense preparedness and negotiations for a successful general disarmament agreement.

At the conclusion of this statement, I am attaching copies of my correspondence with Governor Rockefeller and my letter of January 12, 1960, to the President.

STATEMENT OF PRINCIPLES ON CIVIL DEFENSE SUBMITTED TO THE PRESIDENT OF THE UNITED STATES BY CONGRESSMAN CHET HOLIFIELD

The prime objective of our declared military policy is to deter Soviet aggression, either against the United States or against our allies, by posing the threat of massive nuclear retaliation against the Soviet homeland. It is said that such a threat offers the best hope of preventing either direct aggression against the United States or extremely provocative actions that might also lead to war.

Two key assumptions underlying this nuclear deterrence policy are (1) that the United States would be able to survive a surprise attack and strike back with forces sufficient to cripple the Soviet Union; and (2) that the United States would be willing to accept the consequences of attacking the Soviet Union in response to a Soviet attack against one or more of our allies.

Basic to either of these assumptions is the ability to survive a nuclear attack launched by the Soviet Union; in the first instance a surprise attack, in the second a retaliatory blow, or counter-attack. If it becomes apparent to the Soviet leaders that the United States could not survive such an attack, there is great danger that our threat of massive nuclear retaliation might be discounted or otherwise misunderstood and thereby fail to deter aggressive action on the part of the Soviet Union.

In other words, if the Soviet Union calculated either that a surprise attack would render the United States incapable of effectively retaliating or that the United States would not be willing to accept the probable destructiveness of a Soviet counter-blow, and thus would not massively retaliate in the event of provocative Soviet action, it follows that the nuclear deterrence policy would not necessarily deter aggressive Soviet actions.

Thus it can be seen that preparations designed to enable the United States to withstand and survive the effects of a possible nuclear attack have a direct bearing on our nuclear deterrence policy. Such preparations not only improve our defensive posture, but they also tend to reinforce and make more meaningful our offensive power in that the use of such power becomes feasible—or at least is not incredible—under certain defined circumstances.

Nonmilitary defense, or civil defense, preparations also serve to reduce the risks inherent in any possible disarmament program and thus may represent the key to successful negotiation of a workable general disarmament agreement. To the extent that civil defense can reduce the effects of a possible enemy attack, it would tend to reduce the advantage any opposing nation might hope to achieve through secret, undetected offensive military forces. At the same time, each nation could develop a substantial degree of protection without creating a threat to the security of any other nation.

It thus would seem practical to gear a phased disarmament program to a civil defense program designed to offset each successive reduction of armaments with added increments of civil defense preparedness.

International inspection of armaments could follow the same pattern, beginning with limited coverage of critical areas and gradually extending to the type of coverage considered essential to permanent arms control and inspection.

Viewed from this standpoint, the following principles concerning civil defense in the United States can be set forth:

1. Large-scale civil defense preparedness is essential to national security and to any safe progress in military disarmament. Such preparedness would provide a degree of personal protection which would serve to "insure" our peoples' lives against the risk of cheating by an enemy power during a period of disarmament and thereafter.

2. A meaningful civil defense program must encompass, on a national scale, all the preattack preparations required to minimize loss of life and to insure the post-attack availability of resources necessary for national recovery.

3. Responsibility for developing such a program rests with the Federal Government as a part of its constitutional duty of providing for the national defense.

4. The States and localities should be called upon to provide maximum assistance to Federal authorities in developing a workable national master plan and in the use of State and local resources, including governmental institutions and personnel, for civil defense emergency and postattack recovery operations.

5. The roles and missions of the Nation's Armed Forces should be recast to encompass

a predetermined role in the civil defense field. Such a role should be planned for clearly defined relationships and integrated action with regional and local civil defense and disaster programs.

6. The first task of national civil defense is to provide protection for the American people from the devastating immediate hazards of nuclear war. Shelter protection from fallout, emergency stocks of basic subsistence supplies, and radiological monitoring equipment are essential for the entire population. Blast protection and protected communications and control facilities should be developed in key areas to insure the continuity of essential governmental operations and to minimize the number of possible blast casualties.

7. The second most important task of civil defense is to provide a basic framework for the postattack recovery of the Nation. This task should be performed concurrently with the protective function and should include measures to insure the availability of material resources in the immediate postattack period for the long-term recovery effort. Standby legislation should be enacted to provide for the necessary economic and industrial control authority and administrative structure, and a Federal stockpile of basic survival and recovery resources should be created and positioned in properly dispersed or protected storage.

8. An effective civil defense as outlined above would make the risks inherent in disarmament more acceptable. Civil defense preparedness should be built up in phases geared to each step in the reduction of our military forces.

9. In the event agreement on arms reduction and control is achieved, a portion of the funds ordinarily earmarked for military purposes should be applied to civil defense needs.

HOUSE OF REPRESENTATIVES,
Washington, D.C., July 27, 1959.

Hon. NELSON ROCKEFELLER,
Governor of the State of New York,
The Governor's Office,
Albany, N.Y.

DEAR NELSON: Your personal note transmitting a copy of the report on civil defense was appreciated. I believe you have performed a real public service in sponsoring the civil defense study in New York State and in making public its findings and recommendations. As you know, I have felt very keenly for a long time that the people must be fully informed about the facts of nuclear radiation and the implications of nuclear war for the survival of our country and indeed of all mankind.

In my congressional work as chairman of the Military Operations Subcommittee of the House Committee on Government Operations, and as chairman of the Special Subcommittee on Radiation of the Joint Committee on Atomic Energy, I have tried to make public, through investigations and hearings, as many of these facts as possible. Our basic studies and investigations in civil defense, I truly believe, have set the groundwork for a national reappraisal of the tasks that lie ahead in protecting the people and affording a means for national survival in the event of nuclear war. The 1956 report of the Military Operations Subcommitee exposed the fallacy of evacuation as a national civil defense measure and recommended a national shelter building program, the need for which has been recognized by many distinguished study groups, including the Rockefeller special studies project in 1958.

A basic tenet of our 1956 and succeeding reports is the obligation of the Federal Government to provide for civil defense as a part of its broad constitutional responsibility to provide for the common defense. I do not think this premise can be challenged in the face of the terrible and widesperad damage that would result from a nuclear attack, and that is why I am concerned about the possible meaning and effect of your State civil defense report.

Assuming the New York State Legislature were to give effect to the recommendations in your report, I see little hope that other States would follow suit. Consequently, there would be no uniform national legislation in this vital area. In an address to the U.S. House of Representatives on July 15, 1959, I took the liberty of suggesting there is little chance of legislative action in your State.

More important is the question whether it is fair to compel private citizens to take action for their own defense against nuclear attack when the Federal Government has not even begun to acknowledge its responsibilities in this area. I do not discuss here the legal or constitutional questions posed by a program of compulsory shelter protection for individuals and property owners. The problem is too large, the tasks too complicated, the time too short for us to expect that a nationwide shelter system ultimately can be achieved by State and individual action in the manner proposed in your report.

Of course, as the Governor of a great State, you are proposing a course of action within the sphere of your responsibilities. With that no one can quarrel, and indeed you are to be commended for asserting responsibilities where others have been laggard.

The value of your report, as I see it, lies in drawing national attention once more to the civil defense problem; and you have been an eloquent spokesman on this subject which has little popular or political appeal but which is crucial to the Nation's welfare. I hope the report will serve the further valuable purpose of alerting the Federal Government to its responsibilities and will not be used as a pretext by those who would relieve themselves of burdensome and costly tasks by attempting to transfer responsibilities to the States or to individual citizens.

I voice these thoughts frankly because of my deep concern. They are not intended in any way to disparage your great public service for civil defense.

Sincerely yours,

CHET HOLIFIELD.

STATE OF NEW YORK,
Albany, N.Y., August 25, 1959.

The Honorable CHET HOLIFIELD,
Congress of the United States,
House of Representatives,
Washington, D.C.

DEAR CHET: Please forgive the delay in replying to your thoughtful letter about the report of the special task force on radioactive fallout. I appreciate very much having your observations which I know will be of considerable interest to the committee presently working on the project.

I do, indeed, feel this course of action is within the sphere of my responsibility for the protection of the lives and health of the people of the State of New York. It is this realization that has prompted my interest, my concern, and my action.

It is encouraging to have your comments. Your extensive familiarity with so vital a topic and your total awareness to the danger make your comments all the more meaningful to me.

For your information, enclosed is a copy of the resolution on fallout, unanimously adopted by the Governors at the recent conference in Puerto Rico.

With best wishes,

Sincerely,

NELSON.

HOUSE OF REPRESENTATIVES,
Washington, D.C., January 12, 1960.

The PRESIDENT,
The White House,
Washington, D.C.

DEAR MR. PRESIDENT: In view of the White House-sponsored Conference on Civil Defense, which I understand was arranged at the request of Governor Rockefeller, I take the liberty of enclosing an exchange of correspondence between Governor Rockefeller and myself on his civil defense proposals for the State of New York. My letter to Governor Rockefeller of July 27, 1959, you will note, is critical of his proposals while commending him for his attention to this vitally important subject.

On the basis of extended studies of civil defense and the effects of nuclear radiation, conducted by the Military Operations Subcommittee of the House Committee on Government Operations and the Joint Committee on Atomic Energy, on both of which I serve, I am convinced that civil defense demands an acceptance of responsibility and an allocation of resources by the Federal Government in far greater measure than has heretofore been evidenced.

As you prepare for the so-called summit meetings, in which disarmament undoubtedly will be a crucial topic of discussion, I hope you will consider this point: That progress in disarmament does not obviate the need for civil defense. In fact, the need for civil defense grows greater because it is the only ultimate insurance against enemy cheating.

The enclosed statement of principles on civil defense outlines this and other points which may be of help to the conferees meeting with you on January 25.

Sincerely yours,

CHET HOLIFIELD,
Chairman, Military Operations Subcommittee.

Drug Prices

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted, I insert in the RECORD the following editorial from the Washington Daily News of January 23, 1960, entitled "Drug Prices":

DRUG PRICES

If you have been following the Kefauver investigation, you have your own idea of whether drug prices are unduly high.

The aim of the Kefauver investigation seems to be to get them down, or at least to find the justification for present levels.

But elsewhere in Congress, there is a determined effort to freeze drug prices—and freeze 'em high. The bill covers any trademark or brand products, but the chief push is being provided by the drug retailers. This is the so-called "fair trade" legislation.

One copy of the bill has been reported to the House, another is pending in the Senate.

Similar laws have been declared unconstitutional in 16 States.

The purpose of the bills is to give the Federal Government's blessing to price fixing. Even though the whole policy of the Government and its laws for years has been to break up price fixing.

When the sponsors of this legislation talk about "fair" trade, it is not the consumers they have in mind.

Michigan Day, 1960

EXTENSION OF REMARKS
OF
HON. LOUIS C. RABAUT
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. RABAUT. Mr. Speaker, today is Michigan Day. She was admitted to the Union 123 years ago today. On January 26, 1837, Michigan became the 26th State. It is fitting indeed that we should pause and take note of this anniversary. For since that date in 1837 the State of Michigan has risen to become one of the truly great States in this Nation.

Michigan takes her name from two Indian words "Michi-gama" meaning great water or large lake. This is quite apt since Michigan—bordered as she is by four of the five Great Lakes—has the greatest supply of fresh water of any of the 50 States. There are over 11,000 inland lakes and more than 36,000 miles of streams in Michigan.

Michigan is the largest State east of the Mississippi. In 1834 when the legislature petitioned Congress for permission to form a State, the Michigan Territory included the present States of Michigan, Iowa, Minnesota, Wisconsin, and part of Dakota. Michigan's Upper Peninsula alone is presently equal in size to Connecticut, Delaware, Rhode Island, and Massachusetts combined.

Michigan has grown tremendously in population also. At the time of her entry as a State the population was just over 87,000. In 1870 the population passed the million mark. Increasing steadily it reached the 2 million mark in 1890, 3 million in 1920, and over 5 million in 1940. The Federal census of 1950 placed the population at 6,372,009, the seventh largest of all the States.

Industry, agriculture and the tourist trade are the three pillars upon which rests the economy of Michigan. During World War II, the magnificent performance of Michigan's automotive industry earned for our State the title of "Arsenal of Democracy." Michigan continues today to be one of the foremost producers of military vehicular equipment and also is in the forefront of the vast new developments and rapid expansion in the manufacture of ballistic missiles.

The automotive industry, however, is only one among in which Michigan is a leader. On the basis of value added by manufacture, Michigan also ranks first in boatbuilding, output of internal combustion engines, mobile homes, steel springs, hardware, industrial patterns, special dies and tools, and conveyors. Michigan is also known far and wide as an outstanding producer of furniture, breakfast foods, drugs and chemicals, sporting and athletic goods, steel, salt and paper products.

Diversification of industry has proceeded at such a pace that of 453 industries classified by the U.S. Bureau of the Census, Michigan has 369 or 81 percent of the total.

Michigan is well endowed with natural resources. She is noted for her limestone. Michigan is first in production of salt, gypsum and marl. The Lower Peninsula has extensive quantities of sand and gravel. Michigan's splendid highways are built of her own native materials.

The mention of highways brings to mind Michigan's wonderful record with respect to traffic safety. Michigan is high up among the States with the highest traffic volume, yet she has the second lowest number of traffic fatilities per 100 million miles traveled. In addition to industry, Michigan is a top-notch agricultural State. Michigan's agriculture brings in more than $730 million each year. Michigan's Lower Peninsula raises 97 percent of the Nation's crop of navy beans. Beans may be baked in Boston, but they are raised in Michigan. One of the finest fruit belts in the Nation is located in the western part of the State, along Lake Michigan. The State's commercial crop of apples, nearly 12 million bushels of them, last year put Michigan in third place in apple growing. Peaches, pears, and cultivated blueberries from Michigan are relished throughout the country. Michigan is first in production of tomatoes and cucumbers. Many other vegetables—onions, snap beans, carrots, and celery—are grown in Michigan. In all, 44 different fruit and vegetable crops are raised commercially in Michigan.

It is obvious that the great State of Michigan is well deserving of an eminent place among her sister States. With such an abundance of resources and diversity of commercial activity we are proud to say that Michigan's economy is gaining year and year. Michigan approaches the seventh decade of this century with confidence and optimism. It is with considerable pride that I call the attention of this body to this—Michigan Day, 1960.

So Now There Is No Missile Gap

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. KOWALSKI. Mr. Speaker, the growing concern of the American people over the missile lag is reflected in the editorial columns of the Nation's newspapers.

I call the attention of Members of the House to an editorial which appeared in the Hartford Courant, a great Connecticut newspaper, on January 21. The Courant, the oldest newspaper of continuous publication in America, has not been unfriendly to the present administration. However, it finds, as so many of us have found, that the administration is attempting to explain away the missile gap rather than moving as actively and effectively as is necessary to end it.

The editorial follows:

SO NOW THERE IS NO MISSILE GAP

It does not take yesterday's rumors about that Soviet nose cone in the Pacific, on top of all the sputniks and luniks, to make an American uneasy. For some years we have been told, supposedly on the basis of intelligence estimates, that by the early 1960s the Soviets would outnumber us in the H-bomb ballistic-missile field by three to one. But now such authorities as Defense Secretary Gates and General Twining, chairman of the Joint Chiefs, say it isn't so at all. New intelligence information shows that there is "a clear balance in our favor."

All this is heartening. Yet one wonders if it is a base solid enough to base national policy on. Perhaps we would be wise if we forgot about intelligence estimates. Perhaps we should just go ahead on our own to do the most we can to make sure the free way of life has a maximum of interior and exterior strength.

The trouble is that we are never given the hard facts themselves, about Soviet missiles and ours, or comparable matters. Perhaps that is too much to expect in a nation, supposedly dedicated to freedom, that loves to wrap facts up in impenetrable containers labeled Security. One is reminded of what Britain's Sagittarius wrote in a comparable situation there during the war:

What are the facts? Are they sunny or sinister?
Ignorant queries are here out of place;
All we can read is the face of a Minister
Pallid from looking the facts in the face.

All we can do is read the faces, and the testimony, of the Joint Chiefs, the Defense Secretary, and our other authorities. And there we read that "There is no missile gap." Well, we can be sure there isn't. We can be sure Mr. K too knows that all his missiles "would not suffice to destroy enough of our retaliatory strike forces" to enable him to make "a rational decision to attack." But missiles are only a token, a symbol, of the life-and-death stakes in the 20th century's epic struggle between liberal democracy and the totalitarian challenger.

This richest nation in all the world's long history might well read and ponder the history of all other rich nations before it. When those nations went in for bread (the most fattening diet any people has ever eaten) and circuses (seen anybody looking at TV lately?) they were readying themselves for conquest by the challenger. Thus it was in Crete's Mycenae, in Greece facing Philip of Macedon, and in Rome before the barbarians. We need not be frightened. Our prowess and our power are still great, our opportunity unlimited. But one could wish that, over the years, there would be a little less official assurance that all is well, and a little more performance, say by military hardware that can throw payloads at the moon, and hit it.

What Is the Truth About Lindbergh?

EXTENSION OF REMARKS
OF
HON. EMANUEL CELLER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. CELLER. Mr. Speaker, one of the tragic heroes in American life is Charles A. Lindbergh. His contribution to aviation science and his example of personal courage will always be re-

membered and honored. But like many another who departed from his narrow field of competence, Colonel Lindbergh committed great blunders or worse when he ventured into the field of politics and international diplomacy.

Beginning with his acceptance of the German Air Medal from the Nazi General Goering, continuing thereafter in his propaganda work for the America First Committee, and culminating in his 1941 nationwide radio broadcast in which he threatened that American Jews would suffer if they continued to work against the Nazi danger, Colonel Lindbergh's career was a pathetically unheroic one. We do not have to believe what the German Ambassador to this country said about Lindbergh's contributions to German propaganda efforts here to conclude sadly that Lindbergh was woefully out of step with his countrymen and with the best interests of America during this period. The facts are on the public record.

But the other day—from a most roundabout source in the ultraconservative magazine, National Review—an opposite viewpoint appeared, attributed to the former American military attaché in our Berlin Embassy, Col. Truman Smith, now retired. According to Smith, Colonel Lindbergh did not want the Nazi medal and was surprised when General Goering suddenly produced it at a private dinner given by the American Ambassador. Again, according to Smith, Lindbergh had come to Germany at the request of Army Intelligence to see if he could discover vital information about the growing German Air Force and to help persuade Goering to accept a plan to permit Jewish emigration from Germany.

Lindbergh himself is silent. Is this an attempt to rewrite history, to change the record as it was known to American public figures and historians for almost a generation? Or, is it a newly unearthed fact? If it is a fact, I will be among the first to give it due weight and publicity even though it cannot, of course, change the record of Colonel Lindbergh's propaganda activities for the America First Committee. If it is a fact, we should all be delighted to credit Colonel Lindbergh with this civic and humanitarian act.

I hope, therefore, that the State Department and the Army will give us now an authoritative and balanced statement on this new development since I am advised that authentic documents are in their possession.

A Test on Civil Rights

EXTENSION OF REMARKS
OF
HON. ROBERT N. GIAIMO
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. GIAIMO. Mr. Speaker, I call attention to an editorial appearing in yesterday's New York Times and ask that my Republican colleagues carefully consider its conclusions. I am sure that they will wish to take action now rather than give credence to charges of a deal between House Republicans and southern Democrats, as the Times implies.

I ask that at this point the following New York Times editorial be included in the RECORD:

A TEST ON CIVIL RIGHTS

A list published in this newspaper last week showed that 146 Democrats and 30 Republicans in the House of Representatives have now signed a discharge petition to bring a civil rights bill out of the Rules Committee and to the floor. The news is the small number of GOP signers, including, for example, only 5 of the 24 Republicans from New York.

House Republican leaders explain that they are against discharge petitions in principle because they do not believe in circumventing House rules. They say the Democrats, as the majority party, bear the responsibility for the bill. They express assurance that the bill will get to the floor and promise to vote for it there.

To put it bluntly, those explanations are lame. It can hardly be circumventing House rules to sign a discharge petition when the rules provide for such a petition. It is no secret that the Democratic Party is divided between South and North. Republican votes are needed to get the bill to the floor as well as to pass it there. Most important, failure of the discharge petition will permit the bill to reach the floor only under unfavorable terms—perhaps including a ban on amendments—dictated by Rules Committee conservatives.

The Republican Party, unlike its opposition, should be free to give whole-hearted support to civil rights legislation. Its failure to do so can only give credence to charges of a deal between House Republicans and southern Democrats. The discharge petition will be open for signatures when the House meets at noon today. If the issue is recognized for what it is—a chance for meaningful civil rights legislation—it should not take long to get the 43 more signatures needed.

No Time for Monopoly

EXTENSION OF REMARKS
OF
HON. THOMAS M. PELLY
OF WASHINGTON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. PELLY. Mr. Speaker, there has been a great deal of controversy for the past few months since an examiner for the Civil Aeronautics Board recommended a monopoly be allowed to exist on the air route between Seattle and Honolulu. This examiner proposed that Northwest Airlines be given exclusive certificate to operate between these two great and growing terminals and that Pan American World Airways, which has been flying the route since 1948 on an equally competitive basis with Northwest, be directed to cease its operations.

As you can imagine, Mr. Speaker, this examiner's recommendation created an uproar all over the Pacific Northwest and Hawaii. Irate newspaper editorials and protests from business and civic organizations in Seattle, Portland, and Honolulu quickly followed this unfortunate recommendation.

But there is still room for hope, Mr. Speaker. Fortunately, the decision of the examiner is by no means final and the full membership of the CAB will hear oral argument beginning on February 10 in the matter of the Pacific Northwest to Hawaii case. There is good reason to believe that, in the final analysis, the CAB will follow its long established policy of approving and encouraging competition and will allow both Pan American and Northwest to operate this most promising Pacific coast air route.

Mr. Speaker, a well known Washington newsletter published by Independent Editorial Services, Ltd., has an excellent editorial in its current edition, "No Time for Monopoly." It concerns itself with the case I have just been discussing. Under leave to revise and extend my remarks, I include this editorial in the RECORD. It follows:

NO TIME FOR MONOPOLY

Air travel to the islands and tourism have been booming since Hawaii's admission to the Union last July as the 50th State. The surge in business is epitomized by such projects as the fourfold expansion of Henry J. Kaiser's 750-room resort hotel and the spate of applications from airlines seeking Civil Aeronautics Board certification to fly between San Francisco-Los Angeles to Honolulu.

The speedup of Honolulu's economic development and its population growth have been matched by Portland, Ore., and Seattle, Wash., which are now linked by two carriers—Northwest and Pan American—with Hawaii. Pan American pioneered the route and has been flying in competition with Northwest on a temporary basis. Because of increasing Pacific Northwest traffic to the mid-Pacific and beyond, Pan American has scheduled jet service. Northwest also is to take delivery of jets some months from now, chiefly for flights to the Orient.

On two past occasions prior to Hawaiian statehood, CAB moved to limit operations on the route to Northwest, on the ground that there wasn't sufficient business for two airlines. Presidential action disapproving such rulings kept competition alive. Since last July 4, however, the matter has been an interstate route case rather than an international one, and the White House no longer can negate such blows at competition in air carriage.

Little more than 5 months ago, a CAB examiner again recommended that Northwest monopolize the route, on which traffic has increased eight times during the 1950's. The recommendation touched off protests from the civic organizations of Portland, Seattle, and Honolulu, the governors of Washington, Oregon, and Hawaii, and the Senate president and legislature of the 50th State. Hawaii understandably wants lots of airliners filled with passengers to fly in from the mainland. Seattle and Portland businessmen and tourists who have been limited to one U.S.-flag airline, Northwest, on the short, great circle route to Tokyo, view with dismay any prospect of a cutback in service to the Far East via the Hawaiian Islands as well.

The CAB has been under considerable fire because of such accusations as ex-member Louis Hector outlined in a 75-page bill of particulars to the President when Hector resigned last fall. One point he raised was that the CAB is long on judicial form but short on judicial substance, and that decisions are made seemingly without regard to established criteria for serving the public interest, convenience, and necessity. Rep-

resentative ENAMUEL CELLER, head of the House Judiciary Committee and its Antitrust Subcommittee, made a similar point when the CAB examiner recommended rejection of Pan American's petition to continue air transportation between the Pacific Northwest and Hawaii. Celler expressed himself vigorously in a letter to outgoing Board Chairman James Durfee.

In recent months, CAB has acquired two new members, Whitney Gilliland of Iowa, Republican, and Alan Boyd, of Florida, Democrat. Neither has had past ties with airline companies. There is the prospect that such new blood at CAB will result in higher priority for the public interest in airline service, and in healthy airline competition.

All the foregoing points to a much needed reform in CAB procedures as pointed out in the Hector report and which Congress should concern itself with. The time for logrolling in air routes has passed.

Economic Recovery of West Germany

EXTENSION OF REMARKS
OF

HON. HERMAN TOLL

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 25, 1960

Mr. TOLL. Mr. Speaker, under leave to extend my remarks in the RECORD I include an article on the "Economic Recovery of West Germany" by Judge Meyer L. Casman, who has made a study of the subject and has lived in Germany. Judge Casman, a prominent member of the Philadelphia bar, has recently been cited in two awards: "as a soldier, engineer, jurist, and good citizen" and the other as "the international good will ambassador."

Judge Casman served in Germany for a short time after World War I and after World War II from 1947 to 1950, first as one of the chief prosecutors at the Nurnberg trials, then as President Judge of the Civil Actions Court and finally as a judge on the Supreme Restitution Court. He is a graduate of the U.S. Military Academy, the Graduate Engineering School at the University of Michigan and the University of Pennsylvania Law School.

The article follows:

ECONOMIC RECOVERY OF WEST GERMANY

Of all the countries in the world, Western Germany can claim the greatest economic recovery in modern times. It started immediately after the war. That country was then absolutely prostrate—commercially, physically, politically, and spiritually. While England need merely rise from about 70 percent of prewar economy, Germany had to start from scratch. By 1952, Germany caught up with England, and now it is ahead of England. Perhaps the following may be given as the principal reasons for Germany's recovery:

1. U.S. PRIMING

Immediately after the war, the Germans were really put to it, for food and all other necessities of a bare existence. During the war, they had, of course, exploited every one of their conquered nations and nationals—depriving these of food they could pilfer to permit themselves to live in lush (relatively) circumstances. After the war these were no more. Circumstances had completely changed. The conquerors became the conquered. The Germans had now to scrape the garbage cans of the American throwaways to survive and exist.

In the after-war chaos, our first mission, therefore, had to be to safeguard all in Germany from famine and disease. We liberally gave of our food, equipment, supplies and know-how. But we accomplished much more. In the first 8 years, we put in about 3½ billion dollars (plus 5 million marks in counterpart funds). It turned out to be the shot in the arm which started the Germans on their upward course in health, social and economic recoveries. Wherever you go you see evidence of our giving. This building was erected with Marshall Plan funds, etc. Then there were ever so many nongovernmental contributions. This building has a tablet marking it as erected by the United Church Movement; This Free University Library in Berlin was from a Ford Foundation grant (1½ million dollars), etc.

Most unique is the full appreciation of it all by the Germans. We are used to being called a "sucker"—you know that adage about biting the hand that feeds you. But not so with the Germans. Here are extracts from Dr. Ludwig Erhard's book, "Germany's comeback in the world's market": "These figures show how much German Reconstruction owes to the American administration's farsighted policy of foreign aid. and to the understanding and altruism of the American taxpayer who had to foot the bill. For every German, it is therefore axiomatic, a fact forming, a permanent element in his historical consciousness, that it was the United States whose foreign aid put into our hand the chief key to open the gates to world markets." Erhard is the Minister of Economics and the present vice chancellor. As late as the fall elections in 1949, there were all over, "Amis, Go Home." No more, anywhere, now.

2. CURRENCY REFORM

All along after the war, it was realized that a currency reform was essential. German mark bills had increased from 5 to 73½ billions, thanks to the Russians, with their duplicate set of plates. Now before discussing any reform, the Russians again insisted on duplicate new plates. To that, General Clay would not accede. He had had too much experience with them by this time. Accordingly, the Russians were bypassed and agreement was reached with the English and French to launch the reform in the three allied zones and sectors.

The reform plan consisted of four military government laws (and many amendments), instituted on June 21, 1948. The substance of these was that current and unpaid payments such as wages, rentals, interest, be made on the basis of 1 to 1; whereas, past debts and merchandise were to go on the basis of 1 for every 10 old marks, i.e., debts and merchandise marked down to 10 percent.

Let me say this. I would not believe it had I not seen it with my eyes. Goods of all kinds not available, or formerly hidden under shelves now appeared in the open; the repairman who would come before only for a guaranteed meal and cigarettes, now would come only for deutschemarks; all black markets disappeared and soon all rationing with its long queues ceased. One victor, England, was still under strictest rationing.

About the time of this currency reform, the allies finally determined to allow full reindustrialization of Germany and see whether it could pull itself up by its own bootstraps. Germany did not disappoint anyone. The marks, which were worthless from 1945 to 1948, began immediately to climb in value in Switzerland and later throughout the world. Before the reform, 1 Swiss franc was worth 25 RM; by 1953, 1 SF was worth 1 DM; now the SF has been exceeded in value by the DM.

3. FINANCE REFORMS

There is no question but that Germany's well planned finance handling and channeling aided greatly in Germany's comeback. She had limited capital and had to make the best use of it. She tackled each problem on its own merits. We can consider but one of them. Let us take her first and most pressing problem, housing. She had three out of every five former homes available, to a population now increased by 25 percent refugees. This is how she did it. Germany gave income tax credit to every industry and employer of up to 50 percent of the cost of home construction made by it for its employees, and free construction mortgage loans to boot. Workers could earn overtime, income tax free. The combined zeal, therefore, of employer and employee under such circumstances resulted in no coffee breaks, work all night by arc light, and over a half million new home units every year.

One could go on and detail the intelligent manner of approach in the other key industries, such as shipbuilding, steel, coal, factories, foreign markets, and even agriculture, in connection with which the land reform of OMGUS should not be overlooked. And there is no room to discuss the intelligent approach to the personal and corporate tax reductions.

4. U.S. FREE ENTERPRISE

One must be acquainted with the old bureaucratic, cartel, government control, opposed to our stockholder systems to appreciate the transformation to the present, Germany is still more bureaucratic than I hope we will ever be. Bureaucracy is a natural for them. But as to private industry and enterprise, there have been revolutionary changes as to manner of doing business and relationships to stockholders.

I do not fear stating that it was the U.S. free enterprise system that superimposed itself over the past autocracy and economic nationalism. We had no little difficulty selling them on the idea. A few of Germany's keymen had the opportunity to see or be trained in the U.S. methods and they are the ones who sold Germany on them. Dr. Erhard has an unshakable faith in free enterprise; that all Government controls are evil and only to be used in times of extreme emergency. Says he, speaking of foreign markets: "A genuine market economy (free enterprise) cannot stop short at the national frontiers; it tends to abolish its own frontiers and thus provides powerful inducements for others to reciprocate * * * it cannot flourish as an island in a sea of controlled economics." It was he more than anyone else who sold our ideas.

Dr. Erhard caused all rationing and price controls to be withdrawn and soon, as he had maintained prior thereto, true competition caused prices to find their own low levels. In foreign trade he set about abolishing import quotas, reducing tariff barriers and opposing artificial subsidies to boost exports; he profoundly believed that liberalization of imports would induce competition in the home market that would keep the prices down, which in turn would help German exports meet international competition. For over 20 years he opposed the German cartels and loudly championed the U.S. "trust busters"—against the strongest opposition, until now they have an antitrust law too.

Perhaps we might also take a leaf of his as to creating and maintaining a consumer market. Unlike our efforts to stem inflation by raising interest rates etc., Erhard was doing the opposite. To boost consumption still more he is proposing that the cost of household equipment such as refrigerators, dish-

washers, and laundry machines be deductible for income purposes. He is quoted as saying: "as long as I am Minister of Economics, there will be no crisis. I will (whenever necessary) mobilize 50 million consumers." He must believe in: "Get consumers and you will not get (economic) consumption."

The Germans enthusiastically adopted our ideas of purchasing on the installment plan and our methods of merchandise advertising. Purchases of furniture and household goods attained proportions that were something entirely new in Germany. While the English have not taken to our too conspicuous advertising, the Germans have taken to it like a duck to water. Though they do frown and properly so on our lack of ability to sell ideas. You know, we invented the expression "public relations"—they adopted these very, very words, for they do not use any translation of them; but they regret to see that while we can sell an icebox to an Eskimo, we have not been able to sell any ideas, particularly vis-a-vis the Russians.

5. FORBEARANCE OF LABOR

Their unions are on an industrial pattern but their is a fundamental difference in their operation. Their unions have representation of the operating board of directors, usually operating the personnel end, in the coal and steel industries. Their corporate setup is a bit different than ours. The Aufsichtsrat, elected by the shareholders, is an enlarged board of directors, and they in turn elect the members of the Vorstand, which might be likened to the operating or executive committee. The union representative would thus appear to serve two gods, the management, as well as labor. He is to us, on both sides of the bargaining table. Yet it seems to work. At any rate, it is this representative's knowledge of the management's side that permits him to not only work in behalf of labor but to keep the union from taking extreme antiproduction measures. Hardly any major strikes. Production goes on. The unions thus operate under the Mit Bestimmung Recht, what we call, the codetermination law.

At first, under necessity of survival, both sides were manly enough to act in a responsible and patriotic manner, subordinating extreme selfishness to the necessities of reconstruction. This was aided by the absence of Communist agitators in the ranks of their unions, and by the hard work and minimum profits of the executive side. The Government also aided by giving the workers what they wanted almost before the unions had time to shout for it. It is not difficult to understand the desire if not the necessity for the codetermination law.

Many of the trade unionists in Germany had spent years in Hitler's concentration camps and all union property had been confiscated. Even more urgently than anything else they did not want any more of the Führer principle which made them slaves. This abominable and most undemocratic principle of labor operation must never see the light of day again. One of the first laws, therefore, that both labor and Government worked together on was this codetermination law which was passed in 1951. It is too involved to adequately treat here. Suffice to say that in the main goal of the unions, the coal and steel industries, the unions and management each got 50 percent representation with a neutral as the mediator in the disputes. As a result there was neither an unbridled boss nor labor agitator.

Now, the workers not only get social insurance, fringe benefits up to 30 percent of the wage bill, low rental housing (about one-third former amount), but are now getting from more and more companies profit sharing. There was really not much opposition to the inauguration of profit sharing. Industry wants to hold on to their good men. It knows only too well the German saying, "Machines are expendable; but good men, irreplaceable." And unions do not resent very much the necessity for a 75-percent vote to call a strike.

6. REFUGEE INFLUX

A good many people in the United States oppose any sizable immigration. Yet this least expected aid from refugees to economic recovery has turned out to be one of the most important reasons for it. Even in Germany, most Germans expected that this incursion of 12 million expellees and refugees, homeless and impoverished, would be a staggering economic burden. But men like Erhard and Adenauer could see ahead and differently. They could see that these 12 million people were not only potential consumers but that they included over 3 million eager workers. They ranged from laborers who might man the mines to thousands of the finest and most industrious craftsmen of East Europe. Thus the men of the Zeiss factory at Jena, who managed to escape to the West, reestablished themselves near Stuttgart.

The refugees are still coming over to the west. In Berlin I visited the camp where over 500 are processed every day. They were nearly all youngsters. Rather than go into the Polizei, which they must, they would rather come over into the West and go into the democratic military there or even into the mines. The old farmer with his four sons wants to come to the West to raise his sons in the western way. Through Berlin alone, over 1½ million have crossed over. For those that are not easily assimilated into the regular German industries, there are now about 128,000 purely refugee undertakings.

Nearly one in every four is an expellee or refugee. Those who could not be taken care of one way or another through work or were too old and feeble, became wards of the state. They were given social security earned or not; and initially assisted by the equalization-of-the-burden funds. Everyone, everywhere, is by now agreed that the refugee influx materially aided Germany's miraculous recovery.

We should study all this to see if we are not in error as to our fearing immigration. After all, we have found that it takes the work of one to support himself and up to 2½ others. Thus, an average family becomes a self-supporting unit, besides all in that family becoming consumers. By keeping them out we not only suffer a possible economic loss, but throughout the world we in deeds negate our wordy generosity. Take the Hungarian recent refugee problem. Canada, with one-tenth our population took two-thirds as many Hungarians from Yugoslavia as we did (we took 2,500 while Canada took 1,765).

It is significant that Canada has attained a postwar recovery only next to Germany's.

7. INDUSTRIOUSNESS

The natural, skill, inventiveness, as well as industriousness of the Geman is self-evident and manifest wherever you go, day or night. And so nonwasteful compared to us. They could get along in respect to food and electricity, for instance, on what we waste in these categories. During daytime there is a minimum of electricity used. They work near windows and only use individual lights where necessary; during dark hours you will not find hallways or rooms always lighted; you put the switch on as you enter the courtyard, it is off as you reach the entrance, you put the switch on as you alight the first flight of stairs, but by the time you reach the next flight that switch is off, and so on. They appear to act as if challenged to show their real industry and bravery in order to overcome the blight of Hitlerism.

Their capacity to work is legendary, but not a myth. There are fundamentals to explain all this but there is no room for it here. Although there are many class distinctions, we would not tolerate here, a very noticeable trait now is the almost complete lack of class resentment of employee for employer. The hard-working boss has set an exemplary pattern, even if he is wealthy. There is no resentment against wealth, wealth equals success and success means hard work. The German industriousness and his other natural traits must be included in the factors which brought about this remarkable recovery.

These are only the major reasons. Recently, Ludwig Erhard summarized the story of the German recovery as follows: "The first concern was to restore competition and the urge and incentive to work. So we made a clean sweep of the price and wage controls started by Hitler and taken over by the occupation authorities. In spite of protests, import controls were relaxed as much as possible. Foreign goods, as they appeared on the market, became a spur to German manufacturers to produce more efficiently. Our manufacturers needed such a spur because for a long time they had been cut off from outside competition, first by the Nazi autarchy, then by the war. Freer trade meant more goods in the shops. It strengthened our new currency because it showed the people they could by something with their money (a pfennig, equaling one-fourth cent, is still a usable coin). I was sure that the more we bought from abroad, the more we could and would sell abroad. It seemed to many a risky thing for a country in Germany's plight to bet on economic freedom. But we made the bet—and won it."

You cannot read this without including what he patently omits—the thorough planning all of the above entailed. Here we have feast or famine. Of course we could have avoided the slight recessions due principally to the curtailment of our defense spending in 1949 and 1953. In 1957, there was real and serious economy ordered to come within a reduced budget. But not an ounce of planning how to avoid a consequent recession. So we had one that was really serious.

In May of 1957 I went to Germany on a study trip covering its economic recovery. I made a longer trip of it this 1959 summer. I found not only an economic but a spiritual recovery too. Up to 1952 they were too busy getting the shelter and food and clothing of mere existence. Since then they have been building well on the Western concept of moral and spiritual values. They no longer alibi but rather feel deeply and acknowledge the shame of the Hitler regimes. They want to make amends and make good not only for their own conscience but to the wronged ones throughout the world. In these respects the Adenauer government has led the way and may it so continue for a long time to come.

Increased Tobacco Allotments

EXTENSION OF REMARKS
OF
HON. EUGENE SILER
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. SILER. Mr. Speaker, I feel that under current market conditions of burley tobacco and under the supply situation for this crop, as we know it to

prevail right now, there could well be an increase in the tobacco allotments all over the country where burley tobacco is produced.

But in order for this good achievement to mean the most for those worst off, I have proposed that two-thirds of this suggested increase be given to the smaller or semirural industrial areas where burley tobacco is now produced and where there is 10 percent or more of the labor forces unemployed. In other words, my bill would give every grower some increase and would give every depression area grower still more increase. Everyone wants to help economically depressed areas but no one seems willing to do anything to help them. My bill, H.R. 9745, would help tobacco growers and would alleviate conditions in depressed areas, all in one legislative effort. It might aid the general economy in most of the following small industrial areas of our Nation now suffering from unemployment.

Maryland, two minor areas.
North Carolina, two minor areas.
Virginia, one minor area.
West Virginia, eight minor areas.
Kentucky, seven minor areas.
Tennessee, one minor area.

On January 20, 1960, I sent Secretary of Agriculture Benson a copy of my bill and asked him to consider it and approve it, if possible. My letter to him is as follows:

HOUSE OF REPRESENTATIVES,
Washington, D.C., January 20, 1960.

HON. EZRA TAFT BENSON,
Secretary, Department of Agriculture, Washington, D.C.

DEAR MR. BENSON: Enclosed is a copy of my own burley tobacco allotment bill for 1960, same being H.R. 9745, introduced by me on January 19, 1960, which I would like very much for you, your Tobacco Division, and your Department to consider. And I would fervently hope that this bill, or one similar thereto, might have the approval of the Department of Agriculture.

My bill would grant a 15-percent increase in burley tobacco allotments, but in practical effect the increase would only amount to about 5 percent because most of the increase would go to the least of tobacco producing areas, those located in some of the economically depressed, labor surplus counties of minor industrial importance in our Nation. I myself represent one of these areas, the Eighth Congressional District of Kentucky, where we have much unemployment and labor surplus with just a few small tobacco bases in most of our counties.

My bill would be a double-barreled benediction because it would recognize the current disappearance of burley tobacco supplies and the high market prices of tobacco by—

1. Giving some increase, not less than 5 percent, to all burley growers everywhere so that they all might share somewhat in the fortunate circumstances of this crop's present status; and by

2. Giving special recognition and consideration to tobacco's poor relations in depressed areas of our country, where the maximum economic needs of our American citizenship prevail right now.

Our President and his administration have heretofore been recorded in favor of depressed areas legislation. My bill would accomplish something in that very area of legislative effort and this would help the entire economy in certain counties of Virginia, West Virginia, Tennessee, Kentucky, and possibly other States where burley tobacco is produced in a small way.

According to statistics at hand, applying to the period of November 1959 the following burley tobacco growing States had 10 percent or more of available labor forces unemployed in minor or small industrial areas, viz:

Maryland, two minor areas.
North Carolina, two minor areas.
Virginia, one minor area.
West Virginia, eight minor areas.
Kentucky, seven minor areas.
Tennessee, one minor area.

Undoubtedly some of those small industrial areas of economic depression in West Virginia and possibly in other States would have no burley tobacco production whatever at the present time. The intent of my bill would not be to add any territory whatever to presently existing burley tobacco places of production but would be to help all presently existing territories some and the economically depressed territories still more. "Blessed is he that considered the poor; the Lord will deliver him in time of trouble." Psalms 41.

With all good wishes and thanking you for your consideration, I am,

Yours truly,

EUGENE SILER,
Member of Congress, Eighth District of Kentucky.

It would certainly be pleasing to me if other House Members from economically depressed, burley tobacco areas would introduce bills similar to mine and then lend a hand toward getting some legislation of this type enacted.

Civil Rights Deadlock

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the New Republic, January 25, 1960, issue. The editorial is most timely:

CIVIL RIGHTS DEADLOCK

About once a year we try to explain what the GOP-Dixiecrat collaboration really means. This is a good time in connection with the civil rights bill. This mild Eisenhower version is now deadlocked in the 12-man House Rules Committee. The committee won't act, and there are not enough signatures available to bring it to the floor by petition. The reason is, of course, that the GOP and Dixiecrats swap favors: the sanctimonious GOP helps the South keep the blacks in place, and the South helps kill liberal spending measures. On the Rules Committee there are four northern Democrats, four southern Democrats and four Republicans. The Republicans won't help the northerners, so the bill is stalled. Again, it takes 219 House signatures to discharge the committee. Northern Democrats don't have that number and need about 50 or 60 GOP signatures for the job. Republicans won't sign. One telephone call from Eisenhower and the GOP would fall into line. He doesn't call.

This doesn't mean there won't be a bill. We expect one. But not until the GOP has squeezed out the last drop of advantage by demonstrating the Democratic split. Or wait—another possibility. This is a perfect setup for young Lochinvar NIXON; he settled the steel strike and befriended labor, didn't he? We think the GOP would love to cultivate the Negro vote for Vice President NIXON by letting him dramatically settle the civil rights case.

A year ago Eisenhower proposed setting up a Committee on National Goals, privately financed, that would tell America what it really is aiming for. Every now and then some reporter needles the White House by asking what's become of this grandiose scheme, but nobody knows. Not a word about it in the state of the Union message.

On the other hand the President did get together a first-rate, blue-ribbon Commission on Civil Rights. Last September it brought out its long awaited report. Its chief proposal, approved 5 to 1, was to establish Federal registrars in southern communities if the local officials refused to list Negro voters. Eisenhower gave the proposal a frosty reception at last week's press conference; he didn't even know if the idea was constitutional, he said; much better stick to his current civil rights bill (i.e., the one stalled in committee by GOP votes). It is reported that some of the Commissioners will hand back their blue ribbons if they don't get White House support. It's no fun doing a nasty job if the boss won't back you up.

Speech by Eduardo L. Martelino

EXTENSION OF REMARKS
OF
HON. LESTER HOLTZMAN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. HOLTZMAN. Mr. Speaker, under leave to extend my remarks in the RECORD I include this speech by a Philippine official, delivered before the Jesuits at Woodstock College in Maryland, which came to my attention recently. I was impressed by the significant arguments presented, which have a direct bearing upon our foreign relations. Eduardo L. Martelino is the Philippine spokesman in New York. He is a former newsman, a World War II veteran, and an author whose recent book, "Someday Malaysia," has just been released in New York.

A seasoned diplomat at 36, he represents a new generation of Asians who believe in the nationalistic movements in their countries. Mr. Martelino, however, points out the fact that these movements are not anti-American. He in fact explains how Americans can best take advantage of these movements and make allies out of those in Asia who continue to remain uncommitted in the ideological battle for men's minds being waged in that part of the world today between democracy and communism. Mr. Martelino's speech is a document I commend to your reading.

The speech follows:

SPEECH BY EDUARDO L. MARTELINO, PRESS ATTACHÉ FOR PHILIPPINE DELEGATION TO THE UNITED NATIONS AND OF THE CONSULATE GENERAL OF THE PHILIPPINES IN NEW YORK AT WOODSTOCK COLLEGE, MARYLAND, NOVEMBER 19, 1959

Reverend Father Rector and gentlemen, I consider it a privilege and a distinct honor to have been invited to speak here at Wood-

stock before this impressive group of young Jesuits. The Society of Jesus is an order made up of the finest minds. That you should therefore apply yourselves to the subject of Philippine-American relations is a matter of gratification for me since I am engaged in the business of disseminating information for my country. This fact however, prompts me to confess that the appreciation I feel for the opportunity to discuss this subject with you is not unmixed with anxiety, for as you are probably aware from recent press accounts, in the present status of relations between the Philippines and the United States all is not well. This is an important question which has long needed plain talk.

The Philippines is an old friend of America. I don't need to retrace the long history of relationship between the two countries; we are all familiar with that. We Filipinos can say to America that in this century it has no better friend in Asia; all others have been at one time allies, at another enemies, at still another, friendly or hostile spectators, while the lines of battle shifted and various wars and their fortunes changed. Only the Filipino people, in summer sunshine and in time of the monsoon, put and still put their faith in the justice and loyalty, the libertarian creed of American democracy as the most desirable foundation of a united world. Only 18 years ago on a Saturday in March, the Battle of Bataan came to an end in the Philippines, and a hundred thousand Filipinos and ten thousand Americans who had fought side by side, began the infamous death march to the concentration camps together.

But today we Filipinos have begun to feel that we are being taken for granted by America, and we often wonder whether or not it would profit us more to put a price on our loyalty and bargain for our friendship.

Let me quote from a recent article by one of America's most widely read syndicated columnists, Bob Considine, writing in his popular column, On the Line, about this subject, said, and I quote: "Our relations are worsening with the Philippines, the only democracy and only Christian country in the Asiatic world and the most loyal of our allies in World War II. If permitted to deteriorate much more, we will have lost not only a bulwark but, more importantly, a trusting friend."

In an editorial on the same subject written in the Tulsa World edition of July 12 last, I also found the following words, and again I quote: "It would be tragic indeed if the United States should fail to covet the friendship of those who have stood by it. It is far more vital to the U.S. world position to maintain what friends we have than to treat generously with those we would like to have but cannot depend upon."

Other editorial comments had been published at earlier dates by the New York and Washington newspapers and I daresay by others throughout the country, all of them sounding a note of warning on the worsening relations between the Philippines and the United States. Time will not permit my reading them all to you at this occasion, but I can assure you that most of them have expressed the same sentiments as the two commentaries I have just quoted.

What, then, has caused the Filipinos to suddenly turn sour on America?

To my mind, the main irritants of Philippine-American friendship might be divided into two general categories: the pending unsettled Philippine claims before the U.S. Government and the question of sovereignty and along with it a misunderstanding of Filipino nationalism. I shall discuss these areas in that order.

We have claims against the United States amounting to approximately $800 million and these claims were officially presented to the U.S. Government on January 14, 1955, 4 years ago. To date only two claims have been approved; one amounting to $23 million representing the long-delayed payment to us of the gold dollar devaluation fund, and $75 million for additional war damage payments. The other claims have either been set aside or rejected completely.

I would like to say just a few words in connection with the war damage payments, and one or two others. We Filipinos remember too well the promises made during the dark days of enemy occupation. Special broadcasts by the late President Roosevelt to the beleaguered Filipino Freedom Fighters had said: "Everything will be restored down to the very last nipa hut." It was a rallying cry which succeeded in strengthening the resolve of my people to resist the Japanese invader.

The U.S. Congress in time authorized sums covering 75 percent of the value of property destroyed in battles between Japanese and Filipino guerrillas, in U.S. air raids against enemy positions, and finally in United States and Filipino battles against Japanese troops. By this time the cost of construction materials and property values had more than doubled, but Congress decided to base its assessment on pre-war values. Well, only slightly more than one-half of the amounts awarded to claimants were actually paid and there still remained unsatisfied 22½ percent as provided by the Rehabilitation Act. There followed the promise to appropriate the amount needed to cover the balance, and Filipinos borrowed money to rebuild against the day when Washington would come through. Washington didn't, not until 9 years later, and still to this day a balance remains.

Another claim has to do with agreements signed by Gen. Douglas MacArthur with officials of the Philippine Commonwealth Government pledging to equalize Filipino soldiers' pay with that of Americans. This agreement was later either ignored or repudiated at the Washington level—at a cost of $200 million to the Philippine Government, which was forced to carry out an agreement made by the illustrious American general.

It might interest you to know what salary the Filipino soldier earned in those days when the Philippines was still a part of America. A Filipino buck private was paid ₱18, or $9 a month, as against $50, or ₱100, which the American buck private was making a month. Yet, my friends, the Japanese bullets on Bataan and Corregidor were not marked with peso or dollar signs, nor did they single out the American soldier from the Filipino. On the other hand, all other mercenaries who fought with the American forces in the last war enjoyed this equal rate of pay which was denied to Filipinos.

Then, as if to add insult to injury, a general impression has been created here that we have been the beneficiaries of extra-lavish American assistance. Here are the figures which I got from the reports of the U.S. Department of Commerce for the fiscal year 1958: During the postwar period, mutual security aid from the United States was given to the following countries in these amounts: Japan, $2,897 million; Formosa, $2,373 million; Korea, $2,160 million; Vietnam, $795 million; Pakistan, $343 million; India, $343 million; and the Philippines, $145 million. Of course, this figure for the Philippines is aside from the war-damage payments which were certainly due us after suffering incredible destruction from an enemy attack which was, after all, aimed against America, for the Philippines was American territory at the time. As you will notice from these figures, our actual receipts are much less than those given to other countries in Asia, some of them former enemy countries, others neutral or uncommitted, certainly none linked by political, military, and economic ties as closely to the American people as we Filipinos are.

I believe, of course, that it is necessary for America to make and cultivate new friends in Asia where communism has seen fit to challenge the Western World to competitive coexistence and where the majority of uncommitted countries are still undecided whether to cast their lot with the Western World or to throw in with Muscovy. But it is certainly wiser for America to keep and maintain old friends. We who as a people have cast our lot unreservedly with hers and have always stood up to be counted, thus assuming all the concomitant risks of such a forthright stand; we who as a Nation have refused, unlike others, to sit comfortably on the fence, or stand on the sidelines, feel that we deserve a more sympathetic understanding of our problems. The truth is that we have not asked for any handouts, nor have we sought charities. If the United States can only see its way clear to settling our claims, we need no financial aid from the United States.

The other delicate area of present Philippine-American relations lies in the emergence of nationalism as a regional phenomenon throughout Asia, and which in the Philippines has become a rising issue of the day. The Western nations decry nationalism as a concept which is barbarous, narrow, self-centered, inherently unfit, and unreliable in the enlightened age of international cooperation. They may be right. But it is a cardinal proposition in logic that one cannot argue against a fact. Nationalism is a fact, the most important fact, in Asia, and it seems to me that, until the Western World learns that fact, all of us are in peril of death.

Rather than decry nationalism or fear it however, the West must understand that this feeling is not antiforeign in nature. It merely consists of a strong and purposeful desire to achieve a new economic freedom, which in the case of the Philippines anyway, will allow our people to participate in a greater measure in the economic development of our country. America should accommodate her attitudes and policies to the legitimate nationalistic aspirations of the newly independent peoples of Asia. All Asians are familiar with the abuses of colonialism. A living generation remembers when they were hewers of wood and carriers of water, and the wealth they created was channeled to a metropolis on the other side of the world. They wish now to distribute this wealth among their own people.

In the political field several problems also arise. One of the worst effects of colonialism is the inferiority complex it creates in the subject people, and the inferiority complex in turn must be compensated (or overcompensated?) with one of superiority. This perhaps explains why Asians seem to react almost automatically against Western policy. If the West offers loans and technical assistance, then there's probably a catch to it. The white man's word was law in the past. Now, even if only to prove that the past is past, his word must be contradicted. I do not say that the Asians are right; I do say the West should try to understand them.

It is against this background and setting that the importance of Philippine-American relations must be viewed. It has been said that we need America. But America needs us too. The Philippines is still the most hospitable country in Asia for Western ideas and Western policies. Americans of another time had essayed to extend to an Asian people, the Filipinos, the democratic ideals, principles and techniques which made their own country great. This venture must be accounted an historic success for it achieved everything it hoped to achieve: the peaceful

emancipation of a colony that has become a friend.

But there is another venture, a Philippine venture, which has greater immediate significance. It is the experiment that we Filipinos have made in turn: of an Asian people placing their trust wholeheartedly in America. No one can ask of a friend more than was asked of us. No friend can give more, and give it more cheerfully, than we have given.

This is indeed a test case for Asia. For if our faith in America and the West is justified with the works of the West, if it can be shown that a small Asian nation resolutely committed to the Western World need not degenerate into a Gunga Din trotting bravely at the heels of his master; if it can be shown that we Filipinos did not make a mistake and that America is indeed a true friend of Asia; then indeed the Philippine venture may induce other Asians to make the choices that we believe are necessary and right.

They are not so much uncommitted as unconvinced; indeed they are uncommitted because they are unconvinced.

Ukrainian Independence Day

EXTENSION OF REMARKS
OF

HON. FLORENCE P. DWYER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Tuesday, January 19, 1960

Mrs. DWYER. Mr. Speaker, the 42d anniversary of Ukrainian independence provides an opportunity for all Americans and free people everywhere to do honor to the continued struggle of a courageous people for freedom.

It is worth reminding ourselves that wherever or whenever freedom is denied, then the idea of freedom itself is in danger. Free people can never relax in the presence of tyranny.

Last year, Mr. Speaker, I was privileged to address the World Congress of Ukrainian Women, sponsored in New York by the Ukrainian National Women's League of America. It was an impressive demonstration to me of the undying determination of people of Ukrainian descent, wherever they may live, to keep alive the hope of freedom for their brethren still in Soviet Ukraine.

Under previous leave, I include my remarks on that occasion in the RECORD as a testimonial of my own admiration for their courage:

UKRAINIAN-AMERICAN WOMEN AND FREEDOM

I want first of all to greet the delegates to this World Congress of Ukrainian Women and to welcome those of you from other countries to our own, and of course I want also to congratulate the Ukrainian National Women's League of America for sponsoring this Congress.

Woman's role in our civilization has always been considered important, though that importance has not been adequately emphasized and properly understood. Certainly such has been the case in the distant past, in ancient times, in the Middle Ages, and in some countries and communities even in our own day.

From time immemorial woman's status and her role was more or less clearly defined and widely recognized: the home was her special place, and to attend to all the details within and around the house was her rigidly prescribed duty. She brought warmth and encouragement to her growing children and helped her husband as indispensable partner in all phases of the family. But with the coming of industrialization, the rise of modern metropolitan centers, urbanization, and all the complexity of today's civilization, this seemingly happy equilibrium was upset. A different relationship developed. Men went off to their work and women remained at home. A separateness and sharp division—a distance—grew up between man and woman. But today we are learning that man alone cannot cope with all his pressing and perplexing problems without the encouragement and inspiration, without the aid and counsel and assistance of woman. Thus, in a sense we have traversed a long distance, through the ages in enlarging the area in which woman works, in enhancing her standing in our civic and social lives, and in appreciating more properly her indispensable role in modern society as her role was also understood—taken for granted—in earlier societies.

These general remarks apply equally to the women of the Ukraine as they apply to the women of America and to those of other countries, particularly to the women of the free and democratic West. It is difficult for one not brought up in the Ukrainian tradition in the historic Ukraine, for one not well acquainted with the traditional Ukrainian family and communal customs, and the Ukrainian way of life, to speak of women in the Ukraine, and describe adequately their important role, to the World Congress of Ukrainian Women. But this challenge may be attempted if one has had a keen interest in Ukrainian affairs, has followed recent tragic history of the Ukrainian people in their homeland, has learned of their struggle for freedom against their heartless oppressors, has known Ukrainian-Americans at work here, and has been aided with information by the Ukrainian National Women's League of America. I have these interests and have enjoyed the favors of the Women's League, and therefore gladly accepted the invitation to address you today.

Now let me say a few words about the general status of women in the U.S.S.R.

It is extremely interesting and revealing to consider the role Soviet women play in Soviet society today. Soviet society presents us all with the distressing and disturbing dilemma of seeing the mixture of good and evil. This is so in a review of Soviet accomplishments in education and science. In the case of the Soviet woman, this dilemma is even more sharply delineated.

The Soviet woman holds some of the most important positions in Soviet economic life and some of the most degrading and humiliating. If any of you ladies present were to be admitted to a hospital in Moscow, Kiev, or Tiflis, undoubtedly you would be attended by a woman doctor. Women dominate the medical profession in the U.S.S.R. It is estimated that in both the medical profession and in education more than 70 percent are women.

Women in the Soviet Union are also technicians and engineers and hold responsible positions in the Soviet Government and the Communist Party organizations. A woman, Madame Furtseva, is actually a member of the highest organ of Soviet political power, the party Presidium.

Yet, this is only one side of the picture. To be sure many hundreds of thousands of women are engaged in the familiar roles of housewife, mother, teacher, doctor, and researcher. But the Soviet woman is also doing a man's job—often of the most back-breaking kind. For every Soviet woman who is a doctor there are many more who wield picks and shovels in construction work, drive rivets in steel structures, run massive agricultural machines, haul mortar and brick, repair sewers, and sweep the city streets day and night. None of these is a pleasant task. All are degrading and humiliating in the extreme.

Why do we see such striking contrasts in the treatment of women? One part of the answer lies in the fact that Soviet Russia suffers from an acute labor shortage. Thus, to achieve the extraordinary goals laid down by the successive 5-year plans, the Soviet Government has not hesitated to exploit the Soviet woman. The Soviet labor force needs them. It is estimated that a third of all heavy manual labor in the U.S.S.R. is being done by women and that nearly one-half of all industrial and factory jobs are held by them. Recent statistics on Soviet population indicate that in 1939, before the war, 52 percent of the total population were women and 48 percent men; the 1959 census revealed that owing to war losses of manpower, the current percentage of the total population of 208,800,000 is 55 percent women to 45 percent men.

The fundamental explanation for women's position in the Soviet Union, however, can be found in the nature of the Soviet system and the Communist ideology. Here, the state is the all-important consideration. In theory, of course, the state consists of all the people and exists to serve their best interests. But in Communist practice, the state is directed by the Communist Party which alone knows what is best for the people. And, the Communist Party, in turn, is dominated by a handful of top officials, and led by a dictator, whose every decision and desire is law.

In a free society, all the people participate not only in the work of the state but in making the decisions. The goals and purposes of a free democracy are the goals and purposes freely determined by its people. Even minorities, even those who may disagree, are protected in their freedom because a truly free society in the Western tradition insists upon limits to the power of government. The essential dignity and freedom of the individual is guaranteed against the demands of the state—no matter how large a majority may feel otherwise.

This, of course, is not so in Soviet society—and this explains the basic difference in the role of women as between the free world and the Communist world. The people of Soviet Russia—regardless of differences in nationality, religion, or personal desires—must devote their services and efforts to the Communist state in whatever way its Communist masters order. There is little or no free choice. If one woman is assigned a profession that gives her unusual opportunity, it is not because she chose it freely or earned it fairly; it is exclusively due to the decision of the Government that she could best serve the state in that capacity. Likewise, the degrading work to which other women are assigned results from the same impersonal, dictatorial decision of the Government. There is no free choice, no consideration of individual rights, no opportunity for freely developing one's God-given talents and tastes.

I have no doubt, however, that before all and above all Ukrainian women in their native homeland and in their personal lives are proud mothers, faithful wives, efficient homemakers, and vigilant guardians of family and community conscience insofar as the state permits. But it is difficult for Ukrainian women in the Ukraine, under the stern and unrelenting Communist totalitarian dictatorship, to retain these virtues and carry on their difficult and onerous tasks. There, under the most oppressive of tyrannies, in the very midst of abject misery, Ukrainian women cannot hope to be their true selves. They are not allowed to be true to themselves, to their families and communities. The monolithic Communist regime, with its purely materialistic beliefs has been forcibly trying to imbue the women of Ukraine with Marx's preposterous and ungodly beliefs. For nearly 40 years the fanatical and brutal Communists have been doing their worst to rob the women, as also the men, of Ukraine of their time-honored

and venerated traditions and virtues. Fortunately, Communist attempts have not succeeded, and I am glad to be assured that today the courageous and stout-hearted women of Communist-dominated Ukraine still steadfastly and tenaciously cling to their womanly, motherly, and family virtues. There, against heavy and often forbidding odds, they are carrying on the fight with all the means they possess for the preservation of these virtues, and also for their personal and national freedom. These dauntless and daring souls deserve our unstinted praise and wholehearted sympathy for their willingness and readiness to sacrifice their all in defense of their cultural and spiritual values.

The virtues of family love, of motherly affection and of concern for the local community are the basic necessities in all free societies. They are much the same in every country and among all peoples, but only those who enjoy the blessings of freedom and democracy may freely practice them. That explains the close relationship and the spiritual kinship prevailing among women of the free world, and also between the women of the free world and the freedom-loving women of the unfree, Communist-dominated world. Of course even closer is the spiritual and cultural relationship between the Ukrainian-American women, the women of Ukrainian descent in other free countries, and the women of the Ukraine itself. That is only natural and desirable. There should be unbreakable ties between the women in the Ukraine and those in the free world. These ties need strengthening, cementing and forging through constantly sustained efforts on the part of women of Ukrainian descent, and particularly by American women of Ukrainian descent.

Those in this country, as well as all of you here representing Ukrainian women in the free world, have the special mission of acquainting the women of your particular country with the lot and fate, with the gifts and talents, with the accomplishments and attainments, with the hopes and aspirations of the women of Ukraine. And since the women of unfree Ukraine are not in position—are not allowed—to speak for themselves, it is incumbent upon all of you in the free world to speak for them, to espouse their cause in all the forums of the free world. I consider this task, in fact, the task of speaking for the women of Ukraine, as one of your solemn duties. It is a primary and basic obligation of women of Ukrainian descent in the free world.

The Ukrainian National Women's League of America, in the course of its existence during the last 34 years, has been doing splendid work both in the propagation of the cause of Ukraine, and also in welfare and educational fields in a large number of communities. Operating in 16 States with 63 branches in many parts of this country, its activities reach out to all communities having large numbers of Ukrainian-Americans. As a civic, cultural, educational and welfare organizations, the league has been helpful to all those needing aid and guidance. Besides giving financial and material aid to the needy, it has been rendering signal service in guidance and educational work, particularly among immigrant Ukrainians. In this respect, the league has become a first-rate educational agency, an enterprising American institution, in teaching and educating Ukrainian immigrants in the American way of life. If the league has done nothing else, this delicate and difficult work alone would command our admiration and high praise. I am indeed glad to express my personal and profound admiration for such fine work.

Since its founding 1925, the object of the league has been, and remains, that of uniting and organizing women of Ukrainian birth and descent in this country for the purpose of mutual benefit, and for the promotion of their common interest, as well as giving assistance to Ukrainians in Europe.

As I said before, in all of its varied and worthwhile activities, in the performance of many humanitarian and educational tasks, the league has been eminently successful. Let me state that it will be even more successful in its future endeavors after this congress, for I am sure that upon your return to your respective countries, you will carry your fine work with increased vigor, energy, and zeal. And the league, knowing that its work has been properly and fully appreciated, will continue the policies which have been endorsed and acclaimed by its members and followers.

I have admired the work of the league in all fields and in all communities, in domestic and international affairs. And I like particularly the slogan adopted by the league for this congress: "Ukrainian women in the non-Communist world in defense of the four freedoms, and of the human rights." In these precarious days, we in the free world should never relax our vigilance in behalf of our most cherished values, our birthrights, our freedoms, the Bill of Rights, and the human rights that belong to all people for all of which freedom-seeking humanity has struggled throughout its known history.

It is of course natural that those who suffer most under tyranny should become its most uncompromising enemies, vowing to fight for its destruction. For that reason I can well understand, and everyone should know, why Ukrainian women everywhere in the free world are so bitterly and justly opposed to all forms of totalitarianism and dictatorship, particularly to Communist totalitarian dictatorship. It is the natural but courageous response of good people to become involved in this world struggle for freedom and independence against the forces of darkness and destruction, against Soviet Communist dictatorship. You have grasped the full significance of that struggle, encompassing not only man's material possessions but also his very soul. By your willingness and readiness to take such a strong and honorable stand against Communist tyranny, you are assuring to yourselves a high place among those who have fought and died for the higher and nobler ideals of humanity. The women of Ukraine, the women of Ukrainian birth and descent, the delegates of the World Congress of Ukrainian Women, and the members of the Ukrainian National Women's League of America—you all deserve well of the free world, for you are fighting in defense of the four freedoms wherever they are denied in the world.

They Can Do One: We Can Do Both

EXTENSION OF REMARKS

OF

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, January 18, 1960

Mr. ROBISON. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wall Street Journal of January 26, 1960:

REVIEW AND OUTLOOK: QUESTIONS OF SURVIVAL

Almost any commentator, learned or otherwise, will be heard these days deploring the Nation's mania for luxury when what the times supposedly demand is concentration on essentials.

Many politicians have also picked up the refrain: We are wasting money on tail fins while the Government should be spending much more on missiles, education, and domestic welfare projects.

The complaint has been further embittered by the tenor of the President's messages this month, with their emphasis on the good life and better to come. For example, the economic report contains a section of tables relating to the diffusion of well-being; they show how increasingly well off Americans are in terms of TV sets, cars, homes, and so forth—and also how many more Americans are coming to share in that prosperity.

This newspaper has no more wish than anyone else to see America let luxury turn it into a sitting duck for the Communists. But before agreeing with the dire conclusion that this is what is happening as a result of too much private spending and too little Government spending, we would like to ask a few questions.

The first is simple: Where does the money come from that the Government spends? Except when the Government resorts to the printing press, it comes from the private economic activity of individuals and businesses. The Government's income increased more than $8 billion in 5 fiscal years, 1955–60, without any increase in taxes. The rise came from expanded private economic activity.

So when these people argue that the Government should spend much more for defense, schools, slum clearance or whatever, they are arguing for a curtailment of the private economic activity which is already enabling the Government to spend many billions more than it could 5 years ago. And if they go on to say that then the Government should raise taxes much more in order to spend more, they are arguing for a still further curtailment. Indeed it is not illogical to figure that the Government's revenue would increase from lower taxes because of the spur that would give to economic growth.

The next question is a little more difficut: Are we spending enough for defense and other essentials? Very few unbiased experts contend that more money is the key to more rapid rocket progress; some military experts believe the Defense Department is correct in its view that the United States is far from lagging behind the Soviet Union in military strength.

All the same, let us assume for the moment that the Pentagon should be spending $51 billion a year instead of $41 billion. Why in all seriousness—and pray what is more serious than the question of our survival?—should not that additional money come out of the billions the Government wastes every year? If survival is the issue, then let the politicians in Washington for once in a lifetime curb their political greed on the ostensible behalf of farmers, healthy veterans and all the other pressure groups, before they start laying waste the private economy.

The final question is again essentially simple: What are these critics of our alleged luxury mania really proposing? They are proposing, if what they say means anything at all, to change our form of society. For what they are saying is that the Government should take over our disorderly private lives and whip them into shape. The Government will allocate the Nation's resources, taking the bulk of them for the Government's purposes and leaving a little, precious little, for consumer goods. That is how it is done in the Soviet Union.

And this tragically misses the point of the struggle in which we are engaged. America's only point in this context, is to demonstrate that the free society and the free economy can both defend itself and provide the good life for all its citizens. The Communists can do one; they cannot do both.

If we cannot do both then we do not deserve to survive as a particular form of economic and political organization. But let us at least not hasten our own destruction by heeding the clamorous counsels of those who cannot see the true essentials for survival.

Appendix

East-West Center for Cultural and Technical Interchange

EXTENSION OF REMARKS
OF
HON. OREN E. LONG
OF HAWAII
IN THE SENATE OF THE UNITED STATES
Wednesday, January 27, 1960

Mr. LONG of Hawaii. Mr. President, on January 21, 1960, Prof. Murray Turnbull, interim director of the proposed east-west center for cultural and technical interchange at the University of Hawaii, addressed the Rotary Club of Wahiawa, Hawaii. Mr. Turnbull is a most unusual man. He is at once a gifted artist whose canvases and designs in stained glass adorn homes and public buildings in Hawaii. At the same time he has been an effective teacher and administrator at the University of Hawaii. He now has charge of preliminary planning for the east-west center at the university and his speech admirably sets forth the purposes and organization of the proposed center.

I ask unanimous consent that Mr. Turnbull's statement be printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD as follows:

ADDRESS BY PROF. MURRAY TURNBULL, INTERIM DIRECTOR, INTERNATIONAL CENTER, UNIVERSITY OF HAWAII, BEFORE THE WAHIAWA ROTARY CLUB, JANUARY 21, 1960

Of all the natural resources upon which the world depends for its survival and its sustenance, none is so important as its people. Of all of the means for making possible the fullest and wisest realization of the potentialities of this basic resource, none offers such promise as the free interchange of information and ideas which will encourage mutual understanding between people.

Wherever and whenever men can face one another as peers and exchange their considered views on the vital issues of their lives, their constructive potentialities for cooperative peace increase dramatically. Whenever they can share knowledge and information basic to these issues, they establish sound foundations upon which such interchanges can occur most fruitfully, and at the same time provide the means for effective thought and action.

It is to accomplish precisely these ends that proposals have been made for the formation of an international center for cultural and technical interchange in Hawaii, which stands as a brilliant symbol of the day-to-day success of the democratic processes as they respond to the creative impact of varied cultural and racial groups. Our newest State provides a tangible demonstration of the cooperative accomplishments of peoples of diverse origins, working together as free men, with mutual respect and consideration. It represents the reality of the American dream, not as a bland assimilation of differences, but as a fulfilled promise in the useful employment of diversities for mutual good. Indeed, Hawaii's people constitute a visible proof that men can live together in harmony. Against this background, and using the unusual resources of the University of Hawaii, the several agencies of the State, the schools, museums, private institutions, and the innumerable services of an alert, informed, and active citizenry, a center to facilitate the interchange of ideas between the countries of the Pacific, the Trust Territories of the United States, and our country promises much.

This promise is not formed on idle speculation or casual good will, but grows naturally out of Hawaii's unique geographic location, its refreshing climate and beauteous vistas, its combination of an innately friendly people and an extraordinary social mixture of several nationalities. In this setting, the State university has taken advantage of challenges and opportunities provided by its living community laboratory to play an active role in the development of the democratic society which is its base and its support. With a faculty itself representative of both Asian and American racial groups, and with its serious attention to Asian-American relationships, to Asian history, geography, art, government, and society, it has for many years invested its energies with profit to Hawaii's young people. Not only has it provided substantial programs in basic areas of higher education, but it has converted natural assets to outstanding achievements in such special fields as marine biology, tropical agriculture, and the social sciences, among others.

When Senator LYNDON JOHNSON and Hawaii's Delegate Jack Burns introduced legislation last summer as a part of the Mutual Security Act directing the Secretary of State to prepare a program for a center for cultural and technical interchange between East and West, the university was ready on the strength of its experience and the enthusiasm of its interests to assist in the planning of a series of proposals to effect the wise purposes of the act. The university had for many years discussed ideas pertinent to such a center, and moved swiftly to draw them together into a concise but useful form as proposals for an international college. As a result of its deliberations, President Snyder recommended that Governor Quinn appoint a committee at large to summarize the available resources of the State and its potentialities. It was on the basis of these thorough and painstaking studies and proposals that the State Department prepared its own recommendations for the center.

To accomplish its goals in the furtherance of mutually enlightening relationships with Asian and Southeast-Asian nations, the proposed center would have two principal units: one, an international training facility, and the other an international college.

The first of these would expand and expedite an extensive series of on-the-job and in-service training programs which Hawaii already has in operation. Through the services of its International Cooperation Center, the State has assisted over 3,000 foreign participants from 30 different countries in the last 4 years. Present facilities, nevertheless, are operating at only a fraction of their capacity. These training resources include programs in industrial administrative practices, business policy, land use survey and planning, traffic control, school planning and administration, coffee production, soil conservation, disease control, sanitation, and child and family welfare, among many others. The training facility proposed would make it possible to exploit these resources fully and with great effect.

The second division of the center would consist of an international college, concerned principally with affairs pertaining to higher education. The endeavors of this unit would be focused on potential leaders and on mature individuals who occupy positions of leadership in their home countries. A number of students would be brought to the university from Asia, Southeast Asia, and the trust territories to undertake studies in the various regular and several special programs of the university. Most, but not all, of these selected young people would be graduate students concentrating on disciplines of greatest need in their own countries. The proposals include a smaller but significant number of fellowships for American students to undertake studies in the Asian studies and overseas operations programs of the university. It is essential that both groups have the opportunity to share study and living experiences in a situation where barriers to friendship and communication are minimal or easily removed.

It is most significant for the purposes of this center that the curriculums and courses of the university bear direct relevance to the problems and the lives of Asian peoples. Application of knowledge is thus enhanced and aided as incoming students respond to the pertinence of their studies. In addition to the regular curriculums of the university available to these students, several special services and programs would be developed in their support. These are integral parts of the project, and essential to its success. First is an English language institute to assure competent training and assistance in the use of English to facilitate the studies and the social contacts of all participating students so that language difficulties will not bar able students from learning in the areas of their interest or becoming isolated without easy means of communication. Language aides and tutors would play an active role in classrooms and dormitories in this development of the existing institute.

To ensure the general welfare of incoming students, a counseling service would be established which would be concerned with problems of immigration, health, recreation, and personal well-being.

The proposed college also includes an American studies institute to bring together an already substantial amount of research and a number of courses dealing with American traditions and institutions, and to focus attention on the history and character of American life.

The center is not alone designed to spread knowledge among student leaders, but has been devised to capitalize on past experience in providing opportunities for mature scholars and leaders to consider together the results of their research and thought in an institute of advanced studies. Under this program a number of scholars from the countries involved would be brought together at the university to participate in joint research, special conferences, seminars, and discussion meetings. The university's

imaginative success in sponsoring the East-West philosophers' conferenecs over the last 30 years provides the impetus for this phase of the project. A translation bureau to assist in the preparation of material in scholarly journals and open avenues for communication between the people most deeply concerned with basic issues and problems would operate as a necessary adjunct to this institute.

The center would be alert to develop other possible programs as needs arise, and would in fact offer an ideal organization and locale for studies and experiments in the education of Asian students which could be of value to all educational institutions.

While the university and the community it represents have invaluable resources to offer for the development of all of these programs in the national interest, the center would require some new physical facilities for its operation in addition to those now available. Chiefly, these would consist of dormitories and food services, with some space for library, classroom, research, and administrative units. The State, through its legislature, has already provided a $534,000 bond authorization for a part of this plant, a portion of which has been released for use in making land studies and outlining preliminary building plans. The university is determined to provide planning for facilities which will enable and encourage the integration of international students with the regular student body and the community.

In addition to these funds and supporting resolutions from its legislature and the extensive preparations undertaken by the university, the State of Hawaii has made it possible to establish an office with a staff at the university to prepare detailed plans for the organization and operation of the center. Furthermore, a number of Hawaii's legislators have contributed to a scholarship fund for local students to study in the center from their own personal funds, and a citizens' committee has been actively providing public support in a number of ways.

Perhaps one of the most heartening things about all of the effort which has been expended in support of this great idea is its cooperative, selfless and nonpartisan character. Representatives from both major political parties are agreed that this project is vital to our national security and offers a magnificent hope for effective national relationships in the future. Hawaii's Senators LONG and FONG and Representative INOUYE have been enthusiastically united in common purpose with both local and national legislators to bring this project into reality. People of widely divergent political views recognize that Federal support of all of these programs is necessary to their success, and that to the extent that they can be initiated with Federal funds along with fair and proportionate contributions from the State of Hawaii, our good relationships with foreign peoples will be buttressed and strengthened.

In addition to his statement that "Hawaii cries insistently to a divided world that all our differences of race and origin are less than the grand and indestructible unity of our common brotherhood," President Eisenhower during his recent visit to India proposed a "massive interchange of mutual understanding on the grand plateau of youth." "I believe mankind will profit when young men and women of all nations and in great numbers study and learn together," he said at the University of Delhi last month.

The International Center for Cultural and Technical Interchange in Hawaii would constitute a sign written large to cast these messages in both directions acros the Pacific and illuminate the very word itself, peace.

Truman's Summit Plan

EXTENSION OF REMARKS
OF
HON. JOHN S. MONAGAN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 27, 1960

Mr. MONAGAN. Mr. Speaker, in further support of my proposal to the President that a member of the Democratic Party be appointed as a participant in future international conferences, I append herewith an article which appeared in the New York Times of January 14, 1960:

TRUMAN'S SUMMIT PLAN—EISENHOWER IS COOL, BUT NATION NEEDS BIPARTISANSHIP IN FIXING BASIC POLICY

(By James Reston)

WASHINGTON, January 13.—The best way to assure the rejection of a good idea in Washington is to tell President Eisenhower it came from his predecessor, Harry S. Truman.

President Eisenhower is probably less partisan than any President of this century, but he has never quite got over Mr. Truman's blunt partisan language in the campaign of 1952, and even now he seems to get his dukes up every time Hurricane Harry is mentioned. Accordingly, when he was asked at his news conference this morning about Mr. Truman's suggestion that a representative of the Democratic Party be taken along to the summit meeting, he did not really come to grips with the idea.

It might be a good idea, he said, if the summit conference seemed to be approaching a treaty that would require the understanding and support of the Senate. But otherwise, he implied, there was no point in taking the opposition along.

In ordinary times, even the Democrats would approve this attitude, but these are not ordinary times. The power of the Federal Government is not in the hands of one party: It is divided, and has been divided since 1954, between a Republican Executive and a Democratic Congress.

MAJOR DECISIONS PENDING

This alone is a powerful reason for including the opposition, not only in the summit meeting, but in the other conferences this year on disarmament, nuclear testing, world trade, and aid to the developing nations of Asia, Africa, and Latin America.

Even this, however, is not the main reason. The main reason is that this is an election year in which decisions will be taken that will certainly influence the course of the Nation's history long after President Eisenhower's retirement in January of 1961.

It may be, of course, that the Democrats will have nothing to do with the Executive after the election. They are in such a mess now in their efforts to settle on a candidate that they may very well be defeated in November.

Moreover, there is no pressure from the Democrats to get involved in the summit meeting, or any other international conferences. Many of them would rather stay on the side and argue about foreign policy all the way through the campaign, just as many Republicans do not want to share the peace issue with anybody from the opposition.

There is, however, the question of the national interest, which is above any partisan interest. The nations of the West are at a critical point with one another, with the Communist world, and with the world in between. The President recognized this in his State of the Union message last week. He also recognized the need for cooperation between the two parties of a divided U.S. Government.

"My deep concern in the next 12 months, before my successor takes office," he said, "is with our joint congressional-Executive duty to our own and to other nations.

"Every minute spent in irrelevant interbranch wrangling," he went on, "is precious time taken from the intelligent initiation and adoption of coherent policies for our national survival and progress. We seek a common goal—brighter opportunity for our own citizens and a world peace with justice for all."

It will be difficult to implement this principle in 1960. Both parties are playing for high stakes. Even if Vice President NIXON is nominated and elected, he faces the prospect of having to work with at least a Democratic Senate. Already there is an ugly mood developing in the campaign over religion. And fierce personal rivalries involving Mr. NIXON and the competing Democratic candidates are not making things any easier.

In this situation, surely every possible effort should be made to minimize the damage, assist the new President, whoever he may be, and assure as much continuity as possible from one administration to the other.

POLICY SUGGESTIONS

These things could be done without giving either party any advantage over the other:

The ranking members of the Foreign Relations and Foreign Affairs Committees could be brought into the major conferences of 1960 as observers. This was what was done, with great advantage to the Nation, when the late Senator Arthur H. Vandenberg, Republican of Michigan, was brought into the United Nations and North Atlantic Treaty Organization conferences of the 1940s.

The candidates for the Presidency could be given periodic briefings by the Central Intelligence Agency, as they were in the presidential campaign of 1956.

The policy studies of the last 8 years—now running into the hundreds—could be analyzed, kept up to date, and summarized between now and November, so that the new President and his staff would have a manageable body of objective information to study between the election and the inauguration.

It may have been that President Eisenhower misunderstood the nature of the question put to him this morning about bipartisan cooperation at the summit. But in any event it is fairly obvious that he has not yet put his mind to the important question of continuity and cooperation between the parties in the last year of his administration.

Midwest Newspaper Suggests Seaton for Vice President

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES

Wednesday, January 27, 1960

Mr. MUNDT. Mr. President, one of the great and influential newspapers of the Upper Midwest is the Sioux Falls Argus-Leader, published in Sioux Falls, S. Dak. Recently this newspaper pub-

lished an editorial entitled "Rockefeller Recognizes the Realities." The editorial pays a nice tribute to Gov. Nelson Rockefeller, of New York; it lauds the character and capacity of Vice President NIXON; and it suggests reasons why the newspaper believes Fred Seaton, of Nebraska, would make a logical and effective running mate for DICK NIXON.

Mr. President, I ask unanimous consent that the editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

ROCKEFELLER RECOGNIZES THE REALITIES

Surprising to many, indeed, was the early decision by Nelson A. Rockefeller not to seek the Republican nomination for the Presidency. Most persons had assumed he would await developments after the first of the year and base his plans on what might take place.

But it is characteristic of Rockefeller to recognize the realities. He has done so as the Governor of New York and in all of his other activities. And he saw in the unfolding panorama of the political picture in 1960 the emergence of Vice President NIXON as the dominant choice not only of the leaders of the Republic Party but of the rank and file.

Still it would be a sorry reflection on the character of Rockefeller if one were to say he withdrew solely because he believed the odds were sharply against his nomination. That would indicate he was concerned only in victory and not in principle. Rockefeller isn't that kind of a man. He will fight for that which he believes to be right even though the way is rough.

But he realized—and this is a demonstration of the man's bigness—that his views and those of NIXON were not far apart. He sensed very well that NIXON is qualified by training and experience and in general advocates the principles that Rockefeller endorses. He made it clear in his statement that he would support the GOP nominee, knowing full well when he made the declaration that NIXON in all probability would be the party's choice.

So it is that the Democrats who now are trying to say that Rockefeller is anti-NIXON are in effect indicting the character of the New York Governor. They are saying that Rockefeller isn't a man who is willing to fight for his principles against extreme obstacles.

Rockefeller is, to be sure, a liberal but his type of liberality is in contrast to that of the many so-called New Deal liberals. The difference, and it is a significant one, is that Rockefeller believes in liberality on a pay-as-you-go basis. He demonstrated that in the first year of his administration as Governor of New York when he forced through the legislature a tax program producing sufficient revenue to match the outgo. That's why Rockefeller's principles are so much closer to those of President Eisenhower and Vice President NIXON than they are to those of, say, Senator HUBERT HUMPHREY, of Minnesota, or Governor Williams of Michigan.

The withdrawal of Rockefeller places the Republican Party in a somewhat unusual position of unity in respect to 1960 and one that should strengthen the party's prospects. But it means as well, of course, that NIXON shoulders an added responsibility as the party's obvious leader. There is every reason to believe he will assume that responsibility with credit.

Thought on the Republican side will now turn to the nomination for the Vice Presidency. Rockefeller has ruled himself out and that leaves the field wide open.

This area of the Nation would find much satisfaction in the nomination of Fred A. Seaton, now serving as Secretary of the Interior. And the qualities that have won acclaim for him here are those that should command national endorsement. He has handled the admittedly complex and highly controversial affairs of the Department of the Interior with ability, tact, and understanding. He has ironed out many sore spots and has been appraised in general as one of the Nation's best Secretaries of the Interior.

We in this region, of course, know him particularly well because his home is in Nebraska and he is the owner of two South Dakota newspapers—the Lead Daily Call and the Deadwood Pioneer-Times. He has a cabin in the Black Hills and spends as much time as he can in that delightful region. It would be a wise choice, indeed, on the part of the GOP to nominate him as the running mate for NIXON in 1960.

Anti-Semitic Occurrences

EXTENSION OF REMARKS
OF
HON. ROBERT N. C. NIX
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 27, 1960

Mr. NIX. Mr. Speaker, under leave to extend my remarks in the Appendix of the RECORD, I have the privilege to include a resolution submitted by a group of outstanding and distinguished leaders from the city of Philadelphia who feel, and properly so, that they cannot stand by without voicing in the strongest terms, their protest and condemnation of the acts and depredations directed against the Jewish people in the many cities of America and several countries abroad. I join them and with the vast majority of Americans as well as men of good will all over the world in condemning this evidence of man's inhumanity to man and I say with them that if we permit injustices of any kind to be visited upon people of any race or country, faith, or persuasion anywhere in the world, we will all in time be destroyed by the same injustices.

The resolution follows:

MEETING OF NEGRO LEADERS, PHILADELPHIA, PA., SAMUEL L. EVANS, CHAIRMAN, JANUARY 21, 1960

Resolved:

1. That Negro leaders, representative of civic, religious, business, and fraternal organizations, call on every branch of the National, city, and State Governments and every citizen, regardless of race, creed, or religion, to denounce recent anti-Semitic occurrences in this country and abroad.

2. We appeal to the 20 million Negroes throughout the country, and other concerned citizens, to lend every assistance to public officials and law enforcement agencies so that they can apprehend and bring to justice those persons who have caused damage to sacred religious institutions of various faiths and property of American citizens.

3. It is our opinion that it is the serious responsibility of the West German Government and its people not only to maintain law and order, and disclaim and expose those guilty of acts of violence, but to remove from public office former Nazi criminals who have jeopardized the life, property, and freedom of others. Further, it should develop a long range program of education that will create a climate of opinion in which nazism cannot revive.

4. We also urge educators and religious leaders in this country to develop programs and activities that will help American children and adults to better understand the contribution of citizens of all faiths, races, and creeds to the creation of an American society based on the principle of equal justice under law.

5. And finally, we apprise American citizens of the Jewish faith and such other citizens who may be the victims of racial and religious persecution that they have a faithful ally in the American Negro who recognizes that acts of injustice to one group strike at the safety, security, and well-being of all Americans.

Proposed End of U.S. Subsidy to Castro

EXTENSION OF REMARKS
OF
HON. STYLES BRIDGES
OF NEW HAMPSHIRE
IN THE SENATE OF THE UNITED STATES
Wednesday, January 27, 1960

Mr. BRIDGES. Mr. President, an editorial, entitled "End of U.S. Subsidy to Castro Warranted by Events in Cuba," which was written by our former colleague, the able William Knowland of California, appeared in the January 23 issue of the Oakland Tribune. I think this editorial warrants the attention of every Member of the Senate and of the general public as well. I ask unanimous consent to have it printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

END OF U.S. SUBSIDY TO CASTRO WARRANTED BY EVENTS IN CUBA

With the recall of the U.S. Ambassador to Washington for consultations, the State Department has emphasized the critical situation created in Cuba by the revolutionary regime of Fidel Castro.

For some time Castro has behaved in an insulting and menacing manner toward the United States without the slightest provocation on the part of this country. He is engaged in a calculated campaign to expel American business from the island. A Cuban official has been placed in a number of U.S.-owned industries with full power of decision and control. Castro has appointed a well-known leftist as head of the banking system and from him has come word that the Government intends to take over 51 percent of all Cuban industry. Despite protests of the State Department, there has been no compensation for the expropriations.

Now the insults have taken a personal turn. Since like all dictators Castro has placed the Cuban press under firm governmental control, he must be held responsible for what his henchmen publish. Yesterday President Eisenhower and Ambassador Bonsal were the subject not only of bitter denunciation but also shameful abuse.

If the matter were not so serious, the language of the semiofficial newspaper Revolution might be considered childish. Referring to the President's visit to Franco, it said "What a historic fraud. What deception. What democratic falsification. What free-world slaves. What a monstrosity." Then came the same kind of epithets the Communists employ: "war criminals, rob-

bers, traitors, scoffers." There has been much of the same kind of billingsgate in the press generally, along with fantastic and irresponsible charges against the United States.

The United States has carefully abstained from any kind of interference in Cuban affairs but we do have legitimate rights and interests in that country. It is incumbent on the U.S. Government to protect its citizens and their property, as well as maintaining respect for American officials. This is no time for timidity or weakness, which only cause contempt for us in the Latin American States. Let the Cuban revolutionaries cry imperialism and exploitation all they want; it has no substance.

If Castro wants to go it alone, without our assistance and investments which amount to about $1 billion, then so be it. There is no reason, then, why American taxpayers should subsidize the Cuban economy.

That is what we now are doing in respect to sugar. Normally there is a world surplus of sugar. Annually the United States buys nearly 3 million tons of sugar from Cuba and pays 2 cents a pound above the world price. That is what makes the sugar industry so profitable in Cuba and because of production costs Cuban producers could make little profit by selling on the world market.

There are numerous other countries including our good friends in Mexico, that are exerting tremendous pressure for a bigger share of the American market. Considering the provocation, there is no reason why the State Department should not suspend the sugar subsidy and quota now accorded to Cuba. It is highly probable that the Congress would favor such a move which would be thoroughly justified by the irresponsible and illegitimate actions of the Castro regime.

The Christian Amendment

EXTENSION OF REMARKS
OF
HON. B. F. SISK
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 27, 1960

Mr. SISK. Mr. Speaker, Dr. John Coleman, whose record is given in Who's Who in America, and who has taught political philosophy in American colleges for over a third of a century, has prepared the following radio program, which is being broadcast on some 100 stations in our country. There is a series of 13 of these programs, and they will be sent free on request. Write to the Christian Amendment Movement, 804 Pennsylvania Ave., Pittsburgh. The program follows:

I love my Uncle Sam. In my book, Uncle Sam is a great man. I do not altogether like his pictures. The artists make him tall and husky, they give him a fine face, they clothe him in a suit of stars and stripes—all good. But they make Uncle Sam too old: whitehaired, white-bearded, about 60. To me he is not over 30, or at the most 35, still in the fullness of his strength—not 60, almost ready to retire.

It is true that relative to population, there are twice as many men and women over 65 in America as there were in 1900. But people live longer today. In 1885 the average length of life in the United States was about 35; now it is almost 70. And the number of births has grown, also, to 4 million a year, 4.7 children born every minute (that seventenths is purely statistical). If one generation goeth, another generation cometh. And actual measurements indicate that our present younger generation is taller and heavier than that of their fathers at the same age. Biologically, physically, Uncle Sam may always be young, have youth on his side.

So also with finances. Uncle Sam is not so old that he can scarcely make a living. He has 3 million of his nephews under arms, to protect himself and his allies; and a million more making munitions and equipment for them. He goes into his pocket each year for at least $30 billion to pay the bill, and he loans or gives, mostly gives, 4 to 4½ billion to his allies, and still has for his own people the highest standard of living in the world. God has blessed Uncle Sam in a material way. Uncle Sam should have a Thanksgiving every week. Surely you will agree with me that financially Uncle Sam is still young and vigorous.

Nevertheless there is a problem that social scientists have not altogether solved: Do nations grow old? Do nations grow old? Is Uncle Sam growing old? Do nations have their infancy, their childhood, adolescence, coming of age, ripened strength and mature manhood, and then—declining years with hardened arteries, weakened heart, stiffened joints, dimmed sight, and hearing—old age? Do nations grow old? It is the fate of individual men once to die. Is it the fate of nations? Is it to be the fate of the United States of America?

After World War I, Oswald Spengler, the German historian, wrote a book, that, widely read in the Western World, caused a sensation, Untergang des Abendlandes—The Decline of the West. Spengler maintained that nations do grow old, that they have a natural lifespan which they cannot extend; that they have their mornings, their noontides, their fine afternoons, their evenings, and then the nights. Spengler maintained also that our civilization—that of the Western nations—is already in the twilight, and the shades of night are falling fast.

Arnold Toynbee, the great British historian, does not agree that nations have a natural and inevitable lifespan; yet in his monumental Study of History, 10 big volumes, he gives us the stories of 26 civilizations known to man, and tells us that of these 26 only 10 survive, and that all 10 are disintegrating, except one—our Western civilization. Toynbee says that civilizations and nations come to an end, not from old age, but because they fail to meet the successive crises that arise in their history. America lives because she met the crisis that arose over slavery, the crisis of our great depressions—1817, 1837, 1857, 1873, 1893, 1920, and then the 1930's; she met the crisis of one world war, and then that of another. We are now faced with the continued crisis of the cold war with communism and with the great social and moral issues here at home. If we meet these successfully we will live.

Toynbee has followed his great work with a small volume, Civilization on Trial. He fears that our civilization, wearied by many problems, may be destroyed by a moral and spiritual decline. Well must we be on our guard. Together, moral and spiritual factors make up that intangible, but very real thing we call morale. Little Greece had morale when she turned back Xerxes with his huge army and the greatest fleet that the world had ever seen. Washington's little army had morale when it left its winter quarters at Valley Forge and, crossing the Delaware at night, surprised the British and won the Battle of Trenton. Resources, great wealth, do not buy morale; great numbers are not a sure foundation for it. Morale is a spiritual thing, arising from a belief in human worth and dignity, a belief that God and His universe are on the side of truth and righteousness; that the future, therefore, holds more, much more, than the past.

Morale keeps our enthusiasm fresh and young and we are ready to buy the future, whatever the cost. When morale is lacking, institutions, even churches—or perhaps I should say, churches most of all—keep their outward forms but lose their vitality, and people do not care—enough; corruption creeps into business, politics, and even sports, and people do not care—enough (we are complacent and self-satisfied); slums and redlight districts spread over one section after another of our cities and the people do not care—enough; crime increases among adults, yes, and among children, and people do not care—enough (except those whose persons or property are damaged); family life and decency are held more and more lightly, and people do not care—enough. If such conditions are growing in America, then despite our strength and prosperity, our morale is declining; God forgive us, we as a nation are growing old. Uncle Sam—gray hairs are here and there upon him, and—he knoweth it not.

But "Christianity", says Toynbee, "has the power to revive us again." Christianity is something more than a doctrine, it is a life centered in the Lord Jesus Christ. Christ said, "I am come that they might have life." He said, "I am the way, the truth, and the life." His is the life for nations as well as for individual men. Nations will acquire a new vitality, a new morale, if they turn to Him and join with Him in fulfilling their prayer: "Thy will be done on earth as it is in heaven."

Let me quote two or three sentences from "The World Crisis and Christ," by Francis B. Sayre, now deceased, but once an Assistant Secretary of State, and later a successful Governor-General of the Philippine Islands:

"If we are to save our civilization now is the time for action. Before the walls have crumbled, we must begin building our foundations anew. The time is past for more churchgoing and singing of hymns. We must set out actually to build a society based on the living principles of Christ. If our civilization cannot be brought to understand more clearly, and to believe more strongly, in the fundamental teachings of Jesus Christ, it cannot survive. * * * We must go back to the living Christ, to the audacious, thrilling, winsome figure that actually lived and still lives."

Said the Apostle Paul (I Cor. 3:11): "For other foundation can no man lay than that is laid, which is Jesus Christ." The Christian amendment is an effort to lay this foundation for our own land.

The first section reads:

"This Nation devoutly recognizes the authority and law of Jesus Christ, Saviour and Ruler of nations, through whom are bestowed the blessings of Almighty God."

Patuxent River Park

EXTENSION OF REMARKS
OF
HON. J. GLENN BEALL
OF MARYLAND
IN THE SENATE OF THE UNITED STATES
Wednesday, January 27, 1960

Mr. BEALL. Mr. President, on January 26, 1960, the Baltimore Evening Sun carried an editorial entitled "Patuxent River Park."

This editorial contemplates the inclusion of the Patuxent River Valley into

the National Park System. I believe this proposal has great merit and I intend to contact the Secretary of the Interior in an effort to start the ball rolling for the development of this park facility.

I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PATUXENT RIVER PARK

High among the reasons for Maryland's distinction as the fastest-growing State east of the Mississippi is its inclusion within one relatively small patch of land of two burgeoning metropolitan areas, those for Baltimore and Washington. While a source of great stimulation to the State, this doubled growth calls for astute public guidance. In particular, something must be done—and soon—to avert the virtual collision course on which the land developers are moving south from Baltimore and north from Washington. The city lines lie less than 40 miles apart, remember, and already that once-sylvan gap is shrunken by onrushing suburbs to half or less its original distance. It is to save those last few acres from the shopping centers and their allies that the State park people are reaching out for the Patuxent River Valley.

Here is the appropriate boundary midway between the two metropolitan areas. As a river valley, it offers a natural buffer separating one set of metropolitan problems from the other. As a handsome stretch of woodland, it places fresh opportunities for retreat and recreation before the citizens of both areas. And, as a public preserve, a park here would go far to prevent pollution of the Patuxent water supply system. The advantages of this site are compelling. There remains a question as to why Maryland should have to undertake the project alone. After all, the southern half of the area to be benefited is being filled up mostly by the northward thrust of Federal employees from Washington. Why should not the Federal park system pay at least a part of the cost of the Patuxent project's cost? An enterprising Maryland Congressman would want to find out the answer.

Farming in Pennsylvania

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 27, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader, January 13, 1960:

FARMING IN PENNSYLVANIA

A turnout of a quarter million in 2 days, despite unfavorable weather conditions that developed yesterday, testifies not only to the interest in the State Farm Show at Harrisburg, but to the place agriculture has in the economy of the Commonwealth.

Although Pennsylvania is regarded as an industrial State, it also ranks as one of the leaders in agriculture. The farm show offers convincing proof.

Farming is a $9 billion industry in Pennsylvania and, therefore, big business. A look around Luzerne and neighboring counties offers proof of large investments and handsome returns.

Under the circumstances, it is surprising more young people do not explore its possibilities. With decentralization in progress and with good highways and automobiles, as well as the telephone, radio, and television, the farmer no longer is isolated. Moreover, his home is modern in every respect and is as well equipped as the residences of his city cousins. His children also have transportation to excellent schools and attend college later. Life on the farm today is a far cry from what it was a century or even a half century ago.

A Scientist Views Religion

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 27, 1960

Mr. MUNDT. Mr. President, a great scientist, Dr. Wernher von Braun, Development Operations Director, Army Ballistic Missile Agency, has made many contributions which have added greatly to our scientific knowledge as well as to our national safety. He ranks among the very greatest of the world scientists, and probably knows more about missile development than any other individual.

However, I believe that he has made another great contribution, in a new area, which can add immeasurably to the moral fiber of our country. In the January 24, 1960, issue of This Week magazine, in the section, "Words To Live By," Dr. von Braun has written on the subject of "Immortality." In this short article he has presented his views on the need for religion and a belief in God in order that man can survive in this dangerous age.

This article, which might well be termed "a sermon" illustrates the truth of the observation that the learned scientists are seldom atheists. The few doors they are able to open only display to them that there are many more doors which they cannot open. Dr. von Braun's words serve to guide us, to inspire us, and to caution us. I commend them to the Members of this body and to all Americans, and I ask that the article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

IMMORTALITY

(By Dr. Wernher Von Braun, Development Operations Director, Army Ballistic Missile Agency)

"I believe * * * that the soul of man is immortal and will be treated with justice in another life respecting its conduct in this."—Benjamin Franklin.

Today, more than ever before, our survival—yours and mine and our children's—depends on our adherence to ethical principles. Ethics alone will decide whether atomic energy will be an earthly blessing or the source of mankind's utter destruction.

Where does the desire for ethical action come from? What makes us want to be ethical? I believe there are two forces which move us. One is belief in a last judgment, when every one of us has to account for what we did with God's great gift of life on the earth. The other is belief in an immortal soul, a soul which will cherish the award or suffer the penalty decreed in a final judgment.

Belief in God and in immortality thus gives us the moral strength and the ethical guidance we need for virtually every action in our daily lives.

In our modern world many people seem to feel that science has somehow made such religious ideas untimely or old-fashioned.

But I think science has a real surprise for the skeptics. Science, for instance, tells us that nothing in nature, not even the tiniest particle, can disappear without a trace.

Think about that for a moment. Once you do, your thoughts about life will never be the same.

Science has found that nothing can disappear without a trace. Nature does not know extinction. All it knows is transformation.

Now, if God applies this fundamental principle to the most minute and insignificant parts of His universe, doesn't it make sense to assume that He applies it also to the masterpiece of His creation—the human soul? I think it does. And everything science has taught me, and continues to teach me, strengthens my belief in the continuity of our spiritual existence after death. Nothing disappears without a trace.

The Crisis of the Commuter Railroads: No. 2

EXTENSION OF REMARKS
OF
HON. DONALD J. IRWIN
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 27, 1960

Mr. IRWIN. Mr. Speaker, pursuant to permission granted, I insert into the Appendix of the RECORD a statement by the New York, New Haven & Hartford Railway which was published in newspapers in New York City and Fairfield County, Conn., and distributed to commuters. This is the second in a series of articles and other material I am inserting in the RECORD to draw the attention of the Congress to the critical nature of the rail commuter situation. This insertion indicates the shotgun techniques of one commuter railroad in which there is a threat to raise fares by 70 percent to meet a deficit, if other means are not provided, but also an admission that such an increase would so reduce passenger volume that discontinuance of the commuter service would be inevitable. Commuter service must not be permitted to be discontinued and in view of its importance to large interstate regions should get the assistance necessary for improvement and development. The statement follows:

A STATEMENT BY THE PRESIDENT OF THE NEW HAVEN RAILROAD

The New Haven Railroad is losing more than $8 million a year on New York suburban passenger service, a fact confirmed in a study recently completed by Wyer, Dick & Co., independent transportation experts.

This is more than the net freight revenue on our entire system. It is jeopardizing commuter service along with the whole railroad. This cannot continue.

These losses include no allowance for new cars or locomotives to replace equipment now in use.

Commuter service on the New Haven now faces these inexorable alternatives:

1. DISCONTINUANCE OF SERVICE

This would produce devastating consequences throughout the metropolitan area: Existing highways, already congested, would become clogged.

Hundreds of millions of dollars would be needed for more highways.

Parking for residents and commuters alike would swamp streets and garages and parking lots. New York City traffic would grind to a halt.

Private automobiles inevitably would have to be banned in mid-Manhattan.

The result would seriously affect millions in New York and Connecticut—not only commuters, but also merchants, homeowners, real estate investors, and employees.

2. COMPENSATORY FARE INCREASE

To make up the losses, the Wyer, Dick & Co., report has advised that it would require an increase of at least 70 percent in commutation fares alone, even if there were no reduction in the number of passengers. But there would be—so substantial a reduction, in fact, that eventual discontinuance of service would be inevitable.

3. TAX RELIEF AND SUBSIDY

Adequate tax relief and subsidies, so generously provided by the Government to other transportation facilities, both publicly and privately operated, have been denied the New Haven Railroad in spite of our intensive efforts to obtain equality of treatment.

For illustration: A New York helicopter service, privately owned, which carries fewer passengers in a year than the New Haven carries in a day, received in 1958 a $2.2 million Federal cash subsidy, which was almost three times its total revenue from patrons.

Whether the rail commuter should be required to pay the full cost of the service is a political and economic issue not for the railroads to determine. I believe, however, the commuter should not have to bear the full burden because:

The service is not alone for his benefit but for the benefit of the entire area served;

The rail commuter should receive equal treatment by the Government with commuters using other transportation facilities.

The New Haven Railroad is doing its best to continue commuter service, but if this service is to continue, the huge deficit must be eliminated without delay.

Obviously help must come either from fare increases, tax relief, or subsidy, or a combination of these.

Faced with this commuters crisis, we have worked out this plan calculated to distribute the cost equitably:

Commuter service survival plan

(a) A 10-percent fare increase to go into effect immediately. (This step is incorporated in papers just filed with the Interstate Commerce Commission.)

(b) Government action through tax relief and public service payments by June 30, 1960, at the latest.

(c) If Government action plus this 10-percent increase does not eliminate the deficit, then it would be necessary to apply for additional 10-percent increases at 6-month intervals until the deficit is met.

The time has finally come when one of two things must happen—either the loss from passenger operations must be eliminated or the service must stop.

The future of New Haven commuter service rests entirely with the public. The actions of the public's authorized representatives during the next 6 months will be decisive.

Contact your Representatives.

The countdown has begun.

GEORGE ALPERT.

Agricultural Chemicals

EXTENSION OF REMARKS
OF
HON. JAMES E. MURRAY
OF MONTANA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 27, 1960

Mr. MURRAY. Mr. President, there is no doubt that we must utilize various chemicals in agriculture in order to control plant diseases and insect attacks. Increased research on the effect of various chemicals on human beings, on wildlife, and on delicate biotic relationships is essential if chemicals are to serve their true purpose in agricultural production.

The Sierra Club Bulletin of December 1959 contains an interesting article entitled "Toxic Pesticides Insufficiently Tested." I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TOXIC PESTICIDES INSUFFICIENTLY TESTED—STRONGER REGULATIONS NECESSARY

The public should be mindful of one inescapable fact in viewing the clash between Dr. Arthur S. Flemming, Secretary of Health, Education, and Welfare, and commercial cranberry interests. The fact is that the development and use of poisons for killing plants and insects have far outstripped facilities to fully test the chemicals for all possible immediate and long-term harmful effects on humans and other life, according to the Wildlife Management Institute.

The reasons which led Secretary Flemming to make his announcement and the charges that have been leveled against him by cranberry producers and sympathetic agriculture groups have been covered fully in the press and on the air. The weedkiller that was used by some cranberry growers in the Northwest, aminotriazole, has been found as a residue on cranberry products. The Food and Drug Administration, earlier this year, refused to accept any foodstuffs with a residue of the weedkiller, because laboratory tests had shown a link with the production of cancer in test animals.

The volume of all plant and insect poisons being used for control purposes in the United States has risen at least seven times above the 1940 level. Most chemicals in use today were not on the market before World War II, and more than 60 have been developed in the past few years. More than one billion pounds of chemical poisons are being used on farms each year.

Few States effectively regulate the poisons. Under law the manufacturers print instructions for use on the package labels and there the responsibility ends. Aminotriazole was cleared for use in cranberry beds after the berries are picked. Some growers obviously used it prior to harvest. Those who did apparently did so in ignorance or contrary to recommendations, but in either case it was used at their own risk.

Happenings in the past few months certainly must have given Secretary Flemming added cause for concern. A classic example is the U.S. Department of Agriculture's ambitious and widely criticized Federal-State project in the Southeast for the complete eradication of the imported fire ant which, in some areas, is classed as an agricultural pest. Heptachlor, the poison that has been used most, is mixed with clay pellets and showered on thousands of acres from the air. Large dieoffs of birds, fish, and other animal life followed some operations. Livestock and farm pets also have been killed. Only after bitterly attacking its critics did the USDA reluctantly somewhat reduce the aerial dosage level.

Now after thousands of acres have been treated, researchers have found that the violently poisonous heptachlor breaks down under exposed conditions to an even more toxic compound, heptachlor epoxide. On October 27 the Food and Drug Administration proposed to reduce to zero its previous ruling that 0.1 part per million of heptachlor residue was permissible on more than 30 agricultural products. Heptachlor and heptachlor epoxide have been found in milk, in the tissues of beef animals, and on grains, fruits, vegetables, and forage crops.

"Although chronic toxicity studies have not been completed on heptachlor epoxide," a Food and Drug Administration official said, "it has been shown in acute toxicity studies that heptachlor epoxide is more toxic than heptachlor. Evidence is not available to show that such residues would be safe."

The public should realize that there also is no evidence to show that residues of aminotriazole or its weathering byproduct would be safe either.

News media reveal that the USDA is siding with the cranberry growers, a position that seemingly stems from financial, not health, considerations. If that is true, then the public should be thankful that there is another agency to protect its health.

Panama Canal Zone: "Yankee, Go Home"

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 27, 1960

Mr. FLOOD. Mr. Speaker, in my address to the House of Representatives on January 13, 1960, on "Panama Canal: Symbol of Fourth Front," I mentioned the vastly important service of Canal Zone residents in alerting the Congress and the Nation to the true situation facing the United States at Panama.

Exercising the constitutional rights of U.S. citizens to petition the Government for redress of grievances, Canal Zone residents, including civil service employees, organized a Committee for Retention of the Panama Canal.

Composed of longtime residents of the Canal Zone thoroughly acquainted with actual Isthmian conditions, this committee has circularized the Congress with a booklet formed by letters, summarizing essential facts; photographs of mobs, their leaders, and scenes of violence; cartoons belittling the U.S. authorities, even the President; editorials and news story extracts from the Spanish language press of Panama. The cover of the brochure is a reproduction of flysheets placed in unoccupied automobiles bearing Canal Zone license plates when parked in the city of Panama, entitled, "Yankee Go Home."

The picture presented, conforming to the pattern of other Communist inspired and directed incidents in Latin America since 1948, is of mob violence as an instrument of Red diplomacy. We must not fall into the trap laid for us at Panama. We must be firm in our stand against any surrender to Panamanian

agitators on the sovereignty and flag issues.

In order that the significant portions of the indicated brochure may be recorded in the annals of the Congress, I quote them as part of these remarks and commend them for careful reading by every Member of the Congress, which is the ultimate authority on isthmian and canal policy matters:

YANKEE, GO HOME

(Issued by Canal Zone Committee for U.S. Retention of Panama Canal)

BALBOA, CANAL ZONE,
December 9, 1959.

DEAR SIR: We Americans living on the Canal Zone do not feel that the average U.S. taxpayer is aware of the real story on the Panama situation or realizes what is at stake. Therefore, we believe the best way to get this story to them is through you who represent them in Congress.

It appears that the United States is going to pay off in one of the most fantastic and bizarre blackmail plots ever perpetrated. The basis for this plot is our State Department's consistent policy of appeasement and its mortal fear that a policy of firmness would be propagandized to the world as aggression.

To cover all the background of U.S.-Panama relations would be voluminous. But the treaty under which the Canal was constructed at an investment of more than $1 billion is the foundation. Under the treaty, Panama granted all rights in the zone to the United States as if the United States were sovereign to the entire exclusion of the exercise of any sovereign rights by Panama. Thus, the United States has exercised jurisdiction and the U.S. flag has flown alone for 50 years. Peacefully negotiated amendments to the treaty, conceding financial advantages to Panama, have been concluded in the interim.

Panama is controlled financially and politically by no more than 50 families (the oligarchy). The gist of the political game is strictly that to the winner of government control belongs the spoils—unlimited graft and corruption. One 4-year term in a key office is enough to set a man up for life. But these 50 families never get enough—although all are millionaires in their own right through control of the country's industry. There is a constant struggle between them for political power—the key to more money. There has never been a strong government and the "outs" are continuously striving to overthrow the "ins."

It was an "out"—Aquilino Boyd—who plotted the incident of November 3. For months he had been arousing the people, particularly the students, on the theme that Panama is sovereign over the Canal Zone. He did not generate much public support, however, it being recognized as a political scheme.

His clever plot was to deliberately instigate an incident with the United States—he advertised his planned march to the Canal Zone months in advance. He wanted trouble. He succeeded. The choice of the Canal Zone Government was to permit Boyd's lawless mob of thugs and hoodlums to overrun the zone or to stop the mob with force.

Why did the Canal Zone have to use the U.S. Army to protect lives and property? This was because of the twist which foiled Boyd's plans. Boyd calculated that the Panamanian Guardia Nacional would attempt to quell the mob and thus the Panama Government would be put in the position of fighting its own people and protecting the Americans. For this, the present Panamanian Government was to be overthrown. But the Government, weak and shaky, did not fall into the Boyd trap. The Guardia Nacional was not called out and the incident of November 3 developed as it did, with the Americans being forced to defend the zone and the U.S. Embassy being attacked and the flag desecrated.

The oligarchy in Panama immediately saw dollar signs aplenty from Boyd's frustrated ambitions. They also own the newspapers and radio stations. An unbelievable avalanche of anti-U.S. propaganda continued for days on the Panamanian radios and in its press. Outright lies, horrible cartoons, distorted reports, charges of employment discriminations, treaty violations—all that would put Pravda to shame—were ground out continuously. All of this was to whip up a violent solid front anti-American hatred among the populace. The purpose: to lay a foundation for blackmail in demanding huge concessions from the United States. These concessions would be in the form of (1) granting monopoly rights, at their price, to the oligarchy for supplies required by the Canal Zone and its employees; (2) outright monetary payments; and (3) conceding to Panama sovereign rights in the Canal Zone. The Panamanian Government climbed right on the bandwagon and stole the leadership right away from Boyd and his clique who had instigated it all.

This terrific denunciation of the United States calls for another march on the Canal Zone; abuse against the Governor, etc., continued for days. The United States lowered itself by sending Under Secretary of State Merchant to discuss matters. He announced that the United States would grant no concessions until normalcy was restored and obtained a promise that the Panamanian Government would protect American lives and property. This was not quite the result the oligarchy anticipated. Also, business was hurting because no Americans were buying anything in the Panama stores. Immediately the radio and press changed; conciliation, not violence, became the word.

But it was too late to prevent further violence. For days the populace had been bombarded with cries to rise to the call of their nation. A mass sovereignty demonstration had been set for November 28. The Communists, Cubans, and rabblerousers were not going to lose such a golden opportunity. Again, on November 28, a mob of hoodlums marched. After several U.S. soldiers had been injured by thrown rocks and glass and had taken all the abuse that any human could be expected to take, the U.S. commander advised the Guardia Nacional that if they couldn't break up the demonstration themselves, he was going to order his troops to open fire. Almost immediately, adequate Guardia Nacional troops arrived on the scene and turned the mob back from the border "to protect them from American bayonets and bullets." The grand "patriotic" demonstrators then proceeded to loot and vandalize the business section of Panama City.

Summation: Uncle Sam has let a bunch of money-mad damagogs and business barons kick him in the teeth—he turns his back and they kick him in the pants. Apparently it is State Department creed that no matter what happens the United States shall not get mad.

Result: Blithely ignoring the views of the Canal Zone administration and the Department of Defense, Ike and the State Department are going to give substantial concessions to the oligarchy and most likely will let the Panamanian flag fly. If that ever happens, the United States is doomed in its control of the Panama Canal—for the flag stands for sovereignty—and sovereignty means jurisdiction.

The moral is: Be as nasty to the United States as you can—and the State Department will pay you off to be quiet. When you want more—just be nasty again. Panamanian demogogs have learned this: presumably their kind all over the world knows it.

Irony: To fan up the poor average Panamanian the oligarchy charged discrimination in employment and wages in the Canal Zone. Last week—the timing was coincidence—the Panamanian Congress on its last day in session passed a 40 cents, repeat, 40 cents, an hour minimum wage law. The same people who caused all the furor against the United States have denounced this as unconstitutional, say that it will ruin the country, and are fighting it with all their power. The current Government had to do some little something for the people because elections come up in about 2 months.

That's the story in a nutshell. We Americans here in the Canal Zone are disillusioned and discouraged. The State Department's attitude is beyond our comprehension. If the United States capitulates to Panama for this political blackmail, it will forfeit all right to respect from any nation in the world. The United States will certainly have become such a laughing stock in Panama that it will be unbearably embarrassing to be an American in the Canal Zone.

Sincerely yours,

ARTHUR J. WYNNE,
Chairman, Canal Zone Committee for U.S. Retention of the Panama Canal.

THE WATER PROBLEM, A NEW CONFLICT WITH THE ZONE

The clear, precise, and patriotic statements voiced in yesterday's edition of our paper by Engineer Reyna on the problem caused by a possible water shortage for Panama City and Colon, make it wholly unnecessary to enter into further arguments in view of Reyna's logical and brilliant statements.

The fact is that the Canal Zone is obligated to furnish Panamanian consumers with all the water they need and at the net cost for pumping, purifying, and distributing this water, without surcharges or marginal costs in which Panamanians have nothing to do. The unilateral arrangements made by the United States artificially creating the so-called Panama Canal Company, which must show a certain amount of profits, although the U.S. Government itself is the only stockholder, is not our business. Therefore, everything concerned with the budgets the Canal Zone may prepare for operations and costs, and the fact that the Company has to repay the U.S. Treasury, with or without interests, over a long-range period more or less, leaves us completely unconcerned, since this is a matter over which we cannot pass an opinion. The only thing we know for sure, which leaves no room for any doubt, is that the Canal Zone is under obligation to furnish Panama with the water it needs without obtaining for it the least profit, gain or benefit.

Apart from these considerations, which are strongly upheld by agreements regulating our relations with the United States, there is the very special circumstances that the water in question being haggled over by the Canal Zone comes from a river born in Panama, runs through territory under jurisdiction of the Republic and flows into the Canal Zone. The Canal Zone authorities then use the water of this river to generate the electric power needed to operate Madden Dam; most important yet, to maintain Gatun Lake at a certain level for navigation, and also for such personal uses as filling up swimming pools and watering lawns and gardens.

Before the Canal Zone authorities definitely refuse to expand their distribution system to supply Panama with water unless Panama agrees to a price that will allow the zone to adjust their accounts and budgets with the margin of profit the Panama Canal Company must show in order to satisfy its stockholder—the U.S. Government—the United States should seriously think and consider the consequences that might follow

such action. We Panamanians cannot resign ourselves to live with a water shortage—a shortage which would become more acute with the growth of our population. The inevitable solution to such a problem might therefore well be the damming of the Chagres River within the Republic of Panama.

We realize, of course, that such a project would cost a tremendous amount of money not available from Panama's ordinary resources. But if such a step had to be decided upon by the inevitable pressure of the circumstances, a way could be found to finance it, bearing in mind at the same time the possibility that the Canal Zone might become the buyer of water necessary for its hydroelectric plants and maintaining the level of Gatun Lake, as well as for other uses.

The Chagres is a Panamanian river 100 percent, as the whole world knows, and it would be logical and natural that we should decide to take advantage of its waters in the event the complicated Canal Zone financial combinations of the Panama Canal Company and the U.S. Treasury confronted us with the dilemma of paying for water at a prohibitive price or suffering the inconveniences, troubles, and dangers to be had from the shortage of such a vital element.

OUR FLAG IN THE CANAL ZONE

News from Washington appears to indicate with certainty that the North American authorities, and the Department of State in particular, have finally understood the reason we have in repeatedly invoking the right that our national flag be raised in the zone together with the U.S. flag, the former as a symbol of sovereignty and the latter of jurisdiction. It is to be hoped that the realization of this justified yearning in the national conscience of Panama not be delayed too long.

It is supposed that when the United States accedes to such a legitimate aspiration, the United States shall proceed in a manner befitting the great solemnity which such an act represents, and in a way that our national emblem may receive the honors it deserves as the highest standard of a sovereign nation. We mean by this, that the official flag raising ceremony in the Canal Zone for the first time should not be undertaken in an almost clandestine manner, without the solemnity the action demands in view of the great significance, but to the contrary, with all the protocol and ceremony proper to such a transcendental act. Not only do we believe that the Department of State should send to Panama for such an occasion a high ranking official—who might well be Mr. Merchant himself—but that the most solemn act of raising the flag for the first time be done in the proper place, reserved for the President of the Republic to raise it. To the Panamanian Chief Executive undoubtedly belongs the honor of raising the flag of his country over a part of our territory, while the U.S. military forces stationed in the zone present arms and fire artillery salvos.

As recently stated by President Ernesto de la Guardia Jr., in an excellent speech we qualify as historic, the Panamanian flag should arrive at the Canal Zone with all the honors it deserves by right. We therefore do not doubt that when the moment arrives in which to give compliance to this national yearning, the flag of our country shall be received and saluted in the form already said. The extraordinary symbolism of this act, which will initiate a new era in the friendly relations of our country with the United States, demands that it be undertaken with supreme dignity.

BALBOA, C.Z.,
December 19, 1959.

DEAR SIR: We hope that you have already received our first letter dated December 9, 1959, concerning the situation in Panama and the Canal Zone. The time is getting near for President Eisenhower to arrive back in the United States from Europe. Here in the Canal Zone and especially in Panama it is felt that when the President returns he will make several announcements granting certain concessions to the Republic of Panama. In Panama it has been stated by many individuals and in the press that the announcement will be as a Christmas present.

Attached is a photostatic copy of an extracted portion of the first page of the Star and Herald, a leading newspaper in Panama, dated November 25, 1959. This article lists the demands which were delivered to Under Secretary Livingston T. Merchant by Civic Forces of the Panamanian Nation. We feel that the most dangerous concession to the Republic of Panama will be the raising of the Panamanian flag in the Canal Zone. President Eisenhower has already stated in a press conference that "we should have visual evidence that Panama does have titular sovereignty over the region."

We fear that the action the State Department has announced of sympathetically considering, whereby the Panamanian flag should be flown in the Canal Zone, is the most serious and potentially the most costly and dangerous of all the long line of concessions made in the past 15 years. The legality of the proposal is dubious; the United States holds a treaty grant in perpetuity of sovereign rights in the Canal Zone to the entire exclusion of the exercise by the Republic of Panama of any such sovereign rights, power of authority. Article III, Treaty of November 1903. Moreover, the official position of the Republic of Panama makes it plain beyond all doubt that the flag raising will only be the beginning of a series of more substantial and expensive demands and that the ultimate goal is ouster of the United States from the zone.

Attached are translations of extracts and views expressed by the Panamanian press and radio. These statements point out the danger of conceding to raising the Panamanian flag in the Canal Zone. The raising of the Panamanian flag in the Canal Zone is just the beginning of endless demands by political demagogues and business barons in the Republic of Panama. We urge you to take the necessary action to cause the President to delay any action regarding Panama, particularly that of raising the Panamanian flag in the Canal Zone, until Congress can review the situation when it convenes in January. For, as you know, once this step has been taken there can be no backing down on such a commitment. And if the Panamanian flag ever does fly in the Canal Zone, the United States can well expect Panama to immediately take the official position that their flag stands for sovereignty—and sovereignty means jurisdiction. Then they will demand elimination of judicial powers, recognition of Panama's civil, penal, fiscal, and labor jurisdiction, removal of the postal system, liquidation of the Panama Canal Company, removal of the Armed Forces, and ultimately the control and ownership of the Panama Canal. The tremendous stake involved demands that no hasty action be taken which would jeopardize the control of the Panama Canal by the United States.

As representatives of the American people we believe you have an important task in retaining the Panama Canal for commercial and defense purposes by the United States and the prevention of ill-advised State Department concessions to the greedy, ruling clique in Panama. American interests, public and private, will be well served by any action that can slow or halt the undermining of the United States position in the control of the Canal Zone through the State Department policy of weakness and appeasement.

Sincerely,

ARTHUR J. WYNNE,
Chairman, Canal Zone Committee for U.S. Retention of the Panama Canal.

TRANSLATION OF EXTRACTS AND VIEWS EXPRESSED IN PANAMANIAN PRESS AND RADIO SHOWING THAT PANAMANIANS CONSIDER THE CONCESSION TO FLY THE PANAMANIAN FLAG IN THE CANAL ZONE IS MERELY THE FIRST STEP TOWARD ACHIEVING FULL JURISDICTION OVER THE CANAL ZONE

La Nacion, May 7, 1958: The President's announcement that negotiations will be started immediately so that the Panamanian flag may fly in the Canal Zone seems on first analysis to be happy and opportune but when one analyzes it further it is not precise or complete. A historic gesture such as Operation Sovereignty cannot be signed and sealed as a simple declaration that our flag should fly in the Canal Zone. It must be carried much further, and immediately, to negotiations for a new treaty since that is the total aspiration of the Panamanian people and doubtless was the fundamental idea of the students.

La Hora, December 7, 1959: "For the first time we agree with Public enemy No. 2 of Panama (Congressman FLOOD) that if Panamanians gained their point in having the Panamanian flag fly in the Canal Zone, they would never stop in their demands. 'After the Panamanian flag goes up in the zone, there are still many other things to demand.' "

La Hora, December 4, 1959: "The next step in the sovereignty battle (after the Panamanian flag is raised in the zone) will be to have only Panamanian judges acting in Canal Zone courts."

La Nacion, December 3, 1959: "November 3 and November 28 have passed and will go down in history as two dates of patriotism when the people launched themselves to plant the Panamanian flag in Panamanian territory. * * * Now there will be December 12 and that will be followed by December 22 and so on until all the Yankees are driven out of the Canal Zone and the canal is nationalized."

La Nacion, December 3, 1959: "The Permanent Defense Board for Panama's Sovereignty in the Canal Zone should warn the Government that sovereignty does not merely rest on having the Panamanian flag hoisted in the Canal Zone. If the Government lets it go at that, Panamanians will have lost an excellent opportunity to establish real sovereignty in the mentioned territory."

El Pais (President de la Guardia's paper), December 1, 1959: "Ambassador Ricardo Arias reported recently from Washington that 'Things are going well' and Panama should have some good news soon. If this means that Panama's sovereignty over the Canal Zone will be recognized without reservation, that the Panamanian flag will fly there beside that of the United States, that the Panama Canal will obtain its supplies only from Panama and the United States, that without rascally subterfuges equal salary will be paid for equal work to Panamanian and North American employees, and that, finally negotiations will be reopened to replace the 1903 treaty—if what he says means all these, then indeed he has achieved a rotund success."

El Dia, November 30, 1959: "One of the most applauded speeches (November 28) was the one in which Minister Moreno stated that nothing new has been gained by the recent statements of Under Secretary L. T. Merchant, and so long as the 1903 treaty remains in effect the entire country will continue its struggle to have it nullified."

Critica, November 30, 1959: "The popular theme in Panama is that the country's differences with the United States may be solved only by a new treaty, in which no mention is made of previous treaties."

La Estrella, November 25, 1959: "That recognition of titular sovereignty is far from what Panamanians think the United States ought to do to remove the differences which brought about the current crisis was indi-

cated by the text of the letter which was delivered to the Under Secretary in behalf of the civic forces of the Panamanian nation. The letter was drafted by a special committee chosen by spokesmen for 40 organizations. It suggested the replacement of existing treaties by an agreement embodying the following points:

"1. Unquestioned sovereignty of Panama over the territory in which the Panama Canal is built.

"2. Replacement of the present grant in perpetuity by one for a fixed period.

"3. Elimination of unfair competition to Panama's industry, agriculture and commerce.

"4. Elimination of discriminatory practices as to wages, opportunities, work conditions and treatment of Panamanian workers in the Canal Zone.

"5. A fair share for Panama in the gross receipts of the Canal, in addition to the present annuity.

"6. Suspension of any judicial, commercial, and industrial activity in the Canal Zone which is not connected with the powers of the U.S. authorities in the Canal Zone exclusively for the maintenance, operation, sanitation and protection of the canal.

"7. Fair interpretation of new treaties.

Meanwhile, Aquilino Boyd and Ernesto Castillero, the Nationalist Party leaders who called for the show of the flag in the Canal Zone on November 3, issued a statement last night minimizing the importance of the recognition of Panama's titular sovereignty. They too, recalled Taft's statement of 1905 and his reference to titular sovereignty as a barren ideality.

"We want, among other things, the Boyd-Castillero statement said 'to see our flag flying as soon as possible in the zone territory and on the main mast of all foreign ships entering the canal waters. Deeds and not words, Mr. Merchant.'"

El Dia, December 1, 1959: "The zone flag-placing stage—a weapon that has had undeniable psychological impact—should promptly be exceeded by another more original type of action which will keep alive the nationalistic flame that has forcefully set on fire the Panamanian spirit."

Alberto Quiros Guardia, speaking at the November 28, 1959, demonstration as representative of the "Front of National Unification": "We are overjoyed that the whole country is behind us; we will not give up until we obtain full sovereignty in the zone. * * * We want the world to know that Panamanians are united; no one can stop us. We have been the victim of bad agreements, but we are sovereign in the Canal Zone as even the Americans have admitted. We require now a new treaty, the main points of which should be full recognition of Panamanian sovereignty in the zone and of the corresponding Panamanian right to derive benefits from the canal; elimination of all judicial, commercial, or industrial activity in the zone which does not have to do directly with canal operations."

Panama City radio station BALBOA, December 10, 1959: "The latest press dispatches reaching Panama from Washington point to the United States of America's willingness to solve the problems arising in its relations with Panama.

"Among those problems the ones which are held foremost in the minds of the Panamanians are: The full recognition of our sovereignty, the flying of the Panamanian flag over the Canal Zone territory, and the obligatory flying of our flag by ships transiting the canal.

"The Washington reports specifically state that such a right held by us will be recognized. We therefore want to applaud our worthy President, His Excellency Ernesto de la Guardia, Jr., our Foreign Minister, Licenciate Miguel J. Moreno, Jr., and our Ambassador in Washington, Ricardo Manuel Arias Espinosa, for the highly patriotic and firm manner with which they carried out the negotiations that have been crowned with happy success.

"Above all, we want to praise the stanch youths, and the crowd of anonymous heroes and patriots who through their relentless and virile actions on November 3 helped attain this victory."

La Estrella, December 16, 1959: "Beginning on page 1, La Estrella carries an open letter to President de la Guardia from Edsel Wong Samudio Panama's labor attaché in her Embassy in Washington, who says that Panama's aspirations in respect to the Panama Canal will be realized when the Republic of Panama owns the canal and can administer it for the benefit of the world.

"He believes that the measures which the North American government has announced in relation to recognition of Panama's titular sovereignty over the zone, on labor discrimination, and on the purchase of Panama's products are not enough, but do show a trend toward greater flexibility on the part of the United States Government and prove that that Nation wants to apply a more dynamic and progressive policy toward Panama in particular and other nations in general.

"He suggests that Panama should undertake negotiations toward a new agreement with the United States which would provide: 1. Technical training for Panamanians in all matters concerning the operation and maintenance of the canal; 2. A 15-year term—or another of reasonable length—in which the canal would pass into Panama's hands; 3. A just compensation to the United States for the money it has invested in the construction and maintenance of the canal; 4. A cooperative system designed to bolster Panama's economy along the lines suggested by CEPAL."

El Dia, December 12, 1959: "Sovereignty, like virginity, is or is not—there is no half-way measure—El Dia remarks at the beginning of its editorial on the classification of Panama's sovereignty as titular."

Critica, December 14, 1959: Panama: "Actual Sovereignty, Not Titular," is the headline over Critica's editorial which, headline and text, is a reprint from an editorial in the latest edition of the magazine "Bohemia." The editorial reviews the issue of sovereignty and supports Panama in its demands.

BALBOA, C.Z.,
December 22,1959.

In our letter of December 9, 1959, we presented to you a factual report on the Panama situation—the background for the incidents of November 3 and 28. We alerted you that the United States, represented by the State Department, appears to be going to pay off in one of the most fantastic and bizarre blackmail plots ever perpetrated. We told you of the State Department's efforts to appease Panama by granting various concessions, including even the right to fly the Panamanian flag in the Canal Zone. We pointed out that the State Department, in following this course of appeasement and in its advice to President Eisenhower, has ignored the views of the Canal Zone administration and the Department of Defense. We also told you that this attitude of the State Department is disillusioning, discouraging, and incomprehensible to the American citizens who live on the Canal Zone and who are thoroughly familiar with Panama's true aspirations.

On December 19, 1959, we wrote to all members of the Senate Committees on Foreign Relations and Interstate and Foreign Commerce and the House Committee on Foreign Affairs and the Panama Canal Subcommittee of the Merchant Marine and Fisheries Committee. We warned that a concession to Panama of the right to fly its flag in the Canal Zone would be of far more impact than just a friendly gesture—that it would be the beginning of the end of U.S. control of the Panama Canal. We pleaded that the membership of these congressional committees use any recourse at their command to prevent independent State Department and Presidential action until at least the Congress had time to consider the proposal and to fully understand the tremendous stake involved. We supported our warning by appending various extracts from the Panamanian press which clearly reveal that the official Panamanian position is that the raising of the Panamanian flag in the Canal Zone is to serve only as the base for further demands—ultimately to the ouster of the United States from the Canal Zone. To the Government of Panama, their flag stands for sovereignty—and sovereignty means jurisdiction.

We herewith make a further effort to awaken you to the importance—to the danger—to the disaster—that attaches to the State Department's proposed concession to Panama. We believe it to be the aim of the State Department to accomplish its devious goal by Executive directive before Congress convenes. It is imperative therefore that Congress exercise its estoppel power immediately—because to delay action until after Congress convenes in January almost certainly will be to check the door after the horse (the Panama Canal) is gone.

To supplement our plea that Congress not passively sit by and let the executive branch give away the Panama Canal, we have prepared the enclosed brochure. If you have not done so, please read our letters of December 9 and 19 included therein. The cartoons are reproductions (with translations) of typical ones being presented daily in the Panamanian press. (The newspaper La Hora is owned by Roberto Arias, son of Harmodio Arias, ex-president and treaty negotiator. El Pais is controlled by the current president, Ernesto de La Guardia. La Nacion is owned by Temestocles Diaz, Vice President of Panama. La Estrella, which has heretofore been considered Panama's most conservative paper, is published by Tomas G. Duque, ex-President of Panama.)

We hope we have helped you to realize the seriousness of the Panama situation. We hope you believe us that the State Department intends promptly through President Eisenhower to direct that the Panamanian flag fly in the Canal Zone. We hope you realize that to permit the flag of Panama to fly in the Canal Zone is far more than a nominal symbol of sovereignty, but rather is to sound the deathknell of U.S. control of the Panama Canal—and, lastly we pray that Congress does not passively condone this, the biggest giveaway in U.S. history.

Sincerely yours,

ARTHUR J. WYNNE,
Chairman, Canal Zone Committee for U.S. Retention of the Panama Canal.

Increased Taxes for Defense

EXTENSION OF REMARKS
OF
HON. FRANCIS CASE
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 27, 1960

Mr. CASE of South Dakota. Mr. President, one of the most earnestly written letters I have received during the opening days of this session comes

from Mr. Richard H. Waltner of Freeman, S. Dak.

Mr. Waltner recognizes the fact that we cannot increase defense spending and proclaim tax cuts at the same time; that if the United States is to maintain its position of military strength, it must be willing to pay the bill in the form of high taxes.

I commend his letter as evidence that conscientious Americans all over this great land, even in the small towns and hamlets, are concerned with national problems and have a realistic outlook toward them.

Mr. President, I ask unanimous consent that the letter of Mr. Richard H. Waltner, of Freeman, S. Dak., to which I have just referred, may be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

FREEMAN, S. DAK.,
January 19, 1960.

HON. FRANCIS CASE,
U.S. Senator,
Senate Office Building,
Washington, D.C.

DEAR SENATOR CASE: After reading excerpts from the recent Rockefeller study, "Mid-Century Challenge to U.S. Foreign Policy," and the John Hopkins University research group study, one most obviously has to conclude that our house is not in order. I recognize that one cannot accept all that he reads at face value, for certainly individual fears and apprehensions are injected into reports of this nature. However, that does not minimize in importance the fact that America has by and large let its defense dwindle and is continuing to do so simply because of peace overtures that might very well be mere fabrications.

Certainly you recall the words of Dimetry Manuilsky when he addressed the Lenin School of Political Warfare, meeting in Moscow back in 1931. At that time he spoke prophetically of the peace overtures which must be used to lure "bourgeois to sleep." "We shall begin by launching the most spectacular peace movement on record. There will be electrifying overtures and unheard-of concessions." Is this not at the moment an altogether familiar theme? He goes on to conclude: "As soon as their guard is down, we shall smash them with our clenched fists." It is just this very thing that deeply concerns the proponents of the above-mentioned reports.

What has happened to the American public? Certainly we do not lack the "guts" to face the problem realistically and to do something positive about it. Why is it that every fearful prophecy is not countered with one of optimism? Have we lost the will to fight and to pay for our liberty, horrible thought it may be? Certainly some creeping demoralization has beset us when we feel that peace; yes, peace at any price, is what we must have, even if it means relinquishing our freedoms. God forbid that we have thus deteriorated.

Congress has recently reconvened. I call upon you as my representative in Congress to do all in your power to put our national house in order. If increased defense and military spending is essential to assure our military superiority and our retaliatory power, then by all means it must be appropriated.

If it means broader and greater taxation, then we must pay the increase. If the public will send us cries of indignation, that is by now an expected response. But what are such cries when our survival as a free democracy appears to be at stake? Again, God forbid that we measure this in terms of dollars and cents. Consider that Americans spend almost as much for recreation as for defense and then conclude that we cannot afford broader taxation if such be essential.

I am only one constituent, a constituent who is deeply concerned, one who does not easily give in to pessimism but at the same time one who refuses to put on blinders in an attempt to block out disturbing truths. I have confidence in the determination of the American people and in our government officials. I feel that action will be demanded if the truth is but known.

But in this day of contradiction nothing appears bad but that it also appears good at the same time. I also have confidence in my congressional representatives to be as concerned about our national survival as I am, regardless of political affiliation, regardless of what a personal stand for that which is right might do to them politically. Once again, God forbid that we have lost our moral and ethical responsibility.

Of course the world wants peace. I am sure that no one nation wants peace more than we do in America but let us negotiate for peace and guard that peace from an unquestionable position of might and determination that the peace we have shall not be taken from us.

Resting confident that you will represent me and that you will seek legislation that in all respects is good, vital, and essential for our Nation, I remain

Yours sincerely,

(s) Richard H. Waltner
RICHARD H. WALTNER.

Tilling Local Acres of Diamonds

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 27, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of January 20, 1960:

TILLING LOCAL ACRES OF DIAMONDS

To be designated Young Man of the Year by the Greater Wilkes-Barre Junior Chamber of Commerce and to qualify for the organization's Distinguished Service Award are the highest civic honors that can come to a local resident in that age category—21 through 35.

Frank J. O'Connell, Jr., Kingston restaurateur and caterer, who was announced as the choice for 1959 at the annual dinner of the Jaycees last night, joins an illustrious company of citizens who have been singled out during the past 14 years, with Jule Ayers, D.D., minister of First Presbyterian Church, city, heading the list. Other names on this roll of honor include Joseph E. Fay, Meade J. McMillen, Jr., Harrison H. Smith, Charles N. Henderson, Herbert J. Morris, John J. Green, Jr., Howard C. Wiener, Jr., James B. Post, Jr., Dr. Robert Kerr, Robert Edgerton, Hugh A. Carr, Jr., G. Guthrie Conyngham and Albert Danoff.

The Jaycees, whose members are excellent examples themselves, were motivated by a desire to focus attention on a young leader of today under free enterprise and to acknowledge the community's indebtedness to him for his contribution to the public welfare, frequently far beyond the call of duty.

Never since 1946 perhaps has the award meant more than in 1959 because of the challenges the area has faced and the opportunities for service, available to all desiring to take advantage of them. Mr. O'Connell was among these enterprising young men who were not satisfied merely with a measure of personal success, but wanted to do something for their neighbors as well.

A glance at Mr. O'Connell's business career and extracurricular activities confirms the wisdom of the outside judges in their decision. He not only has found his native Wyoming Valley a place of rare opportunity, but in a score of other roles he has shared his talents unselfishly for the betterment of the lot of his neighbors.

Frank O'Connell was not dismayed by the blows fate dealt the area recently. Instead he pitched in and proved again what others have discovered—that in periods of crisis, locally as well as nationally, opportunity beckons individuals with ability and courage. Acres of diamonds are waiting here for other Frank O'Connells to till.

On behalf of a grateful community, we take the liberty of extending congratulations and best wishes to Mr. O'Connell and to the Greater Wilkes-Barre Junior Chamber of Commerce.

Proposed Repeal of Connally Amendment

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 27, 1960

Mr. HUMPHREY. Mr. President, the Foreign Relations Committee is holding hearings on my proposal, Senate Resolution 94, to repeal the self-judging reserve clause from our acceptance of jurisdiction of the International Council of Justice. To promote the rule of law in the world, rather than the rule of force, and to show our intention to work with other countries in strengthening world law, the repeal of this reservation is an important step. The jurisdiction of the International Court does not extend to domestic matters and the safeguards of legal procedure are written into the statute establishing the World Court.

An excellent analysis of the situation was published in the Tampa Tribune in Florida by Dr. Thomas P. Hardeman, an expert in U.N. matters. Entitled "The Connally Amendment: Why We Should Repeal It," this article states very clearly the strong safeguards in the statutes of the World Court that would prohibit the invasion of our domestic jurisdiction.

Mr. President, I ask unanimous consent that this article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Tampa (Fla.) Tribune, Jan. 10, 1960]

THE CONNALLY AMENDMENT: WHY WE SHOULD REPEAL IT

TAMPA.—The idea of the rule of law among nations is not new. For those who have

grieved over the human slaughter caused by the 8,000 wars that have been fought in recorded history, it remains as a haunting and humane alternative to the rule of force. However, for law to be an effective instrument of peace among nations, it must be applicable to all alike.

God said to Moses (Leviticus 24: 22) "You shall have one law for the stranger and for the native." In pursuit of the same ideal the American Secretary of State, Elihu Root, proposed in 1907, "a tribunal which would pass on questions between nations with the same partial and impersonal judgment that the Supreme Court of the United States gives to questions between citizens of the different States, or between foreign citizens of the United States."

Was Moses a dangerous man? Was Secretary Root a dangerous man? For espousing the same ideal, Candidates NIXON and HUMPHREY are branded as dangerous men by the Florida Coalition of Patriotic Societies (Claude Boring, manager, in Letters to the Tribune, Tampa-Tribune, Sunday, January 3).

The kind of isolationism that serves as a premise for Mr. Boring's opposition to internationalism is dead, although it did keep the United States from ever becoming a party to the Permanent Court of International Justice in pre-World War II days. It may be worth remembering, however, that Presidents Harding, Coolidge, Hoover, and Roosevelt, all unsuccessfully advocated adherence to that court. Have all our recent Presidents been dangerous men?

Isolationism was so dead by November 1945 that the Senate Committee on Foreign Relations, having conducted hearings on Senate Resolution 196, providing for our acceptance of the new Court's jurisdiction, unanimously reported Senate Resolution 196, without amendment, for favorable Senate action. On the floor of the Senate, Tom Connally proposed successfully an amendment contained in the final eight words of the following reservation: "The jurisdiction of the International Court of Justice is not to apply to:

"Disputes with regard to matters which are essentially within the domestic jurisdiction of the United States of America as determined by the United States of America."

Remember, there was no question whether domestic matters belong to the Court's competence; the only question concerns the right to decide what is domestic. The United States reserved to itself a veto power with respect to the jurisdiction of the International Court of Justice. This immediately seemed offensive to right thinking lawyers, jurists, philosophers, and statesmen because it violates the age-old precept that no man, no nation, should be the judge in its own case. The matter was immediately considered by the assembly and house of delegates of the American Bar Association. The assembly resolved in 1946:

"That the Senate of the United States should reconsider the subject of the declaration of compulsory jurisdiction, and should eliminate therefrom the right of determination by the United States as to what constitutes matters essentially within the domestic jurisdiction."

The house of delegates strongly advocated "withdrawal of the reservation put in the declaration by virtue of the Connally amendment * * * and that the Senate authorize the filing of a further declaration which shall not contain the reservation." Is the American Bar Association composed of dangerous men?

If as Senate Resolution 94 proposes at present, that Connally amendment is removed and the United States accepts the compulsory jurisdiction of the International Court of Justice in its entirety, as prescribed by article 36(2) of the statute of the Court, there are still strong safeguards against the invasion of our domestic jurisdiction:

1. Compulsory jurisdiction is limited to legal disputes concerning only the interpretation of a treaty, any question of international law, the existence of any fact, which, if established, would constitute a breach of an international obligation, and the nature or extent of the reparation to be made for the breach of an international obligation;

2. The statute specifies that the Court's jurisdiction exists only in relation to other States accepting the same obligation—which at present no Iron Curtain country accepts;

3. Both the statute itself and article II of the U.N. Charter exclude intervention in, or jurisdiction over, domestic affairs;

4. The Court's jurisdiction is restricted by statute to disputes "hereafter arising"—which eliminates old legal disputes;

5. United States adherence to the Court may be terminated on 6 months' notice;

6. If a case against the United States should go before the Security Council for enforcement, we have there the veto power under articles 27(3) and 94.

In the light of these safeguards, it is no wonder that the special committee of the American Bar Association's Section of International and Comparative Law said last August, "Complete withdrawal of the self-judging reservation would not expose the United States to undue risks." Were these dangerous men? Of course not.

There are many arguments for removal of the Connally amendment, all of which are in the interest of the United States. Our leadership of the free world, the protection of our interests abroad, our struggle for the minds of men, all demand that this step be taken, and that Senate Resolution 94 be supported to that end.

In thus speaking, we do not claim a monopoly on patriotism, but we do claim the right to work for the good of our country and humanity in the way we think best. This has always been the American way. We deeply regret that the Florida Coalition of Patriotic Societies, through Mr. Boring's letter to the Tribune, has seen fit to charge the President and Vice President of our country with a flagrant betrayal in their advocacy of a move having so much bipartisan support in the United States.

THOMAS P. HARDEMAN, Ph. D.,
Executive Director of American Association for the United Nations, Tampa Chapter.

Mr. HUMPHREY. Mr. President, I also note at this point that today I testified on Senate Resolution 94, and that testimony is now a part of the official record of the Senate Committee on Foreign Relations. I urged that the so-called Connally amendment be repealed, and that the United States take the lead in establishing the jurisdiction of the World Court. I am happy to note that the Secretary of State and other members of the administration are supporting this effort.

Fluorine in Drinking Water

EXTENSION OF REMARKS
OF
HON. JOHN DOWDY
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 27, 1960

Mr. DOWDY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter from Mrs. Myrtle Pope of Nacogdoches, Tex., in accordance with her request:

NACOGDOCHES, TEX.
November 12, 1959.

Congressman JOHN DOWDY,
House of Representatives,
House Office Building,
Washington, D.C.

DEAR CONGRESSMAN DOWDY: I am not worried about an occasional scoop of cranberries. What I am worried about is clean water to wash them in.

The Supreme Court has ruled that any city government can put rat poison in the water I must drink all my life, and that I can have nothing to say about the matter.

Has the amount of fluorine used in drinking water been clearly exonerated from producing cancer? If not, how does it happen that the policies are different for drinking water and cranberries? I have seen scientific studies that hold one part of fluorine per million in water to be definitely harmful.

Sincerely yours,
MYRTLE PIHLMAN POPE.

Sermon of Archbishop O'Boyle on the Occasion of the Pan-American Mass, at St. Patrick's Church, Washington, D.C., November 26, 1959

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 27, 1960

Mr. McCORMACK. Mr. Speaker, on the occasion of the pan-American Mass, celebrated on November 26, 1959, at St. Patrick's Church in Washington, D.C., His Excellency, the Most Reverend Patrick A. O'Boyle, D.D., archbishop of Washington, delivered a most appropriate and inspirational sermon.

In my remarks, I include with pleasure the sermon, delivered by Archbishop O'Boyle.

SERMON OF ARCHBISHOP O'BOYLE, PAN-AMERICAN MASS, ST. PATRICK'S CHURCH, NOVEMBER 26, 1959

"What shall I render to the Lord for all the things He has given me? I will take the chalice of salvation, and I will call upon the name of the Lord. I will pay my vows to the Lord before all His people."—Psalm 115: 12–14.

King David's beautiful prayer of thanksgiving which I have selected as the opening text for the sermon on this the 50th anniversary of the pan-American mass is very familiar to all of you. Indeed it is probably more familiar than any other Scriptural text on this particular subject. I have chosen this psalm because it so adequately expresses what it is that we, the representatives of Latin America and the United States, are doing here this morning in St. Patrick's Church and what has been done here every year for half a century on this selfsame day and at this very hour. We are offering to Almighty God through Jesus Christ, His Son, the chalice of salvation in humble gratitude for all the things that He has given us in our respective countries in the Western Hemisphere. We are paying our vows to the Lord before all His people.

In the words of the farsighted priest who started the pan-American mass in 1909, this was its original purpose: "To bring together representatives of the Government of the

United States and of all the South and Central American Republics, and have them united in a solemn act of thanksgiving to God on our so-called national feast day. This is still the principal purpose of the pan-American mass, but from the very beginning it has had a second purpose which is equally important—to foster inter-American friendship and understanding and in that way to promote the cause of peace and freedom not only in our own hemisphere but in the rest of the world as well.

This morning, as we joyfully commemorate its 50th anniversary, I shall refer briefly to these two traditional purposes of the pan-American Mass. But first of all, it will be appropriate to summarize what we know about the origins of this blessed tradition, which every year brings so many of us together in a common act of thanksgiving and which over the years has held aloft the exalted ideal of divine worship to promote the cause of pan-American unity and to strengthen the bonds of friendship.

The idea for the annual pan-American thanksgiving Mass originated 50 years ago with Father William T. Russell, who was then pastor of this historic parish. Father Russell first proposed the idea in June 1909 in a letter to Mr. John Barrett, director of the Bureau of American Republics, who enthusiastically approved it and was extremely helpful in bringing it to fruition.

We owe a great debt of gratitude to the memory of Father Russell, who subsequently became the bishop of Charleston, S.C. Under God it was he who was principally responsible for initiating the providential tradition which we are continuing here this morning. But if Father Russell was the originator of the pan-American Mass, he was not alone in promoting it. From the very beginning he enjoyed the whole-hearted support and cooperation of the leading figures of the day in both church and state, including many distinguished members of the Latin American sector of the diplomatic corps.

The record shows, for example, that among the prominent ecclesiastics who were seated in the sanctuary at the very first pan-American Mass in 1909 were His Eminence James Cardinal Gibbons, archbishop of Baltimore, Archbishop Falconio, apostolic delegate to the United States; and Msgr. Bonaventura Cerretti, auditor of the apostolic delegation, both of whom later became cardinals and served with distinction in the Roman Curia.

Distinguished guests of honor at the first pan-American mass included President William Howard Taft; the Honorable Joaquin Nabuco, Ambassador of Brazil, and dean of the diplomatic corps; Secretary of State Knox; Secretary of the Interior Ballinger; Justices White, McKenna, and Brewer of the Supreme Court; Members of the U.S. Congress; high ranking officers of the Army and Navy; and official representatives of all of the 21 American Republics.

From that day to this, both church and state have been well represented at each succeeding observance of this importnt religious ceremony.

While I do not wish to spend too much time recounting the history of the pan-American mass, I deem it appropriate on this golden anniversary to recall two significant incidents which occurred during the early years of its observance. These incidents will serve to illustrate the importance which leaders of church and state have always attached to this annual ceremony.

The first of these two incidents has to do with His Eminence Cardinal Gibbons. One of the cardinal's biographers tells us that "on the evening before Thanksgiving Day in 1920 a friend who visited him in his study found him crouched in a chair, deathly pale and in a state evidently approaching collapse. Gibbons admitted that he was almost incapable of exertion, and remarked that he knew he was unprepared to attend the pan-American mass the next day in St. Patrick's Church, Washington, at which he was expected to be present; but, he exclaimed with spirit, 'I will go.'" He was then 86 years of age and within 4 months of his death.

"To the visitor," the cardinal's biographer continues, "this seemed to be merely a rash decision. The general celebration of Thanksgiving had become commonplace, but it meant far more to Gibbons than to most men. He could not forget that more than 40 years back, when many of the religious groups in America were apathetic in regard to the observance of the day, he had led the way for the Catholic Church to give her full and continuous adherence to the growing national custom, and that it was he who had approved the institution of the pan-American mass, at which Presidents, Cabinet members, and Latin American diplomats were wont to assemble annually."

There is no need to elaborate upon the significance of this long-forgotten incident in the life of Cardinal Gibbons. Suffice it to say that it dramatically symbolizes the importance which ecclesiastical leaders in this jurisdiction have always attached to the Pan American Mass.

The second incident concerns Secretary of State Knox and Ambassador Nabuco of Brazil. Both of these illustrious gentlemen, in responding to toasts at the luncheon in St. Patrick's Rectory following the first Pan American Mass in 1909, suggested that the Mass be made an annual event and further expressed the hope that the salutary American custom of observing Thanksgiving Day as a National holiday would eventually spread to other countries in the world.

"It would be, indeed, a notable outcome of this celebration," Secretary Knox observed, "were an annual day of thangsgiving and prayer to be adopted and observed throughout the whole vast extent of the American Hemisphere so that, with one accord, as if one speech and one blood, our peoples, however separated in race and traditions, should make evident that spirit of oneness in a common aim which is the truest mission of the Pan American communities."

Ambassador Nabuco expressed a similar hope. "There is no public custom of the American Nation that I admire more," he said, "than her Thanksgiving Day; I only wish all mankind, following you, would join on the same day every year in universal thankfulness to God."

The gratifying sequel to this prophetic incident is undoubtedly known to all of you. At the present time, more than 70 nations officially observe Thanksgiving Day, and a number of other countries are preparing to do so in the not too distant future. Much of the credit for this development belongs to the Holy See and to the Bishops of Brazil and other Latin American countries, but we can state with justifiable pride that it received its initial impetus from the first Pan American Mass in Washington and from the suggestions made on that occasion by Secretary Knox and Ambassador Nabuco.

Having related these two events, we return logically to the twofold purpose of the Pan American Mass and to the theme of this 50th anniversary sermon—our duty, on the hand, to offer thanks in common to Almighty God for all the things He has given us and, on the other hand, to promote the cause of freedom and peace.

Almighty God has given so many good things to those of us who are privileged to live in the Western Hemisphere that I cannot even list them here this morning, much less describe them in detail. But I should like to mention one of them in particular—the priceless gift of peace. Even today, of course, relations between certain countries in the Western Hemisphere are unfortunately rather strained. Nevertheless, in contrast to the deplorable situation which has prevailed from time to time during the past 50 years, even these countries are not at war with one another today. For this we can be truly grateful to Almighty God.

The fact that we the peoples of the Western Hemisphere are not at war with one another is due in no small part to our mutual support of the Organization of American States, which has its headquarters here in Washington in the beautiful Pan American Union Building on Constitution Avenue. As we offer thanks to God this morning for the existence of this great organization, one of the most important regional agencies of the United Nations, let us also ask Him to watch over it in the future and to help it become an even greater force for good in the months and years ahead. More specifically, let us ask our blessed Saviour, the Prince of Peace, to keep us ever faithful to its noble purposes, which, as you know, go far beyond the negative purpose of preventing war among or between its member states.

The Organization of American States, in the words of its charter, was established by the American states "to defend their sovereignty, integrity, and their independence." These purposes are extremely important and would of themselves fully justify the existence of an inter-American regional agency of the United Nations. But let us never forget that the OAS was also established by its member states for other and ultimately more important purposes: "to achieve an order of peace and justice, to promote their solidarity, to strengthen their collaboration."

Bishop Currier, the preacher at the mass in 1913, spoke very movingly about the prevention of war—the negative purpose of the OAS, which organization, of course, was not in existence then. That was the right thing for Bishop Currier to have done 46 years ago and possibly the only thing he could have done under the circumstances. But we shall have to do much more than that in 1959. While striving to carry out the negative purpose of OAS, which is the prevention of war, we shall have to pay much more attention than ever before to its positive purpose, which is to achieve an order of peace and justice.

This is the only way we can effectively meet the challenge of communism, which has already made significant gains within the Western Hemisphere. To ignore or to underestimate the extent or the seriousness of this challenge would be the sheerest kind of folly. But purely negative anticommunism is a snare and a delusion. We must be prepared to carry out the peaceful and constructive purposes of the OAS Charter for the most positive of all motives; namely, the selfless love of God and neighbor, which is the whole law and the prophets.

But what does it mean in our day and age to serve the cause of freedom and of peace?

The late Pope Pius XII answered this question as follows:

"To serve the cause of peace is to serve justice. To serve the cause of peace is to serve the interests of the people, especially the lowly and dispossessed, To serve the cause of peace is to face the future with a serene and unruffled countenance. To serve the cause of peace is to hasten the day when all nations without exception shall lay aside their rivalries and feuds and embrace one another as brothers. To serve the cause of peace is to serve civilization."

These words of the late Holy Father, one of history's most eloquent and effective champions of international peace and human solidarity, were written in 1947. The address from which they are quoted was entitled "Now Is the Time for Action." No one of us as an individual and no single nation either in the Western Hemisphere or

in any other part of the world has thus far taken them completely to heart. In varying degrees, we have all been too complacent. But time is rapidly running out on us. Ten or twenty years from now there may not be any more time for action.

In this connection, a European scholar recently wrote—with pardonable exaggeration, if any—that this planet of ours in 1959 is like a nightmare ocean liner with a handful of first class passengers living luxuriously in very comfortable quarters while the majority of the human race are herded together, on the decks and in the holds, in hunger and misery. "Who can fail to see the dynamite in this situation," he bluntly asks. "It is only too obvious," he continues, "that the people on the decks and in the holds could mutiny * * * and could easily overwhelm and enslave the first class passengers. Our world is that ocean liner, headed toward an unknown destiny, but a destiny common to all on board."

This is indeed a very graphic simile and one which can serve to reemphasize the terrifying urgency of our courageously striving, not only through the OAS, but through voluntary, nongovernmental organizations and by our individual efforts and prayers, to serve the cause of peace by serving justice and by serving the interests of the people, especially the lowly and the dispossessed. Only in this way can we earn the right to "face the future with a serene and unruffled countenance."

Only in his way, moreover, can we render adequate thanks to Almighty God for His manifold favors and blessings. "What shall I render to the Lord for all the things He has given me," King David asked himself. "I will take up the chalice of salvation," he replied. But to take up the chalice of salvation in the new dispensation, as our Blessed Savior reminded the sons of Zebedee, is more than an empty ritual or a ceremonial rubric. "Have you the strength to drink of the cup that I am to drink of," He asked the sons of Zebedee in the presence of their mother, who was so understandably but so aggressively anxious to see them get ahead in the world. Our Lord's question to these generous young men was meant to warm them as gently as possible that to follow Christ—to pay our vows to the Lord and in that way give adequate thanks to God—is to give of our substance and, if necessary, to sacrifice our very lives for our brethren, especially the lowly and the dispossessed.

That all of us may learn this lesson as well as did the sons of Zebedee and that we may individually and collectively put it into practice throughout the Western Hemisphere, should be our fervent prayer this morning. Now indeed is the time for action.

As I thank you sincerely for accepting our invitation to this the 50th anniversary of the pan-American Mass, may I conclude with these words from Pope Pius XII, so appropriate to this occasion in view of the fact that they were meant to encourage the observance of Thanksgiving Day in every country of the world and were also meant to encourage all of us to serve the cause of freedom, peace, and justice:

"Thanks be, then, first and last, to God; and as you bless Him for His gifts, you will affirm the worthy purpose to honor and revere His most holy will in your fulfilling of a sacred duty to your people.

"And to the end that you may heed this call of a right conscience with courage and with constancy, we fondly invoke for yourselves * * *, for your children and your country, an even more generous boon of light and strength from the heart of Him who holds men and nations in the hollow of His omnipotent hand."

Let's Not Kid Ourselves

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 27, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article, written by Mr. Jim G. Lucas, which appeared in the Washington Daily News, Wednesday, January 20, 1960. Mr. Lucas writes on the stake that the United States has in Laos.

OUR STAKE IN LAOS—LET'S NOT KID OURSELVES

(By Jim G. Lucas)

VIENTIANE, LAOS, January 20.—If free elections were held today in Laos, ever qualified observer, including the American Embassy, concedes that this hermit kingdom of southeast Asia would go Communist in a landslide.

Since 1955, the United States has put $190 million into Laos, much of it in direct dollar grants. This economic, military and technical aid is still going on, and our physical presence here has certain advantages.

As long as we are here, the Communists aren't, at least as an organized force. It is cheaper to stay here than to fight our way back in. The moment we give way to accumulated frustrations, the Communists move in.

However desirable it may be for these gentle people of Laos to run their own country without exterior influence, there is a political, economic and military vacuum here and someone—or something—will fill it.

NEW STARS

As for the United States, belatedly—after 5 years of futility, waste and corruption—we are writing off all we have spent to date, starting afresh, and hoping against hope it is not too late to salvage something. If elections can be avoided during 1960, those hopes may be realized.

Washington has sent in a completely new team. It is composed of top-rated men. Ambassador Horace H. Smith, who was Charles (Chip) Bohlen's able No. 2 man in Manila, has, in 9 months, restored some of our diminished prestige.

Our new ICA Chief, John Tobler, has impressed Lao and foreigners alike with his candor and realism.

And Brig. Gen. John Heintzges—who must masquerade under the title of "Mister" and wear civilian clothes—has moved ruthlessly, but with discerning respect for Asian sensibilities, to bring order out of military chaos.

DESPAIR

Even these men sometimes experience moments of despair.

"I often feel I'm swimming upstream and losing way," Ambassador Smith told me.

It was ICA Chief Tobler, a former United Press reporter in Europe, who advised me to ignore the rosy reports of his predecessor. "Let's not kid ourselves," he said. "It's just not that way."

And it was General Heintzges—scorning the Pollyanna treatment I had learned to expect from American military advisers the world over—who told me candidly:

"We have yet to give this country a fighting army."

INHERITED

These men are in no way responsible for the record we have made here in the past 5 years. Had they—or men of their caliber—been here from the start, the situation would be different. Yet they inherited it, and to some extent they are restricted to it.

What they are able to accomplish in 1960—and they will not fail for lack of trying—will determine the future of the West in southeast Asia.

When we started with our help in 1955, Laos had no roads. It still has none.

Laos had no national communications hookup. It has none now.

In all Laos, there was one high school. So we built a $500,000 "university."

Laos lacked hospitals. (The country has one native doctor and three dentists.) We have yet to build a hospital.

Laos needed powerplants, dams, and public works. We may have some such projects in mind, but they are still in blueprints.

THE ARMY

Under the guise of insuring political stability, we gave Laos a 29,000-man army which has yet to prove its fighting capacity but whose politically minded commanders actively connive to bring down any civilian government they oppose.

In 5 years, we have invested almost four times Laos' gross national product ($50 million), and neither we nor the Laos have very much to show for it.

Laos is bordered on the north by Communist China, on the northeast by Communist north Vietnam. If Laos fell, south Vietnam would be flanked; a wedge would be driven between Saigon and Bangkok. Shaky Burma could disappear inside the Communist orbit. The Chinese Reds and their anxious satellites would be in position to threaten Singapore and Malaya, perhaps Indonesia.

We Must Act Now: Tomorrow May Never Come

EXTENSION OF REMARKS
OF
HON. ROBERT N. C. NIX
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 27, 1960

Mr. NIX. Mr. Speaker, as the year 1960 comes upon us nearly 100 years after the Emancipation Proclamation, Negro Americans in some States are still being denied the right to vote, the right to equal education, the right to equality in the courts, the right to protection of their person, the right to protection of their property and a recognition of the dignity of their person. In almost every State they are denied equality in housing and employment.

This disgraceful and appalling situation does exist in the United States and it is known to every responsible figure in Government, religion, business and labor, from the President of the United States down to the candlestick maker. Neither the moral forces of the Presidency nor the united moral forces of Christendom has been directed with vigorous purpose to eliminate this evil. This is true despite the fact that in today's world, dynamic and explosive ideas joined with frustrations among the people of many lands have rewritten history and overturned governments in China, Indonesia, India, Indochina,

Burma, Ceylon, Pakistan, Tunisia, Cuba, Syria, Moravia, Egypt, Sudan, Guinea, Nigeria, Ghana, and the Cameroons are now at work in other areas as well as in one of our most vulnerable points—Panama.

We all recognize the fact that even with its imperfections the United States is the undisputed world leader, but we must also recognize that the leader is being challenged from every point on the globe. Her morals, her laws, her Christianity, her intent, her sincerity are all under question and therefore suspect. It is, therefore, necessary to assume that the 800 million peoples of Asia, Africa, and Latin America, and elsewhere, will judge the United States, will trust the United States, not by the old assurances of equality, justice, morality, and good intentions toward all men, but that their trust will largely depend on what is done by the United States to set its house in order. It is reasonable to assume that if our house is set in order, we will establish a true basis for the trust, confidence, and respect of men everywhere.

If, on the other hand, the United States permits repetitions of the Mack Charles Parker disgrace and the double standard of pseudojustice of the Florida rape cases, and the flagrant violations of the Negro's right to vote as well as other countless inequities, we will justly deserve the revulsion of the peoples of the world who can only conclude that we know the words of justice and godliness, but that we have lost the substance and meaning of Magna Charta, Bill of Rights, Constitution of the United States, and of Christianity.

In this hour of our greatest decision we dare not again forget that "what happens to the least of men anywhere, happens in time to all men everywhere and it will follow as day follows night; that by turning our backs on the wrongs we have the power to prevent, we must share the blame with those responsible for those wrongs."

This year of 1960 demands that the 2d session of the 86th Congress pass civil rights legislation assuring liberty and justice to all thereby proving to all nations that the United States truly believes that "whatsoever ye would that men should do to you, do ye even so to them: for this is the law of the prophets."

As a realist, I must note that there are among my fellow Americans some who flatly reject my statements. To these I recommend reflection, reason, and analysis.

There are others who hold themselves aloof from our conflict and agony, from the problems of the present and the hope of tomorrow. To these I say, you stab your country in the back by withholding your intellectual and moral judgment in this hour of imminent peril.

But to those millions who believe in the American dream, who are convinced that our destiny is linked with that of the uncommitted people of the world, I say the 2d session of the 86th Congress will pass positive and meaningful, as well as vocative civil rights legislation and remove the roadblock to the peaceful and equal progress of all our citizens; we will root out, expose, and destroy the apostles of fear, ignorance, and demagoguery; we must never permit our freedom, our democracy, and our leadership, to be sacrificed on the altar of prejudice.

Four-H Gold Star Award Program

EXTENSION OF REMARKS
OF
HON. WRIGHT PATMAN
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 27, 1960

Mr. PATMAN. Mr. Speaker, there was a Gold Star Award Banquet at Mount Pleasant, Tex., in the congressional district I have the honor to represent, on November 21, 1959. It was a very impressive occasion. It was a tribute to outstanding young men and young women from each county in that area. The 4-H Gold Star Award program is the only award sponsored by the Texas A. & M. College for 4-H Club members. It is presented to only one boy and one girl in a county each year, who have been selected by the local committee within the county, which is the highest honor a club member can win at the county level.

Mr. John E. Hutchison, Director of the Agricultural Extension Service, College Station, Tex., was the principal speaker at the banquet. I am inserting herewith a copy of his inspiring and constructive address.

TALK AT 4-H GOLD STAR AWARD PROGRAM, EXTENSION DISTRICT 5, ALPS CAFE—MOUNT PLEASANT, TEX.

(By John E. Hutchison, Director, Agricultural Extension Service, College Station, Tex.)

It's a pleasure and a real privilege to join with your parents and friends in honoring you boys and girls who are the Gold Star Award winners in your county. In every walk of life, excellence of performance is rewarded. Last week I noticed in the paper that Ernie Banks, the star Negro shortstop of the Chicago Cubs, and Nelson Fox, second baseman for the White Sox, received awards for being the outstanding baseball players in the National and American Leagues for 1959. Now, sports writers are selecting their all-district or all-conference and all-American football players, so it is entirely fitting that we pay honor to you tonight for it is a high honor to be selected as a Gold Star Award winner in your county. This is the only award sponsored by the Texas A. & M. College for 4-H Club members. It is presented to only one boy and one girl in a county each year. These boys and girls are selected by a local committee within the county, and this is the highest honor a club member can win at the county level.

I wish very much that you could see yourselves from my vantage point tonight. I don't refer only to my place here where I can see each of you—although this is pleasant because you are a splendid and handsome group—but I mean from my experience vantage point as well. I wish very much, too, that I were capable of making some dynamic or moving remark that might inspire you to stop and think seriously about the tremendous potential that each of you represent as an individual human being with most of your life before you. At this instant there is little that you might aspire to be that you could not achieve—in happiness or in whatever you may choose to do. You are the most important of all God's creations. Formed in the image of God—more important than any other living creature—endowed by God with the power to think—to accept or reject good or evil—to love—to worship—and to decide things for yourself. We are sometimes awed by the new and far-reaching discoveries, such as atomic power or rocket ships that outstrip gravity or even how to trap a new solar energy, as the plants do—but all of these have importance only as they contribute to the welfare of the individual or as the individual places value on them. I feel that each of you is proud that you are privileged to live in this particular period of history because tremendously exciting and challenging changes are taking place at an unheard of speed. Just 150 years ago, man could move no faster than animal or wind power could move him. The wheel was known to the Aztec Indians before the pyramids of Egypt were built—yet it had changed but little when it was put on the Conestoga Wagon to take our ancestors across this continent. The sails used by the Phoenicians in the days of King David and King Solomon were little different from those used on the *Mayflower*.

It doesn't seem possible that just 56 years ago, Orville and Wilbur Wright made their historic flight at Kittyhawk, N.C.; the very first time that man had been able to fly. Today you can have an early breakfast in New York City; get on a Boeing 707 jet liner, and get to Los Angeles in time for a second breakfast—that is, if you want two breakfasts. Scientists predict, and most of us believe, that the next 10 years will see scientific and technological progress that formerly would have required 100 years to accomplish.

In agriculture, more progress as measured in terms of output per man-hour, has been made since 1940 than had been made in the previous 100 years. There will be more important changes while you are in high school than there were in the whole of the 17th century. But you boys and girls are the architects of the future—you can guide the changes that take place—if you properly prepare yourselves. You must guide the changes—they must be purposeful changes—we dare not leave them to chance.

Yes, we are living in a wondrous age, when the secrets of photosynthesis are slowly being unlocked; when they tell us that electric power generated from atomic sources may soon be available at even lower cost than electricity is today. As power becomes more available, man is freed from drudgery—the great strides that have been made in efficiency are largely a result of the availability of power.

We may be on the verge, for the first time, of being able to adequately feed all of the peoples of the world. (It's a disturbing thought to know that one-half of the people of the world go to bed hungry every night.) E. E. Cummings has said that "better worlds are born—not made, and their birthdays are the birthdays of individuals." The significant birthday of an individual is not the day he is born, but the day he realizes that he is responsible for the kind of person he will be, and decides to take conscious and planned direction of the process. This means the beginning of a lifetime of study, thought, and creativity. This means self-discipline; it means straight thinking; getting the facts straight and of questioning what is right and good and beautiful. It means the development of moral commitment and the spiritual

side of your being. It means the developing of yourselves to your fullest capacities.

It is a sad commentary that most of us live far below our potentials. Someone has said "we live bungalow lives on skyscraper foundations." We must learn how to work and believe in the dignty of work. Man needs work—all of the resources of the earth and all of the relationships of human beings are a challenge to man to discover and to use them for the best possible purposes. (In one section of the world today, there is an overabundance; while in another section people starve—some way to achieve a better distribution on a more equitable basis is a terrific challenge, and how the peoples of the world can learn to live together in peace is another.)

We must learn how to deal with people and develop the science of getting along and living together, regardless of our differences. One of the chief tragedies in today's world is widespread inability to communicate—despite all of our technological developments. Communications are such that we can send a message around the world in less time than a human voice can travel the length of a football field. Yet, not only is an iron curtain lowered between nations, but it is also daily and hourly lowered between individuals and groups. It has been said that if in all our practices of life we could learn to listen and to be listened to; if we could grasp what other persons are saying, as they themselves understand what they are saying, the major hostilities of life would disappear for the simple reason that misunderstandings would disappear.

I sincerely believe that you have a better opportunity to realize your dreams within your own lifetime than any previous generation. I believe this because more of the fundamental research has been done, and you have access to infinitely better training. You must, of course, avail yourselves of the opportunity to acquire this training if you are to compete successfully.

Four-H Club work offers an opportunity to assist a large number of rural and in some cases urban youth, with their developmental needs in an excellent way.

Four-H, as all of you know, is the youth phase of the Texas Agricultural Extension Service program, which is a part of the Texas A. & M. College system. Four-H Club work is founded in the practical arts; it is rooted in the boys' and girls' own environment; it is family centered; it is a completely voluntary organization. Not only is membership voluntary, but much of the actual organization and training work is carried on by voluntary adult and junior leaders.

Four-H teaches boys and girls to accept the challenge of life around them; it recognizes and provides for the high incentive of ownership; it provides learning under the stimulus of competition through the demonstration projects which boys and girls carry on as a part of their work. These demonstration projects, such as feeding out a calf, growing a garden, making a dress, or landscaping the home grounds, provide a job with both a purpose and a value. As these demonstrations are completed, they not only develop abilities and skills in youth, but strengthen character through perservance. Then, as boys and girls demonstrate what they have learned to others, and as they participate in the various recreational and educational programs featuring the head, the heart, the hands, and health, leadership, and personality development experiences are provided. This relating of teaching to daily life has been acknowledged by educational psychologists as a powerful educational concept and provides what these educational psychologists call almost a perfect teaching situation.

Four-H Club work is more than learning improved practices and techniques in agriculture and homemaking and related subjects; but rather it is an understanding of the basic sciences behind these improved practices—why they are good practices. This kind of understanding can be transferred to other situations in life as well; but if we cannot see more in 4-H than just teaching agriculture or home economics, we will have missed the great potential and the glory that is 4-H—that is, teaching boys and girls, and helping them to meet adequately their developmental needs and to develop four-square personalities.

Will Rogers said once when he was watching a junior livestock show in the Coliseum in San Francisco that "whoever thought up the idea of 4-H was inspired."

In the words of Harvey Firestone, president of Firestone Rubber Co.: "4-H is founded upon the principle that competition and cooperation can exist side by side in a group of friendly young people."

Four-H is set up to teach its members to have respect for advice and leadership; at the same time it makes provisions for its members to win respect in return by working and developing their own qualities of leadership.

Four-H is designed to build character, because the character built upon a spiritual and moral foundation and close family ties, is the bonding agent that holds all of the other principles of character together.

Four-H Clubs provide a framework for developing the kind of leadership which our Nation must have for a substantial group of the young men and women of this Nation. I firmly believe that boys and girls of 4-H in America will exercise leadership functions in their lives, as they develop, far in excess of their numerical importance. Participation in properly planned 4-H Clubs will provide them backgrounds and experiences and attitudes which will equip them to move into leadership roles beyond those consistent with mere numbers.

The 4-H team is made up of sponsors and donors such as the rural electric cooperatives of this area who are the host for this award dinner tonight, and many other sponsors—voluntary adult and junior leaders—parents and the extension agents. Today there are 84 different award programs that are designed to appeal to boys and girls from 9 through 21.

Finally then, I would extend again my most sincere congratulations to you award winners tonight, and to your parents, leaders, and friends of 4-H and the extension agents who assist you, and would say that surely there is no more important work than this which contributes toward the development of the most strategic resource which this Nation or any nation has—that is, the youth of the land.

U.S. Junior Chamber of Commerce Observes 40th Anniversary

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 27, 1960

Mr. FLOOD. Mr Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Record, Saturday, January 16, 1960:

JAYCEES 40 YEARS OLD

Next week brings the 40th annual anniversary of the founding of the U.S. Junior Chamber of Commerce, an organization whose members, young man between ages 21 and 36, are devoted to "Leadership Training through Civic Betterment."

"Jaycee Week" commemorates that week in January 1920, when young men from 24 cities, meeting in St. Louis, launched a national group which now functions in 3,700 communities with over 200,000 members. Throughout its existence, this organization has always been in the front ranks, ever ready to assume responsibility of civic leadership and promoting enthusiasm for civic improvement.

The Jaycees develop in young men qualities of personal leadership and offer young men an avenue with which to improve their communities while acting as a medium for vigorous expression of their opinions.

The qualities of leadership are an important item in the minds of the junior chamber of commerce, and a basic drive of its organization is to develop desire and initiative in its members to assume a responsible role in the community.

To highlight this drive, the Greater Wilkes-Barre Junior Chamber of Commerce, annually honors a young man, between 21 and 36 years of age, for his outstanding contribution to his community. Whether he be a junior chamber member or not, the Jaycees believe that a selfless attitude toward improving our community is a worthwhile trait for young men to possess.

On Tuesday, January 19, the "Outstanding Young Man of 1959" will be awarded the distinguished service award by the Greater Wilkes-Barre Jaycees at a dinner celebration to be held in the Crystal Ballroom of the Hotel Sterling.

Coupled with this affair will be bosses' night, an annual feature of junior chambers in dedication to the bosses who support the Jaycees and recognize the value of the organization.

We salute the Greater Wilkes-Barre Jaycees on their 21st birthday anniversary. The organization was started in 1939 by Robert Eyerman, first president and first Jaycee president of the State organization. From 50 members then, the Jaycee movement has grown to 190 chapters in the State with over 10,000 members, 200 of which are in the Greater Wilkes-Barre Jaycees.

The community can be proud to express its thanks for the untiring efforts of the Jaycees for community development and is justified in extending best wishes for success in forthcoming projects—the next being the 1960 parade of progress.

On Appreciation of Youth

EXTENSION OF REMARKS
OF
HON. ED EDMONDSON
OF OKLAHOMA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 27, 1960

Mr. EDMONDSON. Mr. Speaker, today I have joined a number of my colleagues in proposing, by means of a House concurrent resolution, the annual proclamation of a Youth Appreciation Week in America.

Last year I had the opportunity to observe, at firsthand, one of the ceremonies climaxing such a week under

sponsorship of the Optimist Clubs of Muskogee, Okla.

It was a most impressive occasion, and no observer could mistake the profound impression upon the young people of our community.

The Optimists have proved to me that it pays to accentuate the positive among the young people of America. Their sponsorship of Youth Appreciation Week has been a real benefit to communities all over the country, and it has been good for both the young people and their parents.

I hope the resolution will soon receive the unanimous approval of the Congress.

Alexander Graham Bell Lecture Delivered by Secretary of Labor James P. Mitchell at Boston University

EXTENSION OF REMARKS
OF

HON. LAURENCE CURTIS

OF MASSACHUSETTS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 27, 1960

Mr. CURTIS of Massachusetts. Mr. Speaker, Boston University was honored to have Secretary of Labor James P. Mitchell deliver the first address inaugurating the university's Alexander Graham Bell lecture series on November 12, 1959. In extension of my remarks, I include the excellent address delivered in the Sargent Gymnasium of the university's Charles River campus, as follows:

President Case, distinguished members of the faculty, alumni of Boston University; I am privileged to initiate the Alexander Graham Bell series of lectures.

The theme of this series is "Man's Communication to Man." The hope that underlies this theme is most certainly that as the people of the several nations of earth improve their ability to communicate they will also increase their wisdom to use instruments like the telephone, the telegraph, the television channel, the printing press, and the radio to establish the understanding upon which peace must ultimately rest.

All of us in the free world share that hope.

I think, however, we would be foolish to believe that the means alone are sufficient without a corresponding improvement in man's social orders and in man himself.

For the fact that the human intelligence has broken down time, space, and language barriers should not in itself create in us the false optimism that pervades an age of propaganda, for the record of using these facilities of communication in the interest of individual enlightenment and national understanding is still a comparatively poor one.

Man's genius for devising the technical instruments to aid him in his search for a better world is still in advance of his genius for using those instruments to attain to that great goal.

We still have no guarantee that because an earth satellite may someday soon reflect instantaneous and undistorted messages to earth that those messages themselves will be ones of enduring wisdom, faith, or understanding.

With this clearing away of the obvious, then, I will approach the theme of "Man's Communication to Man" in three of its important aspects:

First, the problem of communication between a free and open society and a controlled, closed society;

Second, the problem of communication within a free society, in which information is power and economic interest is often a deciding factor in the use of communications media;

Third, the problem of communication in a specific part of that free society that is in itself a showcase of American values and the American ability for self-government; namely, the labor-management area.

During the recent American Fair in Moscow, a member of the staff of the Department of Labor stood by a Department exhibit and conversed, for many hours each day, with the Russian people. His experiences, as he told me about them, are illuminating.

His general impressions were these:

The questions the Russian people asked him showed two things: their means of communication, controlled by government, have been used for decades to present a distorted picture of the outside world and especially of the United States, but the Russian people generally do not believe their own propagandists.

The United States was pictured as a land of very poor living conditions, high unemployment, inadequate wages, and general exploitation of the workers by the wealthy owners and of the Negro by the rest of society.

The Russians, however, do not accept this picture at face value. When a professional agitator appeared at the exhibit he would often be silenced by the other spectators and forced to withdraw in embarrassment. Frequently the people would apologize for the incident.

With this cynicism about their own controlled information—the only paper printed outside the Iron Curtain on the Moscow newsstands, for example, was the London Daily Worker—the Russian people have the corresponding problem of not knowing what to believe.

They have existed in an information vacuum for 40 years and they are desparately anxious for news from the outside. Almost every day, after many hours of answering question, our staff member would be followed as he walked across the exhibit area. If he stopped to converse with a single Russian he would immediately be surrounded by a crowd of 50 or more.

They asked him, generally, four kinds of questions: those on living standards, including hours of work, earnings, cost of living, minimum wages, industrial disputes, labor standards, workmen's compensation, unemployment insurance and so on; they asked him especially about unemployment, and finally about the status of the Negro in our society and the ability of the ordinary person to get a good education.

Because of the entire popular literature and all of the communications media in Russia is devoted to proving that Marx and Lenin were right, the Russians often found it difficult to understand his answers.

It was almost unconceivable to them, for example, that Americans work, on the average, 8 hours a day for 5 days of the week. This was contrary to what they had always been taught, that in America the rich get richer through exploitation of the so-called working class.

The found it difficult to believe that a worker in the United States could change jobs and location at will.

They were little short of astounded to discover that the average worker in the United States earns $385 a month—four times the Russian average where everyone, even waitresses, are on a piece-rate basis.

They did not know whether to believe it or not that American workers can join unions freely; they were surprised that unions were legal in America.

We approach, then, the problem of communicating the truth, with the knowledge that the truth will be distorted. We face the problem of communicating the truth to a people of rising educational attainment but who are uninformed, curious about the outside world yet unable to form a clear picture of it, cynical about what they are told yet uncertain as to the real truth.

Recent developments within Russia, Mr. Khrushchev's visit to this country, indicate there may be some hope that a freer exchange of information between the Russians and ourselves may be possible, however limited in scope. Certainly we must take that hope for what it is worth.

This means, in the materials we present to them, less criticism of their system and more truthful presentation of our own.

I believe the only effective posture we can take is that of a truthful people.

I think we should report about our unemployment problem, our distressed areas, our migrant farmworkers, in their proper perspective as problem areas in a huge, healthy economy employing 67 million people and supporting the kind of living standard that speaks very well for itself.

I think we should report about the racial problems we have as a part of the whole story of a nation of many diverse creeds and colors and nationalities, and explain some of the things we are doing to solve them.

The lasting hope for peace is that Russian society will join the affairs of the world as an enlightened and informed member. I genuinely believe that the Russian people themselves desire this.

Light will shine into Russia only when the Russian leadership allows it; of that we can be certain. But this should not discourage us from keeping that light shining and steady.

And there are reasons to hope that things are improving. The American and Russian fairs were breaches in the Iron Curtain. The jamming of our broadcasts has stopped. And with the President's coming visit to Russia we have, I feel, a major opportunity to open another door in our relationship.

In his speech before the United Nations in 1958, the President spoke of "a world community of open societies" as the proper condition for permanent peace.

Change, the order of life and the world, can come peacefully or through the use of force. It can come by making of societies armed camps, bases for aggression, or it can come by opening societies to exterior influences and clearing away, piece by piece, bit by bit, the barriers to free communication.

Whether or not such measures can or would successfully deter the rulers of Soviet Russia from their announced determination to bring the change of communism to the world by aggression and force, none can know. We do know this: We must believe at all times in the appeal of the truths of our own society and our own faith in its motives.

This means for us a constant reappraisal of the way we inform our own people, and an honest examination of the problems of communication within our own free society.

Open communication is one of the assumptions of freedom, for in any society information is power. To withhold information from the people is to deny the people power.

Because this is so, free communication is one of the most sensitive and important aspects to American life, but one which poses for us one of the traditional dilemmas of a free people: where there is a freedom, there can be an abuse of it.

At times it seems that in the area of communication the abuses exceed the benefits.

The nature of our society, made up of various self-interest groups and commercial interests in competition for acceptance and popularity, is such that a free use of the communications media can lead to the corruption of those media by giving them over to propagandizing in its most offensive form.

Sooner or later this causes a reaction and cry goes up for regulation. I am not one to join in that cry. I do not believe that in this area an aroused, angered and embarrassed popular opinion is an infallible guide to corrective action.

I would put my faith, rather, in two sources to guarantee that what we see and what we read and what we hear are truthful.

The first source is ourselves.

The second source is an awakened and enlightened responsibility on the part of the men who manage our communications media—producers, writers, editors, photographers, reporters.

If we were the literal prisoners of our communications media, if we had no choice but to read newspapers and magazines, open our mail, watch television and listen to the radio, but we still retained the power to change what we saw, then the change we would demand would reflect that condition of bondage—and theoretically government would be the proper instrument to respond.

The present demand for regulation, reflecting the self-righteousness of scandalized individuals, seems to me to imply that we have no choice but to serve these media.

But every person is at liberty to turn his television set off—shoot a hole in it with a shotgun if he wants—close or not buy the magazine, throw the mail into a wastebasket unopened. I believe that reform, when and where needed, should reflect this condition of freedom—and the proper agency to respond are the private agencies that have the responsibility.

But it goes deeper than this.

When Americans ask their Government to change or control something for them, it is an indication they are unable to do it themselves in their private capacities.

So this demand for reform in the communications media leads me to believe there is a serious failing somewhere in the individual's ability to use his freedom of choice. It leads me to believe that he is, to some extent, a prisoner of the popular values that are themselves the corrupting sources of the media he complains about.

The argument ends, of course, here—on the campus of an educational institution and the thousands of others like it.

I said that the first source of reform was ourselves. I meant by that the educational system of America is in our hands, and it is to the educational system that we must look to provide the values that alone make men truly free.

This freeing of the individual, which is the very act of education, must be coupled to an awakening of responsibility by the managers of our media, a responsibility I feel has been suppressed in favor of maintaining competitive position.

The commercial domination of the television industry, to take one important example, has frustrated the brilliant hopes society once had for that medium's ability to enrich and improve lives.

There is no more dangerous form of deception that to create secular appetites in a general populace faced with strict and stern responsibilities to themselves and the rest of the world—yet this is the very substance of commercial programing. One of the most powerful, certainly the most attractive form of communication ever devised by man has been used not as a spokesman but as a salesman.

And this at the very time in history when there is a desperate national need to be informed—not only of world events but of the striking discoveries being made in the fields of medicine, archeology, astronomy, mathematics, physics, biology, to name just a few.

Imagine the problems we face each day in the field of self-government, race relations, economic growth, city planning and development, education, delinquency, use of manpower—I can go on—yet how much of the substance of these things is squeezed in between the western and the murder mystery?

The American citizen, surrounded by the most effective means of communicating with his fellow man in the history of the race, is often denied the true experience of the realities of our civilization.

Instead he is smothered by fictions. He is deluded into thinking that he will be happier, healthier, more successful if he purchases and uses a certain product. Certainly the deception practiced as a part of the format of any particular program is a small thing when compared to this massive and willful confusion of values.

I have said this many times before, from many public platforms, and I would like to repeat here that we must ask ourselves whether or not an educational system that teaches the prices of everything and the values of nothing is little more than a prelude to gullibility. So long as the experience of education fails to result in a conviction about values, then we will continue to have the problems I am discussing today. On the other hand, a truly educated people would make any regulation of their own means of communicating unnecessary.

In general, the confusion of values evident in the problems of our media are also evident, in another way in another vital area of communication within our society—that between labor and management.

Here, however, it is not a case of the commercial exploitation of a media but of the commitment in many cases of two institutions, labor and management, to concepts that are no longer true or useful.

The attitudes of labor and management reflect too much of the past and not enough of the future.

The class war is over but too often the rhetoric lingers on.

If you take a copy of many labor newspapers in one hand and a copy of many management newsletters in the other, you will find little objective truth.

Respected men on both sides utter in public the slogans and the battle cries of 50 years ago, until the relationship degenerates into an orgy of name-calling that shames them both, and that merely adds to the difficulty of communicating between them.

Instead of responding to creative and compelling new motives—motives of partnership in a troubled world that needs their strength, motives of domestic growth not endangered by self-centered interest, motives of solution to the problems of technological change and foreign competition, to name a few—they too often waste their energy in this self-induced hysteria of sloganeering.

Waging the battles of 1910 on the fields of 1960 is not only wasteful, it is dangerous.

The context that labor and management exist in today is far different than it was as recently as the war. Their actions are no longer isolated. Their responsibilities no longer extend only to their members and shareholders but to the entire national interest in an economy characterized by interdependence and by multiple, private ownership of property.

Yet they are unable to communicate as they should, even while these responsibilities hang over them.

I think there have traditionally been three major barriers to open communication between labor and management—social, political, and economic.

There were once very great social distinctions between company presidents and labor leaders. Today, one can find bargaining sessions in which the company president began his career on the assembly line while the union spokesman is a college-trained lawyer. The unhappy class division that kept them apart—and I sometimes wonder if it ever really existed—no longer exists between American labor and management.

The second barrier has been a political one. It resulted from the centering of both of these institutions around political doctrines that appeared best to further their own ends.

But over the years, not only has the composition of the labor movement changed, not only has the management structure changed, but the political doctrines themselves have changed—as they always have and will in this country.

Yet the old division is maintained, and it can be a block to communication.

With some prominent leaders one has to constant distinguished between the statements they make as the representatives of their union, or their company, and the statements they make as political personalities.

Just the other day a prominent labor leader, speaking in Washington, said that the invocation of the Taft-Hartley injunction in the steel dispute by the President was a political payoff to the steel companies that had contributed to the 1956 election.

Now how can we expect to rationally meet the problems we face, problems which require reason and discipline to solve, in such an unprincipled political atmosphere.

The third and final barrier between labor and management are differences in economic philosophy. In many cases, these differences are genuine. A labor leader might well believe that full employment and economic growth would result from lifting consumer buying power through wage increases, and that a slight increase in the cost of living is a small price to pay, while a management respresentative might believe just as strongly that increased profits, resulting in increased expenditures for plant and equipment, is the surest way toward growth and full employment.

What is needed here is more communication and not less.

But it has to be a new form of communication, carried on outside the bargaining table, carried on frequently over a period of time, to agree on what they can agree on, and to develop a mutually understandable vocabulary to deal with those problems they cannot agree on.

Let them agree on one idea as a starting point. That idea is this:

Owners and stockholders, union members and employees, the consumers and the public, all have a right to a fair share of increasing productivity.

Let them agree that the time has come when a third chair is at every bargaining table, the chair in which the public sits—the chair in which as consumers and taxpayers they sit themselves.

In our modern economy, the decisions made by labor and management have an impact on the national interest, which is, after all, their interest.

This is certainly not a hard thing to agree to and it is a start.

It is possible to apply this idea to particular industries, if both labor and management within that industry talk it over and talk it out away from the bargaining table.

Labor and management in this country have got to start talking to each other in a more meaningful way. They have to rid themselves of the old social and political divisions that no longer exist, for our econ-

omy is the bedrock of the Western World and its strength depends upon the good sense and the good will of the men who operate it.

I have talked considerably longer than is my custom. I would like to take 1 more minute to sum up, generally, this first Alexander Graham Bell lecture.

It is my belief that in communicating with the largest nonfree society of modern times, that we should keep the light shining into that state, even though we know it may be distorted. I think we should stand at all times in a posture of truth, and concentrate our efforts on presenting the true values of our society and not so much criticism of theirs. I hope that doors are beginning to open between us, and we should proceed in the firm conviction that freedom and truth have their own appeal.

To make this effort succeed, however, we must reappraise the means of communication within our own free society, and the use of those means. If regulation is needed to assure that those means will be used to instruct and uplift, it should be the self-regulation that results from education. And the managers of the media have a responsibility they have not exercised to the fullest.

In another area of vital communication, I believe that labor and management in the United States find it difficult to communicate because there are shadow differences between them reflecting an older time, and which are not useful for today and tomorrow.

And finally, if both labor and management can agree to the element of public interest in their deliberations, they can go on to discuss, outside of the bargaining table, the methods by which this understanding can best be implemented in individual industries.

I have been privileged to appear here today. I hope that in future years the memory of Alexander Graham Bell will be honored in the only meaningful way, by a growing understanding among men, a wider peace among nations, and truer virtue in each member of the human family.

Tribute to Captain Goldberg

EXTENSION OF REMARKS
OF
HON. SEYMOUR HALPERN
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. HALPERN. Mr. Speaker, on December 29, at a ceremony at the headquarters of the Third Naval District in New York City, Capt. Joshua L. Goldberg, Chaplain Corps, U.S. Navy, was presented with the Legion of Merit. The distinguished captain, who as a rabbi and as an officer has served his faith and his Nation so outstandingly, retired on January 1 and has taken up his new duties as executive vice president of Hebrew Union College, Jewish Institute of Religion.

The bestowal of this award by the Navy on the captain is a reflection of his dedication of purpose and his love of country, and those of us who know him, as well as the untold thousands everywhere with whom he has come in contact, are justifiably proud.

The Department of the Navy is to be commended for making the award, and I, personally, wish to compliment Secretary of the Navy Franke on this recognition of the meritorious service of my former Queens neighbor and dear friend for over 20 years. I am sure that I am joined in these sentiments by the legion of Captain Goldberg's friends and admirers. May he enjoy, in his new role, many fruitful years of service to his God and Nation.

Under leave to extend my remarks, I include the citation accompanying the tribute by the Navy which was presented by Vice Adm. Thomas S. Combs, Commander, Eastern Sea Frontiers, and Commandant, Third Naval District, to Captain Goldberg, in the Appendix of the RECORD:

For exceptionally meritorious conduct in the performance of outstanding services as district chaplain, 3d Naval District, from August 1949 to January 1960. Exercising sound judgment, diligence, and leadership, Captain Goldberg has been eminently successful in serving his fellow man through establishing and maintaining religious and human understanding and good will among all people. As the sole military chaplain representative on the Committee on Moral and Spiritual Resources of the International Information Administration, Department of State, he contributed materially to the success of the committee through his numerous suggestions and recommendations regarding problems of understanding in various parts of the world. In his role as a special representative of the Chief of Naval Operations on a trip to Israel concerning matters of a delicate nature and important implications in the field of international relations, Chaplain Goldberg succeeded in achieving an understanding whereby a naval attaché was assigned to Tel Aviv, and problems regarding visits by units of the 6th Fleet to Israeli ports were amicably resolved. As a member of the Armed Forces Chaplains Board for 5 years, he was instrumental in establishing the Board's governing policies, and contributed to its success as a liaison group between civic and religious organizations and the Chaplain Corps of the three military departments. Aware of the benefits to be derived from a better human understanding among members of the North Atlantic Treaty Organization, he organized and participated in two NATO chaplains' conferences, which have provided a better understanding between nations and navies of the NATO member countries regardless of various religious convictions. Chaplain Goldberg's dedicated service and outstanding accomplishments reflect the highest credit upon himself and the U.S. Naval Service.

WILLIAM B. FRANCKE,
Secretary of the Navy
(For the President).

The Late Honorable Charles Hawks, Jr.

SPEECH
OF
HON. ROBERT B. CHIPERFIELD
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. CHIPERFIELD. Mr. Speaker, I was deeply saddened to learn of the passing of my good friend the Honorable Charles Hawks, Jr., a former Member of Congress who represented the Second District of Wisconsin.

We both served as freshmen during the 76th Congress, and I had the privilege of knowing him well. He was a hard worker devoted to serving his constitutents and his country.

I always admired Charlie for his grasp of governmental affairs. This knowledge was readily recognized and after leaving Congress he associated himself with industry, dealing closely with Federal departments. But Charlie continued his interest in public affairs and kept up his very close association with Members of Congress and his former colleagues. I was always grateful for his warm friendship.

Charlie was one of the most loved Members that ever served in the House of Representatives. Personally, I have lost a dear friend and one for whom I had great regard and affection.

Those of you who were fortunate enough to know him, I know join me in expressing sympathy to his mother, devoted wife, Lucille, and their son and daughter.

Ukrainian Independence Day

SPEECH
OF
HON. ELMER J. HOLLAND
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. HOLLAND. Mr. Speaker, the Ukrainian people have always fought for their right to be a free and independent nation. Through the many and long struggles which began more than 300 years ago, they have succeeded in keeping alive their spiritual resiliency, their unquenchable desire for freedom. Without ceaseless and sustained work, without the cheerful willingness of the Ukrainian people to sacrifice their all, they could not have attained their national independence in 1918. Though they lost their well deserved and hard earned independence 2 years later, and though since then, for almost 40 years, they have been suffering under the most cruel tyranny in existence today, yet the lesson which they have learned in the school of adversity is not forgotten, Today they are struggling just as fearlessly and confidently as did their forebears generations ago for their freedom and independence. On this 42d anniversary of the Ukrainian Independence Day I wish them all a lightening of their heavy yoke.

May we who are free dedicate ourselves to make the very most of our opportunities, living in harmony with our neighbors and setting for ourselves the highest standards of excellence we can achieve.

Retirement Plans for Self-Employed

EXTENSION OF REMARKS
OF

HON. JOHN JARMAN
OF OKLAHOMA

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 27, 1960

Mr. JARMAN. Mr. Speaker, an able discussion of H.R. 10, written by Mr. Darold H. Kirby, appeared in the November issue of the Western Business Review, and I believe it merits the serious consideration of every Member of Congress. With that thought in mind, I have asked that this article be here printed in the RECORD.

The article follows:

RETIREMENT PLANS FOR SELF-EMPLOYED

(Darold H. Kirby)

The lifetime income curve of a self-employed man usually is parabolic. Income rises slowly in early years, advances to a peak where it stays for a few years, then declines gradually. In the earlier years of this country, because of very low income taxes and little or no inflationary pressure, personal saving was not especially difficult. The problem today, when at least one dollar out of three of earnings must be paid out in some form of taxes, is how to save something from those peak-earning years to provide for retirement.

Yet, it is essential that long-term savings be encouraged. At most, social security benefits will provide only the minimum retirement benefits necessary for a subsistence standard of living. A program must be developed to enable the self-employed to provide for themselves a second layer of retirement income to supplement social security. This supplement would then raise the standard of living of a retired individual from a subsistence level to a level nearer that of his productive years.

PROPOSED RETIREMENT PLAN

Under the proposed Self-Employed Individuals' Retirement Act (commonly known as the Keogh-Simpson bill, H.R. 10) the self-employed would be encouraged and assisted in providing funds for retirement. The bill grants an income tax deferment by allowing a limited income tax deduction each year for amounts paid as premiums on restricted retirement policies or deposited in restricted retirement funds. Amounts invested, plus accumulated earnings thereon, would generally not be taxable income until withdrawn after the individual reaches retirement age. Under this proposal retirement funds to supplement social security benefits could be more easily provided than at present.

Preferential income tax treatment, however, is presently given to about 1 out of every 3 wage earners and salaried employees—approximately 19 million employed individuals—whose employers have set up qualified pension and profit-sharing plans in their behalf. In excess of $3 billion in retirement fund payments is annually invested for these individuals from allocations which would otherwise be paid to them and subject to current income taxes. Employers receive an income tax deduction for the amount paid into such plans, but on none of this is the employee taxed—either on the employer's contribution or the accumulated earnings—until his retirement.

The proposed legislation would correct some of the existing inequality of tax treatment between the self-employed and other employees. Self-employed individuals are precluded from any potential tax deferment in providing themselves with retirement income. State laws prohibit many professionals from incorporating, and other self-employed who choose to operate as individual owners or partners are deprived of tax equality in providing for their retirement.

ELIGIBILITY

All self-employed individuals who are subject to the tax on self-employment income for social security purposes, plus physicians and ministers who are ordinarily exempt from this tax, would be eligible for the retirement deduction plan. Approximately 10 million persons from farming, the medical and legal professions, private business, and a select group of other occupations and professions would be included in this group.

Subject to certain basic provisions, the law provides for the individual who has self-employment income but who also receives wages which are subject to social security taxes. The retirement deduction for example, would not be allowed in any year that the individual's employer makes a contribution on his behalf to a qualified pension, profit-sharing, or stock bonus plan. Nor would it be allowed in any year that the individual draws benefits from such a plan. Thus, an individual who has both wages and self-employment income could not secure the benefits of both types of retirement plans in the same year.

ALLOWABLE RETIREMENT DEDUCTIONS

Annual deductions

When computing adjusted gross income on his income tax return a self-employed individual would be allowed an annual deduction, up to the year he reaches age 70, for retirement deposits consisting of amounts paid as premiums on restricted retirement policies deposited in restricted retirement trust funds. The annual deduction would be limited to 10 percent of net earnings from self-employment but may not exceed $2,500. For example, if net earnings from self-employment is less than $25,000 the annual deduction could not exceed 10 percent. If net earnings are more than $25,000, the annual deduction could not exceed $2,500.

Total contributions to fund

Another restriction on the fund is that the total deduction allowed to an individual during his lifetime would be $50,000. This limit is computed at 20 years times the annual limit of $2,500; however, the annual deduction would not be limited to only 20 years unless the maximum deduction is taken each year or unless the individual reaches age 70 before the 20 years have passed.

If the individual is over age 50 when the law becomes effective, then the limit on the annual deduction would be increased one-tenth for each year his age exceeds 50. Thus, the annual limit for an individual age 60 would be 20 percent of his self-employment income but not over $5,000.

If the taxpayer has received any amount in any prior taxable year from a qualified employee pension or profit-sharing plan or, at the end of the preceding taxable year has a nonforfeitable right in such a plan, then the 20-year lifetime limit would be reduced by the number of years of service attributable to his rights under such plan. The lifetime deduction of an employed individual who is or has been an employee and, for example, has 5 years service under an employee plan, would be limited to 15 years times $2,500 to $37,500. The 20-year maximum is apportioned in a like manner between other similar combinations.

Basis for deduction

For the purpose of computing the retirement deduction, net earnings from self-employment are the same as net earnings for the self-employment tax except that they would include earnings from those professions not presently covered by self-employment tax. This exception includes such items as net earnings from the performance of services by a minister or a Christian Science practitioner, and the net earnings derived by a doctor of medicine from the practice of his profession.

Planning retirement deposits

Retirement deposits made on or before the 15th day of the fourth month following the end of the taxable year may, at the option of the taxpayer, be taken as a deduction in that taxable year thereby permitting the computation of a self-employment income for the year before determining the total deposits to be made.

A certain flexibility is possible in planning a retirement program under this proposed law because the individual can determine the amount of his retirement deposit each year up to the limit allowable. If the age and expected future earnings of the self-employed individual is such to assure ample time to take advantage of the lifetime deduction of $50,000 by retirement age, then annual deposits could be varied with fluctuations in the amount of earnings. In years of high income the maximum deposit could be made in order to secure the maximum income tax deferment. In years of low income or emergency cash requirement no deposit would be necessary.

EFFECT OF TAX DEFERMENT

The main economic advantage arising from income tax deferment on retirement deposits stems from the fact that self-employed individuals could invest a full dollar of income to accumulate a larger fund. This would in turn earn a higher return, and the fund would increase faster because income from the investment would not be taxed currently.

The effect of tax deferment is illustrated from the following simple tabulation. The comparison is based on a $100 annual investment, for 20 years, with interest at 4 percent compounded annually, to an investment of $75 with interest at 3 percent. An average income tax rate of 25 percent has been used for the purpose of this illustration causing a decrease of $25 in the annual amount available for investment after taxes. This likewise causes a decrease in the interest accumulation from 4 to 3 percent.

	Before taxes	After taxes	Increase by tax deferment
Retirement deposits—20 years $100 per year before taxes. $75 per year after taxes.	$2,000.00	$1,500.00	$500.00
Interest accumulation.. 4 percent before taxes. 3 percent after taxes.	977.81	513.28	464.53
Total accumulated	2,977.81	2,013.28	964.53

A second possible advantage would be the difference in the amount of income in the years when the deduction is taken and in the years after retirement. Individuals will probably be in a lower tax bracket in the later years with a resultant tax savings on retirement income. Some individuals would possibly have no other taxable income and thus the increased personal exemptions after age 65 could be applied in full to reduce or completely offset the income taxes on retirement income.

ACCEPTABLE RETIREMENT PLANS

The restricted retirement policy

One of the methods of securing a retirement deduction is by the payment of premiums on restricted retirement policies. These must be either annuity, endowment, or life insurance policies (or acceptable combinations) issued by a domestic life insur-

ance company on the life of the taxpaper and identified as a restricted retirement policy which provides for the payment of restricted retirement benefits. A straight term insurance policy will not qualify.

Age provisions: The policy may provide for life insurance protection up to age 70½, but only that portion of the premium which is allocated to the cost of restricted retirement benefits will be allowed as a retirement deduction. It must be nonassignable with no person other than the insured having any incidents of ownership. However, the insured may designate beneficiaries to receive the proceeds payable in the event of death before age 70½.

Restricted retirement benefits consisting of the entire value of the policy must be paid in one of the following methods:

(a) To the insured not later than at age 70½.

(b) To the insured as a life annuity which may provide for a minimum term certain, not extending beyond his life expectancy and beginning not later than at age 70½.

(c) To the insured and his spouse as a joint life annuity or as a joint and survivor annuity beginning not later than age 70½ of the insured.

(d) To the insured, or in the event of his death to his beneficiary, as an annuity certain beginning not later than age 70½ and not extending beyond his life expectancy.

Current Policies: Many individuals are presently carrying insurance to provide protection for their families or to provide for retirement. Since most insurance premiums, other than for straight term insurance, contain an amount for savings, these policies could be qualified as restricted retirement policies and a portion of the premium could then be taken as a retirement deduction. An annual savings in the cash required to be paid out would result to the extent of these amounts, and self-retirement deduction.

This savings could also be used to provide additional retirement funds. Thus, at least to the extent of these amounts, any self-employed individual could avail himself of the benefits of the retirement deduction to create a larger retirement fund without increasing his cash requirements beyond present payments.

The restricted retirement fund

The other method of securing the retirement deduction is through deposits in a restricted retirement trust fund with a bank as trustee. The plan must also have been established for the exclusive benefit of the individual who is investing for his retirement. The trust will be permitted only the following types of investments:

(a) Stock or securities listed on a national securities exchange.

(b) Bonds of the U.S. Government or instrumentality.

(c) Stock in regulated investment companies.

(d) An annuity or face amount certificate for any member.

The trust may distribute income or corpus to participating members at any time. When the member attains age 70, the trust must begin a program of distribution of that member's interest which must be completed before he attains age 80. Alternatively the trust can, before the member reaches age 70, purchase an annuity for him or a joint and survivor annuity for him and his spouse.

In the event of death before age 70, the member's entire investment in the trust must, within 5 years, be distributed or applied to purchase an immediate annuity for his surviving spouse payable for her life.

TAXATION OF RETIREMENT INCOME

Provided in the bill are several rules relating to the income tax treatment of amounts received from restricted retirement policies or funds.

First, there are general rules covering amounts received after the taxpayer reaches age 65. The amount of money and the fair market value of property received from restricted retirement funds are included in gross income when received. An exception is that an individual may receive from a fund, without paying tax immediately, an annuity contract on his life purchased by the fund. The basis in the fund will be zero.

With certain exceptions, amounts received under a restricted retirement policy will be taxed under the present rules relating to annuities. These exceptions include the following:

(a) That portion of the annual premium which is allocated to the cost of other than retirement benefits cannot be treated as part of the consideration for the annuity.

(b) Amounts received before the annuity starting date will be included in gross income to the extent that they do not exceed the total retirement deductions previously allowed.

(c) The annuity part of any premiums not allowed as a retirement deduction—e.g., because they were paid in a low income year or before the policy became a restricted retirement policy—will be treated as consideration paid for the policy.

(d) The present special income-spreading provision for lump sums received under endowment policies will not be allowed.

Second, there are penalty provisions which will be imposed for amounts received while the taxpayer is living and before he has reached age 65. If the amount received is in excess of $2,500 the tax will not be less than 110 percent of the aggregate increase in taxes that would arise if this amount had been received equally in the taxable year and the 4 preceding taxable years. If the amount is less than $2,500 the tax shall be 110 percent of the tax resulting from the inclusion of this amount in gross income.

Third, there are special rules for taxing amounts received after death of the taxpayer. Under a restricted retirement policy, if payments are made on the death of the insured, the entire cash surrender value arising from retirement deductions will be taxable unless such value is applied to provide an annuity for his surviving spouse. The balance of any death benefits received, representing the pure life insurance portion, will not be taxable. Amounts from retirement policies or funds received by a beneficiary will be taxable as income in respect of a decedent and, if appropriate, a deduction with respect to the allocable estate tax will be allowed.

Finally, there are limitations on the taxation of amounts received under certain circumstances and limitations on certain credits or tax benefits that the taxpayer might otherwise receive. If the taxpayer after reaching age 65, or his beneficiaries, receives in 1 year as lump sum the entire amount in all retirement policies or funds, then the increase in tax shall not be greater than five times the increase in tax resulting from the inclusion in gross income of 20 percent of the amount so received.

Taxable income for any year in which retirement benefits are received cannot be less than the amount of the retirement benefits received less personal exemptions. If this restriction results in an increase in taxable income for the year, then none of the special credits against the tax, such as the credit for dividends received, will be allowed. Under this limitation itemized deductions or business losses would be deductible only to the extent of taxable income other than retirement benefits.

The retirement income credit would not be allowed with respect to amounts received from a restricted policy or fund.

INEQUITIES IN THE BILL

At least two major inequities are contained in provisions of the bill. One is that the penalty for receipt of any retirement benefits before age 65 would constitute an additional hardship in the event of total and permanent disability. If an individual qualifies for disability benefits under social security laws, amounts received from his restricted retirement policies or funds should be subject to the same taxation as they would at retirement after age 65.

The other is that the limitation on allowable deductions from retirement income could result in the disallowance of itemized deductions or business losses in any year that a taxpayer's income from sources other than amounts received from restricted retirement policies or funds were not adequate to offset these deductions.

STATUS OF BILL

Legislation similar to the present proposal has been given consideration since 1951. However, possibility of its passage has been brightest during the past two sessions of Congress. In 1958 and again in 1959 similar bills were unanimously passed by the House of Representatives. In 1958 the Senate refused to consider the bill on the floor since it had been introduced too late in the session to be considered by the Finance Committee.

The Senate Finance Committee has held hearings on the 1959 bill, but at the time this article was written no report had been issued by the committee. The bill will therefore carry over to the 1960 session as pending legislation.

Administration opposition has come principally from the Treasury Department, which objects to the Keogh-Simpson bill mainly because of the loss of tax revenue now estimated at $365 million for the first year after the law becomes effective. Sometimes overlooked, however, are the increased taxes which would be received after the bill had been operative and the present self-employed are eligible to draw on the retirement funds.

Geneva Test Ban Negotiations

EXTENSION OF REMARKS

OF

HON. HUBERT H. HUMPHREY

OF MINNESOTA

IN THE SENATE OF THE UNITED STATES

Wednesday, January 27, 1960

Mr. HUMPHREY. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I made relating to the Geneva test ban negotiations at Pontiac, Mich., on October 30. The speech dealt with the Geneva negotiations for a treaty on the cessation of nuclear weapons tests.

During the course of my remarks I advanced a proposal in an effort to prevent a deadlock in the negotiations from developing. This proposal would seek a treaty banning, under effective control and inspection, all nuclear weapons tests in the atmosphere, underwater, in outer space, and underground down to a level of about 5 kilotons. The level of about 5 kilotons was selected because from the scientific evidence then available it ap-

peared to me that the number of onsite inspections required to check on suspicious events, that is, unidentified earth disturbances, of 5 kilotons and above would not be too great. In fact, I suggested that between 25 and 50 inspections within the Soviet Union might be sufficient.

News reports appearing within the last few days indicate that the United States is now about to advance such a proposal to the United Kingdom and the Soviet Union. According to these reports we shall propose an agreement to ban tests underground down to a certain size depending in part on the number of onsite inspections that can be negotiated.

One important aspect of the proposal to be offered by the United States, however, is not clear. In my Pontiac speech I suggested that the United States should be willing to agree not to test in the range below the 5-kiloton threshold for 2 years pending the outcome of a research program and an evaluation of the experience of the control system. To me a 2-year moratorium on tests below the range of the inspection level was a risk worth taking. If we found the Soviets testing in that range then we likewise would be free to test. But we have a much greater chance of detecting even small tests with the control system in operation than we have now with only our national stations to rely on.

It is possible that the pro-testers within the administration will prevail. If they do, any threshold agreement proposed will be as high as possible, say 20 or 30 kilotons, so that the range of testing allowed will be large. Furthermore, the pro-testers will argue against the concept of a 2-year agreement not to test in the range below the threshold. They would not be willing to await the outcome of a research program. This is not strange since the pro-testers have done nothing that I can see to start research programs within the United States designed to improve our ability to detect and identify underground explosions.

I hope that the pro-testers will not win their case. I am heartened, nevertheless, that a threshold proposal along the lines I outlined at Pontiac is now apparently about to be offered at the Geneva test-ban negotiations.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

NUCLEAR TEST BAN NEGOTIATIONS PROPOSAL TO BREAK IMPASSE

(Excerpts from speech by Senator HUMPHREY in Pontiac, Mich., Oct. 30, 1959)

I want to discuss with you tonight the problem of disarmament—a subject which lies at the very heart of international relations and military policy.

A few months ago, a congressional committee was informed by experts that a surprise nuclear attack on the United States would last just a few hours, but would cost the lives of about 50 million people—just about one-third of the population.

The large nations of the world have just about given up the old concepts of strategy—soldier against soldier, ship against ship, army against army. Now our military calculations involve the bombing of cities, the destruction of populated centers, the elimination of production facilities. These measures mean death to millions of people at a time.

And the most frightening thing is that we have almost grown accustomed to it.

But it does no good to express horror, or to display moral indignation.

The problem is also a practical one, and we must solve it practically. We must insist on a fair solution even as the loaded guns are pointed.

In his speech at the U.N., Mr. Khrushchev stated that the Russians want to reduce arms at the present time. This is encouraging. But up to now, they have shown little willingness to allow international officials to inspect the Soviet Union to ascertain whether they are performing according to agreement.

The job of American diplomats is twofold; first, to persuade the Russians to accept inspection, and second, to be sure that our inspection demands are reasonable and necessary to police an agreement effectively. We must not yield on any essential, because an agreement without real inspection would be worthless. But we must recognize that the Russians have a historic passion for secrecy, and that the thought of foreign inspectors traveling freely around their country is repugnant to them. We must make sure that our demands entail the maximum in control and the minimum in complexity.

This is the general task of American diplomats. I want to become more specific.

If the world is to witness any progress toward ending the arms race and toward reducing the burden of vast expenditures for defense, we must determine whether the Soviets mean it when they claim they are willing to accept controls. Our main, and at the moment, only opportunity to find out is through the nuclear test ban negotiations now in progress in Geneva.

I wish to discuss these negotiations with you tonight because they bear so directly on whether a breakthrough in the disarmament question is possible. If these negotiations succeed, then future arms control talks can be conducted in a much more favorable atmosphere than if they fail or become stalemated indefinitely. The negotiations are a test of Soviet willingness to accept controls.

My purpose tonight is to report briefly the status of the negotiations and also to share with you a specific proposal for breaking what is fast becoming an impasse in the test ban talks.

The three nuclear powers—the United States, Great Britain, and the Soviet Union—have been negotiating for 1 year. Definite progress has been made.

Soviet representatives are beginning to accept some concepts of control to police a nuclear weapons test ban. They have indicated a willingness to cooperate with the other nuclear powers in sending satellites into space to help detect nuclear tests hundreds of miles above the earth. They have agreed that a specified number, roughly 20, fixed control posts will be established within their borders to house a variety of instruments to record signals of possible nuclear explosions. And they have accepted the idea that on a few occasions a year a mobile inspection team consisting of foreigners and nationals may go to the site of an unidentified event registered at the control posts to determine whether such an unidentified event is a nuclear explosion.

For a country in which secrecy and suspicion are almost a cult, the willingness of the Soviets to accept the above controls is an advance over previous arms control negotiations. Never in 13 years of talks on disarming have the Soviets come this close to accepting controls in specified treaty language.

However, the United States finds that the Soviet position on controls is still inadequate in three major respects.

First, our Government says the control posts should contain a higher proportion of foreigners than the Soviet Union has yet been willing to accept. The United States has asked for a ratio of two foreigners to every national. The U.S. position perhaps could be modified and I believe that if both sides wish to reach an agreement the difference between the two sides on this point can be compromised.

The second criticism of the Soviet position concerns the budget. The Soviet Union has tried to insist that the budget for the International Control Organization should be adopted unanimously; in other words, it should be subjected to a veto by any one of the three nuclear powers. But the Soviet Union has not always demanded a veto in the adoption of budgets, to name for example, the International Atomic Energy Agency. So it is very conceivable that this obstacle need not remain one for long.

Now I come to the third area in which the United States maintains that the Soviet position on control is inadequate. And this is the most important and the most difficult of all. On this point, the negotiations could fail or stalemate. This question is the number of times that a mobile inspection team may travel to the site of an event which could be suspected of being a nuclear explosion. As I have said, the Soviets maintain that this will be necessary only a few times each year.

The United States objects to the restriction of a few. But on this question the United States has no counterproposal of its own. We object to the few sought by the Soviet Union but have nothing to offer in return. We say that the number of mobile inspection visits should be related to the number of unidentified events which might be suspicious. U.S. scientists have attempted to estimate how many unidentified events there might be, particularly those underground. Their estimate is based on calculating about how many earthquakes there will be in the Soviet Union and of these how many the control posts will be able to assert are definitely earthquakes and not nuclear explosions. Some of our scientists calculate that the number of events that could be subject to inspection is a very large one. This figure, in fact, is so large that our negotiators are quite certain that the Soviet Union will never accept mobile inspection teams investigating the site of every one of hundreds of unidentified earthquakes.

The big problem, then, is how many of the hundreds of unidentified earthquakes should be subject to inspection to give a high degree of assurance that the Soviet Union is not able secretly to conduct a militarily significant series of nuclear weapons tests.

I have presented to you as objectively and as briefly as I can the major issues that are before the nuclear powers as they resume their negotiations at Geneva. I have indicated that with respect to the first two of the major unresolved issues, on staffing and on budget, the differences can probably be reconciled. On the third issue I am not so sure a reconciliation is possible. I say this because the Soviet Union gives little indication that it will submit to mobile inspection more than a few times a year. And the United States is not even able to say how many inspections it thinks would be necessary. So you have a situation in which the Soviet Union maintains a position that is highly unsatisfactory to us and in which the United States has no position at all. Without a position on the part of the United States, it is difficult to see how any compromise can be reached.

What is the answer to this apparent impasse? I have urged the administration to reach some position on the question of the number of inspections. Its answer is that no position is possible until the Soviet Union

is willing to discuss the technical complexities of the problem. The Soviet Union, contending that it spent an entire summer discussing the technical difficulties, prefers to solve the problem by picking a number out of a hat, and a low number at that.

Many people, particularly those inside or close to the Atomic Energy Commission, would solve the impasse by advocating a nuclear weapons test ban that covers only atmospheric tests. They say that because atmospheric tests are so much more easily detected than those underground or at high altitudes, such a limited agreement would eliminate the necessity of any mobile inspection teams at all. The Soviet Union, thus far, has claimed that it wants a comprehensive agreement; that is, one that covers all nuclear weapons tests. It has rejected an atmospheric ban.

I believe that an atmospheric ban is better than no agreement. I believe that it is less desirable than a total ban because it would allow not only the United States, the United Kingdom, and the Soviet Union to continue testing, but it would also allow other countries, such as Communist China and France and many others, to become nuclear powers.

Furthermore, if all our testing were done underground, I think this could result in an increase rather than a reduction of world tension. With all countries burrowing down into the ground to test their weapons each would have less knowledge of what the other was doing, thereby increasing suspicion and distrust.

If the Soviet Union is unwilling to discuss the technical complications of a comprehensive agreement and if the United States is unwilling to reach a negotiating position regarding the number of annual inspections it believes would be both safe and reasonable, then some other way out of the impasse must be found. For we must not let the Geneva negotiations fail.

I do not pretend to have the perfect solution to this problem. But I offer here tonight one possibility for your consideration and discussion.

For a comprehensive test ban our scientists believe that the number of unidentified events in the Soviet Union alone would number several hundred, obviously too many to inspect. However, this number drops drastically as the size of the nuclear explosion or earthquake increases. For example, if the control organization had to inspect only for explosions of approximately 5 kilotons or larger, the number of inspections needed in the Soviet Union would be somewhere in the range of 25 to 50. Such a range does not appear to me to be too high, either from a practical point of view or from the viewpoint of the Soviet Union with its suspicious outlook toward any inspection or control.

My proposal, therefore, is as follows:

Point 1: Let the United States extend its general moratorium on all nuclear tests now scheduled to end on December 31 for a maximum of 1 year. This would give the nuclear powers ample chance to reach agreement. I would not extend this moratorium more than 1 year; if the Soviets stall longer than that, it is a sign they are trying to get a test ban with no controls whatsoever. I think the United States must not allow this to happen.

Point 2: We should be prepared to enter into an agreement banning nuclear tests equal to and above 5-kiloton explosions. The agreement would specify that all unidentified events with a signal equal to and above a 5-kiloton explosion would be subject to inspection. The ceiling on the number of mobile inspections would be somewhere between 25 to 50. In this way I believe we could arrive at a number of mobile inspections that would correspond to our present best educated guesses from a scientific point of view as to what is necessary.

Point 3: We should be prepared to join with the other countries for 2 years from the time the agreement goes into effect in a moratorium on tests below 5 kilotons. At the end of that time we shall know two things: (1) whether the Soviet Union and other countries are cooperating in installing the control posts; and (2) whether by observation and further research the control posts can be improved to detect and identify most of the unidentified events below a size of 5 kilotons.

Point 4: During the 2-year period in which the control posts and inspection system for the 5 kiloton threshold agreement were being established we should conduct a comprehensive research program in cooperation with the Soviets, with the United Nations, and also by ourselves. Such a program would be designed to find ways of improving the control system so that all suspicious events would be subject to inspection within a reasonable ceiling.

Point 5: The agreement should specify that if the international control posts or our own detection system gave evidence that the Soviet Union was not cooperating in the moratorium on tests below 5 kilotons—those not subject for 2 years to mobile inspection—then we would be free ourselves to test in this range. We would present our evidence to the international control commission to show that the moratorium had been violated. And if the Soviets do not agree to install appropriate and reasonable controls for tests below 5 kilotons we should be free to test in this range if our defense requires it.

My proposal is one I believe can be reached within a short time, given the sincere desire to reach agreement on the part of the Soviet Union and the United States. This is one that should be offered rather than have the negotiations fail or continue indefinitely as a stalemate. This proposal covers the requirements of the United States, namely that a control system should be based on what scientists estimate can be done. It also covers the requirements of the Soviet Union, that a control system must not be confused with extreme complexity, which to them looks like espionage. And it is a proposal which gives considerable assurance that we can have a total and effective test ban agreement.

In advancing this proposal before you tonight I believe some important and related points should be stressed.

A cessation of atomic tests is arms control, but it is not real disarmament. It is only a first step toward disarmament.

We believe that disarmament is necessary, that it must eventually come, and that without it, the whole world is in danger. We are willing to accept the kind of international inspection which alone can make disarmament effective and meaningful.

Well, then, why don't we say it? Why don't we identify our country with these goals? Why don't we let the peace-loving people of the world understand that the United States is the leader in the great quest for peace?

Why do we leave it to Khrushchev to go before the United Nations General Assembly and proclaim the great goal of complete disarmament, as though he had invented it?

I think the present administration has been extremely negligent in allowing this idea to become associated, in the eyes of the world, with the Soviet Union, when in fact, it has been an American idea.

In addition to proclaiming our sincere and dedicated conviction to a system of comprehensive disarmament, we must also be prepared with the necessary technical studies for control and inspection in each stage of disarmament. And we must also be prepared to change a vast segment of our production from arms manufacturing to peacetime pursuits.

There is no doubt in my mind that money saved on armaments will find other uses. It would make it possible to shift emphasis to many urgent peacetime tasks. To discuss the many opportunities that we would have to make use of savings from a reduction of defense expenditures is another speech. I am certain this audience will forgive me if I refrain from giving you another speech this evening.

The big question is, will we find these other uses quickly enough, and will these other uses employ the very people and the very facilities that formerly were engaged in military production?

It will take considerable planning to make the transition smooth. Healthy reconversion is not just one big overall problem. Rather, it consists of thousands of specific problems, involving particular groups of employees. The fact that the general national level of prosperity will continue offers no reassurance to individual workers who would lose jobs.

Finally, I want to conclude by underlining the point that—when I speak of disarmament, I mean mutual disarmament, under effective controls which will give assurance that all parties are living up to the agreement.

I do no mean unilateral disarmament.

Indeed, I strongly oppose the tendency of the Eisenhower administration to reduce our armed power unilaterally, or try to rely solely on the massive nuclear deterrent because it is cheaper than the conventional forces which are needed for local issues, and to place the budget ahead of national security.

All of this is dangerous to our national defense. It encourages adventures on the part of the Communists which may lead to wars which otherwise might have been avoided. Weak defenses make disarmament more difficult. A nuclear war is horrible to contemplate. But also horrible is the prospect of a United States and a free world so weak that domination by the Soviet dictatorship becomes unavoidable.

Disarmament is at the very center of our foreign relations. I have stressed it tonight because I believe deeply that solutions can be found if our leaders, the Soviet leaders, and the leaders of other nations are convinced that large-scale devastating wars no longer can be made a substitute for resolving disputes in ways that are peaceful, equitable, and just.

Mr. HUMPHREY. Mr. President, this statement indicates the course which I believe our Government should follow relating to the negotiations on the cessation of nuclear weapons tests. I am happy to note in the morning press that the recommendations which I made at Pontiac, Mich., on October 30 are now the recommendations of our Government at the Geneva Conference.

Those recommendations include a comprehensive ban on all atomic or nuclear tests in the atmosphere, at high or low altitudes, or in outer space; also underwater tests or submarine tests, as well as the large underground tests which readily lend themselves to inspection and detection.

With respect to the smaller weapons or smaller explosions, my recommendation included a joint cooperative effort by the United States, Great Britain, and the Soviet Union, through a series of test explosions under United Nations supervision, in order to improve detection and inspection.

Also I called for a vastly expanded program in research on nuclear weapons testing, in order to improve the control and inspection methods.

Waste in the Mails

EXTENSION OF REMARKS
OF
HON. GEORGE MEADER
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 27, 1960

Mr. MEADER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Adrian (Mich.) Telegram of January 23, 1960:

WASTE IN THE MAILS

The junk mail that comes into a newspaper office fills big baskets everyday. Within a month it is measured by the ton. It comes from many sources, from publicists, from manufacturers, from industries, from labor unions, from distributors, utilities, and recreation groups. Most of such mail is promoting something or someone. There's no end to it. Much of it also comes from U.S. Government agencies.

If individuals, corporations, and organized groups want to throw their money into wastebaskets all over the land that's one thing. There must be some return or they wouldn't do it. But for the U.S. Government to use public funds in mailing saturation projects is wasteful, reckless, and ill considered. The cost of such material, printing, and clerical help, is only part of it. The junk material also clogs the Government's postal system which has many problems of its own.

A case in point is three envelopes from the Federal Aviation Agency, Washington, D.C., arriving the same day. The envelopes measured 9½ by 12 inches. They were made of very good quality manila paper.

One envelope contained a news story about the Agency requiring air carriers to have airborne weather radar. The news release was 7 pages long.

Another envelope contained news of new rules governing the consumption of alcoholic beverages aboard aircraft. It was 5 pages long.

A third envelope contained a release about the agency's $118 million program of air navigation and air traffic control facilities. It was eight pages long and listed sites all over the Nation where funds will be expended for new facilities.

The effort to inform the public of Government agency activities is commendable. But such efforts must be used wisely and effectively. For instance, the three releases arrived the same day. One manila envelope instead of three could have been used. We doubt if the releases were of much value to most newspapers. The release on alcoholic beverages was received 2 days after its release date. The Telegram received ample coverage on the story from its wire service, the Associated Press, and had reported the news on page one the requested release date. So the one mailing was a complete waste. The item concerning the airborne weather radar on air carriers wasn't newsworthy here. Some papers probably used it. The wire services had the news if it was wanted. The Associated Press also handled the story about air navigation and traffic control expansion.

The news release might have been valuable for papers desiring to expand or enlarge upon the Associated Press service. But here again, a wise and efficient handling of the news by the Federal Aviation Agency would have sent the mailing to those who could or would make use of it. A blanket mailing was wasted.

This wasteful use of the mails by the Federal Aviation Agency is by no means isolated or unique. Every newspaper gets copious mailings of Government and Government agency material. It also receives voluminous material on occasion from Congressmen, some of which is useful, but most of which is excess baggage. The efforts of Congressmen and Government agencies to inform and acquaint the people with programs and causes, as we said, is commendable. But in these days of high Government costs selective use of the free mailing privilege is highly desirable. A lot of work, and a lot of money, goes down the drain every time a worthless mailing is discarded. And in newspaper offices, the discards become a torrent.

America's Main Problem

EXTENSION OF REMARKS
OF
HON. THOMAS J. LANE
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 19, 1960

Mr. LANE. Mr. Speaker, under leave to extend my remarks in the CONGRESSIONAL RECORD, I would like to include a recent statement by Dr. Emilio Núñez-Portuondo, a loyal friend of the United States of America and former President of the Security Council of the United Nations, in which capacity he merited worldwide renown and respect. The exposition by Dr. Núñez-Portuondo was brought to my attention by my dear friend, the Reverend Father Joseph F. Thorning, Ph. D., D.D., a specialist on inter-American history, who on several occasions has represented the United States of America at Presidential inaugurations in South and Central America. The noble Cuban people, now subject to the military tyranny of the Castro brothers, Fidel and Raúl, merit our understanding and cooperation in their crusade for freedom and decency.

The statement follows:

AMERICA'S MAIN PROBLEM

(Dr. Emilio Núñez-Portuondo, former president of the Security Council of the United Nations)

Many persons residing in the United States of America, mainly of the diplomatic delegations to the White House, the Organization of American States, and the United Nations, have written us requesting enlightenment on the tragic situation of Cuba, and in some cases they have offered their own suggestions to remedy the ills besetting the island.

This issue explains the Cuban situation, as objectively as possible.

Even before Fidel Castro assumed power by overthrowing ex-president Batista, we warned in every way possible, utilizing every means available, including the rostrum of the United Nations, that Castro's movement was inspired and directed by international communism, for the purpose of starting the political and economic penetration of communism in the Americas, which until the present time has been the zone of exclusive U.S. influence.

We always maintained, as indeed was the case, that the majority of the July 26 movement, headed by Castro, were not active Reds, nor even fellow travelers. It is also true that during the last year of siege he was supported, in some cases, in good faith and, in others, from fear, by all ranks of Cubans who were deceived with respect to the true purposes of Castro and his lieutenants. In many cases this attitude was assumed when it became apparent that Batista couldn't or didn't want to stamp out the revolutionists.

During the period of 7 days that we occupied the position of Prime Minister of Cuba, in March of 1958, we tried to establish beneficial policies for our country, to avoid an overwhelming victory of the Reds who would have turned Cuba into a branch office of the Soviet Union or the People's Republic of China.

When we discovered that our position was not acceptable to those who had the power to enforce it, we resigned and returned to the position of Ambassador of Cuba to the United Nations, where we represented Cuba from 1952 to 1958.

It seems unnecessary now to analyze responsibilities for the situation existing on the island. But it is a fact and no intelligent person can deny it, that an absolute Communist regime exists in Cuba sterner than that of Soviet Russia, equaled only by Red China.

The great majority of we Cubans who oppose the Communist regime of Fidel Castro also oppose the restoration, directly or indirectly, of ex-President Batista to power. This would not solve the Cuban problem; it would aggravate it. His return to power would never be accepted by the people of Cuba, nor by international public opinion.

It would be a mistake to try to achieve the impossible, and furthermore, it would be prejudicial to national interests.

It is evident to us that an authentic social revolution has occurred in Cuba—it is not a typical Latin American revolution. The Reds have taken advantage of the genuine discontent of the needy classes and have proceeded on their own, but ably, to grant reforms.

Some could be kept as they are, others changed; and some, if not abolished, will ruin the country.

Attempting to overthrow the Castro government by a Batista-backed movement, signifying a step backward with respect to the social revolution, seems not only impossible, but unjust—action of this kind will not accomplish the internal peace required for Cuba's reentry into the family of civilized nations.

A minority of those who oppose Castro feel that the recent revolution was no different from an ordinary Latin American revolt; that it is very easy via decrees and laws to go back as if nothing at all occurred on December 31, 1958. To be sure, we do not share this feeling which is so completely contrary to the logic of facts.

We are convinced that if the Castro regime continues to throttle Cuba, pretty soon every other Latin American state will find itself in a similar situation, or at least, engaged in hopeless civil strife incited by international communism.

We are firmly convinced that for the United States, a Communist Cuba fastened the bridle of Moscow and Peiping represents a greater threat than does Berlin under control of East Germany.

We have said, and we repeat, that a Red regime, such as that established in Cuba, with its machinery of repression perfected daily, assisted by Russian and Chinese experts, cannot be destroyed by internal forces alone.

Proof of this is seen in the Baltic States, Hungary, Rumania, Czechoslovakia, Albania, Bulgaria, Poland, North Korea, North Vietnam, Outer Mongolia, Ukrainia, and East Germany. Theorists, searching for solutions in the library, who may take exception to this statement, cannot offer one single example to the contrary. Guatemala was not completely Red as is Cuba. There the Army stood up to communism and threw Arbenz out of power.

It also seems clear to us that here you have a problem that extends beyond the borders of Cuba, to all America, especially the United States. Ignoring this fact, from good faith or not, results in converting yourself into an effective ally of international communism, and the longer you wait to recognize the truth for what it is, the more you play into the hands of the Reds, thereby impairing the safety of the hemisphere. To regard the Cuban situation as if it were just another in the long list of Latin American revolutions, we insist, is an error of frightful consequence.

To maintain that the Cubans can take care of their problem alone, without help from the outside, in the face of foreign interference from Russia and China, is an injustice to the people of Cuba. We are obliged to state the truth even if it is not pleasant. This is a situation affecting all of the Americas, mainly the United States, the leader of the Democrats and anti-Communist forces in the hemisphere. The facts show we know whereof we speak. We fear only that when the required measures are taken it will be too late. Cuba will be in ruins, spiritually and materially, and beyond redemption.

To those who have written to us, we ask, why was the Declaration of Caracas adopted?

Will the peoples of the world believe in the solemnity of OAS agreements if the most important one of all is relegated to oblivion precisely when for the first time there exists a situation for which it was created?

The truth is clear and simple, and cannot be disguised. If a Communist regime did not exist in Cuba no state would have the right to intervene in matters essentially internal, pursuant to the rules of international law, the Charter of the Organization of American States and the United Nations. States affected by measures taken by the Cuban Government against their nationals could present claims, but in accordance with the treaties in force they could not exercise economic or any other pressure against Cuba.

But if an absolute Communist regime, tied to Moscow and Peiping, prevails as it does in Cuba, there is at our disposal a legal instrument authorizing collective action, if such is possible, and if not, unilateral action is authorized by which the state most directly affected adopts measures of security to prevent its own destruction.

Only the Communists and fellow travelers can attack such an action, since they hope to convert the American Republics into vast concentration camps. But such an action would be applauded by the anti-Communists of the Americas and the world at large who have been amazed that a regime representing the establishment of Soviet military and naval bases only 90 miles from the shores of the United States has been allowed to strengthen itself and last for 1 full year.

NEWS AND COMMENTS

Puerto Rico: As is widely known, Puerto Rican nationalists have established their headquarters at Havana. They propose by way of violence to break all ties with the United States of America. The wife of Pedro Albizu Campos resides in Cuba and officials of that country render her effective aid and support.

We have been informed privately that Cuban experts on the use of explosives and methods of sabotage have been sent to Puerto Rico to train the nationalist farces. If the authorities do not take appropriate measures, Puerto Rico may soon be the scene of terroristic activities from which great damage will follow.

Inasmuch as the distinguished Governor of Puerto Rico, Luis Muñoz Marín, was one of the most outspoken sympathizers of Fidel Castro during the civil war in Cuba, it is possible that he could undertake negotiations with the Cuban Government conducive to Cuba's complying with international obligations. At least, he could try to prevent any further interference in Puerto Rican affairs and take the necessary steps to prevent Castro from making his points with dynamite and other instruments of sabotage.

Cuba: On December 16 Fidel Castro made another speech, which only lasted 4½ hours, at a conference of sugarworkers.

In this speech he announced the unshakable purpose of his government to seize all of the sugar properties in 1960, to be turned over to the farmers. He specifically referred to U.S. sugar properties, asserting that they would be the first to be confiscated.

We hope now, since this action has been announced a year ahead of time, that those mainly concerned will not be caught by surprise. We are predicting with sufficient anticipation everything that is going to take place in the island. This is not too difficult a task. All you have to do is to read up on what has happened in the Soviet Union and Communist China and their satellite states to see that the same thing is happening in Cuba, although faster.

In his speech Castro denounced the United States as the stronghold of racial discrimination in the hemisphere. He also blamed the United States for his not having received some agricultural equipment on account of the steelworkers' strike. This last speech reveals a program of action in regard to the United States that not even Stalin would have dared to make public.

For a quick picture of the situation prevailing in Cuba today read the reports published in the American press on the trial of Hubert Matos. What the press reports did not disclose was that the five members of the army who served as judges on the court are well-known, active Communists. Morally and legally they should have disqualified themselves from pronouncing judgment on their comrade in arms.

At this trial Fidel Castro testified for 7½ hours. He insulted both defense counsel and prosecutor. He made a spectacle of himself, as any demented person would, turning his back to the court and addressing the public watching the trial.

On the third day, that is, after speaking to the sugarworkers for 4½ hours and to the Matos trial spectors for 7½ hours, Castro made another speech of 5½ hours—a total of 17 hours in a period of 72 hours. Which goes to show what we have maintained in Latin American Events, that Castro suffers from a mental disorder known as logorrhea. In his last speech he declared that no one, not anything, would stop him from carrying out his program, which means the total communization of the country.

Meanwhile "Ché" Guevara, president of the National Bank of Cuba, sent, according to custom, a copy of the facsimile of his signature for recognition on credit documents issued by the bank to other institutions.

All concerned were quite astonished to see that the signature was simply "Ché." No one but another lunatic would act in such a way.

The president of the National Bank of Cuba is named Ernesto Guevara. His name is not "Ché," which is neither a first nor last name. It would be the same as signing "friend," or "dog," "cat," and so forth.

This "Ché" dictated last week Resolution 365 of the Monetary Stabilization Fund by virtue of which no Cuban can take a trip out of the country more than once a year. It fixes as a limit for travel expenses, hotels, and food the total amount of $150. Cubans are prohibited from purchasing tickets costing more than $500 which means that practically no one can travel to Europe or to South America, for example, because the fare is higher than this amount.

As a natural consequence to these measures promulgated by "Ché" in only 1 week the suspension of 37 daily flights was announced by National Air Lines, Delta, Aerovias Q, Mackay Air Line, and Pan American.

"Ché" in his determination to ruin Cuba economically, as ordered by Moscow and Peiping, dictated a circular stipulating that all bank drafts to foreign countries must not only be authorized by the National Bank of Cuba, but private banks must send reports on the origins of all savings and current accounts and a statement of the use to be made of drafts to other countries.

The Communist regime, last week, condemned the Cubans Luis Lara Crespo and Juan Morfi Reyes to death for the crime of having conspired against the government. The accused were not given the right to appeal the sentence, and the court was composed not of judges but of officers of the rebel army. They were executed immediately by firing squad.

U.S. citizens John V. Martino and Frank Austin Young have been condemned to prison terms in Cuba, Martino for 13 years and Young for 30 years, both at hard labor. Peter John Lambton of Nassau, Bahamas, has also been sentenced to 25 years of hard labor. These punishments have been inflicted by military courts from which there is no appeal.

James Buchanan, reporter for the "Miami Herald" has been arrested and tried for counterrevolutionary activities. When the Inter-American Press Association requested the Provisional President of Cuba, Comrade Osvaldo Dorticós, to release Buchanan the reply was that he not only would not be released but would be certainly sentenced. And he was sentenced to 14 years imprisonment at hard labor, but the sentence was suspended by the military court on condition that he leave the country within 24 hours. The trial was held in a movie theatre.

All of the aforementioned items present in brief form what has transpired in less than 1 week's time in Cuba, 90 miles from the coast of the United States, the world leader of democracy, human rights, and the fight against international communism.

It was also made public that two Cuban priests, Father Eduardo Aguirre Garcia and Father Ramón O'Farrill escaped from Cuba to political asylum in the United States. These priests were outspoken partisans of Fidel Castro during the revolution that overthrew ex-President Batista. Now they have had to flee Cuba because, according to declarations made to the U.S. press, the Government of Cuba is completely Communist, under orders from the Soviet Union and the People's Republic of China. They also reported that Fidel Castro made them the proposition of organizing a national Cuban church, apart from the Vatican, which Catholics would consider sacrilegious.

CASTRO HOLDS OUT PURSE FOR RED GERMANY'S SUBS

"BERLIN.—Fidel Castro is reported to be negotiating with the Communist bloc for submarines as well as military jet aircraft.

"Official East German Communist sources reveal that Castro's purchasing agent, Cuban Air Force Capt. Victor Penza Cardozo, has contacted the East Germans concerning the sale of submarines.

"Indictions are that East Germany, which by now has a large pool of submariners

trained both in East Germany and Russia, is soon to receive a number of U-boats from the Russians. The plan apparently is to turn over several of East Germany's older ones, to the Cubans.

"In Prague, Captain Penze is quoted as telling East German representatives that Castro considers a submarine fleet no less than aircraft as Cuba's 'first line of defense.'

"East German officials in Berlin are gleefully acclaiming the Castro arms mission as the Latin counterpart to the Nasser arms-for-cotton deal with Russia with Castro laying sugar on the line instead of cotton.

"Nasser, too, received submarines from the Communist bloc as part of the barter deal.

"Western intelligence officials are exhibiting considerable apprehension over the East Berlin submarines-to-Castro report. The possession of a U-boat fleet would provide Castro with virtually unlimited opportunity for clandestine mischief-making in the Caribbean.

"These possibilities extend beyond the opportunity which Castro would acquire for landing agents, saboteurs, and even armed forces in the Dominican Republic and other such Castro target areas.

"The introduction of a Cuban submarine fleet into the Caribbean would automatically provide a screen for Soviet submarine operations.

"One of Castro's leading officials, Capt. Nuñez Jimenez, chief of the New Agrarian Reform Institute, said Cuba will now proceed at full speed with the purchase of Communist arms now that Britain has refused them."

We are not surprised since we predicted this event in previous editions of the newsletter. We can report that Russian submarines have been regularly circulating around Cuba. Persons completely in our confidence have written through secret channels that from the Isle of Pines Russian submarines have been seen unloading crates the contents of which are unknown.

It is curious, to say the least, that this serious blow to the security of the United States, that is, the purchase of submarines by the Red regime of Fidel Castro, has had very little publicity in the United States. The American people are still not aware of it.

What May Be Good for the Unions May Not Be Good for Airline Safety

EXTENSION OF REMARKS
OF
HON. WALTER M. MUMMA
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 27, 1960

Mr. MUMMA. Mr. Speaker, airline safety is very important to every one of us and this year has started off with considerable discussion in light of the unfortunate tragedies that have occurred in that transportation industry.

The editorial from the Patriot of January 26, 1960, that follows, may very well point the finger to what may be a major factor. No wonder General Quesada advises "no special interest group can be permitted to hold the pen that writes the rules."

In view of the record this year, congratulations to Quesada for his efforts to enforce to the letter of the law matters of safety regulations and required pilot qualifications.

The editorial from the Harrisburg, Pa., newspaper follows:

QUESADA AND FAA ON BEAM IN AIR SAFETY CONTROVERSY

The year is less than a month old, yet it already looms as the blackest in history for American aviation if the airline crash-death rate continues.

In the face of this and a 1959 record that marked an alltime high in airline fatalities, the enforcement campaign for air safety being waged by the Federal Aviation Agency is worthy of public support.

The embattled Administrator of FAA, Elwood R. Quesada, is calling a spade a spade and a special interest a special interest in carrying forward his comprehensive program for more air safety.

Efforts of the Air Line Pilots Association, an AFL–CIO union, to paint the FAA as a destructive force are inexcusable. What has happened is simply that pilot qualifications have been stepped up and regulations, too often winked at in the past, are being better enforced.

The record of nearly 4,000 rule violation charges filed by the FAA last year, double the previous year's total, stands as evidence, too, that many airline practices have been whistled down and reforms demanded.

We are inclined to accept Mr. Quesada's appraisal that only a hard-core few in the aviation industry are making all the noise. We know of no more safety-minded group than airline pilots, whose own lives depend on their flying practices, and commercial airlines, whose very existence depends upon public confidence.

In the uproar that always goes up after a spectacular air crash, it is easy for the public to overlook the safety strides the industry has made over the years. Yet this record in itself cannot justify the pressuring of some special interests in aviation to force an easing of regulations applied to them and substitution of their own version of what the rules should be.

Although the air safety rate last year continued to show commercial air travel is four times safer than the highway, the death total still set an alltime record and the rate of fatalities per 100 million passenger-miles also went up. This came at a time of vast change in the crowded sky with more jets being introduced while conventional aircraft continue to fly the airways. At the same time, the number of all kinds of aircraft continues to soar.

Every factor argues for more emphasis on air safety, not an easing up. And Mr. Quesada was 100 percent on the beam when he told the Monroney committee that "no special interest group can be permitted to hold the pen that writes the rules."

It is said about nearly everything that the public's interest must come first. If that is true anywhere, it certainly applies to air safety. Mr. Quesada and the FAA have put first things first. They deserve full public support.

Gift to Japan

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. COAD. Mr. Speaker, recently the people of the State of Iowa, through the cooperation of the U.S. Air Force, the Foreign Agricultural Service of the Department of Agriculture and the U.S. Information Agency, presented to the people of Japan a planeload of breeding hogs. I was very proud to take part in the presentation of this gift to the representatives of the Japanese people at Des Moines.

The following letter from the Honorable Herschel C. Loveless, Governor of Iowa, to the Honorable Hisashi Amano, Governor of Yamanashi Prefecture, Kofu, Japan, explains why this gift was made and its significance to the people of America and Japan:

JANUARY 15, 1960.

The Honorable HISASHI AMANO,
Governor of Yamanashi Prefecture, Kofu, Japan.

DEAR GOVERNOR AMANO: When you receive this letter, there will have been transported to Japan the plane load of breeding hogs about which I wrote earlier.

These animals are being presented to your people of the Prefecture of Yamanashi as a modest contribution toward offsetting their August and September typhoon losses and also to help further their trend toward greater domestic livestock production.

This presentation is made on behalf of the citizens of the State of Iowa. It represents the sincere interest of our people in the efforts of your people toward continued agricultural improvement.

I very much regret that I could not arrange to travel to Japan at this time. Since I was unable to make the trip personally, this letter is being hand delivered to you by the Honorable LEONARD G. WOLF, Member in the U.S. House of Representatives from the Second Iowa Congressional District. In addition to fulfilling this function, Representative WOLF also is in your country as a representative of the congressional Committee on Science and Astronautics to discusse satellite tracking facilities with officials of the Japanese National Government.

As my spokesman, Representative WOLF will introduce to you Mr. Roscoe Marsden of Ames, and Mr. Albert Miller of Ogden, two central Iowa farmers whom I have designated as my technical representatives to assist in the introduction of the hogs into Japan. Both of these men have farmed for many years and are livestock producers of long experience. They also are directors of the National Corn Growers' Associaiton, which played a large part in planning the hog shipment.

Messrs. Marsden and Miller have come prepared to remain in Japan as long as 60 days to demonstrate and otherwise to transmit information on hog production methods which have been found satisfactory on Iowa farms and otherwise to help your farmers in every possible way.

It is the hope of our people that this token consignment of breeding hogs will prove one day to have been the nucleus for a substantial expansion in meat animal output, which we understand is one of your agricultural goals. Such a development should help assure your people of that very important ingredient for the peace and happiness of a nation, namely, an adequate food supply of desired variety and protein level.

I have written that this shipment is to be considered as coming with the best wishes of the people of Iowa, but in a larger sense it also is an additional demonstration of the good will toward Japan of all the people of the United States. Responsibility for the introduction of these animals into your country is being shared with several agencies of the Federal Government, namely, the U.S. Air Force, the Foreign Agricultural Service of the U.S. Department of Agriculture, and the U.S. Information Agency.

To an even greater extent, perhaps, the shipment may be said to represent the American Nation because it is in harmony with the President's "People-to-People" program in which thousands of our citizens and private institutions are participating voluntarily outside Government channels. It was in furtherance of this program for strengthening friendly international relations that correspondence here was opened with your office several years ago and also between civic representatives of our capital city of Des Moines and those of your capital city of Kofu.

In evidence of this desire to extend a helping hand across the sea, I may add that participation in the departure ceremony here at Des Moines included, by special invitation, His Excellency Koichiro Asakai, Ambassador of Japan in Washington, D.C.; Mr. Nobuyuki Nakashima, First Secretary of Embassy; and Mr. Hideo Tokoro, Embassy Agricultural Secretary. Among others from my office greeting Ambassador Asakai was Mr. E. J. McManus, Lieutenant Governor of Iowa.

Also participating in the ceremony were six Members of Congress from Iowa; Mr Mark Bortman, general chairman of the "People-to-People" program; Mr. Marvin McLain, United States Assistant Secretary of Agriculture; Maj. Joseph J. Kionowski, representing the Secretary of the U.S. Air Force and official representatives of the U.S. Information Agency.

With every good wish for the future in the Prefecture of Lamanashi, I am,

Very truly yours,

HERSCHEL C. LOVELESS,
Governor of Iowa.

Save Now—Pay Later

EXTENSION OF REMARKS
OF
HON. CHARLES O. PORTER
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. PORTER. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following timely editorial which appears in the January 28, 1960, edition of the Machinist.

I think the simple question now before the Congress is "When is a surplus a surplus?"

DANGER

Fact: President Eisenhower is asking Congress to approve a budget for the Federal Government next year that calls for $4 billion less in expenditures than the total receipts he expects from tax collections and other sources.

Fact: President Eisenhower's new budget takes a smaller proportion (19 percent) of the national income to finance the Federal Government than in any other year of his administration.

These two facts should explode the argument that the United States can't afford to provide its citizens with necessary and long overdue Government services.

By any logic, the United States can afford the necessities of the times. The present administration just doesn't want to spend the money on taking care of people.

They would rather have a dollar surplus than rebuild our public school system. They would rather have money left over than help the States build needed hospitals or help cities clear the slums or redevelop depression areas or even to maintain the world's strongest defense force.

For big business has been arguing that the only good government is a small, ineffective government—a government that puts dollar values above human values. The propaganda has had it effect. Today millions of Americans believe that a cash surplus will do more for the country than an adequate defense force. As a result, our Federal Government has been seriously weakened and so has our Nation.

We're indebted to Walter Lippmann, the newspaper columnist, for a courageous analysis of the President's proposed budget for 1961. Here's what Lippmann wrote:

"Never before in all history have so many people in any country had so much money to spend privately as they saw fit. This would be an unalloyed delight were it not for the disturbing fact that during these years of private prosperity, the President has been presiding over the loss of American primacy among the great powers of the world."

Back through history, great riches and bulging treasuries have tempted many aggressor nations. For the second strongest military power, a $4 billion surplus could be dangerous.

Gates Takes New View

EXTENSION OF REMARKS
OF
HON. FRANK KOWALSKI
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 27, 1960

Mr. KOWALSKI. Mr. Speaker, as another instances of the disquiet of the American people over the lag in our missile program, I cite an editorial in the Hartford Times, a distinguished Connecticut newspaper.

In its editions of January 23, the Hartford Times commented editorially on the new administration dictum—that intelligence reports can be based on intentions rather than capabilities.

The editorial is as follows:

GATES TAKES NEW VIEW

The rosy picture of our military power given to Congress by Secretary of Defense Thomas S. Gates, Jr., is an interesting one. As Senator RICHARD B. RUSSELL, the Armed Services Committee chairman, said guardedly, "From the way he presented it, it was encouraging."

It should be understood what Secretary Gates and Gen. Nathan F. Twining, chairman of the Joint Chiefs of Staff, have done. As Mr. Gates explained, "Heretofore we have been giving you intelligence figures that dealt with the theoretical Soviet capability. This is the first time that we have had an intelligence estimate that says, "This is what the Soviet Union will do." Therefore the great divergence, based on figures that have been testified in years past, narrows because we talked before about a different set of comparisons."

In other words, instead of talking about the number of missiles Russia has—which has been the worry—Mr. Gates turns to consider what she will do with them. Based on the armament we possess, Mr. Gates doesn't think that the Russians are going to do anything. So from that way of looking at it, we have, as he sees it, "a clear balance in our favor."

That takes care of the likelihood of war in the immediate future and it fits well into the President's policy of a deterrent defense. But it offers no hint that the administration intends more rapidly to overcome present Russian ICBM superiority.

The best which is offered on that score is a statement that "on the basis of our current intelligence estimate we do not now believe that the Soviet superiority in ICBM's will be as great as that previously estimated in 1960–63."

That may be, but it has been our misfortune to downgrade Russian capabilities before. There is no security in such an assumption.

Exemptions in the Fair Labor Standards Act

EXTENSION OF REMARKS
OF
HON. JOHN H. DENT
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. DENT. Mr. Speaker, as a member of the Subcommittee on Labor Standards, I am privileged to revive arguments both pro and con on the question of extension, increased minimum wage, as well as eliminating certain exemptions.

Knowing that this Congress must do what seems so essential in this year of 1960—namely, take this legislation up for consideration—I am passing on for the enlightment of other Members certain arguments advanced by the Amalgamated Meat Cutters and Butcher Workmen's Union for elimination of the seafood exemption:

SEAFOOD EXEMPTION IN THE FAIR LABOR STANDARDS ACT

Some of the Nation's lowest paid and most poverty stricken workers are employed in the seafood processing industry. Wages as low as 60 and 65 cents an hour are not uncommon among these workers.

Not far from Washington, in Norfolk and Hampton, Va., women work on fish for 65 cents an hour. On the gulf coast, wages go even below that amount.

Many of these workers cannot get year-round employment. As a result, their problems become even more serious. In the New Orleans area, annual income among shrimp and crab workers are below $1,000 a year.

Workers in the seafood processing industry are among those who need the protection of the Fair Labor Standards Act the most. Yet they are almost completely exempted.

Only seafood canning is covered by the minimum wage provision (not by the maximum hours provision) of the Fair Labor Standards Act. Yet even this coverage is riddled with administrative exemptions.

Cutthroat competition exists in this industry as a result of regional and area differentials in wages. Pacific Coast seafood processing firms pay nearly double the wages of southern coast firms. Consider these 1954 figures of the Census of Manufactures:

Region	Canned seafood	Cured fish	Packaged seafood
Northeast and North Central	$1.19	$1.45	$1.44
Southern	.94	.90	.89
Pacific coast	1.86	1.69	1.67

These figures are the latest available in the Census of Manufactures. The differential has increased since 1954.

In Gloucester, Mass., a large northeastern seafood processing center, the lowest wage at 18 companies is $1.25 an hour. In Maine, workers processing the same seafood for the same markets labor for 85 cents an hour.

With these wage differentials, companies paying a halfway decent wage often find it impossible to continue in business. In Gloucester, some dozen companies have gone out of business in 10 years—three have run away to lower wage areas.

The Pacific coast companies and the firms in other regions under union contracts have shown that they can pay at least a minimum wage of $1.25 an hour and a 40-hour workweek. Organized firms are paying higher wages and provide fringe benefits. Many managements are afraid only of being put at a competitive disadvantage by companies which trade on low wages and human misery.

Profits in the industry are sufficient to pay a $1.25 minimum wage and overtime rates of pay. Many of the giants of the industry pay worse than substandard wages. According to the testimony presented by Benjamin O. Johnson, president of the Sea-Pak Corp. of Georgia, before the Senate Labor Subcommittee on May 14, 1959, this large company has an average wage of 87 cents an hour. The company's minimum wage is 65 cents an hour.

Since the seafood processing exemption was written into the Fair Labor Standards Act, the industry has undergone great changes. New means of spotting fish by airplane, new machinery, new operating procedures, provide much more regularity and productivity in the industry. If there ever was a justification for this exemption, it has disappeared.

The seafood processing exemption in the Fair Labor Standards Act is morally unjust and economically unjustified. It should be eliminated.

FIRST PROCESSING AND SEASONAL EXEMPTIONS IN THE FAIR LABOR STANDARDS ACT

One of the least known exemptions in the Fair Labor Standards Act are the two which provide a 28-week period in which no overtime or only limited overtime need be paid to workers who process vegetables, fruits, and some other types of food products. These are often referred to as the seasonal and first processing exemptions.

1. Section 7(b)(3) provides that for a 14-week period, time and one-half overtime payments need be made only for work over 12 hours in 1 day or 56 hours in 1 week in an industry which the Secretary of Labor has classified as seasonal.

2. Section 9(c) provides that for a period of 14 weeks (and this is an additional 14 week period) no overtime payments whatsoever need to be made to employees engaged in:

(a) First processing of or in canning, or packing, perishable or seasonal fresh fruit or vegetables, (b) in handling, slaughtering, or dressing poultry or livestock, (c) or in the first processing within the area of production of any agricultural or horticultural commodity during seasonal operations, (d) in first processing of milk, buttermilk, whey, skimmed milk, or cream, (e) in the ginning and compressing of cotton, or in the processing of cottonseed, (f) in the processing of sugar beets, sugar beet molasses, sugarcane, or maple sap, into sugar.

These exemptions are morally and economically unjustified. Their only effect is to keep down workers' wages. S. 1046 and H.R. 4488 would eliminate them from the Fair Labor Standards Act.

Here is why these exemptions are unnecessary and should be eliminated.

1. Overtime in canning and preserving is actually lower than in other industries which have long been fully covered by the Fair Labor Standards Act. The Department of Labor statistics show the following as the average workweek in canning and preserving during the peak months of 1958: July, 40.7; August, 42.1; September, 42.3; October, 40.2; 1958 as a whole, 39.6.

The meatpacking industry, which is fully covered by the Fair Labor Standards Act, works an average of 43 hours a week during peak months. Many key meat plants work 48-hour schedules in some months with full-time and one-half paid for overtime without difficulty. The payment of time and one-half would certainly cause few problems in the canning and preserving industry, which has lower average workweeks.

2. Several dozens of contracts negotiated by the Amalgamated Meat Cutters and Butcher Workmen with canning and preserving firms throughout the Nation show that processing plants can well afford to pay time and one-half for all overtime. These contracts forbid the use of exemptions and the firms prosper.

3. No harvest season of any vegetable in any part of the country lasts any more than a fraction of the 28 weeks which the exemptions of the Fair Labor Standards Act provide as a time completely free of overtime or one in which only limited overtime need be paid.

In its booklet, Vegetables for Commercial Processing, the Department of Agriculture lists the most active harvest dates for the 11 vegetables chiefly used for processing in some 350 main-producing areas of the Nation. Two-thirds of these area harvesting periods last 4 weeks or less. Only 13, or 3.8 percent, last more than 6 weeks. Here is a breakdown of these regional harvest periods:

2 weeks or less	71
3 weeks	59
4 weeks	95
6 weeks	79
8 weeks	23
10 weeks	5
12 weeks	3
14 weeks	2
16 weeks	1
18 weeks	2
More weeks	0

In other words, corporations or their organizations attempt to justify these exemptions by claiming they are needed to meet the peak work of harvest time. But the fact is that no harvest period lasts anywhere as long as the exemptions.

4. The 28 weeks of allowable exemptions, for all intents and purposes, provides a complete overtime exemption for the canning, preserving, and processing industries. Twenty-eight weeks are more than a half year—nearly 7 months. Many canning, preserving, and processing plants operate less time than that in a year. Others operate on short workweeks during half or more than a half of the year. The 28 weeks total exemptions, therefore, becomes a dodge for avoiding, in practice, the maximum hours provisions of the Fair Labor Standards Act in these industries.

5. Processing companies are hardly small firms. Much machinery and, therefore, much capital, is needed for this work. Automation is now coming in. In this industry are giant firms, such as General Foods; H. J. Heinz; Libby, McNeill & Libby; Campbell Soup, etc. The net profits of these firms run into the multimillions and the tens of multimillions. They can well afford to pay full time and one-half for all overtime.

6. Income of workers in the canning and preserving industry not only is below that of workers in manufacturing, in general, but these wages are falling farther and farther behind. In 1958, average hourly earnings for canning and preserving workers were $1.67, as compared with the $2.13 average for all manufacturing workers. They were 46 cents below the average in 1958, as compared with 41 cents in 1956, 35 cents in 1952, 27.4 cents in 1950, and 17.6 cents in 1957.

Further, the wages of these workers have not increased as productivity in the industry has risen. From 1947 to 1958, productivity increased 65.3 percent, but wages increased only 60.2 percent. These workers, therefore, not only need to have the extra income that will come to them from full FLSA coverage, they also deserve it.

7. Eliminating the overtime exemptions will not hurt any firm, as long as each one has to meet the same requirements. Enlightened managements in these industries currently find that the exemptions are a harmful competitive factor since the exemptions, especially 7(c), benefit some firms while not others. If all firms have to pay full overtime, such as all meatpackers do, for example, it will be no burden to any individual firm.

Nor will the cost have to be borne by either the farmer or the consumer. The increase in productivity in this industry has been very large, an average of 6 percent a year. These productivity rises can more than cover the very slight increase in cost which will come with the elimination of overtime exemptions.

In short, processing firms can well afford to pay time and one-half for all overtime. The workers in these industries need and deserve such payments. The cost of overtime can well be borne by companies out of the profits which come from productivity increases. Harvest seasons certainly do not justify the existence of these exemptions, since they are only a fraction of the length of the exemptions. Further, the canning and preserving firms average little overtime, except during short peak seasons. Other fully covered industries actually have longer periods of overtime worked.

Therefore, all evidence points to the justice of removing the exemptions of sections 7(b)(3) and 7(c) from the Fair Labor Standards Act.

Democratic Spending Policies Sound

EXTENSION OF REMARKS

OF

HON. LEE METCALF

OF MONTANA

IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. METCALF. Mr. Speaker, in a recent news column, our colleague, DON MAGNUSON, of Washington, took issue with the contention by some that the Democrats are out to spend President Eisenhower's predicted $4.2 billion surplus at the end of fiscal 1961. On the contrary, as the column points out, there is serious doubt there will be a surplus of anywhere near the expected amount.

MAGNUSON, a member of the Appropriations Committee, and three of its subcommittees, is certainly in a position to know what he is talking about. I concur with him that the Democratic spending policies will remain sound, based on the country's needs.

The column follows:

DEMOCRATIC SPENDING POLICIES SOUND

(By DON MAGNUSON, U.S. Congressman, Seventh District)

WASHINGTON.—As a Democrat in Congress, it is most aggravating to see and hear the constant assumption that President Eisenhower's prediction of a $4,200 million sur-

plus at the end of fiscal 1961 will result in increased spending by the Democratic Congress.

I have seen it stated repeatedly in the Nation's press that "the Democrats have their eyes on that $4.2 billion melon"; "the Democrats are planning to seize upon the projected surplus as an excuse for increased spending," etc.

I know of no Democrat—in the leadership or in the ranks—who has given the slightest hint that the President's rosy prophecy will have any effect whatsoever on Democratic spending policies.

Yet, one sees in print almost daily the implication—if not the outright statement—that this is true, as if it were declared policy of our party.

In the first place, I also know of no Democrat who does not take the prediction of the big surplus with a large grain of salt. I know I do.

The President's hope for a surplus of $4,200 million is predicated on an enormous increase in revenues—an estimated $84 billion in fiscal 1961 as against an estimated $78,600 million in fiscal 1960, which will end June 30. It seems to me this is pretty risky figuring, based more on wishful thinking than on reliable indexes.

In the meantime, of course, it makes fine campaign fodder.

Let's look at the record of the Eisenhower administration, fiscally speaking, since the famous general campaigned his way into the White House on a platform of economy and reduction of the national debt. When he became President, the national debt was $265 billion. Next June 30, it is estimated, it will be $284,500 million.

The curve of the national debt throughout Eisenhower's 7 years has been constantly upward. There is nothing to lead me to believe that that trend will be reversed in his last year in office. So much for the "surplus."

Democratic spending policies are based upon our estimates of national needs, from military to human. For my part, the President's looking through rose-colored glasses will not affect my votes on money measures one iota, and I know I speak for the party's leadership in Congress and the party as a whole.

Hon. Richard M. Simpson

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 27, 1960

Mr. BYRNES of Wisconsin. Mr. Speaker, under leave to extend my remarks, I include a resolution adopted by the Wisconsin Federation of Young Republicans in tribute to our late colleague, the Honorable Richard M. Simpson, whose tragic passing we all mourn:

Whereas the Wisconsin Federation of Young Republicans has recently lost a firm and loyal friend in the tragic and untimely death of Congressman Richard Simpson of Pennsylvania; and

Whereas the Republican Party has lost one of its clearest-voiced spokesmen and the entire country has lost one of its firmest defenders: Now, therefore, be it

Resolved, That the Wisconsin Federation of Young Republicans extend its most sincere sympathy to the family, friends, colleagues, and constituents of Congressman Simpson.

Criticizing Nixon Not Enough

EXTENSION OF REMARKS
OF
HON. ROBERT H. MICHEL
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 27, 1960

Mr. MICHEL. Mr. Speaker, under leave to extend my remarks I would like to include the following editorial from the Washington Evening Star of January 26, 1960:

CRITICIZING NIXON NOT ENOUGH
(By Gould Lincoln)

Finding a man to defeat Vice President RICHARD M. NIXON in the presidential election next November is today the Democrats' No. 1 task. It is a task that the party leaders, during their Washington weekend just concluded and in their confidential moments, discussed with serious concern. This does not mean they believe the task is hopeless by any means. It means, however, that these Democrats have passed the stage when they believe that any Democratic nominee for the Presidency could defeat the Vice President.

While they pondered this problem, they listened to the Democratic hopefuls Saturday night—seven of them—open a rapid-fire attack on Mr. NIXON during their big fund-raising dinner here. These aspirants were able to agree at least on one thing—they all want to tear down the Vice President. Their efforts at the dinner, however, did not develop anything new.

The speakers dealt in vituperation and personalities. That kind of thing is an old story to the American people. It has been going on for 7 years. With the increase in Mr. NIXON'S stature as a public servant, which even his critics will find it difficult to deny, this line of attack sounds particularly futile. The Democrats face today a tough political situation. The country is prosperous, and so are most of the people. The country is at peace, and there are hopes that even the so-called cold war may thaw a bit as a result of President Eisenhower's leadership. Mr. NIXON benefits greatly from this situation.

DISCUSSES OTHER CANDIDATES

So some of the shrewdest Democratic leaders did not pay much attention to the wisecracks of their potential nominees directed at Mr. NIXON. What they discussed in their private conferences were the vote-getting powers of the individual candidates for the presidential nomination. As one canny and experienced leader put it: "The Democratic Party is the majority party in the Nation today. However, some of the so-called front runners for our presidential nomination may lose important groups of voters if they are nominated. I discount talk of giving Adlai Stevenson a third presidential nomination. I believe he is not, indeed, a willing candidate for a draft. Further, the movement now undertaken by a rather amateurish group to draft Mr. Stevenson is not likely to upset the minds of the politicians in the party's national convention who believe that Stevenson's two defeats make him unavailable. A Stevenson nomination, while it is possible, I consider entirely improbable."

Going further, this leader said it was clear that Senator KENNEDY, of Massachusetts, while he might have the support of all the Catholics in the Democratic Party and others who are not Democrats, might lose the votes of many other Democrats and independents. He added that Senator KENNEDY'S youthful appearance may militate against him. As for Senator LYNDON JOHNSON of Texas, now credited with having strong support both in the South and in parts of the West and North, this same party leader said: "I recognize Senator JOHNSON'S undoubted ability. However, I am afraid he would not be able to get the votes needed to win in many of the big cities and States—votes we must have."

Senator HUBERT HUMPHREY, of Minnesota, this leader said, was regarded as too radical, too much to the left, by many people. He obviously was thinking of the solid South, particularly, as well as of some of the more conservative Democrats in other parts of the country.

Coming to Senator STUART SYMINGTON, of Missouri, this leader spoke particularly of his voting record in Congress, which he said should be regarded with favor by the farmers—some of whom would not go for Senator KENNEDY—by workingmen, and by champions of civil rights. "SYMINGTON is no stemwinder as a speaker," he continued, "but he would be less likely to lose the votes of large numbers of Democrats than are others who are pushing for the presidential nomination."

PARTY COOPERATION VITAL

Much will depend upon the ability of the Democratic Party to stick together in firm support of its presidential nominee after the bitter fights in prospect during the preconvention campaign and during the convention itself. Former President Harry S. Truman took occasion to appeal to all Democrats, including the candidates, to get solidly behind the nominee of the national convention next July.

Senator KENNEDY is cleverly making friends in other parts of the country. It still remains to be seen what he can do in New York, Pennsylvania and New Jersey and in many States of the West and Midwest. If Senator KENNEDY is able to kill off Senator HUMPHREY in Wisconsin, he and Senator JOHNSON likely will go to the convention with blocs of delegates more than 400 in number. A SYMINGTON nomination will depend very much on whether these two contenders, Senators KENNEDY and JOHNSON, are unable to obtain a majority of the votes of the convention.

If Senator KENNEDY cleans up in the presidential primaries which he is entering, it will be difficult for the Democratic National Convention to turn him down. Indeed, such a turndown might be fatal to Democratic hopes of electing a President.

Today's Education Needs

EXTENSION OF REMARKS
OF
HON. HUBERT H. HUMPHREY
OF MINNESOTA
IN THE SENATE OF THE UNITED STATES
Wednesday, January 27, 1960

Mr. HUMPHREY. Mr. President, we will soon be considering proposed legislation which will profoundly affect the education and the welfare of our schoolchildren.

James Carey, president of the International Union of Electrical, Radio & Machine Workers, AFL–CIO, has written an article which sets forth some of the basic considerations we should keep in mind when this legislation comes up for action. He also discusses the interest of the labor movement in enlarging

the educational opportunities for America's young people.

This article makes it clear that trade-union members support our system of education not just for the welfare of themselves and their children, but for the welfare of all Americans.

Mr. President, I ask unanimous consent that Mr. Carey's article from the I.U.D. Digest of last spring be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

TODAY'S EDUCATION NEEDS

(By James B. Carey, president, International Union of Electrical, Radio, and Machine Workers, AFL-CIO)

Few people today realize that during organized labor's earliest days—the 1820's and 1830's—its major goal was not higher pay, shorter hours, and better working conditions, but the attainment of free education.

In 1829, the newly formed Workingmen's Party platform declared as its chief objective: "We seek a system that shall unite under the same roof the children of the poor man and the rich, the widow's charge and the orphan, where the road to distinction shall be superior industry, virtue, and acquirement without reference to descent."

The reason for labor's interest in education was simple. Educational opportunity was badly needed. Except for some parts of New England where a few tax-supported schools existed, the Nation had virtually no provisions for the education of workers' children.

Where did the employers stand on this issue? As might be expected, they were almost vitriolic in this opposition to free education. Employers, big and small, used child labor as a means of keeping down costs and free education would have eliminated this cutrate workforce. As one business publication of the day solemnly proclaimed: "Universal, equal education is impossible, if trade, manufacturing and manual labor are to be successfully prosecuted—unless the standards of education be greatly lowered and narrowed."

Despite the opposition to free education by the selfish exploiters of child labor, tax-supported school systems began to appear—starting with Pennsylvania in 1834—in State after State.

By the 1860's free public education had arrived. Unfortunately, attendance was still optional. Once again, organized labor led the fight for compulsory schooling. Once again, too, business was in the opposition with its self-interest in maintaining what it could of the child-labor force.

As late as 1912, the labor movement charged that "of the 25 million children of school age in the United States, 50 percent leave school at the end of the sixth grade, at approximately 14 years of age." And in 1920, it is a matter of record that this country's unions were fighting for academic freedom as well as for compulsory school attendance up to the age of 16.

Since 1920, our unions have continued their campaigns for more and better schools, for more and better trained teachers, adequate financing of school systems, free textbooks, and more State and municipal colleges.

Through the years, we of organized labor have shown our deep sense of responsibility for the scholastic opportunity and well-being of our children.

Today, as much as ever, we are determined to have our voice heard, and our objectives fulfilled. Basically, we are concerned with six specific educational problems that we believe must be solved if we are to overcome our present crisis.

The need for more and better schools.

The need for more teachers, better trained teachers, and better paid teachers.

The swift and complete abolition of segregated educational facilities.

A rethinking of curriculums to meet the new challenges of the space age and the atomic era.

Improved health safeguards for students, expanded medical protection, and enlarged benefits under the milk and lunch programs.

The need for public understanding that our education problem can be solved only by a combination of Federal, State, and local action.

America's educational crisis must be placed in proper perspective. The present crisis cannot be separated from our Nation's heavy defense expenditures, nor can it be separated from the nearly 5 million workers now jobless and the millions more employed on short workweeks. This educational deficiency is also directly related to the the country's tax structure and to the constantly increasing cost of living.

Organized labor has definite educational goals within the specific areas mentioned above. It looks upon these goals as minimums—all badly needed—if this crisis is to be overcome.

We believe, and our belief is shared by a number of educational authorities, that in the realm of school construction, we need a minimum of 132,000 new classrooms this year and at least 400,000 in the next 5 years.

Some 2.5 million children now attend school for only half-day sessions. New schools in our growing suburbs often have overcrowded classrooms from the day they open their doors. Some youngsters suffering the effects of part-time schooling have coined the phrase "drop-day" to describe their abbreviated study week.

ADEQUATE PROGRAM

In the face of these needs, the proposals for school construction aid made by the administration are worse than inadequate. Stripped of its glowing generalities, the administration's program would provide little more than loans to localities to help pay some part of the annual interest and amortization costs of school construction bond issues.

The administration does not propose to spend 1 red cent for school construction aid this year. Even, Health, Education, and Welfare Secretary Arthur Flemming has admitted that such minimal aid as is proposed by the President would not start until fiscal 1961.

If the classroom problem is dismaying, the teacher problem is appalling. It is appalling in numbers, in qualifications, and in salaries.

HEW Secretary Flemming has estimated that this year we need 135,000 qualified teachers. Organized labor thinks he is conservative. We are convinced that the figure should be closer to 150,000 and that 1.5 million new teachers will be needed in the next 10 years.

Needless to say, we are greatly disturbed by statistics indicating that some 300,000 of today's teachers do not meet minimum certification requirements.

DISGRACEFUL SALARIES

The root of the problem is the disgracefully low level of teacher salaries. The average teacher earns about $4,520 a year, with a range of from $5,925 in California to $2,225 in Mississippi. One out of every four teachers in America is paid less than $3,500 annually.

I would point out that these rates show an average annual pay lower than the average for all American factory workers. The average teacher's annual salary is some $3,000 less than the pay of the average professional worker.

In view of these facts, it is easy to understand why so many teachers must work at second jobs, find employment during vacation time, and count on their wives or husbands to earn additional needed income.

Teachers' pay scales being what they are, there is little wonder that our educational system is not attracting enough outstanding people. The starting pay offered to teachers, when compared with the starting pay offered by business and industry, discourages thousands of potential teachers.

The labor movement believes teacher salaries must be significantly improved. We have waited too long to consider only 10 and 15 percent pay increases. HEW Secretary Flemming has said that he believes in doubling present salaries. We are in full agreement. Unless action is taken now, teacher salaries will have to be tripled in a very few years—and then it might be too late.

Labor's stand on the elimination of all school segregation is—I am sure—too well known to need repetition. I would point out, however, that, as in their efforts to obtain free education, unions also spoke out vigorously in favor of complete integration well before the Supreme Court's historic decision.

Regarding the need for a reevaluation of curriculums, the labor movement knows there must be more vocational and technical training, as well as a major revamping of science teaching in both elementary and secondary schools. If we are to meet the challenge of the space age and the atomic era, this new emphasis—coupled with a vastly expanded scholarship program—is absolutely necessary.

Nevertheless, the teaching of the humanities cannot be neglected. In the final analysis, the fine arts and the liberal arts—together with the spiritual values of our Judeo-Christian tradition—constitute the true core of our civilization. If we sacrifice these teachings in the name of science, the brave new world we seek will be devoid of richness and empty of intellectual, esthetic, and spiritual discovery.

Just as we concern ourselves with the mental development of our children, the labor movement also demands healthful physical growth.

We object strongly to tying price tags on immunization shots. We are opposed to school or municipal arrangements where only the children of the well to do receive inoculation against polio, influenza, and other diseases. Free health services of this nature are in order for all the children and labor intends to fight to see that they are forthcoming.

For similar reasons, the labor movement is vitally concerned with the nutrition of our schoolchildren. Our country now has about 138,000 primary and secondary public schools, but only a little more than half participate in a school milk program, while less than half participate in any school lunch program.

With countless thousands of parents, we want to see both the school lunch and school milk programs made available to every schoolchild in America. Looking to the future, I am sure that the labor movement would support the idea of free vitamin pills for schoolchildren whose vitamin deficiencies have been detected.

These are specific steps that must be taken before the educational crisis can be overcome. But words alone will not answer the problem. Organized labor believes that action is urgently needed and is seeking to implement a program designed to meet today's requirements.

Aside from legislative activity, trade unionists traditionally have not been welcome in the educational field. In the past, the few labor officials who attempted to participate in community and State school problems were almost always opposed by

the ultraconservative and status-quo minded leaders of these same communities.

Happily, this picture is changing. Just as labor has been recognized as an essential part of community chest and united fund campaigns, so it is now being asked to participate in school affairs. A generation ago—even 20 years ago—a representative of organized labor on a school board was almost unheard of. Today, hundreds of union members—elected or appointed—are on the school boards of big cities, small cities, and towns.

I have no doubt that in an overwhelming majority of cases, the inclusion of these union members has strengthened and revitalized these school boards. Labor representatives, generally, have brought with them fresh, vigorous viewpoints with the militancy to set and achieve challenging new goals.

LABOR'S ROLE

I am partisan, of course, but I strongly believe that organized labor—to one extent or another—can help find the solution to every problem that public education faces today. I am convinced, in fact, that labor can contribute more to the solution of some of these problems than any other section or group in our society.

First of all, we of the labor movement can throw the strongest possible support behind legislative proposals—at the Federal, State, and city levels—to provide the funds for more schools, more teachers, and higher teacher pay. Additionally, we are helping political candidates sympathetic to these educational objectives by providing them with moral, organizational, and financial aid.

We can help communities and school boards raise funds for new school construction and current operating expenses. We must insist upon the revision of the present antiquated tax structure under which nearly 80 percent of all school revenue comes from property taxes.

In a similar fashion, we can help in the raising of necessary funds by actively supporting school bond issues or equitable new local taxes.

For the purpose of launching school improvement programs, the labor movement can use its influence to combine into one, overall, coordinating group such organizations as the parent-teacher associations, civic leagues, private welfare agencies, fraternal societies, religious bodies, citizens' associations, and neighborhood groups.

Unions can also play an important role in helping the teachers. Higher professional teaching standards can be supported, teachers can be protected from investigative hysteria, witch-hunts, and unneeded and stupid loyalty oaths.

The labor movement also has a responsibility to encourage and aid teachers in the formation of their own unions and in the securing of improved teacher-retirement programs and health insurance plans.

There are other areas where organized labor can be of assistance. We can help local school boards combat false "economy" programs and ruinous penny-pinching policies promoted by the big industry associations. We can champion the cause of full academic freedom and democratic rights within the school system. We can enlarge and diversify our own growing scholarship programs. We can lead community efforts to establish specialized educational programs for both gifted and retarded children, and—of course—we can fully back our other already-mentioned educational objectives.

While organized labor believes that it can make an important contribution toward attaining these objectives, it is not so naive as to think that it can do this job alone. The unions of the AFL–CIO realize that labor is but one part of the community that must stand up and be counted if our Nation's present educational crisis is to be overcome.

Unfortunately, the present administration has steadfastly refused to provide leadership for a program designed to improve the Nation's faltering educational facilities.

Despite the 1958 elections and their seemingly clear mandate for meeting the needs of the people, the present administration continues to sacrifice education to the fetish for a balanced budget.

SAD RECORD

In 1956 and 1957, the White House gave at least lip service to certain pending school construction bills, although even these inadequate proposals were smothered in the House when the President refused to lift a finger to secure their passage.

Today, while the administration is once again mouthing school construction needs, its remedy is almost meaningless. We know from sad experience that it is one thing for the President to suggest a legislative proposal in public statements and quite another for him to fight for his own programs.

The President's present school construction program is a perfect example of this political two-timing. One day after the administration outlined its school aid program, the President told a press conference: "We recognize the national need for better education, but also I am firmly committed to the idea that the primary and basic responsibility in these matters rests with the communities and the States. And the only thing that I think the Federal Government should do is to try to inspire or help them on the basis of need, and where need can be proved."

Largely because of administration opposition, not one scrap of school construction legislation has been enacted by Congress during the past 4 years. We of the labor movement are angry about this disregard for the educational need of America's children and we intend to translate our anger into action.

MURRAY-METCALF SUPPORT

Organized labor has already given its strongest possible endorsement to the Murray-Metcalf bill. This measure would appropriate $1.1 billion the first year and would reach $4.7 billion annually after 3 years for new school construction and teachers' salaries. We have pointed out that the $1.1 billion requested for the first year is no more than the cost of just 10 days of fighting the cold war as measured by current defense appropriations.

Nor are we alone in our endorsement of the Murray-Metcalf bill. It also has the full support of the National Education Association and most other major teacher organizations.

The White House has already indicated its opposition to this measure and the daily press has prophesied that the Presidential veto will be used if the bill is passed. Unfortunately, the Democratic leadership in Congress has not, at this writing, included the measure as a part of its "must" legislation.

Confronted with this antagonism on the one hand and a lack of enthusiasm on the other, organized labor and its friends must prepare to fight hard if they are to take our children out of the corridors and boiler rooms, out of half-day sessions, and out of frightening firetraps.

We are going to have to campaign strongly and loudly for this legislation and we are going to have to talk cold turkey with the Members of Congress. We are going to have to tell our Representatives and Senators bluntly that when they come up for reelection, labor will remember what action they took, or failed to take, on school construction and teachers' salaries.

I have listed several ways that labor must help if we are to be successful in this battle for adequate education. I say that the time to start this action is now—and I mean immediately.

The Need Is To Strengthen, Not Weaken, the Food, Drug, and Cosmetics Act—Testimony on Proposed Color Additives Legislation

---

EXTENSION OF REMARKS

OF

HON. LEONOR K. SULLIVAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 27, 1960

Mrs. SULLIVAN. The House Committee on Interstate and Foreign Commerce is at present engaged in important hearings on legislation which passed the Senate in the closing hours of the last session dealing with the use of coal tar and other coloring matter in food and cosmetics. The legislation is primarily intended to aid industries in these fields to continue to use dyes which cannot any longer pass Food and Drug Administration tests for harmlessness.

In my testimony before the committee this morning, I urged a go-slow policy by the committee, pointing out, first of all, that the proposed legislation provides virtually no added protections for the consumers and would, as it passed the Senate, actually weaken the consumer protections of the Food, Drug, and Cosmetics Act; and, second, that if any legislation is passed to aid industry and to clear up legal confusions in the use of dyes, that it be only as part of an overall tightening and improvement of the entire Food, Drug, and Cosmetics Act. I particularly urged that several loopholes not related to color additives in the 1938 and 1958 acts be closed, and that we now enact as part of the Food, Drug, and Cosmetics Act the same pretesting requirements on ingredients used in cosmetics as we now require for additives used in food processing.

My testimony this morning was as follows:

THE NEED IS TO STRENGTHEN, NOT WEAKEN, THE FOOD, DRUG, AND COSMETIC ACT

(Testimony of Congresswoman LEONOR K. SULLIVAN, of Missouri, before House Committee on Interstate and Foreign Commerce, on proposed color additives legislation, Wednesday, January 27, 1960)

The tremendous turnout you had here yesterday morning when Secretary of Health, Education, and Welfare Arthur S. Flemming testified on the color additives issue indicated clearly the widespread interest in the subject matter of these hearings. I doubt if you ever tried to squeeze more spectators into your hearing room. Obviously, this legislation is serious to many groups in our society—to the food and chemical and cosmetics industries, and to the general public—particularly the housewife.

My purpose in appearing before you this morning is to urge you to please take your

time on this legislation. I am not going to suggest that you sit on the bills and do nothing about them, but I sincerely urge that you make haste slowly—that you study this matter as carefully as any issue ever to come before the committee, for you are dealing with the health of the American people in the most direct manner possible.

CIRCUMSTANCES OF SENATE ACTION

I make such a point of urging caution because I know you are under strong pressures to act quickly on color additives legislation. We all know that late in the session last year, without any hearings at all and under procedures which seemed to indicate it was a very minor and routine bill, the Senate, by unanimous voice vote, passed a most far-reaching bill on color additives. We know it is a defective bill in a most serious respect. Yet it came out of committee, as I said, without hearings, and was called up under a routine call of the calendar for passage by unanimous consent, with no full explanation and with virtually no debate or even discussion. The only thing we find in the CONGRESSIONAL RECORD of the debate which occurred was a colloquy over the effects of S. 2197 on the right of Florida citrus growers to use a not-quite-harmless coal tar color in coloring Florida oranges. When the Senator from Florida was assured that S. 2197 would not interfere with the use of Citrus Red No. 2 on Florida oranges, the bill passed automatically.

Some of the members of the committee will recall that immediately after the Senate acted on this matter last August, I contacted them to urge that there be no such precipitate action in the House. I appreciate the fact that no attempt was made to jam through a bill in the frantic closing hours of the last session. I appreciate the fact that full hearings are now scheduled into the color additives issue.

DELANEY ANTICANCER CLAUSE A MINIMUM REQUIREMENT

I don't want my testimony to imply anything improper on the part of anyone in the Senate—I just think that in the closing rush of last August this bill could not possibly have received the close attention it deserved. Nevertheless, the circumstances of the Senate's action were such that I find it very hard to feel right about this legislation, even if we close up its most glaring loophole by inserting the same kind of anticancer provision which Congressman DELANEY wrote into the food additives bill in 1958. I cannot understand why the bill as it came from the Senate did not include such a clause. Without it, I think this legislation would be far worse than present law covering the use of coal tar colors. Furthermore, by taking out from under the Food Additives Act of 1958 dyes made from other than coal tar bases, it would increase the danger of carcinogens in our diets, unless, of course, the provisions of the Delaney amendment are written into this bill as a minimum requirement.

Obviously, then, despite its impressive title as a bill to protect the public health, S. 2197 as it passed the Senate would weaken the protections of the Food, Drug, and Cosmetics Act. And this is certainly no time in our history to be weakening the consumer protections of our laws. On the contrary, our laws to protect the consumer need strengthening, and this is particularly true of the Food, Drug, and Cosmetics Act. We have put a number of patches on it in recent years, but it is far from being as strong as it should be.

HOW WOULD CONSUMERS BENEFIT?

Clearly, some of the shortcomings of the present act do exist in this area of coal tar colors. But I am not convinced the deficiencies are as serious to the consumer as they seem to be to many of the industries affected.

The present law says in effect that no coal tar color can be used in or on food or cosmetics unless it is deemed harmless. This law grew out of the conviction of scientists that coal tar colors are inherently risky and should be circumscribed in use to such an extent that if there is any question at all about their safety they should not be used in or on food, or in other substances which may be ingested. In recent years, new testing methods have shown that some of the coal tar colors previously thought to be harmless are not in fact completely harmless although they may be, and probably are, safe in the manner normally used in commercial products. Nevertheless, because these colors cannot pass the test any longer of being harmless under all circumstances, the law states they cannot be used—they must be withdrawn. As a result some of the yellows used in coloring margarine and butter, some of the reds—most of the reds, I believe—in lipsticks, and various other familiar colors used in foodstuffs are in the process of being delisted—of being prohibited for use on products which people eat (or, in the case of lipsticks, swallow).

Mr. Chairman, I am not quite sure I see how the consumer is being damaged by the removal of these colors. Nor do I see why the consumer would benefit from the changes suggested in this legislation. I can readily see why many industries want legislation enacted which would set up entirely new criteria for approving the use of coloring matter, including the setting of tolerances for the use in or on food of apparently harmless quantities of dyes which may not be harmless in greater quantities. But I do not yet see how the consumer interest would benefit from this color additives legislation.

CAN WE BE CERTAIN THAT SAFE LEVELS ARE REALLY SAFE?

True, the proposed legislation would place on the manufacturer, not the Government, the burden of proof for establishing the safe levels of coal tar colors. But as our whole experience with the coal tar colors shows, today's proof of safety may be inadequate in terms of tomorrow's testing methods. Do we then go to the consumer and say, "Sorry, we made a slight mistake; a coal tar color we knew was not completely harmless but which we thought was safe to use in certain concentrations has now turned out to be unsafe and dangerous, and if you've been eating it in your food we're very sorry about it?"

Mr. Chairman, just how important is it to have these artificial colors in foodstuffs if there is any danger whatsoever to the consumer through their use? True, the margarine manufacturers want their product to look like butter; the butter producers want their butter to look like yellow butter regardless of its natural color; the Florida citrus growers want their greenish-looking oranges to be orange in color, and the manufacturers of all sorts of products—sausage casings, cakes, cookies, pies, bread, processed cheese, spreads, canned and frozen vegetables, confectionary, ice cream, gelatin desserts, puddings, and so on—all want to dazzle us with the looks of their products even if they have to create the look artificially with coal tar colors which cannot any longer pass the test of being harmless.

Now we are told that the consumer wants and demands these attractively colored foods and therefore it is an economic necessity for industry to provide them.

CONSUMERS ASSUME DYES ARE SAFE

I do not doubt that a housewife buying oranges will generally select the product which looks more natural by reason of having been dyed to look that way rather than the greenish one next to it which appears to be unripe; I do not doubt that in selecting a lipstick she will want the color which, to her, best matches her complexion and outfit; I do not argue that in buying processed foods, she is attracted by the appearance of the product.

But the point is that the consumer, in buying these brightly colored or natural-looking colored items in the store, believes—takes it for granted—that the coloring dyes used are safe, and that otherwise their use would not be permitted by the Federal Government.

What this proposed legislation would do is to say the coloring matter frequently used may not be entirely safe under all circumstances, but we believe and trust and hope and have reason to think it is safe in the amount used and in the manner used. And so the housewife will then continue to be able to buy margarine which looks like butter, and butter which, because of a deeper yellow shade, looks more like butter, and so on, even if the looks are artificially contrived through use of not-quite-harmless dyes.

Under S. 2197 as it passed the Senate, these dyes could even be cancer-inducing, yet could be used if the manufacturer could establish that the cancer manifested itself only at substantially higher levels of concentration.

CANCER-INDUCTION IS CUMULATIVE PROCESS

This, of course, does not jibe with the findings of outstanding cancer experts that cancer-induction is a cumulative process which begins with the first dose of the cancer-inducing agent. Secretary Flemming referred to this matter at some length in his prepared testimony yesterday and in a technical report he also submitted, so I need not go into it in any detail. Many of you—perhaps all of you— saw the letter I obtained on this matter last year from Dr. Harold F. Blum of the National Cancer Institute and which I placed in the CONGRESSIONAL RECORD of August 27 at pages A7482–3 in direct reference to the bill which had just passed the Senate and which is now before you. But in view of Secretary Flemming's technical report from the NIH, I think we can now take for granted the fact that carcinogens must not be allowed in food or in anything ingested. Present law already prohibits this as far as all food colors are concerned—the coal tar colors under the basic Food and Drug Act of 1938 and the other colors under the Food Additives Act of 1958.

So, again, I ask how does this legislation help the food consumer?

We are told that the job of analyzing and retesting all of the coal tar colors already in use or authorized for use to see if they are still harmless would take the Food and Drug Administration at present levels of operations at least 20 years. This legislation would throw that burden onto the manufacturers and they would have to complete the task in 2½ years. Frankly, I think what would happen is that at the end of 2½ years we would either be flooded with anguished demands for an extention of time, or many of the dyes would then go off the market because the cost of proving their safety was too high. I for one would be willing to give the Food and Drug Administration the funds to do this testing itself—under the present law.

BROADEN SCOPE OF HEARINGS

I realize, Mr. Chairman, that I am not helping the committee very much if all I do in testifying here is to say "take it easy." I know you have a problem to contend with and many pressures upon the committee to act quickly. Therefore, I think it would be constructive to make this suggestion.

Broaden your hearings and your studies to include not just this one question of coal tar colors and other color additives but to include all of the aspects of the Food, Drug and Cosmetics Act. It is time for that kind of look at the overall picture. In the past 6 months or so we have had one explosion after another over phases of the law and

its operation—cranberries, stilbestrol in chickens, the lipstick crisis, the food additive clearances, and so on. I think tremendous progress has been made in alerting the general public to some of the issues involved in food, drug, and cosmetics legislation, and that this is an excellent time to take a good, hard look at the basic law and its patchwork amendments and to undertake a tightening of many of their provisions. This would, of course, carry some dangers with it—the danger perhaps that groups which have suffered economically from operation of some of the consumer-protections of the law would attempt to use such hearings and any new legislation as a means for weakening rather than strengthening the law. But I don't think they could succeed—certainly not if all of us who are deeply concerned about this problem are willing to fight off the pressures to weaken the law.

And the end result could well be a general strengthening of the law—so that the Government, for instance, would no longer have to rely on voluntary agreement in the poultry industry to take stilbestrol out of poultry feed; so that, for instance, cosmetics which are now in the twilight zone of Governmental protection can be put under the same stringent tests for safety as our food additives must now pass; so that other loopholes in the law may also be closed.

WE NEED PRETESTING OF COSMETICS

I think color additives legislation in the context of that kind of approach would be far better legislation than either of the bills now before you. For such an omnibus approach would permit you to eliminate the loopholes in the 1938 law under the new drug sanction and the similar loophole in the 1958 amendments which requires FDA to prove the harmfulness of any additive which had previously been sanctioned for use by a governmental agency. Secretary Flemming in his testimony referred to the stilbestrol problem and the unfairness, as well as the danger to the public, of these so-called "grandfather's clauses" covering chemicals once approved and thereafter protected against delisting until the Government can definitely prove their harmfulness.

In the field of cosmetics, the law is hopelessly obsolete. The Government at present cannot move against a suspect cosmetics item until it has proof of the product's harmfulness. My bill, H.R. 1360, and a similar bill by Congressman DELANEY, would provide the same consumer safeguards on ingredients in cosmetics that the food additives amendments of 1958 provided in connection with the use of chemicals in food. These cosmetics bills have been pending before you for some years, without any action or even hearings. I think this is the year and this is the time—in connection with the color additives bills—to take up this closely related subject of safe cosmetics.

The color additives bill makes it imperative that we do so. For the color additives bill would not only change the basis under which coal-tar colors could be used in cosmetics. It would also establish, for the first time, a basis for clearing in advance the safety of non-coal-tar colors used in cosmetics. That would be helpful. But what of all of the other ingredients in cosmetics? If we are going to require manufacturers to prove the safety of their non-coal-tar color additives in cosmetics, why not in the same legislation and at the same time and under the same standards require the manufacturer to establish the safety of all ingredients in his cosmetics product?

At present, as you know, enough women must be harmed by a new cosmetic item to alert the Food and Drug Administration into looking into the matter; then the FDA must prove the product harmful in order to remove it from the market. I receive letters from women from all over the country complaining about various cosmetics they have used—shampoos or wave set products they claim have caused them to lose their hair, polishes which set up allergic reactions, lotions and creams and powders and lipsticks and deodorants and whatnot which caused embarrassment, discomfort, or pain. I usually pass these complaints along to FDA and sometimes they find the product involved warrants a fullscale investigation and other times they will report merely that the reaction was probably a rare allergic one.

WOMEN WANT SAFE LIPSTICKS

But if a woman is allergic, the label on a cosmetics item tells her nothing. She has to learn the hard—and painful—way.

Speaking as a woman as well as in my capacity as a Member of Congress, I urge you, Mr. Chairman, to go slow on this color additives bill and to enlarge the scope of your hearings to include all issues involved at present in the Food, Drug, and Cosmetics Act. As a woman, I am aware of the fact that some of our favorite lipstick shades may soon be off the market unless this color additives bill is passed quickly. But I am not convinced we would be doing the women of this country any favor at all to assure them the continued availability of lipstick shades which are not safe to use. True, it is claimed we don't swallow our lipstick. But I think the people who make that claim don't use the stuff themselves.

We like the bright and light shades but if they cannot safely be produced, then we prefer to do without these particular shades. In any event, I am sure the cosmetics industry is resourceful enough—it is an extremely resourceful industry—often too much so—but I am sure it is resourceful enough to find substitute colors if it has to. And I think every woman would agree that rather than use unsafe coloring matter, we would be quite happy to settle for a darker shade if necessary, just so long as we could be completely assured it was safe.

I don't think, under this proposed legislation, that any such flat and unequivocal guarantee of safety could be made about any coal-tar color for which a tolerance had to be set. I will not and cannot argue with the scientists on that, but it is my personal opinion—if a coal-tar color is unsafe in any quantity, no matter how large, my feeling is it should not be used at all in foods, drugs, or cosmetics.

If, on the other hand, legislation is absolutely necessary to clear up some of the confusion in the color additives field, then I urge that it be done only as part of an omnibus bill closing all loopholes in present law and including comprehensive safe cosmetics legislation.

Harry S. Nicholson, Sr., of Wilkes-Barre

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 27, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the Wilkes-Barre Times-Leader of January 20, 1960, which comments upon the passing of one of Wilkes-Barre's leading citizens and businessmen, Mr. Harry S. Nicholson, Sr.

The article follows:

HARRY S. NICHOLSON, SR.

Another generation of the Nicholsons, one of Wilkes-Barre's leading families for almost a century, disappeared from the local scene yesterday afternoon when Henry Samuel Nicholson died suddenly at 74 after a heart attack. Just a month ago his brother, William R. Nicholson, retired treasurer of the W. H. Nicholson Co., founded by their grandfather, died. Harry S. Nicholson, who was with the firm for 52 years, served as president, general manager, and director. The late Arthur Nicholson, a prominent figure in business and politics, was another brother.

A banker as well as an industrialist, Harry S. Nicholson reminded many older residents of the city of his uncle, George Nicholson, who played a leading role not only in the family business, but in the community. George Nicholson was an organizer and first president of the Hanover National Bank, where his nephew served as a director, secretary, and, more recently, as vice president.

Harry Nicholson easily qualified for a place among the community's most substantial citizens. A good neighbor, churchman, sportsman, and friend as well, he was as unassuming as he was able and dependable. No worthy individual who asked him for a helping hand was ever disappointed if it were within his power to grant the request.

The fourth generation of Nicholsons will have to aim high to match the impressive achievements and record of service of its distinguished predecessors.

Newspapers Which Mislead America

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. SIKES. Mr. Speaker, I submit for reprinting in the CONGRESSIONAL RECORD an article from the October 1959 edition of the American Mercury which I consider well worth reading. It is entitled "Newspapers Which Mislead America":

NEWSPAPERS WHICH MISLEAD AMERICA

(By Harold Lord Varney)

While admittedly the American press has taken some competitive buffeting at the hands of TV and other media, it has not lost its long lead as the creator of American public opinion. The American newspaper and magazine is the No. 1 source spring of most of the ideas and emotions which move Americans. What the press says today, uncritical Americans, in tens of millions, will be saying and voting tomorrow. The political news writers of the New York Times and the Washington Post and Times Herald—and the anonymous writing factory of Luce—color the very idiom of American political discussion.

Nowhere has this opinion-making power of some of our snob-minded publishers been more evident than in foreign relations. In this area, the press filters all our thinking. Most Americans, unless they are foreign-born or possess specialized knowledge, have only the haziest notions of foreign politics. In place of knowledge, their impression of foreign countries is usually emotional. There are bad nations which they should hate and good nations which they should admire. The newspapers and magazines have identified these nations to them. National foreign policy, which is the product of public opinion, arises largely out of this vast swamp of popular misunderstanding. It has little relationship to actual American self-interest.

In its shaping of public thought, the snob press has a whole mythology which it passes on solemnly to its readers. The heroes and the devils in this mythology are a constantly changing procession. They are chosen according to the current ideological yardstick of the newspaper owner or editor.

It is easy to identify the devils.

At the moment, Soviet Russia heads the demon list. But this emotional attitude could rapidly change. If the best people should revise their thinking on Russia, as such men as Cyrus Eaton have prematurely done, the change could come quickly. There was a precedent for such an altered national mentality in the years between 1942 and 1945 when it was almost unpatriotic for a newspaper to tell the truth about "our noble Russian ally." The cold war could end with surprising suddenness. When it ends we may expect to see a wild scramble of newspaper and magazine writers to find greatness and inspiration in Khrushchev's Russia and Mao Tse-tung's China.

Another of today's devils is Gamal Nasser. But he has not always been so excommunicated. In 1952 when—with Naguib—he expelled suety King Farouk from Egypt, he was the bright symbol of promise for Egypt's tomorrow. If he would abandon his anti-Zionism, his return to sainthood would be sharp and sudden.

Gen. Charles de Gaulle has now regained his luster in the American press. But his career in American public opinion, as shaped by the newspapers, has been a changing and cruel zigzag. Acclaimed as a hero in 1944 when he returned to Paris victoriously, he was undefended by American newspaperdom in 1946 when he defied the Communists and retired. During the succeeding years when he attempted to fight back against the Communists and the ineffectual French Liberals with his "Rally of the French People" he was treated by most American newspapers as a suspect Fascist figure. The American press was chasing after new French heroes, particularly the contemptible Mendes-France. Only since his spectacular return to power has the fumbling American press acknowledged that De Gaulle is actually on our side in the battle for the world. His alternate popularity and disapproval have followed largely the changing myths of newspaper-induced American opinion.

Today the "devils" of the snob American press, aside from the Communists, include Verwoerd, of South Africa; Kassim, of Iraq; Nasser, of Egypt; Trujillo, of the Dominican Republic; Somoza, of Nicaragua; and Batista, late of Cuba. Not one of these foreign government heads can hope to receive fair or even truthful coverage in the influential American press. Usually, when they are discussed, they are mentioned with all the implied moral disapprobation which newspapers traditionally reserve for ladies of the street.

Not quite in the doghouse, but subject to being chucked in there at a moment's notice, is a secondary group of rulers. These probationers include Chiang Kai-shek of free China, Syngman Rhee of South Korea, Francisco Franco of Spain, Antonio de Oliveira Salazar of Portugal—and lately—Arturo Frondizi of Argentina. All these, with the exception of Frondizi, have at some time or other been hated targets of the American snob press. While not today directly in the line of fire, their acceptance is tentative. They are still subject to occasional sniping and name-calling.

And who are the heroes?

The foreign government heads who, today, receive red carpet treatment from the Sulzbergers, the Luces, the Cowles, and the Grahams include such preposterous figures as Fidel Castro of Cuba, Jawarharlal Nehru of India, Kwame Nkrumah of Ghana, Romulo Betancourt of Venezuela and, intermittently, our old friend "Bung Karno" Sukarno of Indonesia. If it is difficult to find a pattern in this surrealist nightmare of favorites, the explanation can be found in the fact that all of them successfully fought rivals in their countries who are on the index of the Times and company. They are lay figures of the snob press imagination who symbolize abroad the ideologies which the editors are ardently press-agenting at home.

We have only to consider this list of "devils" and "heroes" to realize how irresponsible American foreign policy, as defined by the snob press, has now become.

To base American foreign policy, not upon the hard facts of national self-interest, but upon capricious editorial office choices, is an attitude which would have seemed sheer lunacy to an older generation of Americans. And yet this is the folly to which 1959 America has conformed.

The ever-descending curve of American prestige abroad has accurately registered this substitution of Times Square for Foggy Bottom as the decision point of our foreign policy.

Let us take a specific situation which is desperately important to American safety, and in which the press has deliberately betrayed the cause of truth. This is Latin America.

The veriest tyro in the State Department knows that U.S. leadership in this hemisphere hangs perilously upon that narrow thread of the good will of a few key national leaders. These leaders, until recently, comprised such Presidents as Batista of Cuba, Duvalier of Haiti, Trujillo of the Dominican Republic, Somoza of Nicaragua, Perez-Jimenez of Venezuela, Camargo of Colombia, Ydigoras-Fuentes of Guatemala, Kubitschek of Brazil, and Lopez Mateos of Mexico. So delicate is the balance in Latin American politics that U.S. self-interest demands the strictest American neutrality in revolutionary situations. None of the Latin American rulers who vote with us in the OAS or the U.N. and who make U.S. hegemony possible, represents a government which resembles our own. Some of the friendly governments shade toward outright dictatorship or enforced one-party rule. Nevertheless, they are our friends in a troubled situation. The most elementary commonsense should tell Americans to keep out of the internal policies of these, our allies.

Regrettably, the reverse has been our policy. Under the insistence of the snob press, spearheaded by the New York Times, the United States has virtually placed itself at head of a crusade to change the form of government of most of its friends in Latin America. Throwing its influence about recklessly, particularly in the Caribbean countries, the United States has performed the dubious feat of helping anti-Americans supplant pro-Americans in two countries, Cuba and Venezuela, and is in the process of helping pro-Communists overthrow America's friends in two other countries, Haiti and the Dominican Republic. In all this succession of folly the role of the press has been primary.

As we have told in a previous article (American Mercury, January 1959) the Castro revolution in Cuba was hothoused to victory, from the feebliest beginning, by the unashamed press-agency of the New York Times. Later, the Luce publications, and the CBS facilities of Edward R. Murrow joined enthusiastically in the act. At no time, during the 2 years that the Times was building up Castro into an admired libertarian, did it warn its leaders of the dark Communist forces which were lurking in the background of the 26 of July movement and which have now come out into the open. At no time did it point out that President Batista, whom it was smearing, was a 100 percent supporter of American interests, while Castro was not. All these overriding considerations were waived aside as unimportant in order to wage an ideological war against a friendly Caribbean government. When Batista found himself hardpressed to oppose the Castro forces, the United States—with the acclaim of the press—shut off American military supplies to his armies. A similar maneuver by General Marshall in China in 1946, it will be remembered, doomed Chiang Kai-shek to defeat by the Communists.

Likewise, in Venezuela, Romulo Betancourt, after a life-time of subservience to the Communist apparatus, suddenly loomed up as America's choice for president of that strategic country, to the shrill acclaim of the American snob press. The man whom Betancourt supplanted, Marco Perez-Jimenez, had been so staunch an American friend that President Eisenhower, at the recommendation of his brother, Milton, conferred the Order of Merit upon him in 1954.

Spearheading the mischief-making in Latin America is a smug organization, controlled by Americans, the Inter-American Press Association. Including practically all American newspapermen who have the Latin American beat, this Association has shamelessly engaged in activities designed to discredit friends of the United States among Latin American rulers.

Preoccupied with the single issue—freedom of the press—the Association has mobilized virtually every Latin American reporter and writer into the ideological movement to "overthrow dictators." Its activities reached the nadir of hypocrisy when Jules Dubois, its most active member, constituted himself the No. 1 American press agent for Fidel Castro, the bloodiest dictator in Cuba's history, and wrote a misleading Castro biography, rearranging his facts to prove that Castro was an "anti-Communist."

Equally culpable has been the record of the press on Far East coverage. More deliberate propaganda and less factual news has been distributed by the American snob press on China, India, and other Far East trouble spots than in any other area. The result is that American thinking on the Far East has been rooted not in policy but in emotion. The emotions change from year to year.

One of the most shameful chapters in the history of American journalism was the smear job which was done on Chiang Kai-shek between the years 1943 and 1949. The fact that the job was perpetrated by ill-informed foreign correspondents—who got their leads in the booby-trap of Chou En-lai's friendly Chungking headquarters—does not detract from the historic enormity of the offense. In demolishing Chiang Kai-shek in the public mind, the press of the mid-forties was destroying the last chance to save 450 million Chinese from communism. It was, perhaps, dooming America's chances of victory in some future World War III. And yet a large part of the American press rushed enthusiastically into this journalistic lynching party without a thought of the fearful consequences to America which would inevitably result.

But the irony of the Far East situation is that a section of the American press is getting ready to do it again. There are increasing signs that important newspapers and magazines are preparing for a "recognize Red China" offensive. Such newspapers at the Washington Post and Times Herald, the New York Post, and such magazines as Mr. Cowles' Look are already putting out feelers on recognition. The New York Times, whose record on China reporting has been good, is now running "think pieces" by Nathaniel Peffer and Chester Bowles to soften up public opinion on Red China.

Once the State Department weakens on passports for American newspapermen for Red China, we may expect to see a whole new stable of "China experts" sending back glowing stories of the virtues of Red China. The press will make the same mistake twice.

When we shift to the Middle East we find another fetid situation in American press coverage. Here the situation is blurred hopelessly by the fatal bias of the State Department, and most newspaper publishers, in favor of Israel against the Arabs. Any American reporter who dared to send back truthful reporting from Cairo, or Beirut, or Tel Aviv would be in danger of swift decapitation by the newspaper front office.

Although America has been alerted to Russian interest in the Arab world by Khrushchev's exultant cry "There goes the Middle East," the American press continues to play games with Middle East coverage by slanting most of the news to exaggerate the importance of Israel in the total picture. A painful example of the sloppiness of American press reporting in this area was given a year ago when Kassim overthrew King Faisal in Iraq. On the eve of the successful revolution, American newspapers were firmly assuring the American public that Iraq was safely attached to the West. The old crop of reporters who could win the confidence of the Arabs, and send back truthful news about the actual conditions has been weeded out by the home editors in favor of reporters with pipelines to Ben Gurion. As a result the American people remain grossly and dangerously ill-informed concerning one of the most politically sensitive areas in the present world.

Yet another part of the world where predigested editorial policies prevent honest and factual field reporting is South Africa. Not since the victory of Dr. Malan and the Nationalists in 1948 has any major American newspaper or magazine attempted to give a sympathetic presentation of the case for the Afrikanders in their homeland. Every magazine article has either been written by a rabid opponent of the Nationalist regime, or by an American observer who saw what he wanted to see in South Africa. Recently, the deep freeze in the American press has been extended to the Dominion Party in Rhodesia. When the New York Times picked out a representative as roving reporter in South Africa its choice fell upon Milton Bracker, hardly an objective reporter, if we may judge by his record in the Latin American area. What the American snob press refuses to concede is that men of good will, in other parts of the world, may choose to handle their domestic problems in a manner quite different from that favored in the United States.

The continual carping and hostility of the press against South Africa—and now Rhodesia—has the effect of inducing distrust of the United States in an area which has been traditionally friendly.

By such slanted and misleading reporting, where ideologies differ, the American press is doing a serious disservice to America's foreign relations. It is making the task of our already irresolute State Department infinitely harder. It is conveying to millions of potential American friends abroad that the United States does not wholeheartedly accept their friendship unless they are willing to accept the political tutelage of papa-knows-best editors and publishers who guide American public opinion.

In a world rocked by uncertainties and perils, the United States cannot afford the luxury of a trouble breeding and preachy press. It cannot carry the load of such a newspaper as the New York Times, which single handedly declares journalistic war upon a friendly and needed foreign government. It cannot hope to win against a single minded Communist world when its organs of public information are irresponsibly working to stultify realistic American foreign policy.

In a period of war, the Nation recognizes the necessity of restraints upon the absolute freedom of the press. Even though a cold war is raging, no one favors legal restraints today. Instead, it is the duty of the press to impose voluntary restraints upon itself to avoid truth distortion and news column editorializing which will mislead national public opinion.

The smug big circulation newspapers and magazines which principally influence public opinion are imposing no such responsible restraints upon themselves. They are slashing out irresponsibly in their efforts to pay off ideological grudges. In innumerable cases they are weakening and stultifying the attempts of the State Department to promote national self-interest.

There is a name for such attempts to wreck Government foreign policy when perpetrated by private individuals. We call it treason. In consciously misinforming, and misleading American public opinion, our privileged press is coming very near to earning that epithet.

Salute to 25 Years of Social Security

EXTENSION OF REMARKS

OF

HON. HENRY S. REUSS

OF WISCONSIN

IN THE HOUSE OF REPRESENTATIVES

Monday, January 11, 1960

Mr. REUSS. Mr. Speaker, Wilbur J. Cohen, professor of public welfare administration, School of Social Work, at the University of Michigan, is a recognized expert on the social security program. On December 3, 1959, in an address to the American Public Welfare Association, Mr. Cohen saluted the program and the people who have made it work. This history of the program is especially valuable today, for congressional consideration of important amendments to the act is already underway. I commend to my colleagues this thoughtful and thorough review which I offer as part of my remarks today:

A SALUTE TO 25 YEARS OF SOCIAL SECURITY

(By Wilbur J. Cohen)

I

Twenty-six years ago, in the depth of the worst business depression of American history, I was a student in the Department of Economics at the University of Wisconsin in Prof. Edwin E. Witte's freewheeling seminar on Wisconsin's economic problems. Under the helpful and guiding hand of Professor Witte, we critically examined the provisions, the philosophy, and the objectives of the Wisconsin Unemployment Compensation Act just recently enacted by the Wisconsin legislature. This was the first State unemployment insurance law adopted in the United States and its origin and design had been formulated out of the seminars held during the early twenties by Prof. John R. Commons, an outstanding labor economist at the university.

I was privileged to study institutional economics and social legislation under the stimulating leadership of Professors Commons, Witte and Perlman. But little did I realize in December, 1933 what importance this topic I was studying would have on my life and the lives of millions of Americans. I was indeed fortunate when Professor Witte took me as his research assistant when he became the executive director of President Roosevelt's Committee on Economic Security in 1934 headed by Frances Perkins, the Secretary of Labor. Rarely does a young man have the unusual opportunity I did to watch and participate in history in the making—as was the formulation of the Social Security Act. The emphasis on ideas, innovation and pioneering in social legislation, stimulated by Prof. John R. Commons, was so strong that there never developed a cohesive Wisconsin school of thought on social security which held all its independent-minded sons and daughters together on all issues. This, to me, seems a sign of strength. Now that social security is a large and complex institution, we need to continue encouraging that sense of creativeness and the responsibility for the development of new ideas in social security during the next 25 years in the great tradition of Professor Commons.

So, tonight, I would first like to ask you to join me in offering a salute to the pioneering men and women who helped create the idea of social security in the United States.

In the short time at my disposal this evening, I cannot, of course, pay tribute to the countless men and women who played a key role in the early evolution of social security, many of whom are in this very room. The roster is long of those whose ideas and energy made a significant contribution to the progress of social security in the past 25 years. I have taken several paragraphs in the Social Work Yearbook of 1960 to record some of the names and their contribution, such as John R. Commons, Edwin E. Witte, Frances Perkins, Abraham Epstein, Harry Hopkins, Robert F. Wagner and Arthur J. Altmeyer. As we talk this evening of the changing sweep of impersonal economic and social forces that have basically influenced the programs in the act, we should also pay tribute to the many men and women of vision who took a dream of the social reformers and translated it into a workable institution. Their efforts made a difference.

Program developments in social security have been the product of many complex social, economic, political, financial and legislative changes. But these factors operated only through the medium of particular human beings with their special capabilities and limitations who took responsibility and leadership for conceiving, achieving, and administering these changes, often under great handicaps. We must never forget the important role in the evolution of social legislation played by responsible and dedicated men and women including politicians, social workers, social reformers, economists, lawyers and administrators.

Mr. Justice Holmes once said that it is only through the effort of human beings that the inevitable comes to pass. And hard work flows only through the minds and bodies of men and women with dedicated purpose. As we point out tonight the achievements of the past, the inadequacies of the present, and the potentialities for improvement in the future, we must place among our objectives for the future:

The development and training of courageous and intelligent men and women who will become good administrators and, at the same time, recognize the importance of social action;

The reaffirmation that good administration today is one of the essentials to future legislative improvements; and

The continual sifting and winnowing of new ideas and the willingness to reappraise the applicability of old ideas in a new setting.

II

Some years ago, Max Lerner wrote a book called "Ideas Are Weapons." Certainly the idea of social security was conceived as one of the weapons of a dynamic society in the war on poverty, dependency, and family disintegration. That we have not achieved all our objectives is not an indication of the fallacy of the basic idea but, rather, the failure to exploit all of its potent possibilities.

Looking backward, and with the wisdom of hindsight, we can now say that the formulators of social security policy in 1934 were bold—but perhaps not as bold as they might have been, or as we now wish they might have been. The breakthrough of the idea of a national social security program came because of a great economic and moral crisis—the depression. The American people were catapulted from the normalcy of the twenties into a world of insecurity and incomprehensible confusion. They demanded that their Government take action—some action—any action. And where did the specific plan come from? It came from the economists, social reformers, social workers, professors, and the so-called idle dreamers who had been studying these proposals when they were impractical and theoretical.

In a way, the social reformers, the social workers, the labor unions, the United States as a whole, were unprepared in the early thirties to fully exploit the historic opportunity. The lack of available administrative skills plagued the planners. The lack of clear constitutional authority created doubts. The low level of economic activity, restricted financial possibilities, and the absence of widespread research and discussion in the twenties left a vacuum that was filled only by the conscientiousness and caution of those in political power.

The Social Security Act of 1935 might have been an even greater piece of social legislation—a more comprehensive attack on social problems—if there had been more research, thought, discussion, and controversy in the twenties about the needs and alternative possibilities, many of which might have appeared impractical at the time. Perhaps then the act might have included some provision for financing medical care costs, some effective Federal standards for unemployment insurance, and Federal grants for general assistance, and the training of needed professional personnel.

I am fully aware of the difficulties and fears that preoccupied the Committee on Economic Security. We cannot change the past, but we can learn from it for the future. I believe that effective social policy is developed by recognizing the critical moment in history when action is possible. This is what we ever must be ready for. And this means continual discussion, debate, and probing of old, new, and controversial issues such as takes place in the American Public Welfare Association.

It is the realization of the importance of timing in social legislation that while a Senator, Walter F. George could oppose disability insurance in 1950, he could also become the man whose support of it in 1956 made it become law as the final achievement of his career—and by only one vote in the Senate. It is the realization that when Senator Vandenberg severely attacked, in 1937, the large old-age insurance reserves, his criticisms evehtually resulted in the significant improvements in family benefits in the 1939 law. It is the realization that the broadside criticisms of the chamber of commerce in 1953 unexpectedly helped to assure the two-party endorsement and liberalization of the very insurance system they criticized. It is the realization that the criticisms by the insurance companies in 1958 of the financial condition of the OASDI program unexpectedly helped to adopt an increase in insurance benefits and financing changes which might otherwise not have occurred at that time.

And, so, I would ask you tonight to salute with me the critics of social security. They are our secret, mysterious weapon. They help spur us on to new, and sometimes unexpected, victories.

From the legislative experience of the past 25 years we may draw this lesson for the continued improvement of social security in the future: to take heed of the past but to always be looking ahead, to be ready for immediate action when the critical moment in history arrives, to have several possible legislative alternatives, to appreciate the necessity for both controversy and compromise, and to expect the unexpected and work with it instead of against it.

III

One of the arguments used by the opponents of social security legislation in 1958 was that it was very bad to enact social security legislation every 2 years—and especially in an election year. It was most interesting how the opponents sold themselves this argument, how they convinced themselves of the moral, economic, and statesmanlike soundness of their position. They not only made the argument; they believed it.

They were dumbfounded when they discovered this argument had little appeal to public welfare personnel, the trade unions, and, especially, had no appeal whatsoever to Congressmen.

I have thought about this episode a great deal. It demonstrates that any organization must be very self-critical about the arguments it uses to support its objectives. The arguments which seem to it so logical, so persuasive, so sound, are not always those which are appealing to others.

I feel reasonably sure that Congress will enact additional social security legislation in 1960 and in 1962 and, most likely, in other even-numbered years in the coming decade. To understand this process requires some understanding of the vast economic and social forces that are at work in our society—for example, the tremendous population changes, the vast unmet needs for social services, and the increasing costs of medical care.

Of all the possible complaints, the implication that Congress has been irresponsible or solely motivated by personal political advantages in recurrent social security legislation is not borne out by the facts.

During the past 25 years, the committees which have handled the OASDI legislation have shown a degree of social and financial responsibility which has been of a very high order. Unfortunately, the opponents of social security legislation have not properly recognized this. The responsibility has been there, irrespective of which party has been in power. And so, tonight, I would ask you to salute with me the Congress, the congressional committees, and the legislative process. It is through this mechanism that social legislation becomes a reality; in which consciousness of social need, conflict, cooperation, and compromise all must play a role.

IV

While during the past 25 years the social security program has done much to help in strengthening family life, there are vast problems still unmet and unsolved. There are still too many low-income families with children. There is still a substantial amount of uncompensated wage loss caused by sickness, disability, and unemployment. There are still delinquent, neglected, and deprived children. There are many areas without trained public assistance and full-time child welfare workers. Aid to dependent children is still grossly inadequate. Health, welfare, recreation, and other social services are not available to all families in every community. Social insurance benefits are inadequate in many cases. Social objectives are subcrdinated to fiscal considerations in unemployment insurance. Medical care of high quality it not actually available to all who need it. These are some of the unfilled needs and some of the controversial areas in which we must work in the years ahead.

I believe that during the next 10 years the productivity of our Nation will continue to grow due to automation, research, inventions, new processes, products, and services. It will be possible, therefore, for our country to afford significant improvements in our social security system from these increased resources so that every aged, disabled person, and every widow and orphan will have sufficient income to enable him to live in health and decency. I look forward to a series of legislative changes by the Congress which will result in:

1. An increase in social security benefits averaging about 40 to 50 percent above present levels;

2. An increase for widows somewhat larger than the average because their incomes are now the lowest among any of the aged;

3. Family insurance benefits to widows with dependent children improved so that when any breadwinner dies his children will not be dependent on charity or relief;

4. An improved and effective system of unemployment insurance;

5. A comprehensive public welfare program including general assistance without any residence requirements;

6. I also believe that the social security system should provide a regular monthly income to all those who are totally disabled for any extended period of time irrespective of age or the type of disability;

7. The social security system also should finance the disabled individual's rehabilitation and retraining and thus provide income security and, at the same time, help him wherever possible to regain independence, self-support, and independent living.

8. I see the social security system taking on a major share of the responsibility of financing hospital, nursing, and other health services for the aged and disabled. By pooling employee and employer contributions, some of the heavy financial burdens of medical care should be spread over an individual's entire working lifetime, and over the entire Nation.

Hospital costs have risen by 100 percent in the past 10 years and will probably continue to skyrocket during the coming decade. The demand by the American people for access to the highest quality of medical services will continue to grow. The principle of applying health insurance on a more comprehensive basis will become practically universally accepted thus eliminating the financial barrier to medical care at the time service is needed. "Group practice" by able, leading doctors should expand which will enable the miracles of medical science to become available more readily to the consumer.

By financing hospital and nursing services for the aged through the social security system, additional funds should become available from the contributory insurance program to raise the standards of nursing home care and to more adequately compensate nurses and other hospital personnel. Visiting nurse services should be available to everyone who might need them. Hospital deficits should decline. The aged and the disabled would have access to the medical care they need as a mater of right and not as an object of charity. And neither the

doctors, hospitals, or patients will be socialized, nor will government intervene into the doctor-patient relationship. Moreover, private insurance, thrift, and economic opportunities for the individual through private enterprise will continue to expand.

The decade of the sixties should be a period of phenomenal economic growth. At the same time, we must make sure that we have an equitable method of distributing this production to our aged and disabled, to our widows and dependent children, and to the unemployed and their families. Social security programs—public and private—are one of the essential institutions that assures that there will be a fairer distribution of goods and services in the economy. Social security is not a handout; it is a cooperative social insurance program that atempts to accomplish both economic and ethical objectives.

In 1960 the social security program will be 25 years old. Even those who have vigorously opposed basic provisions of the program in the past will now admit that it is here to stay in some form or other and that there will be some improvements. Social security is recognized as necessary to the effective functioning of our economy. It is both a businesslike and humanitarian program.

The economic problems of the aged, the sick and disabled, widows and orphans, and the unemployed are part of the problem of persistent poverty in the midst of plenty. We must vigorously continue the attack on poverty and dependency. The United States can, if we wish, accomplish the abolition of poverty and financial dependency before any other country in the world does it. This objective, like flying to the moon, has been the dream of many minds in the past. There is no reason why the United States should not make as its goal the accomplishment of both objectives during this coming decade.

Removal of Disability Payments Age Limit Under Social Security Law

EXTENSION OF REMARKS
OF
HON. ARCH A. MOORE, JR.
OF WEST VIRGINIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. MOORE. Mr. Speaker, I have today introduced a bill removing the 50-year age limit for persons receiving disability payments under the Social Security Act, and permitting the payment of such benefits from the beginning of an individual's disability.

Mr. Speaker, I earnestly hope that Congress will thoroughly examine and evaluate the social security program during the present session of Congress. It is apparent to a great many Americans that measures such as the removal of the disability age limit are urgently needed to improve and update Federal programs for the assistance of aged, disabled, and needy persons in our Nation.

Mr. Speaker, there is no reason why a person should have to wait until he is 50 years old before he can qualify for disability relief under the social security program. Such relief should begin when it is needed most; namely, immediately upon the determination that a person who has been paying into the social security trust fund has become totally or permanently disabled. This to me is the only fair and just approach to the overwhelming human problems involved in a person being injured or becoming so seriously ill as to prevent him from pursuing his regular line of work.

In introducing this bill today, I add my voice to those calling for fairer and better treatment of the disabled.

Mr. Speaker, I ask unanimous consent that the text of the bill be printed following these remarks:

S. 2897

A bill to amend title II of the Social Security Act to eliminate the requirement that an individual must have attained age 50 to qualify for disability insurance benefits, and to permit the payment of such benefits from the beginning of the individual's disability

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That (a) subparagraph (B) of section 223(a)(1) of the Social Security Act is amended by striking out "has attained the age of 50 and".

(b) The last sentence of section 223(c) of such Act is amended by striking out all that follows "1957" and inserting in lieu thereof a period.

SEC. 2. (a) Subparagraph (C) of section 223(a)(1) of the Social Security Act is amended by inserting "while under a disability (as defined in subsection (c)(2))" after "benefits".

(b) Subparagraph (D) of section 223(a)(1) of such Act is amended to read as follows:

"(D) has been under such disability throughout a period of at least six consecutive calendar months, or dies as a direct result of such disability".

(c) Section 223(a)(1) of such Act is further amended by striking out "beginning with the first month after his waiting period (as defined in subsection (c)(3)) in which he becomes so entitled to such insurance benefits" and inserting in lieu thereof the following: "beginning with the first month in which he satisfies subparagraphs (A), (B), and (C)".

(d) Section 223(a)(2) of such Act is amended by striking out "in the first month of his waiting period" and inserting in lieu thereof "in the first month in which he is under the disability described in paragraph (1)(C)".

(e) Section 223(c) of such Act is amended by striking out all that follows paragraph (2).

SEC. 3. The amendments made by this Act shall apply only with respect to monthly benefits under section 223 of the Social Security Act, or based upon the wages and self-employment income of an individual entitled to such benefits for months after the month in which this Act is enacted.

Pollution Problem

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 27, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I insert into the RECORD an editorial from the Hilo (Hawaii) Tribune-Herald of July 21, 1959, entitled "Pollution Problem":

POLLUTION PROBLEM

Hilo's Coconut Island affords one of the best swimming facilities anywhere on the big island, with dressing rooms and sanitary facilities maintained by the county parks deparment.

Yet the board of health has been warning for years that Hilo Bay is polluted to the degree of being unsafe for swimming, and at the recent meeting of the territorial board here, it was pointed out that this pollution is becoming worse. Long ago the department warned not to eat raw fish taken from the bay.

Pollution comes chiefly from the Hilo sewage outfall off the Puueo shoreline. The sewage is not piped out far enough to prevent its being swept back into the bay by currents flowing through the breakwater entrance.

A further source of pollution is the drainage of cesspools along the shoreline.

That there hasn't ben an outbreak of typhoid doesn't mean that there couldn't be.

And maintaining a swimming facility—without warning signs—where the water is known to be polluted, is inconsistent, to say the least.

Eventually a sewage disposal plant and some method of dealing with cesspools too close to the shore will have to be provided. Coconut Island is a fine recreational asset to the city and this asset would be greatly enhanced if the surrounding waters could be kept reasonably free of pollution.

As it is, the board of health warnings should not go unheeded.

The situation is being reviewed for a report, which we understand will also include the problem of bagasse along the shoreline outside the bay, for presentation to the State legislature to see if a solution can be found.

All along, the cost factor, both as to a sewage disposal plant and the elimination of bagasse, has been the stumbling block.

Gen. Douglas MacArthur

EXTENSION OF REMARKS
OF
HON. EDWARD J. DERWINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. DERWINSKI. Mr. Speaker, as time marches on, great men take their rightful places in the nonpartisan pages of history. In the heat of controversy, our greatest leaders have been subjected to ill-tempered abuse. Years later, in the calm, when a man's true role in history is analyzed, we can properly evaluate his contributions to his country. It is with this thought in mind that I call your attention to the 80th birthday of one of the greatest Americans of all time, Gen. Douglas MacArthur.

A decade ago, he was subject to removal from his command by the ill-advised action of the then President of the United States. General MacArthur was, in fact, punished because he maintained a belief that victory was essential for the protection and integrity of our country. Since we can now look back at that turbulent period, in a quiet and analytical manner, it is apparent that General MacArthur was completely correct in his position, and that the Nation

suffered irreparable harm as a result of his being removed from military command.

Mr. Speaker, I take this opportunity to salute this truly outstanding American on his 80th birthday and to remind him that the Nation will be forever grateful for his lifetime of service in defense of his country and the cherished ideals he so steadfastly maintained.

Crime Against Humanity

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 21, 1960

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the text of an editorial from the current issue of the Brith Abraham Beacon, published by the well-known American Jewish fraternal order, Brith Abraham. The editorial discusses the current wave of anti-Semitism in Germany and its repercussions here. It makes a strong appeal for steps to eliminate the distribution of hate literature through the U.S. mails. The editorial is written by the order's grand master, Maurice Goldstein.

In similar vein, Grand Master Goldstein has written a letter to President Eisenhower calling his attention to the anti-Semitic wave and urging legislation to bar from the mails publications which spread racial hatred because they "are destructive to our national peace and unity."

I might add, Mr. Speaker, that last year I introduced two bills, H.R. 3127 and H.R. 3128, to prohibit the transmission of hate literature through the mails, but to date no action has been taken on them by the respective committees.

The text of the editorial cited above and the letter to the President follows:

CRIME AGAINST HUMANITY

(By Maurice Goldstein)

The recent grotesque outburst of anti-Semitism and swastika desecration of Jewish temples and Christian edifices has raised the question among Jews whether we should be complacent (be silent) or voice our public protest and demand just punishment for the malefactors.

As your leader, I have pondered this problem and came to the conclusion that we should take the position that the perpetrators of these vicious acts must be stopped and punished. I therefore communicated with President Eisenhower, Members of the Senate, Congress, and Mayor Wagner and made our position known and urged that every means available be taken to stop these "lunatic fringe" persons before this condition gets out of hand.

The destruction of 6 million Jews by Hitler kept steadfastly coming to my mind. Before Hitler, Germany had a most affluent and cultured Jewish community. The 600,000 Jews in Germany lived happily and thrived spiritually and economically. They lived in peace with their Christian neighbors.

After World War I, clouds began to gather around the Jewish population—from time to time small anti-Semitic outbreaks occurred. Hate propaganda began to appear and a hush-hush attitude prevailed. Many of the German-Jewish leaders expressed the belief that the clouds will clear and sunshine will once again spread over that land.

As the years rolled on, Hitler began to assert himself more and more. He accused the Jews as responsible for the economic plight of Germany. Then came November 9, 1938. This was the "black day" in Germany—synagogues were burned; Jewish owned stores were destroyed and looted; Jewish citizens were mistreated. Still the people remained silent. The Nazi marauders took this as proof that they could proceed with their destructive escapades without interference. This was the signal for mass massacres of innocent people.

While the Jews were the target for persecution, many good Christians fell because they took the part of their fellow Jews.

Hitler's persecution of Jews was the beginning of the crime against humanity. It culminated into a Second World War with millions of casualties.

The recent revolting wave of anti-Semitism, which burst out in Germany, had a chain reaction. It spread to many parts of the world—including the United States.

This is a renewed warning that racial prejudice is simmering. Although mild at present, many ask, Will it burst out into a dangerous flame? One wonders whether the recent anti-Semitic vandalism was an organized attempt through a central body, or was it the outburst of immature warped minds?

Brith Abraham for many years has sensed that a growing tide of anti-Semitism in the United States was fanned by hate publications. We have warned again and again against these peddlers of hate—seeking to divide race against race.

Once again we want to call attention to our Government—with emphasis upon our Post Office Department—that hate publications must be barred from the U.S. mails. A careful study of these publications will strongly indicate that they are not published to enhance American culture, education, or improve our American way of life. Instead, they are designed to spew hate.

We are grateful to Congressman VICTOR L. ANFUSO, who in the past has sought legislation to bar these hate publications from the use of the U.S. mails. His bill was regretfully pigeonholed in committee. We understand his feelings about our liberty-loving and peace-loving people everywhere. He again made strongly know in Congress recently his position against the anti-Semitic vandalism. We salute him for that. But we must not fall asleep and say, "It can't happen here." The people of Germany said so and they were dragged into one of the bloodiest conflagrations by Hitlerism.

We therefore made a strong appeal to the President of the United States to take steps to bring about legislation that would bar hate publications from the use of the U.S. mails—

Because they are subversive—contrary to good government.

Because they violate every principle of freedom of religion.

Because they divide race against race which is destructive to the unity of our Nation.

Because they are not educational and do not exemplify the intent of our second class mailing privileges.

JANUARY 22, 1960.

His Excellency DWIGHT D. EISENHOWER,
President of the United States,
Washington, D.C.

DEAR MR. PRESIDENT: Brith Abraham, national fraternal order, with 275 lodges throughout the country, is deeply disturbed over the current epidemic of anti-Semitism. This condition is making deep inroads in our national unity.

After considerable study and survey, we find that hate papers now distributed through the U.S. mails, are responsible for a great deal of this unrest. These publications spare no one as long as they create fear, suspicion and divide race against race. The effectiveness of these hate peddlers has already reached within our city high schools with students wearing swastika pins and armbands.

This is the beginning of a subversive movement—contrary to good government—and must be nipped in the bud. We must not let it get out of hand as it did in Germany during the Hitler regime.

We respectfully urge that you request legislation that would bar any publication, primarily designed to spread racial hate, from the U.S. mails. The intent of mailing privileges for newspaper publications must come under the category of educational value. Surely these hate publications are destructive to our national peace and unity. Therefore, they should be classified as "subversive" and be prohibited from the use of the second class mailing privileges.

We respectfully submit this recommendation for your speedy action.

Very respectfully yours,
MAURICE GOLDSTEIN,
Grand Master.

Continuation of Lamb Grading—Testimony of Arnold Mayer of Meat Cutters Union

EXTENSION OF REMARKS
OF
HON. LEONOR K. SULLIVAN
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 27, 1960

Mrs. SULLIVAN. Mr. Speaker, several weeks ago the House Committee on Agriculture conducted hearings on the proposed suspension by the Department of Agriculture of its program for grading lamb and mutton carcasses. My testimony on this matter appeared in the CONGRESSIONAL RECORD of January 14. Since then, the Committee on Agriculture has unanimously adopted a resolution calling upon the Department of Agriculture to continue lamb grading, and the Department officials, I understand, are to meet on Friday to decide on the course of action they intend to follow. I sincerely hope the overwhelming public sentiment in favor of a continuation of lamb grading persuades the Department to reverse its decision in this matter.

In the meantime, Mr. Speaker, I believe it would be most useful to Members of Congress and consumers generally to be able to read an excellent statement on this subject presented to the Committee on Agriculture on January 13 by Mr. Arnold Mayer, legislative representative of the Amalgamated Meat Cutters and Butcher Workmen AFL–CIO. Mr. Mayer's testimony covers not only the important subject of lamb grading, but the even more important program for meat inspection under which the Department of Agriculture examines and

clears for interstate commerce the wholesomeness of all of the red meats and also poultry.

I believe that the bill which I drafted several years ago to provide for compulsory Federal inspection of poultry for wholesomeness was the first bill prepared by a Member of Congress on this subject since some time in the late 1920's or early 1930's. In that endeavor, I had the wholehearted help and support of the Amalgamated Meat Cutters and, in fact, I should report that my interest in this matter was aroused by facts brought to my attention by this union concerning conditions in the poultry processing industry. The union, furthermore, provided a large share of the impetus in enlisting public support for compulsory Federal inspection of poultry.

I want to commend the AMCBW and its executive officers, President Thomas J. Lloyd and Secretary-Treasurer Patrick E. Gorman, for their many efforts in behalf of the consumers of this country. And I want to commend Mr. Mayer, not only for his fine presentation in behalf of his union on the lamb grading issue, but also for the hard work he has performed in the years I have been in Congress on many measures intended to assure the wholesomeness of the food we eat.

The statement on lamb grading referred to above is as follows:

STATEMENT BY ARNOLD MAYER, LEGISLATIVE REPRESENTATIVE, AMALGAMATED MEAT CUTTERS AND BUTCHER WORKMEN OF NORTH AMERICA, AFL–CIO, IN SUPPORT OF LAMB GRADING, BEFORE THE HOUSE COMMITTEE ON AGRICULTURE, JANUARY 13, 1960

Mr. Chairman and gentlemen of the committee, my name is Arnold Mayer. I am the legislative representative of the Amalgamated Meat Cutters and Butcher Workmen of North America, AFL–CIO.

The AMCBW is a labor union with 375,000 members organized in about 500 local unions throughout the United States and Canada. The AMCBW and its locals have contracts with thousands of employers in the meat, retail, poultry, egg, canning, leather, fish processing and fur industries.

It is a pleasure to be able once again to appear before your committee to present the views of our union. We greatly appreciate the opportunity, since we feel the subject you are now considering is not only important in itself, but also in providing a first class example of how things should not be done by the Department of Agriculture.

Before I present our views in detail, I should like to read a resolution which our union's executive board of the AMCBW adopted in its meeting in Chicago last Thursday. The resolution concerns both our opposition to the suspension of lamb grading and our fears on the current dangers to the inspection of processed meat and poultry. Although the latter problem is not the subject of this committee's current inquiry, it, nevertheless, will be of interest to you.

The text of the executive board's resolution follows:

"Instead of having the prospect of gaining new and added protection in 1960, consumers of meat and poultry actually face the unfortunate possibility of losing a vital safeguard for their health and an important aid in determining quality. These possible losses are (1) Federal inspection during further processing operations of meat and poultry, and (2) meat grading.

"FURTHER PROCESSING INSPECTION

"It is vital to consumer protection that meat and poultry be inspected during further processing operations (when it is being canned or processed into such meat or poultry products as sausage, meat pies, soup, etc.).

"The inspection is a safeguard against the deterioration and adulteration which may occur in meat and poultry between the time of slaughter and processing. Also, it prevents the use of further processing operations as a dumping ground for those cheap and impure products which cannot pass inspection. Finally, it guards against the adulteration of the product by the non-meat items used in further processing, such as easily spoiling vegetables.

"It has been suggested that meat and poultry processors be made to pay for the further processing inspection. In this way, the proponents of this view argue, consumers can have their inspection and yet not have to pay for it. Unfortunately, neither part of this argument is true. Consumers would still pay the bill in several forms, especially in higher prices. And—even more important—the integrity of the inspection would suffer. Experience has shown that when the company, whose product is to be inspected, hires and pays for the inspection, then the firm will be able to exert a variety of pressures on the inspection program. Instead of being a panacea, the idea of processor-paid inspection, if instituted, would do harm to the consumer-protective purposes of inspection.

"As a whole, the attempt to save money by weakening or cutting out inspection of further processing operations is pennywise and pound foolish. The savings which may show up in the budget of the inspection agencies will be spent many times over by health agencies and individual families.

"LAMB GRADING

"After announcing earlier in 1959 that lamb grading would be maintained, Secretary of Agriculture Ezra Taft Benson suddenly ordered its suspension in early December. When great opposition to this move developed from many organizations, including our union, Benson postponed the beginning of suspension, but did not drop the idea of doing away with lamb grading.

"As President Lloyd and Secretary-Treasurer Gorman pointed out to the Secretary, the suspension decision itself, was surprising, but the reason given for it is positively amazing. The Secretary declared that lamb grading was suspended because various groups in the industry could not agree on standards for it. He did not mention the consumer or consumer interests. Apparently, consumer interests were not considered at all in making the suspension decision.

"Actually, lamb grading is an aid to the housewife in determining that she is getting her money's worth of quality. To take this aid away is definitely a step backward.

"Not only would the suspension of lamb grading be a consumer loss in itself, but it could bring still further harm. It could be used as the opening wedge to do away with all meat and poultry grading. Such an action would do further hurt to the consumer.

"CONCLUSIONS

"The danger to the meat and poultry inspection and grading programs are of great concern to the Amalgamated Meat Cutters and Butcher Workmen (AFL–CIO). Our union has consistently fought for consumer protection, especially in the industries where our members are employed. For example, the AMCBW was the initiator and the mainforce in the enactment of a poultry inspection law to protect consumers against diseased and adulterated poultry. And it has consistently worked for adequate appropriations for consumer-protective protective programs: Therefore be it

"*Resolved by the International Executive Board of the Amalgamated Meat Cutters and Butcher Workmen of North America (AFL–CIO)*, That this union will continue its long-held policy of battling for consumer protection by strongly supporting new protective measures and opposing the suspension or revocation of existing ones.

"Concerning the current problems faced by the inspection and grading programs, we specifically urge that:

"1. The Administration request, and Congress appropriate, adequate funds to carry out meat and poultry inspection programs which will fully protect consumers. Included must be funds to provide inspection of further processing operations in meat and poultry in the manner that this inspection is currently being performed.

"2. Secretary of Agriculture Ezra Taft Benson immediately reverse his suspension of lamb grading, and reject all further threats to the grading of meat and poultry.

"3. The Department of Agriculture consider the interests of consumers as paramount in its decision-making and reverse its current usage of neglecting the consumer in the interests of industry."

The resolution expresses our position. I should like to amplify on it somewhat.

We are amazed that in making the suspension decision of December, the Department did not take into consideration at all the needs of consumers. The Department's press release of December 4, which announced the decision, quotes the Secretary as saying that lamb grading would be suspended because various segments of industry could not agree. The release does not even mention the welfare of consumers. Consumers apparently, were outsiders whom not even the Department's press agents thought of.

This is, unfortunately, indicative of many of the Department's actions. The problems of industry become paramount. The welfare of the millions of consumers is secondary—if it is considered at all. It takes blunders like the December 4 press release to demonstrate this unfortunate policy.

Yet, programs with which the Department has been entrusted are of great importance to the consumer in the form of either health protection or buying assistance. Grading is one of the latter. Grading aids the housewife in determining the quality of meat she buys, just as it helps the institutional buyer.

It is vital that lamb grades, as well as those on other meats, effectively differentiate between varying qualities of lamb, so that the consumer has a choice. These grades should be fair and objective to the producer and packer. But we want to emphasize a point which the Department seems to neglect: The welfare of the consumer should be considered paramount in these programs.

As we understand it, a part of the controversy over lamb grading standards has been concerned with whether an inspector should look into the carcass or not. Frankly, this argument brings the whole situation near ludicrousness. If the grader can do his job more effectively by looking into the carcass, then why shouldn't he? Yet, this point appears to have been one of the major controversies which led the Department to conclude that the industry could not agree and grading should, therefore, be suspended.

The suspension of lamb grading would be a step backward in aid to the consumer. It could also be used as an opening wedge against other consumer-beneficial grading programs, as beef grading and poultry grading.

This step backward should not be permitted. Consumer-protective and consumer-

assisting programs should be strengthened and increased, rather than cut back.

We, therefore, urge the committee to indicate to the Department of Agriculture that lamb grading be continued. We urge that you tell the Department that grading standards which effectively differentiate for the consumer varying qualities of lamb should be used.

We also respectfully suggest that the committee make the Department understand that the welfare of the millions of consumers must be considered paramount in policy-making and decisionmaking, rather than the interests of particular industries. We hope that such a warning from the committee will prevent future debacles in which consumer-aiding programs are suspended because various sections of an industry could not agree.

Trees—And Keeping These United States Green

EXTENSION OF REMARKS
OF
HON. ROBERT L. F. SIKES
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. SIKES. Mr. Speaker, I submit for reprinting in the CONGRESSIONAL RECORD an article from the October 1959 edition of the American Mercury which I consider well worth reading. It is entitled "Trees and Keeping These United States Green":

TREES—AND KEEPING THESE UNITED STATES GREEN

(By Russell Maguire)

During the last 150 years in these United States we have lost one-third of our total arable land. We have cut and consumed seven-eighths of our virgin forests. The future picture is a gloomy one.

Forest and water supply are closely united. Cutting the forests and denuding the earth of its natural vegetation causes the water level to sink and brings death to plant life. As a result, people die. No amount of technical counteraction can stop this process. We may temporarily relieve a bad situation, but sooner or later our present course will lead to disaster.

Therefore, let us awaken the slumbering love of our solid citizens for our forests and plant life. Let us start a crusade of self-preservation through action. This crusade will encompass every phase of our social, economic and political life. It cannot be extinguished because it serves nature and natural law is supreme.

What have we done to correct our wasteful past? With another purpose in mind, Franklin D. Roosevelt made a feeble attempt by creating the CCC Camps and speaking pompously of a tree-army. It failed and bogged down because it had a wrong objective. Our entry into promoted World War II is no excuse. There was simply no sincere spiritual program behind the so-called tree army. Our country's green carpet continues to dwindle away slowly but surely.

Beginning in 1941, with the full encouragement of industry, the American tree farm system has spread to every section of the United States. It was a commendable attempt indeed, and, certainly better than nothing. What is wrong about it, is the fact that it is solely based on profit. It dismissed completely man's natural love for nature. Their basic promotional thought is "tree farming is a profitable enterprise" instead of "Keep these United States green for your children and children's children."

Therefore, success is limited by the desire or need for profit and furthermore limited to the small percentage of citizens who are fortunate enough to own suitable land on which to gamble for profit. Under the system by which we live, there is absolutely nothing wrong about it. Actually, those who do their part for themselves and for the industry are doing something. At least they keep our country green in certain areas and, if we are lucky enough, their heirs may continue the program and replant for their successors. But more can be done by each and every individual.

The United States belongs to all its citizens—men, women, and children and it belongs to their children's children as long as there is a U.S.A. Yet, our country will last only as long as we preserve it. If we destroy its natural vegetation, its forests, we destroy its water supply, its climate, and in the end, life itself.

As a nation we are following the path of many people before us who have gone into oblivion. If we forget, and neglect our highest natural obligation "to preserve and seek perfection," then we deserve to be destroyed by nature. Our children and children's children will pay the price of our policy of waste and neglect. It is barbarous to leave the solution of present problems to future generations because we are selfish and self-satisfied. In most cases we are not yet suffering the total impact of the failure of our forefathers and ourselves. Correction and readjustment are already difficult tasks. They may be impossible in the future. Whoever believes in future atomic plant growth and future atomic readjustment of everything in need of readjustment is definitely insane or a fool.

Wherever Mother Earth dies, man also becomes extinct. This dying process passes on unrecognized from generation to generation because each generation merely sees the environment which nature presents during its lifespan. It has no direct knowledge of the looks of this same environment 100, 200, or 300 years earlier. It does not know how far the impoverishment of plant life has gone, and, with it, life itself.

To this date historic thinking considers its task fulfilled by chronological reference to the life of the numerous peoples, their ascent and downfall. This enables us to know superficially about the history of man for a short period. Lacking is the complete history of the environment.

History, policy, culture can never be truthfully understood without knowledge of the contemporary background of environment, because only man and environment form the totality, the unity. The history of man is, and will also be, bound by thousands of roots to the history of environment. Without it, one cannot understand the life, the soul, the thinking and creating, therefore the fate, of a people.

Innumerable peoples and cultures belong to the past of this earth, and where they once lived is, in many instances, today no-man's land, dead rocks, desert. The great stretches of ruins in the Old and New World are cemeteries of innumerable cultures gone down and disappeared. Many of these peoples have, in the progress of civilization, through senseless methods of land cultivation and destruction, transformed their land into deserts, and thereby destroyed themselves. A people that loses its land through poor management, or destroys the fertility of its soul, is always ripe for its downfall. Every nation whose environment decays will be rootless and be lost in nothingness. Only a settled nation is bearer of a culture, never a nomadic people.

Today, from Morocco through Africa and Asia to Mongolia, there is one long gigantic belt of deserts, interrupted at a few points only. Archeology now has established the proof that these deserts once were fertile land. According to information from Herod, only 2,000 years ago, the great and numerous Garamant people lived in the now bare and totally sun-scorched Fessan. Through Tibet and north of Tibet the famous silkstreets of antiquity led to the West through wide, populous countries. Millions of men once lived in Turan, not to count the once flourishing cities which had to be given up on account of ever-increasing drought.

While Greece rose to its first classical period, desert sand had already swept over the ruins of the decaying cities of the Hittites. Here, in antiquity, once stood evergreen oak forests in Greece, Italy, and Spain—all sung about by poets. Now, since the first century A.D., they are dry, rainless, infertile, rocky landmasses. At the time of Hannibal, the Sahara was far to the south of Carthage. Today the desert extends northward into Spain and Italy. Where was it at the time of the Egyptian pyramid builders who put pictures of forests and hunting scenes upon their reliefs?

What we call the desert of Gobi was once the hunting ground of Genghis Khan. About China we know that more than half of this gigantic land was transformed into steppes and deserts through deforestation during the time from 1700 B.C. to A.D. 1100. Another warning cry is the Judean Desert. Where we see today the bare, stony mountains in Palestine, we found Roman forest boundary stones (64 B.C. to A.D. 330). In the bordering deserts, we see for miles and miles subterranean, interconnected gathering places for water, so-called feggaras. Ruins of dams and aqueducts in Palestine prove the enormous wealth in water in days gone by. The remains of the pipeline of Caesarea, for instance, show us that this city got its daily supply of water of 80,000 cubic meters from a distance of 5 miles. The land between Gaza, the Dead Sea, and the Gulf of Aquaba, the so-called Negev, was once a rich, very populated province of the eastern Roman Empire.

Examples and more examples of this kind could be enumerated, always the same: earth's once glorious cultures today buried under sand dunes. Deserts, fallow land, waterless steppes, poor prairies, in short, gigantic dead regions are the remnants of these numerous disappeared peoples who have not fulfilled their true task in relation to the earth.

We accept this terrible heritage as a given, unchangeable fact. We theorize about ancient and modern natural catastrophies. We search for a proof that these deserts, wastelands, and infertile prairies are part of the original earth from ancient time to our present day, notwithstanding that expedition after expedition confirms that all these lands were once fertile earth.

To keep these United States green now and forever is the duty of all. Our trees shade all of us whether we own them or not, and we all love our trees from deep within our hearts. Just think of the millions of American men and women throughout the land who plant trees and shrubs in their gardens, watering them much of the year round with great love and oftimes at a sacrifice. Is this not a substantial and obvious proof of the very existence of a deep love? Because it is natural, it is so very simple. We can all work to bring about this greatest, natural potential of national thought relationship. A gigantic green carpet will cover our country and bury under its foliage much of the uglinesses that bother us today.

By flooding teachers and community leaders with reprints of this article, you can help yourself and all others. Let's start planting trees and planting good, sound ideas.

Detention of American Citizens Behind the Iron Curtain

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 27, 1960

Mr. ADDONIZIO. Mr. Speaker, Comdr. E. G. Carlson, American Legion, West Orange Post No. 22, has furnished me with the following resolution that is being sent through channels of the American Legion to the President of the United States. Commander Carlson explains in an accompanying petition bearing the signatures of the membership of post 22, that "our objective is to obtain immediate action of getting a release or an accounting of the American citizens taken prisoner or otherwise detained during the Korean conflict and still in custody of the Communists," and he urges strong action to accomplish this great purpose. As Americans who cherish liberty and freedom, our eyes and prayers must continue to be focused on these fellow citizens who are fated to suffer under the unrelenting and murderous Communist tyranny. Certainly we cannot be indifferent to their fate nor accept it placidly. This is a matter of urgency, and the zealous concern of the members of post 22 is commendable.

Americans cannot be convinced of the Communists' proclaimed desire for peace without some clearcut affirmative acts for peace. As the resolution points out, "improved relations between the United States of America and Communist countries is dependent on a clear demonstration of good faith by the Communist bloc." The prestige and authority vested in the Office of President of the United States must be unceasingly used to unloosen the chain of bondage of these tragic Americans who firmly cling to their hope for freedom and their love for their homeland.

The full resolution follows:

Whereas in his recent visit to the United States, Soviet Premier Nikita Khrushchev expressed an interest in world peace, disarmament and improved relations with the U.S.A.; and

Whereas various cultural exchanges between the U.S.S.R. and the U.S.A. have been successfully arranged between the respective Governments; and

Whereas estimates from reliable sources indicate that a substantial number of American citizens who were taken prisoner during the Korean conflict are still being held by the Communists; and

Whereas Premier Khrushchev appeared sympathetic to a woman in Des Moines, Iowa, who approached him expressing concern over her two sons who are behind the Iron Curtain; and

Whereas it would appear essential that improved relations between the U.S.A. and Communist countries is dependent on a clear demonstration of good faith by the Communist bloc: Now be it hereby

Resolved, That the American Legion Post No. 22, New Jersey, memorialize the President of the United States, himself or through appropriate agencies, to call for an immediate accounting for and return of all American citizens taken prisoner or otherwise detained during the Korean conflict and still in custody of the Communists; and it is further

Resolved, That other American Legion posts and departments throughout this State and Nation, as well as other civic and patriotic organizations, be encouraged to express concern for the plight of American citizens so long detained behind the Iron Curtain.

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

Appendix

Address of Vice President of the United States at Chicago Dinner With Ike

EXTENSION OF REMARKS
OF

HON. ALEXANDER WILEY

OF WISCONSIN

IN THE SENATE OF THE UNITED STATES

Thursday, January 28, 1960

Mr. WILEY. Mr. President, last night the Vice President of the United States delivered an address at the dinner with Ike at Chicago, Ill. It is a remarkable speech in many ways. I quote merely one paragraph:

As far as I am concerned I don't think we need to be too worried about their comments, because if you think what they said publicly about me was bad you ought to hear what they're saying privately about each other.

The Vice President referred to comments made previously about him.

In this speech the Vice President has demonstrated the judgment he has shown through his years in the Vice-Presidency. His office has certainly qualified him to step up higher, and recent polls indicate that is just what the people think.

Mr. President, his salutation of the President was superb.

I ask unanimous consent that the address may be printed in the Appendix of the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

TEXT OF ADDRESS OF THE VICE PRESIDENT OF THE UNITED STATES AT THE CHICAGO "DINNER WITH IKE," AMPHITHEATER, CHICAGO, ILL., JANUARY 27, 1960

This is a proud day in the life of this city, our party and our Nation. Seven and one-half years ago a great crusade was launched from this very hall to drive from our Nation's Capital a discredited administration and to elect as America's 34th President one of the truly great men of this century, Dwight D. Eisenhower.

Never in the history of this Nation has an administration more magnificently realized the dreams and objectives of those who worked and voted for its election. For the achievements of those years, the American people will be eternally grateful—the ending of one war, avoiding others and maintaining peace without surrender of principle or territory; unleashing our economy from abritrary controls and encouraging and stimulating the creative enterprise of our people with the result that our Nation's prosperity has reached an all-time high; and above all the restoration of the highest standards of honesty, dignity, and integrity in the conduct of the people's business by our national administration in Washington, D.C.

Every American who joined that crusade can proudly say tonight that under the leadership of a great President and his Republican administration, the American people in terms of peace, prosperity, and progress have enjoyed the best 7 years of their lives.

Tonight we salute the man who gave our party and our Nation this inspired leadership. We do it by our presence here. We do it with the contributions that this dinner represents. But the finest tribute that we can pay to him is by pledging ourselves to carry on the crusade he has so splendidly begun, by working and voting for another great victory for the Republican Party and for the American people this November.

Incidentally, as you may have noted, some of the Democratic Presidential candidates took a somewhat different view of the President's leadership at their meeting in Washington Saturday night. They also had some things to say about me.

As far as I am concerned I don't think we need to be too worried about their comments, because if you think what they said publicly about me was bad.you ought to hear what they are saying privately about each other.

However since this is a salute to the President, I do feel it is appropriate for me to comment, at least briefly, on the constantly reiterated charge of our opponents that "Dwight Eisenhower has been a weak President—what the Nation needs is a strong leader."

His leadership does not need defense by me or by anyone else. But I would like to share with you some of the unforgettable personal experiences I have had in seeing the President in action during the last 7 years.

I have seen him calmly and wisely make the decisions requiring action on Lebanon, Quemoy-Matsu and Suez.

I have seen him make the even harder decisions not to act and talk when a lesser man's rashness could have risked war. Courage is not always shown by strong actions and brave words. Often it takes a far higher form of moral courage to be silent when talk may be harmful, and it takes both courage and judgment to choose a sound course in contrast to a spectacular course. I have often heard the President say in these difficult periods, "In a battle, give me a man who keeps his head when everybody else is losing theirs."

I have seen his magnificent sense of duty—duty that three times brought him back to his desk after illnesses that would have put younger men on the sidelines—going to Panama while still suffering intense pain from an operation—traveling to Europe for the NATO Conference 2 years ago when even speaking was an intolerable strain.

I have seen him deal with Mr. Khrushchev's deft sallies graciously, but with unmistakable and masterful firmness.

And like any great leader he is at his best when the going is roughest. After our defeat in the congressional election of 1958 when he was being written off as a lame duck President, he threw down the gauntlet to the spenders and with the help of a fighting, united band of Republicans in the House and Senate he saved the American people from billions of dollars in higher taxes and higher prices which the massive spending programs of his opponents in the Congress would have made inevitable.

Illinois Republicans can be proud tonight that EVERETT DIRKSEN's splendid leadership in the Senate and the united support of Illinois' Congressional Republican delegation contributed immensely to this magnificent achievement.

And there has never been a more eloquent answer to the charges of "American prestige is at an all-time low—no leadership—no sense of purpose" than the tumultous welcomes the President received on his recent trip abroad. This was a personal tribute. But it was also a tribute to Dwight Eisenhower, the leader of the free world, the living symbol of the greatness of America and its selfless dedication to the cause of peace and freedom.

If there is any further answer needed to the charges of no leadership, let me note one tremendous and revealing contrast between the campaigns of 1952 and 1960.

In 1952 the Democratic candidate for President couldn't run fast enough—away—from the sorry record of the Truman administration which even he termed a mess.

In 1960, every Republican candidate will be proud to defend the Eisenhower record against all comers and to ask the American people to register their approval on election day.

With such an outstanding record, what do we have to worry about? The answer is that the very record which is our greatest strength is potentially our greatest danger. Because we have such a fine record there will be an understandable temptation to stand pat on what we have done, to be smug and self-satisfied about the past and to fail to meet the new challenges of the future. This attitude is not worthy of our party. And what is infinitely more important, it is not adequate for the needs of the nation in these times.

We can and should be proud of our record. And let me serve notice right here and now that I intend to defend it with all the strength at my command against those who attack it. But, we shall look upon our record not as our ultimate achievement but as the solid foundation upon which to build even greater accomplishments in the future.

Why is America a great nation today? Because we Americans have never lived in the past. We are never content to rest on our laurels. We never like to settle for being second best in anything.

Let this be the spirit of our party and our people as we enter the crucial year of 1960.

No administration in our history had more reason to be proud of its record in domestic affairs, but we see exciting challenges in those domestic problems that remain unsolved.

We believe that overall the American educational system is the best in the world. But inadequate classrooms, underpaid teachers and flabby standards are weaknesses we must constantly strive to eliminate, always recognizing in the remedies we recommend that any Federal education program must not infringe upon State and local responsibility for and control of our school system.

We are proud that there has been more progress in the 7 years of this administration in the field of civil rights than in any administration since Lincoln's, but we shall continue to work for constructive programs which will assure progress toward our goal of equality of opportunity for all Americans.

We are thankful that American agriculture is the most productive in the world and that our problem is one of surpluses rather

than scarcity. But we believe there is no higher legislative priority than a complete overhauling of obsolete farm programs under which the prices farmers receive for major farm products continue to go down and the costs to the taxpayer continue to go up.

The fact that there are more jobs at higher wages available to Americans than at any time in history does not weaken our determination to develop effective programs in which areas of chronic unemployment can be restored to healthy, productive units of our economy.

The fact that as a result of our policies 12 million more Americans are covered by social security and that benefits are almost 50 percent higher than was the case 7 years ago dos not in any way slow down our drive to find ever more adequate methods for protecting the aged, the unemployed and the disabled.

And the fact that the American economy has never been more productive than it is today only encourages us to find more effective methods to deal with disputes between labor and management so that the public interest may be more adequately protected but without controls which would stifle the productivity of our free enterprise system.

I am sure that a question which may have occurred to you is this: Aren't all Americans for these objectives, including our opponents? The answer is yes, of course. What is the difference, then?

We Republicans have unshakeable faith that the way to achive these goals is by the free choices of millions of individual consumers, by the productive efforts of free management and labor, and by local and State action wherever possible—supplemented when necessary but not supplanted by the Federal Government.

The philosophy of most of our opponents is just the opposite. They claim that the road to progress has to be paved with bigger Government, more spending, and higher tax bills for the people to pay.

The record proves that our faith in freedom is well placed. Economic policies based on encouraging rather than stifling free enterprise gets results—they work. Because the fact is that for 20 years Democratic administrations promised to give the American people the economic abundance and prosperity that the people, stimluated by 7 years of Republican faith-in-freedom, have in great measure now achieved for themselves. And as long as they are left free of arbitrary controls, the American people will continue to achieve greater and greater abundance with fair shares for everyone.

Great as are our domestic problems, there is another which transcends them all—our survival in the struggle which is going on throughout the world today.

There is no part of our record of which we are more proud than in the area of national security and the conduct of foreign policy. But we know that the challenge which confronts us continues to be massive in character. Because while Mr. Khrushchev and his colleagues claim they have ruled out the use of force as an instrument of implementing their national policies, they have never abandoned their goal of communizing the world. Their people are being driven to superhuman efforts to realize this objective and their leaders have notified us of their intentions.

What should our answer be?

Militarily our objective must be to maintain sufficient strength, not for purposes of attack, but to deter any potential aggressor. Questions have been raised as to whether we have now and will continue to have in the future strength of this magnitude.

We need constant examination and constructive criticism of our defense posture, pointing up our weaknesses where they exist. But constructive criticism is one thing; making America appear weaker than she is to potential aggressors is another. It is time to quit selling America short. We are not a second-rate country with second-rate military strength and a second-rate economy.

Let's get these facts straight right here and now. No aggressor in the world today can knock out the deterrent striking power of the United States and its allies. This is the case today, and it will continue to be so in the future. We know this, our political critics should know it, and, what is most important, Mr. Khrushchev knows it.

What should our policy in the future be? Because we are living in an age of rapid technological advances in military science, we must submit our national security programs to a searching, month-to-month reexamination in the light of any new technological developments and of our best current estimates of the military capabilities of any potential aggressor. On the basis of these appraisals, we must make such readjustments as are necessary to keep our deterrent power at adequate levels. And let us resolve once and for all that America has the resources and the will to maintain the absolute deterrent strength necessary for survival, whatever sacrifices may be required.

But the maintenance of military strength adequate to deter aggression, while absolutely essential for our survival, does not by itself meet the responsibilities of world leadership which are ours.

We must leave no stone unturned in our efforts to find some more effective guarantee against the terrible destruction of nuclear war than the mere maintenance of a balance of terror.

We must continue to follow the President's leadership in his willingness to discuss our differences at the conference table whenever there is a prospect for success; in his search for an effective formula under which we could reduce the burden of armaments and discontinue testing of even more destructive nuclear weapons; and in his steadfast devotion to the principle that the United States must take the leadership in substituting the rule of law for the rule of force as a method of settling disputes between nations.

Above all, we must recognize that the greatest danger we face is in the nonmilitary rather than the military area. Millions of Americans heard Mr. Khrushchev on his recent visit to this country lay down his blunt challenge for peaceful competition between the Communist and the free world.

What should our answer be?

We should make it clear at the outset that we welcome competition, provided both sides compete under the same set of rules and provided the competition takes place both in the Communist and the free world. After all, competition is our idea. It is the motivating drive responsible for the economic, political, and cultural progress of this Nation. We are glad that Mr. Khrushchev recognizes its merits and we welcome his challenge.

Can we win in this competition? The answer is—yes, if we recognize some basic factors.

We must avoid at all costs any overconfidence just because the Communist idea is repugnant to us or because of our belief that the Communist system has built-in weaknesses which will eventually bring about its downfall.

We must always remember that a totalitarian system, in the short run, can concentrate immense power on chosen objectives; that the Russian people are working long and hard under the driving direction of fanatically dedicated leaders who are motivated by but a single objective—the communization of the world; that the leaders as well as the people have a highly developed competitive spirit and that they have the advantage of anyone who is running behind in a race—the stimulus of trying to catch up and pass the front runner.

We can win in this competition, in other words, if we recognize their strength and if we work harder, believe more deeply, and are motivated by an even stronger competitive spirit than theirs.

But in recognizing the seriousness of their challenge, we could make no greater mistake than to go overboard and start to judge American institutions by the Communist yardstick.

They have a patent on the system of bureaucracy, government controls, and government domination. But even they have found it necessary to modify their system by increasingly providing greater rewards for those who make the greatest contributions to their economy.

In other words, they are finding it necessary to turn our way. At a time they are turning our way, the greatest mistake we could make would be to turn their way.

Our answer to them, therefore, in the area of economic competition must not be more government spending and more government controls but stimulation and encouragement of the creative energies of millions of free peoples and of our system of productive private enterprise.

And we must not make the mistake of just meeting them on their chosen battleground. The answer to atheistic Communist materialism is not just more and better materialism.

To put it simply, they offer progress at the cost of freedom. Our alternative is progress with freedom—and, in fact, progress because of freedom.

I realize that there are many who complain that the Communists have a sense of purpose which we lack. And there is no question but that they do have a sense of purpose—that of imposing the Communist system on all the nations of the world.

We can certainly agree that we do not have this sense of purpose. Because, as the President reiterated over and over again on his recent trip, far from wanting to impose our system on other nations, we believe that all peoples must be free to choose the kind of government they want.

But the fact that we have no desire to conquer the world does not mean that our alternative to communism is simply to leave the world as it is—ignoring the misery, disease, and inequity on which communism thrives. We, too, have a purpose and a mission in the world today—and that is what we must make clear as we meet the Communist challenge.

We offer our partnership, our advice, and assistance in helping peoples everywhere to achieve the economic progress which is essential if they are to have better food and housing and health than they presently enjoy.

But we do not stop here. We say, broaden competition between communism and freedom to include the spiritual and cultural values that have especially distinguished our civilization and enriched our lives.

We insist that man needs freedom—freedom of inquiry and information, freedom to seek knowledge, to express his views, freedom to choose his own leaders and hold them strictly accountable, freedom to shape his own destiny—and above all—freedom to worship God in the light of his own conscience.

Let our mission in the world today be to extend to all mankind not just the ideal but the fact of freedom—by preserving and protecting and defending it, by helping others achieve it, by offering our own example of a free society at work.

This mission is not new. It is the heart of the American idea that goes back to the very foundation of this free Republic. It is the essence of the crusade launched here 7 years ago and we can be proud tonight that our great President, Dwight D. Eisenhower, is its living symbol in America and throughout the world.

Vice President Rooney

EXTENSION OF REMARKS
OF
HON. CLARENCE CANNON
OF MISSOURI
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. CANNON. Mr. Speaker, our distinguished colleague, the gentleman from New York, Congressman JOHN J. ROONEY, was nominated for Vice President of the United States at a notable dinner given in his honor in New York City this week.

No more popular candidate could be nominated and I am convinced that if the ballot were taken here on the floor of the House this morning he would receive every vote cast without exception on both sides of the aisle.

Congressman ROONEY's nomination is most timely. Many have been mentioned for the Presidency but there has been a dearth of candidates for the Vice Presidency and no one could serve in that high office with greater ability or better understanding of basic national problems than Congressman ROONEY.

The widespread enthusiasm with which the nomination was received is reflected in the graphic account carried by the New York World-Telegram of January 22, 1960:

ROONEY FOR VICE PRESIDENT—JUDGE SWEEDLER HEADS GROUP PUSHING CANDIDACY

JOHN J. ROONEY was there when they blew the atom bomb at Bikini and this experience has pretty well fortified him against life's surprises. Nevertheless, he was taken back when they told him last night about the committee.

"What committee?" he asked. "Say it again, slowly."

The New York Citizens Committee to Nominate Congressman JOHN J. ROONEY for Vice President of the United States—that's the committee. Puzzlement, disbelief, then shock registered with the Congressman.

Few people, other than Committee Chairman Nathan Sweedler, were carried away with the idea but the sentiment was celebrated. What better way to salute the veteran Congressman, who was the honor guest at the Cathedral Club's 60th annual dinner?

Mr. Sweedler, a former municipal court justice, was quick to confess his friend, Representative ROONEY, was unaware of the committee's existence.

"He doesn't know the first thing about it," Mr. Sweedler said. "I felt it was a capital idea so I had 2,500 cards made up and distributed. Unless Congressman ROONEY stops it, it is my plan to visit throughout the State and encourage committees for ROONEY.

"You know," Mr. Sweedler said, "the only difference between JOHN ROONEY and JOHN KENNEDY is that Senator KENNEDY has a couple of million dollars."

The guest list at last night's dinner read like a Who's Who in Politics.

Among those attending were former Gov. W. Averell Harriman; State Comptroller Arthur Levitt; Joseph M. Swing, U.S. Commissioner of Immigration and Naturalization; Tammany Leader Carmie G. DeSapio; Democratic State Chairman Michael H. Pendergast; Brooklyn Democratic Leader Joseph T. Sharkey; his GOP counterpart, John R. Crews, and a contingent of Texas Congressmen whooping it up for Senator LYNDON B. JOHNSON, the principal speaker.

Noting the presence of Lane Dwinell, assistant secretary of state, and other State Department brass, Representative ROONEY cracked: "This belies a great many newspaper stories; I have friends in the State Department."

Mr. ROONEY, it is said, does not have a couple of million dollars, but he does wield considerable power and this makes for irony. If he were ever to move up in government, he might increase his stature but lose several inches off the big stick he holds as chairman of the House Subcommittee on Appropriations.

The Democratic Congressman for Red Hook, South Brooklyn, and Borough Park is widely known as a bulldog on budgets, giving cold shivers to the State Department, Justice and Commerce Departments, the U.S. Information Agency, and others over expenses. Mr. ROONEY is not loath to take on an opponent and argue the positive and negative aspects of a $27 executive-type wastebasket. As a Vice President, for instance, life could prove dull to an old warrior.

The Boy Scouts and the United Givers Fund

EXTENSION OF REMARKS
OF
HON. THOMAS J. DODD
OF CONNECTICUT
IN THE SENATE OF THE UNITED STATES
Thursday, January 28, 1960

Mr. DODD. As a member of the Senate Appropriations Subcommittee on the District of Columbia, and the Subcommittee on Juvenile Delinquency, it is a special pleasure for me to call the attention of my colleagues to the outstanding accomplishments of the local chapter of one of this Nation's most important national organizations. I refer to the National Capital Area Council of the Boy Scouts of America and the wholesome benefits which it provides in bringing a strong and virile scouting program to the boyhood of this area. Clearly, the training that the council gives the boys in citizenship, character development, and physical fitness goes a long way in helping to effectively combat the serious problem of juvenile delinquency.

Two facts are especially noteworthy about the Scouting movement in this area: First, more than 43,000 Cubs, Scouts, and Explorers are enrolled in the National Capital Area Council; and second, approximately 16,000 registered adult volunteer Scouters give capable, dedicated, and devoted leadership to these boys. The figures I have quoted represent a growth in membership of 20,000 boys and leaders during the past 5 years. Another point worthy of consideration is that 35 full-time professional Scout executives serve these 16,000 volunteer leaders—or an average of only 1 paid executive for every 450 volunteer leaders. These significant indicators, plus the fact that the Scouting program is brought to the boys of this area on an efficient cost-per-boy basis which is below the national average, means that the operating expenses are lower here than in most metropolitan centers, to insure the best possible program and services for American boyhood.

I cite the above facts because I have been especially interested to read in the Washington newspapers recently about problems facing the Boy Scouts and the United Givers Fund, arising primarily from the cost of the significant and expanding services of the Scouting program, which must be met from the unfortunately insufficient contributions to the United Givers Fund by the Washington community. Because I recognize that the largest portion of the financial support of the Boy Scouts in this area is received from the United Givers Fund, which contributes also to the support of 145 other agencies, I have been impressed by the statesman-like resolution of this difficult problem and the method that was arrived at in an attempt to secure additional funds to meet the minimum requirements.

It is in this spirit, and in a desire to congratulate president Philip Gore and the civic-minded men on the executive board of the National Capital Area Council of the Boy Scouts, president Charles E. Phillips of the United Givers Fund and president Frederick B. Lee of the Health and Welfare Council, that I ask unanimous consent to introduce in the RECORD the following statement that was issued on behalf of these community leaders on January 16 and an excellent editorial about it that appeared in the Washington Post and Times Herald of January 18, 1960.

There being no objection, the statement and editorial were ordered to be printed in the RECORD, as follows:

UGF-HWC-BOY SCOUTS UNITED ON PLANS FOR SUPPLEMENTAL DRIVE OF SCOUTS

United Givers Fund President Charles E. Phillips, Health and Welfare Council President Frederick B. Lee, and Philip L. Gore, president of the Boy Scouts National Capital Area Council, announced today that complete and satisfactory agreement has been reached on the supplemental membership enrollment to be conducted by the Scouts during February. Mr. Phillips expressed approval on behalf of his agency and stated that Frederick B. Lee, president of the health and welfare council, voiced a similar view in according HWC endorsement to the limited appeal to be undertaken by the Scouts.

Mr. Phillips pointed out that (1) the Scouts may seek to enroll parents of Scouts and active registered adult volunteer Scouters; (2) the scouts will not publicize the drive through mass media channels; and (3) the rules and conditions of HWC and UGF will be observed.

Mr. Phillips explained that, at the request of Philip Gore, president of the Scouts National Capital Area Council, he and Mr. Lee had met with Mr. Gore on Friday, January 15. The group conferred regarding a suitable basis under which the Scouts could conduct a drive without doing a disservice to united giving, inasmuch as the Scouts had previously sought to obtain additional funds for 1960 by enrolling Scout alumni and proven supporters of Scouting in their supplemental appeal. Special attention was directed at increasing their proceeds by more complete enrollment within the approved categories of parents and registered Scouters.

Mr. Gore stated: "The Boy Scouts, as a charter member of UGF, as a member agency of HWC, and as an organization that plays an integral role in the life of this commu-

nity, has acceded to the request of HWC and UGF to conduct its current enrollment in accordance with the provisions they have established. In a desire to cooperate and not to impair the united giving concept, our executive board has agreed to restrict our drive again this year to a nonpublic appeal. Because the need is so great we shall tackle this assignment with renewed dedication." Mr. Gore added that, through the determination and support of the parents of Scouts and the volunteer Scouters in this area "we earnestly hope to be able to meet the minimum costs of the vital program of scouting in order that the benefits it provides to boyhood and the community will be maintained and strengthened."

Mr. Phillips, in mentioning his gratification to Mr. Gore and the Scout executive board, joined with Mr. Lee in expressing the hope that this supplemental enrollment would prove successful. Mr. Phillips acknowledged the important contribution made by the Scouts in their performance of vital services and added that he was glad that this matter was resolved in a way that is clearly in the best interests of the entire community.

CLOSED BREACH

Supporters of both the United Givers Fund and the Boy Scouts of America will be pleased that they have reached agreement on the Scouts' supplemental drive next month. The announcement 2 weeks ago that the Scouts would broaden their solicitation even if it should mean loss of UGF support was a serious blow to the widely-approved concept of a one-package fund-raising campaign. Apparently the Scout leaders came to see that their plan would work to the disadvantage of the entire community and perhaps in the end to the disadvantage of Scouting. In any event, they are entitled to commendation for the subsequent agreement to keep their supplementary drive within the UGF rules. The community now has a vested interest in supplying the Boy Scout organization with the funds it needs through its limited appeal to parents and adult volunteer Scouters, and everyone should understand more clearly the necessity for greater efforts to raise the entire UGF quota in the next drive.

Water Resources of Illinois and the Nation

EXTENSION OF REMARKS

OF

HON. WILLIAM L. SPRINGER

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 28, 1960

Mr. SPRINGER. Mr. Speaker, on October 21 the Governor of Illinois, William G. Stratton, delivered an address on the water resources of Illinois and the Nation at a dinner sponsored by the Kaskaskia Valley Association at Carlyle, Ill.

The Governor has taken a very active part in the water resources problem in Illinois and he certainly expresses a vast and extended knowledge of the entire question in this address. I herewith append the address in full:

A year ago, approximately, the civic-minded people of this area observed the actual groundbreaking for the great Carlyle Dam, the culmination of the hopes and strenuous effort of many years.

Tonight, we have here many of those who through the years dreamed for this project; we have those who actually planned for it with the skills and talents of engineers, and we have those who are building the project itself with their own know-how and machines. We have, then, represented here, the attributes of foresight, planning, and action.

Here tonight we have also representatives of local, State, and Federal Governments, a display of the cooperation which is possible among these agencies of government, a cooperation which is vital to the continued progress of our Nation under governmental leadership.

Also at this dinner are representatives of the ultimate users of the facility we are creating—the municipal, industrial, agricultural, and recreational facility which this great body of water will provide.

The wealth of a nation or an area is never really represented by dollars or monetary values. It is most truly measured by the abilities of the people of a nation or an area to use—and most important—to conserve—its resources.

This Carlyle Dam, this Kaskaskia development, is a classic example of a drive to use and conserve the most precious asset of water, in which Illinois is vastly wealthy, through the cooperative efforts and abilities of the people of an area, and the governmental and civic agencies which are embraced in that area. This observance tonight, is, in essence, an act in a drama portraying the insistence of a restless and progressive people that there is virtually nothing which can't be made better.

I have mentioned the varied talents and ambitions which are represented at this dinner. A person could make a long speech only by analyzing each of those talents, the dreamers, the planners, the doers, and so forth; in fact, one could make too long a speech doing so. Rather we can only skim over the elements involved here, and be gratified that they exist.

It is important, however, to point out that the resource which we discuss tonight, water, is one in which Illinois ranks high in the scale of measuring the values of a region. It is one of the favorable elements which we in Illinois have to offer commerce and industry as a major contribution in a combination of circumstances that is perhaps not surpassed throughout the world.

When this State was a wilderness, its water resources were not larger than they are today, and the best scientific research tells us that the resource of water in Illinois will be undiminished and constantly refreshed for all ages to come. Wars have been fought for water, and nations have perished for want of it. Here in this State, which actually is almost an island bounded by the Mississippi, the Ohio, the Wabash, and Lake Michigan, it is estimated that 2,000 billion gallons per day of atmospheric moisture are present to renew our water resource, with about 99 billion gallons per day falling as rain or snow. Inside the State some 23 billion gallons per day of streamflow are available, which, coupled with the water on the border make available an average per day of water supplies totaling 43 billion gallons, or five times the present usage in the State. Thus it can be seen that the quantities of water needed for our increasing population and industrial and agricultural growth and expansion are present to meet all foreseeable needs.

These statements, incidentally, are not made on the basis of quick and haphazard research for the expediency of the moment. Our State's water resource records go back to 1895, and Illinois has the best set of records on water and resources, with its tremendous value to industrial development, in the Nation.

Among the results of these long-time studies is the knowledge that here in southern Illinois there is not only a higher mean annual rainfall, there is a greater runoff and streamflow, an ideal combination of circumstances for developments such as the Kaskaskia Reservoir.

In fact, what we are doing here is putting to work a natural advantage of an area, conserving it, and making it available for use in myriad fashions that surpass the imagination even of those who laid the basis for the development.

I know that all at this meeting are well acquainted with the statistics concerning the development—its 26,000 acres of water, its potential as a flood control pool, its shoreline with the vast recreational possibilities, and the miles of dams and levees that will contain the water.

It is generally known, I suppose, that 25 communities will be within economical range to use the water for local purposes and the ultimate plan was adopted after exhaustive research into other methods of providing flood protection, which is a basic reason for the work.

This lake and the future one above us at Shelbyville will afford protection to some 65,000 acres of agricultural land, and increase the potential use of about 70,000 acres of fertile bottom land along the course of the river.

Other benefits will include attraction for industry, better control of flood conditions and navigation on the middle and lower Mississippi River, and great new recreational areas for about 3½ million people within a 100-mile radius of the Carlyle Reservoir.

I have mentioned the cooperation which has existed among agencies of Government and citizen groups in this development, and I want to remind all of you that the cooperation will continue in the future. Our State government, as a matter of fact, is already at work in consultation with Federal authorities planning recreational facilities and areas, operation of which will be a prime function of our own department of conservation.

It has been a policy of this administration to develop new areas for rest and revitalization of our population. It is our belief, and one which has been implemented into action, that these days of exploding urban growth and of a generally stepped-up pace of living have created the requirement that the State provide such facilities. Suburban development is eating up the woods and waters that used to surround our cities and towns, and we must provide a substitute for them. A generally increased standard of living has provided longer periods of leisure time, and a general increase in the economic ability of persons to take advantage of that time. Our development of parks, lakes, hunting, boating, and fishing areas, is the answer to these requirements, and it is my firm belief that the responsibility of the State is just as great in this area as it is in other areas of service, such as providing for the ill and the poor.

While I am not at liberty here tonight to give specific details, I can say that negotiations and planning are already underway by our department of conservation to utilize certain areas of the shoreline of this development as game refuge and hunting areas. We will have hundreds of acres under such control in perhaps three areas to be operated by our department.

The Federal Government will, of course, work closely in cooperation with us in this field. In addition, recreational experts predict that more than 60,000 fishing trips annually will be made available by the water impounded in this development. In the early planning stage by our department are accommodations for the fisherman and the camper, including public boats and launching facilities, and picnic and camping areas.

It is likely there will also be development of commercial docks and launching areas.

They have even reported to me the kind and size of fish they expect to be harvested from the lake—largemouth bass, bluegill, black and white crappie, and catfish. During the early development, or impoundment of the lake, the experts say, the fishes caught will be large individuals, present now in the river, and very fast growing individuals that quickly attain a desirable size because of the vast quantity of food available during the early inundation. This phenomental growth in newly impounded water is rather like the results obtained when virgin lands are cultivated for the first time.

It is in this field that our State government will be most active in connection with this development, which will bring such vast benefit to this entire wide area. We are pleased that we are a part of the creation of this reservoir and are convinced that the State funds we are using now and will use in this area for these purposes are wise investments.

It is only during times such as these that such massive strides toward betterment can be made. Only in periods of peace and prosperity do we have the manpower, the facilities, the materials, and the finances to build for the present and the future.

In wartime, our manpower and our materials are devoted to the waging of conflict. In times of deep depression there is a definite limit to resources, in the face of surplus manpower. With peace and prosperity there are not only the resources, the manpower, the ability, there is the desire to progress along the lines that lead to individual betterment through cooperative effort. This lake we mark tonight is an outstanding example of the drama of improvement. I congratulate all concerned.

Friends Abroad Can't Be Bought

EXTENSION OF REMARKS

OF

HON. HERMAN E. TALMADGE

OF GEORGIA

IN THE SENATE OF THE UNITED STATES

Thursday, January 28, 1960

Mr. TALMADGE. Mr. President, it is a fundamental truth that friendship cannot be purchased, and the United States has had ample evidence of it in the unhappy results of many phases of its interminable foreign aid program. That point was the subject of a recent editorial of exceptional clarity and perception in the Albany (Ga.) Herald of January 22, 1960, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FRIENDS ABROAD CAN'T BE BOUGHT

As is typical in a presidential year, loud are the cries in Congress about the need for economy. Unhappily, too, much of the verbal anguish is in the form of political lipservice. For instance, in the midst of the economy platitudes may be seen several ingenious schemes for spending the money of American taxpayers on so-called foreign aid projects.

Cuba's Fidel Castro has proposed that the U.S. Government loan $30 billion for a Latin American development program over the next decade. Similarly, other "good neighbors" in that area have suggested that Washington supply fixed amounts of capital every year, create a preferential trading zone for Latin American exports and finance the rapid industrialization of Latin America.

There is also considerable advocacy of America's underwriting the foreign exchange required for India's third 5-year plan, which begins in 1961. The cost is variously estimated at $1 billion to $1.5 billion. The argument advanced here is that Red China has been bounding along economically under communism and that India, with its mixture of socialism and free enterprise, has been lagging in development; therefore, the American taxpayer should fill the breach for India's benefit.

These are but a few of the suggestions for getting the American dollar abroad. They all are being presented to the American public on the ground of necessity. What is being attempted is to induce the conviction that the issue of the cold war will be determined by the willingness of the U.S. Government to sign unlimited blank checks. Yet some of the assumptions on which the pleas for ever bigger Government-to-Government subsidies are founded are downright untenable, and others are very rickety. It simply is not true that this or that amount of dollars will save this or that nation from passing under Communist rule.

For 7 years, the United States has been pouring money into Bolivia on a substantial scale. The argument has been that American generosity has helped to keep in power a left Socialist regime which is accepted as a bulwark against communism. But recent anti-American riots show that this investment has brought little, if any, good will, and Bolivia's economic difficulties seem just as far from solution as ever.

Indeed, it is quite arguable that, in this and other cases, lavish American aid has been of little real benefit to the recipient countries. It has encouraged their rulers to dodge the temporarily unpopular measure which would put the economy on a sound basis.

Brazil is a larger and economically more significant country than Bolivia. Here also there is little economic benefit to show for the loans to a total of some $900 million which Brazil has received since the Eisenhower administration came into power. Some of these loans were granted on the understanding that Brazil, one of the world's chronic inflationists, would take some economic and financial measures calculated to put its house in order. These measures have not been taken to date, and it is not likely that they ever will be.

Truly, America and Americans have not proved wanting in the spirit of international cooperation. But it is well to remember, with the outflow of gold from this country as a periodic warning, that our resources are not inexhaustible and that a gift, as well as a loan, "oft loses both itself and friend." When the Washington Government is asked to commit itself to trying to bail out the ocean of poverty in Africa, in many parts of Asia, in some countries of Latin America, the skeptical instinct of the average American voter and taxpayer is probably a more intelligent guide than the fallacious eloquence of those who make a fetish of unlimited handouts.

Tribute to the Late Justice Johnston

EXTENSION OF REMARKS

OF

HON. EUGENE J. KEOGH

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, January 28, 1960

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following tribute to the late Justice John B. Jehnston, which appeared in the New York Law Journal of Tuesday, January 19, 1960. Justice Johnston served in the House from 1919 to 1921 as a Representative of the Fifth New York District. He had a long and distinguished career as a lawyer, legislator, judge, and administrator.

The article follows:

TRIBUTE TO THE LATE JUSTICE JOHNSTON

At the opening of the appellate division of the supreme court, second department last Friday, Presiding Justice Gerald Nolan, in tribute to the memory of the late former Associate Justice John B. Johnston, addressed the bar as follows:

"It is fitting and proper that at the opening of this court today, some mention should be made of the loss which we have suffered in the death on Monday last of one of our former associates, Hon. John B. Johnston. With his passing, a long and distinguished career in the public service as lawyer, legislator, judge, and administrator, was terminated. I shall not at this time attempt to detail his many outstanding acomplishments or the numerous honors which were conferred upon him. It is sufficient to say on this occasion that the list would be long and most impressive."

Judge Johnston was born in Glasgow, Scotland, on July 10, 1882. In 1885, his father came to the United States and settled in Long Island City. The following year, 1886, his mother Janet, his sister Mary, and young John B., who was then 4 years of age, left Scotland and joined the father in America. Later on, in 1895, the family moved to Brooklyn where the judge resided continuously until the time of his death.

Judge Johnston received his early education at the public schools in Long Island City and Boys High School in Brooklyn. In 1899 he secured a position as office boy in the law office of the celebrated lawyer and orator, W. Bourke Cochran, who encouraged him to take up the study of the law. From 1906 to 1908, he attended the New York Law School, and upon completion of his law studies, was promoted to the position of managing clerk in Mr. Cochran's firm. He was admitted to the bar June 5, 1912. He continued with Mr. Cochran's firm until the latter's death, at which time he engaged in the general practice of the law in his own name at 31 Nassau Street, New York City. In November 1918, he was elected to Congress from the Fifth New York District, where he served from 1919 to 1921. As in his practice of the law, his ability and eloquence won immediate recognition and acclaim in the Congress of the United States. Upon completion of his term in Congress, he returned to the practice of the law until he assumed office as a justice of the supreme court in the second judicial district on January 1, 1928. He served on that bench with outstanding ability and great distinction.

On January 1, 1935, Gov. Herbert Lehman first designated him as an associate justice of this appelate division. Thereafter he was redesignated by Governors Lehman and Dewey, and continued as an associate justice of this court for 17 years. He retired on December 31, 1952, upon reaching the mandatory retirement age of 70.

On January 1, 1953, he was appointed an official referee of the supreme court and continued as such until July 4, 1955, when he assumed the office of State Administrator of the Judicial Conference of the State of New York, a post he held at the time of his death.

It was my privilege to be a very close friend of Judge Johnston for many years. I had for him a genuine and lasting affection. His untimely passing brings to me a deep and keen sense of personal loss. His

gracious and charming manner won for him the esteem and respect of all who had the privilege of knowing him. We shall miss his friendly presence and genial companionship.

Judge Johnston had a keen and brilliant legal mind and the ability to express himself with clarity and vigor. During the consultations of this court, his rich and well-rounded experience, profound knowledge of the law and wise counsel, were of invaluable aid to his associates. Later in our deliberations and activities as members of the Judicial Conference, he was a tower of strength in the movement to modernize and streamline our judicial system. This splendid courthouse in which we are assembled today, the planning and construction of which he supervised, is a lasting monument to his zeal, integrity and vision. In Judge Johnston's passing, our profession has lost a stalwart and forthright advocate, our community an outstanding leader and brilliant administrator.

Many of you, I am sure, had the privilege of knowing Judge Johnston personally or professionally during his long and distinguished career. All of you, I am confident, share our feeling of sadness and loss today, at his passing. To his son John and his family, to whom Judge Johnston was so deeply devoted and so closely attached, we extend our heartfelt sympathy.

When this court recesses today, it will do so in memory of Judge John B. Johnston.

Rail Commuter Problem

EXTENSION OF REMARKS
OF
HON. HARRISON A. WILLIAMS, JR.
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Thursday, January 28, 1960

Mr. WILLIAMS of New Jersey. Mr. President, the commuter problem is a part of a much larger transportation crisis caused by inadequate facilities, expanding needs and spotty planning. A thoughtful, consistent Federal policy in these matters could greatly ease the problem and make commuter service an efficient, if not altogether a pleasant means of getting to and from work. Several pertinent thoughts on transportation needs and Federal policy are given in a Newark Sunday Star-Ledger editorial. I recommend these ideas to the consideration of all persons interested in a rapid solution to this deteriorating situation.

Mr. President, I ask unanimous consent that this editorial be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Newark Sunday Star Ledger, Jan. 24, 1960]

INCONSISTENT POLICY

In commenting on the failure of the Federal Government to assist in solving the rail commuter problem, Governor Meyner pointed up a contradiction in the policy pursued in Washington.

While the Federal Government refuses to help tackle the problem, it has claimed jurisdiction in permitting service to be curtailed or abandoned.

If the Federal Government assumes this jurisdiction, it cannot maintain that the problem is purely local and outside its purview. In view of the Transportation Act of 1958—under which the railroads are seeking to dump portions of their commuter operation—the claim of the Federal Government to a hands-off policy will hardly hold up.

Commuter service can be considered a part of the national rail pattern, since losses incurred in commuter operations are made up through revenue from freight operations. This certainly has a bearing on the ability of the railroads to maintain all-around service.

One of the reasons for a reluctance to get in the commuter picture may be the difficulty in apportioning aid. One area may well complain that another is getting favored treatment. Such complaints, however, would not be unique in the history of Federal assistance.

A good case can be made out for Federal aid to bolster rail commuter service. Not the least of the arguments is the prospect that steadily deteriorating rail service will mean an added load on the roads. And since the Federal Government already has assumed a responsibility in the matter of highway construction, assistance to the railroads might, in the long run, be much less costly.

Perhaps the Government isn't obliged to follow a consistent policy. But it could find just as much justification for assisting rail commuter operations as for withholding aid.

Nixon Maintains Lead, 55–45, Over Stevenson

EXTENSION OF REMARKS
OF
HON. WILLIAM L. SPRINGER
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 28, 1960

Mr. SPRINGER. Mr. Speaker, I know that many people throughout the country have been interested in the relative standings of the candidates for President in both parties in polls now being undertaken by several organizations. One of the most reliable of these is the Gallup poll, taken by the American Institute of Public Opinion, in Princeton, N.J. This poll shows as of January 1960 that the Vice President has 55 percent of the popular vote and Mr. Stevenson 45 percent—that the Vice President has 53 percent of the vote and Senator KENNEDY 47 percent of the vote in a poll between those two candidates.

From this, it would appear that the lead which the Vice President has over Mr. Stevenson and Mr. KENNEDY is approximately the same as it was in October and November of 1959.

The article follows:

THE GALLUP POLL—NIXON MAINTAINS LEAD, 55–45, OVER STEVENSON

(By George Gallup, director, American Institute of Public Opinion)

PRINCETON, N.J., January 27.—Vice President NIXON holds a substantial lead over Adlai Stevenson today in a test of the two men's potential support from the Nation's voters.

In the latest Gallup poll, NIXON'S margin is about the same as that he had over Stevenson 2 months ago.

Gallup poll reporters across the country asked this question of a carefully drawn cross section of voters:

"Suppose the presidential elections were being held today. If Adlai Stevenson were the Democratic candidate and RICHARD NIXON were the Republican candidate, which would you like to see win?"

The latest trial heat results:

NIXON VERSUS STEVENSON, JANUARY 1960

	Percent
NIXON	55
Stevenson	45

The Vice President's political fortunes over the past year can pretty well be divided into pre-Moscow and post-Moscow periods—a reference, of course, to NIXON'S trip to the Soviet Union last summer.

Before his trip, for example, NIXON was trailing Stevenson in trial heat tests; since his return from Russia, he has run ahead of the former Illinois Governor. This has been the trend of the vote since 1 year ago:

Nixon against Stevenson, 1955–56

	NIXON	Stevenson
	Percent	Percent
January 1959	49	51
July (Russian visit—late July)	44	56
August	51	49
September	54	46
November	56	44
January 1960	55	45

Against Senator KENNEDY, a leading choice, along with Stevenson, of the Democratic voters, NIXON'S showing has followed much the same pattern. Before his Russian trip, the Vice President trailed KENNEDY—since then, he has pulled up sharply on the Senator, with the latest results as follows:

NIXON VERSUS KENNEDY, JANUARY 1960

	Percent
NIXON	53
KENNEDY	47

The fact that NIXON runs a stronger race aganst Stevenson than against KENNEDY is due chiefly to Senator KENNEDY'S greater strength in his native East.

Here is a comparison of NIXON'S vote by regions of the country against both Stevenson and KENNEDY:

	Percent NIXON	
	NIXON against Stevenson	NIXON against KENNEDY
National	55	53
East	56	49
Midwest	55	53
South	50	54
Far West	58	58

The Vice President's apparent vote-getting ability today is particularly interesting when one compares the present Nixon-Stevenson trend with that recorded by the Gallup poll just 4 years ago. At that time, with Eisenhower running ahead of Stevenson in trial-heat tests, this was the trend of Nixon-Stevenson sentiment:

Nixon against Stevenson, 1955–56

	Stevenson	NIXON
	Percent	Percent
February 1955	61	39
October	53	47
November	54	46
December	57	43
February 1956	59	41

U.S. Share of Seaway Tolls Totals $3 Million

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Thursday, January 28, 1960

Mr. WILEY. Mr. President, the completion of the St. Lawrence Seaway, formally dedicated on June 26, 1959, represents a milestone of major progress in creating a stronger economic lifeline between the United States—particularly the Great Lakes region—and markets, people, and Nations around the globe.

The scope and significance of the seaway project has excited and challenged the thinking and imagination, not only of shipping and other commercial and economic groups, but of citizens in almost all walks of life.

Serving the Nation, the seaway is expected to create ever greater economic benefits that will flow veinlike to communities throughout the country.

However, the transformation of the untamed waters of the mighty St. Lawrence River into a harnessed seaway was not accomplished, my colleagues will recall, without sizable opposition, particularly on the grounds of the cost to the American taxpayer.

As a cosponsor of the seaway law, I naturally feel that in accordance with its original provisions, the seaway should "pay its own way."

Recently, the St. Lawrence Seaway Development Corporation issued a report on the first year operations of the waterway.

Despite difficulties of the operation of such a tremendous, complex project—as well as the loss of traffic due to the steel strike—Seaway traffic for the first year of operations with ocean vessels was most encouraging. The volume of cargo tonnage for 1959 was 75 percent over 1958. Indications are even more promising for 1960 season. New lines are reported entering the Great Lakes next year and most scheduled lines which used the seaway in 1959 are expected to return. Bulk cargo potentials are increasing.

From 1959 toll revenues, the Corporation paid all operating expenses of nearly $1 million and in addition repaid to the U.S. Treasury the sum of $2 million.

The seaway will, I believe, not only pay off its costs of construction—as provided in the law—but will also—as we who supported it envisioned—be of tremendous economic benefit to the country.

For the future, the seaway, I believe, will continue to grow to serve the fundamental commercial, economic, travel, shipping and a great many other interests of the Nation.

Recently, the Milwaukee Journal carried a detailed article entitled "Share of Seaway Tolls to Total $3 Million," outlining the way in which the seaway is not only paying the costs of operation, but even during its first year of traffic, making payments on the indebtedness of its cost of construction.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SHARE OF SEAWAY TOLLS TO TOTAL $3 MILLION

WASHINGTON, D.C.—The United States' share of ship tolls on the new St. Lawrence Seaway in its first year of operation is expected to total more than $3 million.

That report was given the Senate Appropriations Subcommittee Wednesday afternoon by Lewis G. Castle, Administrator of the St. Lawrence Seaway Development Corporation, which built and now operates the American part of the seaway.

Castle asked the committee to approve a $1,414,000 operating budget for the fiscal year beginning July 1. He said the corporation planned to spend $1 million for operation and maintenance and $414,000 for administrative expenses. The operations budget represents a $25,000 increase over the current fiscal year primarily because of pay raises, Castle said.

Congress merely sets a limit to Corporation spending. The money comes from seaway tolls.

Castle said the Corporation had paid $2 million in interest on loans to the Treasury and expected to make a supplemental payment after all accounts were collected.

"With a creditable year of operation behind us, it can safely be predicted that a steady and substantial year by year increase in the flow of commerce through this great international waterway is expected," Castle said.

He added the Corporation's estimate that 50 million tons of cargo would pass through the seaway annually by 1968 "seems assured."

He said cargo ships carried 20 million tons of cargo through the seaway last year, an increase of 75 to 80 percent over the 1958 total carried through the old, shallow seaway.

In reply to a question from Senator ELLENDER, Democrat of Louisiana, Castle said there was no truth to a rumor that the Corporation planned to request permission to deepen the seaway to 35 feet.

PILOT ACCORD REPORTED

Canadian and U.S. officials were reported Thursday to have reached agreement on a future study of safety in Great Lakes navigation.

The House Merchant Marine Committee has approved legislation requiring pilots on Great Lakes vessels, even when they are in open water. Some Congressmen have objected that such an open water requirement would unnecessarily increase shipping costs.

Committee Chairman MAGNUSON, Democrat, of Washington, said that the State Department had told him that Canada, which objected to a provision calling for a joint United States-Canadian commission to study pilotage problems, had agreed on a substitute method. He did not say what it was.

"I hope," he said, "that this forward step will enable our countries to arrive at an agreement that will be acceptable to each of us and make it effective, before the 1960 navigation season opens. In the interest of safety, this matter should be settled without further delay."

Bonded Debts Are Not Cash in Hand

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 28, 1960

Mr. SANTANGELO. Mr. Speaker, under unanimous consent I insert in the CONGRESSIONAL RECORD an article "Paperwork, Not Profit, Held Worst Arms Excess" which appeared in the New York Herald Tribune on Sunday, January 24, 1960. The author, Allen M. Smythe, is an authoritative financial writer who specializes on defense procurement practices.

The article points out the problems of defense negotiated contracts and shows the large amounts that the Renegotiation Board has ruled to be excess profits of many large airframe firms. The Renegotiation Board has now reviewed nearly all of the 1955 defense contractual earnings, over half of the 1956 earnings and making good progress with its 1957 audits.

Mr. Speaker, I want to again call attention to the fact that these prosperous defense contractors are not now required to refund these abnormal profits after the Renegotiation Board's decision as they were properly required to do in wartime. Most of them merely post bond and then delay their appeals to the Tax Court of the United States. The U.S. Treasury needs this cash more than do these blue-chip defense companies.

I also desire to call attention to the hearings and report of the Hébert Special Investigations Subcommittee in which it was brought out how these same large airframe firms use pressure from retired military officers and advertising in trade and semiofficial service journals to influence both awarding and settlement of contracts. These publications continually berate Congress for not voting more funds for questionable weapons that cost in the billions. Of course, almost all of such advertising is charged off to the contract. President Eisenhower recently had some pertinent remarks to make about such unethical advertising. However, the Pentagon apparently is doing nothing to remedy the situation.

Also, these same large companies who hold billions of dollars in defense letters-of-intent, cost-plus contracts, and negotiated incentive contracts, spend millions of taxpayers' money in raiding each other for technicians and scientists. All such recruiting costs are reimbursible on these types of contracts. Little attention has been paid to the excellent work of the Manpower Subcommittee of the House Post Office and Civil Service Committee which has been investigating the artificial shortage of engineers that is being created by these expensive and hysterical recruiting drives.

The article follows:

PAPERWORK, NOT PROFIT, HELD WORST ARMS EXCESS

(By Allen M. Smythe)

Excessive paperwork rather than problems of excessive profits appear to plague defense contractors. The Renegotiation Board is now issuing demands for refunds on abnormal profits on defense contracts in 1955. This 4-year lag means extra accounting and filing problems that are increased when appeals are taken to the U.S. Tax Court.

Large airframe companies claim their fiscal experts are swamped from trying to follow the complicated procedures in contractual negotiations of the Pentagon. This accounts, they say, for their high overhead costs which are not reduced with smaller military aircraft production.

The trend is toward more and more paper work. Defense firm executives point out that the Pentagon is planning to adopt a completely new set of contract cost rules next July 1. Although many increases were made this action has been opposed generally by business and especially by small business. Demands from congressional groups that allowances on some cost items be tightened have been ignored.

These new cost rules will require new accounting practices by 35,000 contractors and subcontractors and will affect $26 billion in outstanding contracts and $14 billion of annually issued negotiated contracts. Some estimates indicate this may increase defense expendings by several hundreds of millions of dollars.

Renegotiation regulations require that all cost records be kept for 5 years under heavy penalties of law. Contractors' costs are subject to review and appeal through several layers of service auditors. Final appeals for contract settlement can be made to the Board of Contract Appeals in the Pentagon. After this final settlement, the contract price is reviewed by the Renegotiation Board for excessive profits. Appeals from their decision can be taken to the U.S. Tax Court.

Renegotiation has a persuasive political appeal. The wartime act has been extended a number of times. It applies now to firms with an annual defense business of more than $1 million.

Boeing Aircraft, the Nation's largest defense contractor, has been renegotiated for the 4 years ending 1955 for a toal of $34,284,165. All four refunds have been appealed to the U.S. Tax Court. General Dynamics, the second largest defense firm, has as yet not been asked for any refunds under the peacetime law.

Other airframe companies which have appealed their refund demands are: Martin ($15,500,000), Fairchild ($2 million), Douglas ($19,500,00), Lockheed ($15,500,000), North American ($29 million), and Temco ($4,250,000).

Another Invasion of States Rights

EXTENSION OF REMARKS
OF
HON. HERMAN E. TALMADGE
OF GEORGIA
IN THE SENATE OF THE UNITED STATES
Thursday, January 28, 1960

Mr. TALMADGE. Mr. President, the people of the State of Georgia believe the Constitution of the United States means what it says when it leaves to the individual States the right to fix qualifications for voting. Although the State of Georgia repealed the poll tax 15 years ago, Georgians feel that the question of whether such a tax should be levied is one which should be determined by each individual State. The Columbus (Ga.) Enquirer on January 23, 1960, featured an excellent editorial explaining the Georgia position on this issue, and I ask unanimous consent that it be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

JAVITS COMES UP WITH ANOTHER BILL DESIGNED TO INVADE STATES RIGHTS

New York's JACOB K. JAVITS, one of the Senate's most extreme liberals, has another project that would be a rank intrusion upon States rights and he claimed Wednesday he had nearly a fourth of the Senate's Members ready to sponsor an anti-poll-tax bill.

New York's other Senator, KENNETH B. KEATING, suggested the same day that the registrar bill, the outgrowth of a recommendation of the Civil Rights Commission, could become the core of a broad civil rights measure, with other proposals attached to it as amendments.

The two New York Senators are Republicans but a New York Democrat in the House, Representative EMANUEL CELLER, dared Vice President RICHARD M. NIXON to help force a House vote on civil rights legislation now resting in the House Rules Committee. CELLER said southern resistance to the legislation requires a coalition of Republicans and northern Democrats "to work together on this." He asserted the Vice President should use his influence with GOP House Members.

Another happening of the same day—Wednesday—was action by the Senate Rules Committee in setting February 5 as a cutoff date for hearings on legislation backed by JAVITS and others to create Federal voter registrars in southern areas where Negroes complain local registrars prevent them from registering as voters.

The activities of the three New Yorkers—JAVITS, KEATING, and CELLER—prompted South Carolina's Senator OLIN D. JOHNSTON to say:

"I do not think that I have a right to tell the people of New York what to do in this or any other field. * * * The people of New York or any other State have no right to tell the people of South Carolina or any other State, what to do."

Florida's Senator SPESSARD HOLLAND, who has introduced a constitutional amendment resolution to do away with the poll tax, said his proposal has 67 Senators as sponsors.

He explained, however, that his proposed amendment bars the poll tax or any other property tax qualification only as a requirement for voting on Members of Congress and presidential electors. His provision would not prevent the States from retaining a poll tax for local elections, if they so desired.

Though only five States now have poll taxes, JAVITS is anxious to abolish it by legislative statute. Senator JOHNSTON contends that it is a matter for State determination. This is the idea we always have had.

Georgia years ago abolished the poll tax and this State would not be directly involved if it were abolished by Federal legislation. But Georgia would be put in the position of not being able to revive the levy if it wanted to do so.

The poll tax remains only in Alabama, Arkansas, Mississippi, Texas, and Virginia. These States alone require an individual tax as a requirement for voting. We dare say the governmental and political leaders of those States vigorously object to the abolition of the tax through Federal action. It is a question for State determination. JAVITS' proposal would be a rank invasion of states rights.

Softness in Training

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 28, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following column written by the distinguished military affairs analyst of the New York Times, Mr. Hanson W. Baldwin, the column having appearing in the Times on December 22, 1959:

SOFTNESS IN TRAINING—EASED METHODS IN ARMED SERVICES FOUND TO REFLECT SOCIAL MORES

(By Hanson W. Baldwin)

The softening of basic training methods for the military services reflects in large measure the social mores and customs of the Nation.

In a recent tour to Army, Navy, Air Force and Marine Corps basic training centers, this writer was told time and again by officers and noncoms of the training cadres that "we could do a better job if they would let us alone." Interference, sometimes at the lowest echelons of command, is by parents, Congressmen, Department of Defense and other civil servants. It handicaps the establishment and maintenance of hard, tough military training adequate to fit a recruit for the toughest of all taskmasters—the battlefield.

At Lackland Air Force Base, Tex., the "gateway to the Air Force" for most airmen, one officer said he had experienced in his short tour of duty there some six or seven congressional investigations and countless inspections by Pentagon civilians. Most of these were interested in costs, and few in the production of disciplined military fighting men, he said.

DRILL INSTRUCTOR SUSPENDED

At Parris Island last summer a drill instructor was suspended from duty after a recruit had charged the DI broke his jaw. Press and radio took up the charge. New "brutality" at Parris Island became the topic of editorial page and pulpit.

The recruit finally confessed that his jaw had been broken by other recruits who had beaten him up because he had refused to finish a confidence or obstacle course. His platoon had therefore lost an interplatoon competition.

Mothers, who fear their boys will catch cold from wet feet, while being trained to kill or be killed and Congressmen "running" the Armed Forces from their offices, are the bane of many training cadres.

But the Assistant and Deputy Assistant Secretaries and civil servants from the Department of Defense and other Government agencies who stress cost-accounting, uniformity, and conformity have done much damage.

The attempt to impose uniform standards on all services, regardless of their differing missions and objectives, has, for instance, handicapped the Marine Corps in maintaining its reputation as an elite service. It was once small and selective. Now it is large and less selective.

FLEXIBILITY WOULD HELP

More flexibility and less outside interference, or, at least, restriction of complaints to the Departments of Army, Navy and Air Force in Washington or to the commanding general of each post, would undoubtedly aid the often harassed training cadres.

Above all, training would improve with a clearer understanding on the part of press and public that basic military training should be keyed to one fundamental purpose—to maintain the peace and to win victory in war. It would also help the services eliminate some subjects that should more properly be taught at home or in school—such as citizenship.

Samuel P. Huntington, in his book, "The Soldier and the State," noted that "the military institutions of any society are shaped by two forces: a functional imperative stemming from the threats to the society's security and a social imperative arising from the social forces, ideologies and institutions dominant within the society."

"Military institutions," he warned, "which reflect only social values may be incapable of performing effectively their military function."

NEW APPEAL HAS HELPED

Greater selectivity in recruiting and a change in the recruiting appeal has helped the services get better soldiers, sailors, marines and airmen.

A Marine sergeant visited a high school which had already been addressed by Army, Navy, and Air Force officers. Each had extolled what his branch of the service could offer in the way of education and pay. The marine epitomized the proper recruiting pitch. He made no address, simply inspected the school and the campus. In curiosity one senior asked him when he would talk.

"I'm not going to talk," the sergeant said. "I'm just looking this place over to see whether any of you guys are good enough to take into the Marine Corps."

Challenge, duty, and obligation rather that "what's in it for me?" is the proper recruiting approach. With it must go careful selectivity.

MORE FUNDS NEEDED

In most cases; basic training facilities of the services need more money. This is particularly true at Lackland Air Force Base in Texas—a World War II base that has only 4 out of some 1,196 buildings of permanent or modern construction.

But the major requirement is for improved officer and noncom leadership at all levels. Many of the junior officers of the training cadres are professionally proficient. But some lack really adequate leadership qualities. Too many are time servers who do not intend to make the services a career.

The noncoms in the training cadres require more careful selection and better training—and more prestige and recognition for their hard, long hours.

The marines have tried hard to provide some compensation to their hard-worked DI's by utilizing the old campaign hat as a badge of distinction and prestige, and by providing extra pay.

JOB IS NOT SOUGHT

But the training job is not sought after in any of the services. The training cadre holds the bag and is too often exposed to criticism of press and public, and to interference by all levels of command.

It is a job that presents perils to a professional career, and few tangible compensations for long and arduous hours, hard on family life.

Yet making men out of boys should be the greatest task and proudest challenge of the Armed Forces. For man and his will to fight is still the ultimate weapon. If the armed services are to be worth their costs the public and the military must key their policies to man.

TV Series From University of Wisconsin Called Breakthrough

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES

Thursday, January 28, 1960

Mr. WILEY. Mr. President, the challenge of enlarging the scope of our educational facilities and opportunity to meet the ever-increasing needs of a growing school-age population is one of the major issues before the Congress and the country.

We recognize, of course, that this is a national challenge, and that the Congress and the country's leadership need to be deeply concerned about providing sufficient educational opportunity for the youth of today—the leaders of tomorrow.

Currently, the bill, S. 8, to provide additional Federal assistance for expanding our educational system is now pending on the Senate Calendar.

I am always, however, particularly delighted to learn of new developments emerging out of the ingenuity and creativity of our citizens.

Today, I would like to pay particular tribute to one such development which is being considered a real breakthrough in the utilization of television for educational purposes.

Although the details of the project are yet to be revealed, the program generally involves an audiovisual approach, through television, to provide education and more educational opportunities for our people. Specifically, the project would represent the first TV correspondence course which coupled with required reports and assigned reading would offer graduate school credits.

We recognize, of course, that this is a new field in which experiment and exploration will open new vistas of opportunity for the future.

Because of this, however, I believe the individuals involved, from both the teaching profession and the television industry, are to be congratulated for this constructive effort to explore for new and better ways of broadening the education of our people.

The project was developed at the University of Wisconsin—one of the great educational institutions of the Nation—under a $100,000 grant obtained through the National Defense Education Act.

Produced under the supervision of Prof. Walter Wittich, the accomplishment is a tribute both to his supervision and the creativeness of all the individuals involved in the program.

Recently the Milwaukee Journal carried an article entitled "TV Series From University of Wisconsin Called Breakthrough" outlining this splendid development.

Reflective of the kind of examples of ingenuity and creativity which has made this country great, and that may well help to meet some of our country's critical need for expanded educational facilities, I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Milwaukee Journal, Jan. 24, 1960]

TV SERIES FROM UNIVERSITY OF WISCONSIN CALLED BREAKTHROUGH

(By Willard R. Smith)

MADISON, WIS.—A major breakthrough in educational methods, achieved in a tiny television studio at the University of Wisconsin, soon will be revealed to the Nation.

A team of seven midwestern teachers of audiovisual education worked together in the preparation and presentation of 42 sound films of teacher training lessons, which are the basis of this new concept.

Coupled with 10 required reports and assigned reading, they represent the first TV correspondence course carrying graduate school credit ever offered in America.

Dean Lindley J. Stiles of the University of Wisconsin School of Education, who obtained a national defense act grant of more than $100,000 to develop this pioneering teacher training course, calls it "a major breakthrough of the first magnitude in the area of teacher training."

This televised course was produced under the supervision of Professor Walter A. Wittich of the University of Wisconsin School of Education. It employs the teaching team approach strongly advocated by Dean Stiles—a group of specialists with a varied kind of demonstration that shows the creativeness of each.

All but seven of the kinescopes were produced in the tiny TV laboratory at University of Wisconsin under director Robert Reed. The others were produced at Michigan State University.

The 15-week course, with three lessons a week, already has started on a Detroit station under Michigan State's sponsorship. By the first week in February the course is expected to be in full swing at Milwaukee; Miami, Fla.; St. Louis, Mo.; Rockford, Ill.; Lincoln, Nebr.; East Lansing, Mich., and La Crosse.

The course will be offered over WXIX in Milwaukee three times a week beginning at 4 p.m., Feb. 3. Mrs. Claudine Shannon of the University of Wisconsin extension division in Milwaukee is the coordinator.

Enrollment in this first offering is expected to run as high as 10,000 with 2,200 inquiries in Miami alone. Members of parent-teacher associations and other interested lay people may join teachers in taking the course.

The course points up the question of whether education, on a changing society, can afford to adhere to teaching forms of the past.

It is intended to be a practical experience for the elementary school teacher who seeks information about basic audiovisual principles through which classroom instruction and pupil comprehension may be improved.

Audiovisual tools include the chalkboard, charts, graphs, pictures, opaque projectors, movies, radio, television and tape recorders.

Wittich described the course as learning how education can compete with all the attractions the commercial world uses to attract the attention of children.

Cassandra Go Home

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 28, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following lead editorial from the Washington Post of Thursday, January 21, 1960:

CASSANDRA GO HOME

No one had better monkey around with us, see, because we'll clobber the so-and-so. New intelligence proves that we're stronger than we thought we were because the other fellow won't have so many missiles as we once supposed, and besides they're not 100 percent accurate. Anyone who says that we're weak doesn't know what he's talking about and may even be part of an infamous plot to force us to knuckle under.

That, in somewhat hepped up paraphrase, seems to be the substance of the testimony by Defense Secretary Gates and Chairman Twining of the Joint Chiefs of Staff before committees of Congress. One may hope fervently that their predictions about American strength and the power balance are right. But perhaps it is not disloyal to express just a teensey weensy doubt about what Chairman GEORGE H. MAHON of the House Defense Appropriations Subcommittee skeptically called "the most enthusiastic and rosy and reassuring presentation that we have ever had."

It is probably quite true, as Secretary Gates impressed upon his listeners, that at the present time the United States and its allies have an edge over the Soviet Union. This country's prowess in manned bombers is formidable, and bombers will remain a major deterrent for several years to come. The likelihood that the Soviet Union could launch enough missiles simultaneously to wipe out all retaliatory power is not great for a year or two.

Then why the big change in approach from that of former Secretary McElroy, who asserted last year that the Soviet Union might have a 3–1 missile lead over the United States by the early 1960's? It is noteworthy that Mr. Gates assures us that there is no deterrent gap—an assurance derived by changing the intelligence method from an estimate of Soviet capabilities to a prediction of Soviet intentions. Does this wipe out the prospective missile gap? Seemingly not. No one has been talking about deterrence in the immediate present. It is the period 1962–64 that will be critical.

During this period, according to previous reports, the utility of the Navy's Polaris missile will be severely limited by the number of Polaris submarines—and, in view of the long lead time, it is the failure to provide already for more such submarines that is the crucial factor. The Air Force Minuteman is a very promising missile indeed, but it is not likely to be available in sufficient quantity to be a strong part of the deterrent until 1964. In the meantime this country must rely upon intermediate-range missiles, upon relatively small numbers of the cumbersome and vulnerable Atlas, and upon manned bombers at a time when defenses against bombers are being markedly improved.

Now it is possible that the significance of the apparent deficiencies, and their influence upon diplomacy, has been exaggerated. If so, however, a lot of expert opinions have been wrong—including the Gaither report, the Rockefeller panel and the recent Johns Hopkins University study, not to mention the views of knowledgeable persons within the Government itself. The demonstrated and acknowledged lag in space activity is further cause for concern.

All of which makes the more curious General Twining's verbal attempt to link criticism of the erosion of American power—criticism directed toward exhorting greater expenditure and effort—with submission to the Soviet Union. To try to pique the complacency and do something about the deficiency is, by an inexplicable inversion, to serve the fatuous notion that "we'd better be Red than be dead."

There is an interesting parallel between this remark and Vice President NIXON's comment in Miami the other day that too much talk about the United States becoming a second-class power could create a danger that a potential aggressor would make a miscalculation. Could it be that there is just a smidgeon of political defensiveness in the glowing portrayals of the defense picture and that such observations reflect—perish the thought—a party line?

No Rank at Bell

EXTENSION OF REMARKS
OF
HON. THADDEUS J. DULSKI
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 28, 1960

Mr. DULSKI. Mr. Speaker, I am happy to state that the Manpower Utilization Subcommittee of the House Post Office and Civil Service Committee, of which I am a member, last spring and again this past December conducted hearings in which the questions regarding the influential use of retired military people and former Government people working with defense contractors are continually being brought out. The Hébert subcommittee of the House Armed Services Committee recently released information as a result of its investigations, and I note that while the largest contractors had an average of 100 former high-ranking officers on their payrolls, one of the biggest contractors in Buffalo, N.Y., the Bell Aircraft Corp., had only 1 former general who is employed in the capacity of a consultant.

Under leave to extend my remarks, I would like to include an editorial from the Buffalo Evening News, Buffalo, N.Y., dated January 19, 1960:

NO RANK AT BELL

The House subcommittee investigating the influence of retired officers on military buying lists 762 former officers now on the payroll of defense contractors. These firms get 80 percent of the weapons business. Among the biggest contractors, the average number of former high-ranking officers is about 100, including scores of general or admiral rank. This compares with only one former general at the Bell Aircraft Corp., and he only in a consulting capacity. Could this be one reason why Bell has had such a tough time getting Pentagon contracts?

Let's Stop This Rush Act

EXTENSION OF REMARKS
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 12, 1960

Mr. BOSCH. Mr. Speaker, in 1946, when considering U.S. participation in the International Court of Justice, the Senate in its wisdom sought to safeguard our sovereign rights by adopting an amendment which has come to be known as the Connally reservation, named for the distinguished former Senator from Texas, Hon. Tom Connally. This reservation gives us the right to determine whether or not a given case comes within the purview of the International Court of Justice.

Now there is a strong move on to repeal the Connally reservation, thus turning over to an international tribunal the right to determine the cases which shall come under the jurisdiction of the court. It would seem to me that any action to repeal the Connally reservation should be the subject of extensive hearings so that the American people may be apprised of what is going to happen and fully understand all the implications surrounding such repeal. This is not a matter which should be rushed through the Congress—I fear that the American people are not fully aware of what is going on.

Under leave to extend my remarks, I include an editorial on this subject from the New York Daily News of January 28, 1960:

LET'S STOP THIS RUSH ACT

An attempt to rush repeal of the Connally reservation through Congress is apparently underway in Washington.

The Connally reservation dates back to 1946, and says that the United States reserves the right to decide what cases it will and will not submit to the United Nations' International Court of Justice, staffed by judges from 15 countries.

Senator J. WILLIAM FULBRIGHT, Democrat, of Arkansas, as chairman of the Senate Foreign Relations Committee, held a hearing on the repeal plan yesterday, with speakers limited to 10 minutes each.

A sort of echo of the Washington rush act attempt will be heard in New York tomorrow morning at 9:30, when the State bar association is to hold a meeting at 34 West 44th Street, to consider a resolution endorsing repeal.

How about a lot of patriotic lawyers showing up at that meeting and voting against this resolution; and how about people who value our national sovereignty and independence writing their Senators and Congressmen please to fight repeal of the Connally reservation?

If it is repealed, the United States will be at the mercy of the World Court in—for one eminently possible example—a legal move to take the Panama Canal away from us and internationalize it. That could deal our national defense a body blow in time of war.

It is every citizen's duty, we think, to do everything he lawfully can do to keep the Connally reservation intact.

Civil Rights

SPEECH
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 27, 1960

Mr. MULTER. Mr. Speaker, first permit me to commend the distinguished chairman of the Judiciary Committee, the gentleman from New York [Mr. CELLER], and all of our many other colleagues who have participated today in this discussion of the important matter of civil rights.

It is appropriate for me to again call attention to that nice phrase which we found in the President's state of the Union message, to wit, "a storm of semantic disorder." No phrase more aptly describes the conduct of this administration, from its inception to date, on both the national and the international scene. The words and conduct of the President with reference to civil rights emphasizes the point I make.

When the President wants to spend more Government money, when he wants to increase the cost of government, when he wants to make the big banks richer by increasing interest rates, he does not hesitate to send for his Republican congressional leaders and tell them what he wants and how to get it for him, nor does he hesitate to send his Cabinet officers to the Hill to pressure congressional members of his Republican Party to do his bidding.

But when it comes to civil rights we get nothing but empty words from him—fine phrases but no action. I am being a little too harsh on him when I say no action. Did he not appoint a commission to look into the matter? Of course, he did. Did he not pick outstanding Americans to do the job for him? Of course, he did. Did they not bring in a good report with fine recommendations? Of course, they did. Then what did he do? He turned his back on them.

We recall all too well the number of times that the President's Republican congressional leaders stood on the floor of this House and told us what the President wanted and what he needed and what he demanded by way of legislation. But when it comes to civil rights all we hear from them are excuses as to why they will not help us get a civil right bill to the floor.

I can understand why no Member, Republican or Democrat, who comes from any of the Southern States will sign a discharge petition to bring the bill to the floor. Right or wrong, almost all of them campaigned for reelection on promises, explicit or implicit, that they would oppose civil rights legislation. But every other Member of Congress is in dutybound, yes, in honorbound, to do all within his power to implement the pledges in their party platforms on civil rights.

The Democrats are doing that almost to a man. Unfortunately, the Republicans are running away from that pledge, almost to a man.

I want to reiterate on this floor what I have said off this floor. There is no principle involved that can possibly justify any Member of this House not signing a discharge petition. A man is either for or against the bill. That can be a matter of principle. But if he is for the bill there is no principle that can possibly justify his not using every effort, including putting his signature on a discharge petition, to bring the bill before the House for action. As long as the method of bringing a bill before the House by discharge petition is a part of the House rules, it must be recognized as being good principle to sign a discharge petition and bad principle not to sign it unless one is opposed to the bill. One can even justify signing a discharge petition when he intends to oppose a bill or parts of a bill, because the democratic process should always be used to give the Members of the House an opportunity to work their will with reference to every important piece of legislation.

Let us destroy this veil of camouflage once and for all. The Democratic Party has a majority by numbers in the House of Representatives. When we deduct from that majority the number of Democratic Members who year in and year out have opposed civil rights, the Democratic Party no longer controls a majority of the votes of the House. We can bring a civil rights bill to the floor and pass it only if that large number of Democratic Members are joined by those Members of the Republican Party who pretend to be for civil rights. The test of their good faith is not how they will vote on final passage or on any particular amendment but whether or not they will place their names on record on that discharge petition so as to bring the bill before the House for action.

A New Test Ban Plan

EXTENSION OF REMARKS
OF
HON. JOHN V. LINDSAY
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 7, 1960

Mr. LINDSAY. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial from the New York Times of January 28, 1960, entitled "A New Test Ban Plan."

The New York Times today published an editorial on the compromise nuclear test ban proposal which the administration has just proposed. It is a good editorial and I take the liberty of putting it in the RECORD so that all of my colleagues will have an opportunity of seeing it.

This proposal represents another effort on the part of our Government to explore every avenue in order to find areas of reasonable agreement on this all-important subject.

The editorial follows:

A NEW TEST BAN PLAN

In line with its declared policy of seeking a ban on all nuclear weapons tests that can be detected and controlled the United States has advanced, as one way of breaking the Geneva deadlock, a new plan for an approach to the problem.

Under this plan the three nuclear powers and all others ready to follow their lead would conclude a treaty aimed at prohibiting all such tests under an adequate inspection and control system. This ban would apply immediately to all tests on the earth's surface, in the atmosphere, and under water, and also to very large explosions underground. Such a ban would immediately eliminate all further fallout, produced only by the first three types of tests. It is considered feasible because both the West and the Soviets agree that, given an adequate inspection system, all four types of tests are easily detected in case the ban is violated.

But because, as the Soviets concede, there is as yet no means available of identifying smaller underground tests, a ban on such tests would be deferred until the necessary means of detection are found. A British version of this plan would include a ban on such tests in the treaty, but with a time limit to stimulate East-West research on better detection methods.

Certainly this is a just and equitable proposal which, if it does not eliminate mankind's dread of the atomic bomb, at least eliminates the fear of test-produced fallout. Yet the Soviets, which have exploited this fear for their own propaganda, reject this plan without even studying it and continue to oppose an adequate inspection system, on which any kind of ban must depend. This may not be their last word, but for the present they give the impression of campaigning for total disarmament and a total test ban while doing everything possible to prevent mutual agreement on either.

Resolution: Mack Charles Parker

EXTENSION OF REMARKS
OF
HON. HUGH J. ADDONIZIO
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 27, 1960

Mr. ADDONIZO. Mr. Speaker, the New Jersey State Conference of the National Association for the Advancement of Colored People has adopted the following resolution on Mack Charles Parker which I commend to the attention of the Congress. This tragedy underscores the urgent need for a strong Federal antilynch law and other meaningful civil rights measures to protect the rights of all our people. I again appeal to the Republican Members of the House to join with me and my Democratic colleagues in obtaining prompt action on the civil rights legislation that has been reported by the House Judiciary Committee.

I join with the New Jersey State conference in urging the administration to take every appropriate action to correct this crime against humanity. As was pointed out yesterday in the discussion on civil rights legislation, much could be accomplished in this vital field by administrative action alone. It is my earnest hope that the President will exert at long last leadership in implementing the noble principles so often enunciated by him. Let us protect the rights of man, let us end forever the

tragedy of mob violence epitomized by the murder of Mack Charles Parker.

The resolution reads:

Whereas the people of the State of Mississippi have shown a callous disregard of the principle of equal justice under the law by failing to identify, locate, and punish those who participated in the murder of Mack Charles Parker; and

Whereas the report prepared by the Federal Bureau of Investigation which has been identified as containing names of the guilty persons was given less than the attention it merits; and

Whereas these actions have embarrassed our Nation throughout the world and made a mockery of our democratic traditions; be it

Resolved, That the New Jersey State Conference of Branches of the National Association for the Advancement of Colored People sharply condem the State of Mississippi for conduct inimical to the best interest of our Nation and respectfully urges the U.S. Attorney General, the Department of Justice, and all Federal law-enforcement officials to correct this crime against humanity; be it further

Resolved, That copies will be sent to the 14 Representatives and 2 Senators from the State of New Jersey.

Civil Rights

SPEECH
OF
HON. ALBERT H. BOSCH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Wednesday, January 27, 1960

Mr. BOSCH. Mr. Speaker, I rise to make my position with respect to H.R. 8601 absolutely clear for the benefit of my colleagues and the people. Let me say that my record during my service in this distinguished body will clearly establish my consistent support of civil rights legislation and related situations whether embodied in education, labor, housing, or any other legislation. I will support this legislation now before the House, to wit: H.R. 8601, when the same comes up for a vote.

When I came to the House in 1953, Mr. Speaker, I established certain policies with regard to procedure to which I would adhere under all circumstances. Among these was a policy of not signing discharge petitions. This is not a capricious or frivolous policy on my part, but was prompted by my sincere conviction in the orderly processes of legislative procedure. I know that in my own conscience I am following what I consider to be the best course, and I am not at all impressed by words such as those used in the course of debate on this important legislation—"Republicans arise and sign the petition or else you shall ever be condemned." Condemned by whom, I ask, Mr. Speaker—members of the opposition party? Let me say that I believe the American people who have always demonstrated their desire to be fair and just in all matters will understand what prompts the action of Members of Congress in carrying out their obligations according to the dictates of their conscience and the appreciation of their responsibility.

Let us be frank with one another—this legislation can be brought on the floor for action any time the majority party really wants it to for in the Rules Committee the majority is 2 to 1; namely, eight Democrats and four Republicans. Obviously the majority can vote this legislation out. There are, however, other vehicles which can be used to bring this essential legislation to the floor. The majority party can either suspend the rules or have action on Calendar Wednesday. Those are the proper parliamentary procedures which should be pursued in the interest of assuring all citizens equal protection under the Constitution.

Meet the Provost of the University of Minnesota at Duluth

EXTENSION OF REMARKS
OF
HON. JOHN A. BLATNIK
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. BLATNIK. Mr. Speaker, one of the fastest growing and most outstanding colleges in the country is the University of Minnesota at Duluth.

In the past 10 years new buildings worth $8.5 million have been erected on a new 200 acre campus. The growth of this fine college is the result of the hard work and cooperation of many people in Minnesota and especially Duluth. Since 1953 the University of Minnesota Provost Raymond W. Darland, an outstanding educator, has contributed greatly to the school's continuing growth.

Under leave to extend my remarks in the RECORD, I insert the following article which appeared in the Minneapolis Sunday Tribune picture magazine for January 24, 1960:

By training Raymond W. Darland, provost of University of Minnesota, Duluth, is an ecologist—a biologist who studies organisms in relation to their environment. With his ecologist's eye he sees UMD as "an organism living in a very favorable environment."

For this Darland gives much credit to the unwavering support of Richard L. Griggs, university regent from Duluth, whose good offices made possible acquisition of UMD's new 200-acre hillside campus, already site of $8½ million of buildings as modern as tomorrow. Darland gives credit also to his two predecessors as provost for planning UMD's development.

But above all he credits the Duluth community. For it, UMD's achieving university status in 1947—after being a normal school, then a State teachers college—represented fulfillment of a 25-year dream of a northeastern university branch. The resultant enthusiasm has made UMD a community center, brought thousands of dollars in gifts and broadest community support.

While Darland gives credit for all this to others, many ascribe much of UMD's success to him: "The place really started to move when he took over," an associate said recently.

And move UMD has: besides its phenomenal 10-year physical growth, enrollment has doubled since 1951 to a record 2,428 undergraduates (and 31 graduate students). They study in four divisions: education and psychology, humanities, social sciences, science and mathematics. UMD is primarily a regional and commuter college: 89 percent of its students come from St. Louis and eight nearby counties.

Ehergetic Darland is a ruddy-complected 210-pounder who stands 6 feet 1 inch. Although he must constantly wear two hats—as chief UMD drumbeater and yet part of the larger university whole—he shows little strain.

A Kansas native with a bit of his State left in his speech, Darland did undergraduate work at Kansas' Fort Hays State college. After 1933 graduation he married Jewell Royse, who taught for the year by which she preceded him out of college.

Darland's doctorate (botany and plant ecology) is from University of Nebraska, where he taught (with 2 years out for navy duty) from 1941 until unlimited research opportunities—and fishing—drew him to UMD in 1948. He headed UMD's biology department in 1949, became academic dean in 1952 and provost (college head) in 1953.

Darland expects more UMD growth, to 4,000 students in 1970 (UMD grew 5 percent this year while all-university enrollment fell a bit).

This will necessitate a $12,750,000 building program (on top of $2,115,000 in 1959 grants). It also will pose the problem of holding and adding to a quality faculty—something Darland believes university affiliation makes easier.

The Myth About Benson

EXTENSION OF REMARKS
OF
HON. MERWIN COAD
OF IOWA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. COAD. Mr. Speaker, I believe that farm legislation must be passed this session to reverse the increasing decline in the farm economy.

Economic conditions in rural America are deteriorating rapidly in an ever-increasing area which seriously endangers the entire economic growth of our great Nation.

Each day my mail brings more and more letters pleading for legislative action and citing instance after instance of economic breakdown, forced sales, and bankruptcies on the farms in our Nation's breadbasket.

These are the results of the operation of the farm policies which the farmers had to live with for the past 7 years.

In the hope that the Members of the House of Representatives will take action on farm legislation this session, which will really work and be of help to the farmers, I submit the following editorial from the Olgona Upper Des Moines as a thumbnail review of the development of today's crisis in rural America. Editorial follows:

THE MYTH ABOUT BENSON

We've read about all we care to on the subject of how "Ezra Benson inherited the farm program from the Democrats."

Ezra Benson became Secretary of Agriculture in the new Eisenhower cabinet that took office January 1, 1953. He has been Secretary of Agriculture ever since.

It is true that when he took office the farm program then functioning was one that originated under a Democratic President and a Democratic Congress. But in 1953 a Republican President and a Republican Congress took over. There has been a Republican President and a Republican cabinet all of the years since then, and a Republican-advocate farm program since that time.

In 1953 and 1954 when Republicans dominated everything, if Benson had any bright

ideas of solution, he had all the cards stacked in his favor. The Democratic farm program ran out.

Since then, the power of the Presidency has been thrown solidly behind every move that Benson has made. For the most part, the Democratic Congress since then has fairly well gone along with him, except that they stood pat against some points which Benson wanted. Had they been enacted the agricultural outlook would be even worse, pricewise.

We're just plain tired of hearing, also, that the program of 1959 was one the farmers voted for themselves. The vote in question, you will recall, gave the farmer one of two choices, both Benson-inspired. They could have voted for higher supports, rigid controls and a curtailment of acreage that would almost put a family-size farm out of business, or they could vote for lowered supports and no allotments. Farmers chose the latter course, not because they could not foresee what would happen, but because for most farmers this probably meant a chance to make a living compared with what would have been the case otherwise. It was the lesser of two evils. After all, they had to live, have something in cash with which to pay taxes, send their kids to school, and maybe a new pair of pants. It wasn't that they liked the choice they selected. Benson dealt the farmer a stacked hand in that vote, and most farmers know it.

Benson has not been made a scapegoat by anyone. He has had 7 years at the helm. During his tenure of office, the cost of administration and the cost of everything that is labeled farm program cost more than in the entire preceding 20 years under the Democrats. And still times got worse for the farmer, and the surpluses became larger.

His theories just simply have not worked out. His great desire to free the farmer as he terms it has simply made the farmer one of the few segments in the economy which has not shared proportionately in an element of prosperity these past few years.

And, at the same time, he has led the city dwellers to believe that the reason for their high cost of living is the farm program. This, perhaps, is the worst thing of all that this angel from Utah has injected into the national thinking. He has deliberately tried to drive a wedge between the city food purchaser and the producing farmer. Anyone with a lick of sense knows that it makes very little difference at the food store how low the selling price per hundredweight of livestock is at the stockyards. But look at the margin of corporate profits for the big processors and you know where the spread is going.

Benson must also be something of a hypocrite. At least it appears that way. While he virtuously slings psalms about the blessing of the open market and lowered support prices, if any, he at the same time has maintained an above-parity support on wool, a product which just happens to be one of the big income items of his brethren in Utah.

Let's have no more of this myth that Benson inherited it all from someone else. Seven years later no man is entitled to blame his predecessors for anything, in the Department of Agriculture or anywhere else.

Borrowed Time Club Dedicated to Age Problem

EXTENSION OF REMARKS
OF
HON. WILLIAM G. BRAY
OF INDIANA
IN THE HOUSE OF REPRESENTATIVES
Tuesday, January 26, 1960

Mr. BRAY. Mr. Speaker, for several years I have watched with great interest the development of the Borrowed Time Club in Bloomington, Ind. This group of "young" men and women over age 70 who have proven that life's later years can be the best—filled with activities that were too luxurious a drain on time prior to retirement.

Dr. Frank O. Beck has been one of the prime movers in the club. Some of my former professors at Indiana University are a part of it. Their remarkable story has been told many times, but it keeps growing longer and more impressive.

Here is one of the latest reports on their achievements, taken from the Indianapolis News:

BORROWED TIME CLUB DEDICATED TO AGE PROBLEM

(By Pat Redmond)

BLOOMINGTON, IND.—There's a busy band of silver-haired citizens here who just won't let go of their "get up and go."

Determined not to be mustered out of society just because they've retired or slowed down a bit, they're organized to fight old age segregation.

The organization, open to all Monroe County residents over 70, goes by the title, "The Borrowed Time Club."

Their aim: To be recognized as a still-active part of the community, able and willing to contribute their talents—particularly to the study of old age.

Formed 10 years ago, the club now includes some 200 active members who meet the first Sunday of every month. A number of committee members meet as often as once a week, however.

HELPED FOUND U.F. AGENCY

Not a games-and-gab group, the Borrowed Timers are dedicated to work on the old-age problem. In its first decade, the club spearheaded the establishment of Indiana's Commission on the Aging and Aged.

Locally, the group engineered the founding of the Monroe County Council on Problems of the Aging and Aged—now a united fund agency.

Panel discussions by club members, first broadcast locally, have been relayed over the world by the U.S. State Department. Requests for information about the club come in from around the country.

The group has two homes in Bloomington which are now being converted into centers for Borrowed Time meetings and for study, counseling and recreation.

Club members glow when they talk about their organization.

B. J. Ragatz, 88-year-old retired farmer and county official from Sterling, Colo., came to visit relatives in Bloomington recently and stayed on. "The club's given me a new lease on life," he said.

NOW IN SECOND PRIME OF LIFE

Mrs. J. B. Dutcher, 80, wiow of an Indiana University professor, said she's found "a friendliness I wouldn't otherwise have."

May Roubadeaux, an active 86, smiled when she said, "It makes life worth living. I used to be a happy little girl—a happy big girl. Now I'm a happy old girl."

Schuyler C. Davisson, 94, professor emeritus of mathematics at Indiana University, said, "We're in the second prime of life."

Much of the club's success can be traced to Dr. Frank O. Beck, 68, a retired minister and professor at Northwestern University. It was in his home that the Borrowed Timers first met in 1949.

Beck, now director and curator of the interdenominational Beck Memorial Chapel on the I.U. campus, is a peppy, tenacious foe of intolerance and discrimination in any form. His frosty eyebrows flashed as he talked.

"We want an intolerant society to become conscious of our age group. Think about it. We're really the only honorable leisure class.

"So far, society's just been driving the ambulance, so to speak, for the old people. This attitude has got to change.

"In the club, we're trying to do for ourselves what society hasn't done—make use of a wealth of cast-off talent and experience."

Beck, who served as chairman of the State Commission on Aging and the Aged after it was formed in 1955, admits his club members have problems.

A PLACE IN LINE OF MARCH

"We can't cut grass any more or shovel snow. There are many who can't properly care for the big homes in which they live. Transportation is a problem, too."

One of the objectives of the club is to establish a clearinghouse for these services needed by the oldsters. And, in turn, the Borrowed Timers are thinking of setting up a program whereby they could offer services such as minor repair work, sewing, baby sitting, and other light tasks.

Not content to eat the dust of the passing parade, Beck and his fellow club members want a place in the line of march.

"We want to live until we die," Beck said.

The Philosophy of Responsibility

EXTENSION OF REMARKS
OF
HON. JAMES G. FULTON
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Thursday, January 14, 1960

Mr. FULTON. Mr. Speaker, one of the most distinguished citizens of the good State of Pennsylvania is the Most Reverend John J. Wright, bishop of the Catholic Diocese of Pittsburgh.

Bishop Wright is a young man who recently came to Pittsburgh to assume his current responsibiilties, and an active person who has done his job well, as well as taking an active interest in the affairs of the great western Pennsylvania metropolitan area.

Under leave to extend my remarks in the RECORD, I am including a speech by the bishop at a dinner in Worcester, Mass., honoring Raymond P. Harold, president, Worcester Federal Savings & Loan Association.

THE PHILOSOPHY OF RESPONSIBILITY

(By the Most Reverend John J. Wright, D.D., bishop of the Pittsburgh, Pa., diocese)

The trials of the so-called war criminals have been subjected to thoughtful criticism by commentators, legal philosophers and historians. The opinion has been expressed that the Nuremberg trials may eventually cause our Nation and our allies very real embarrassment because the courts which conducted them functioned without previous written law and with the doubtful competence of conquerors. Quite possibly, too, apart from these considerations the cases of individual war criminals may have involved injustices or inequities because of passion or partisanship or misrepresentation.

Whatever the final verdict of history concerning the competence of courts like that at Nuremberg or the prudence of the judicial precedent established there, there was one refreshing aspect to the determination to bring to trial the war criminals and to demand an accounting before some bar of justice from some of those who by deliberate plan and conscious choice brought about the appalling evil that was World War II. This determination constituted a dramatic affirmation, before all the world and under

the most solemn circumstances, of a seriously neglected truth, the truth that political, social, and like moral disasters do not merely happen. They are not the blind results of inexorable fate. Even the most complex of these calamities are not the work of irresponsible, mechanical forces alone. Just as great movements forward in the social history of mankind may be accurately attributed to the honorable actions of upright men, so the moral disasters which overtake men and nations must be attributed to the unfortunate use by responsible men of that freedom in which God created mankind from the beginning.

In the rise and fall of societies as in the personal salvation or damnation of individual men, the old truth enunciated by the Sacred Scripture remains valid. It is a law of social history as well as a condition of individual salvation: "He shall have glory everlasting who was free to transgress, but did not, who was free to do evil things, but did not do them." This is the clue to a man's perfection: "Before man is life and death, good and evil, that which he shall choose shall be given him (Ecclesiasticus 15: 18). "Behold I set forth in your sight this day a blessing and a curse; a blessing if you obey the commandments of the Lord your God, * * * a curse, if you obey not" (Deuteronomy 11: 26–28). This is also the key to a nation's progress, its use of the freedom in which God made man from the begininng: "Jerusalem, Jerusalem, thou who killest the prophets, and stonest those who are sent to thee. How often would I have gathered thy children together, as a hen gathers her young under her wings, but thou wouldst not" (Matthew 23: 37).

The determination to bring to justice the so-called war criminals constitutes, I repeat, a dramatic reaffirmation of the reality of free will and of personal responsibility for the moral consequences of individual actions. I speak of a reaffirmation because the philosophy of responsibility had lost something of its appeal, certainly in social thinking and possibly in legal thinking, in the generation immediately preceding the war.

There had always been the temptation to shuffle off accountability for moral defect. Shakespeare described and refuted it: "This is the excellent foppery of the world, that, when we are sick in fortune, often the surfeit of our own behavior, we make guilty of our disasters the sun, the moon, and the stars: as if we were villains by necessity; fools by heavenly compulsion; knaves, thieves, and treachers, by spherical predominance; drunkards, liars, and adulterers, by an enforced obedience of planetary influence." But "The fault, dear Brutus, is not in our stars, but in ourselves, that we are underlings" (Lear and Julius Caesar).

The philosophy of responsibility in modern times has further suffered from impersonal, collectivist theories of society and of history which found favor during and since the last century. These have tended to link human action to material forces and mass controls rather than to spiritual personality and individual responsibility. To be sure, an earlier generation of devout and God-fearing people had recognized the challenge of some environments and the limitations of certain heredities, but they still acknowledged that the generality of men remain free to make conscious choice between moral life and death, good and evil. But recently social theory followed new lines along which it has attempted to lead legal theory and application. As against the old philosophy of responsibility there has grown up the theory that misconduct is always abnormal, that what the law calls crime and what conscience calls sin are to be explained largely in terms of causes beyond the control of the sinner or the criminal. The dedicated to the great task remaining bephilosophy of responsibility has been replaced by the philosophy of excuse.

Under the newer concept, it is not a question of being able to transgress, but refusing to do so; it is rather a question of acting in accordance with the characters which, without our asking, we have received and which, without our choice, we follow. Character is considered a product of circumstances, and delinquency and crime are simply other names for conflict and maladjustment. Criminals are sick people, like the insane. They should be dealt with as sick people and far from seeing in their criminal actions anything for which they are responsible, we must learn to recognize in criminality the existence of something for which society is responsible. This has become the typical doctrine of a whole school of psychology and sociology. Hence the familiar captions under pictures of young criminals, "Who is the real delinquent, this boy or society?" Hence, too, the frequent statements of sociologists and other experts who announce, "We believe in the responsibility of society, not of the individual."

A few years ago I listened to a broadcast over a national network of an extremely effective radio drama. It was clearly conceived by its author and presented by its broadcasters as setting forth a profound and cogent point. Its scene was the cell of a condemned murderer. Every device of skillful radio-theater drove home the idea of the play as stated by the players: "Tonight I am sitting on the edge of a prison cot in the cell of a condemned murderer. Between him and the rope which will break his neck and choke the breath from his throat are 9 hours of tortured darkness. Soon the collective hand of society will reach out and pull the lever that will spring the trap and send his feet kicking in midair in the death struggle. Perhaps the collective conscience of society will permit itself a slight qualm. as I write, the murderer watches me. He is nothing more than a big-boned, hulking, somewhat dull kid who continually trembles. He will die in the first light of the morning. I shall write then about the court which should have tried him. It is a purely imaginary court (a court which sits in judgment on ordinary people who lead what might be called a blameless life, a court established by a law which reads in part): 'Whereas the State decrees that no one lacking 21 full years in age, can now alone be held responsible for any murder, it is ordered that a minimum of six shall then be hanged if one such minor is condemned to die.' And so this court's been called to quickly find the necessary five, the five additional nooses which await along with the one society's decreed for the young murderer."

The five extra nooses, as the play developed, were fashioned for the necks of the boy's school authorities, his parent, a political leader in his community, a representative of organized entertainment, and an average member of the general community. The broadcast was extremely effective. It undoubtedly left in the minds of millions the impression that thus responsibility was placed where it always belongs; not with the individual criminal, but with the total society—and therefore with no one. It was a dramatic example of the philosophy of excuse as opposed to the philosophy of responsibility.

Judge John Perkins, former justice of the Boston Juvenile Court, tells how one morning a probation officer came into his court room and said: "I went to the prison association dinner last night. The principal speaker made a moving address. At the end of it, after describing how a parolee had committed an atrocious murder, he burst into a dramatic peroration. Raising his eyes to the ceiling and with his voice trembling with emotion he exclaimed dramatically: 'Somehow, somewhere, someone of us failed this man.'" The judge remarked ironically: "You mustn't object to that argument. As a matter of fact, it is a wonderful idea for us, too. All these cases we have been worrying about, because they turned out badly, were not our fault. We never failed. Whenever we thought we had failed, someone else had always failed us."

This is the philosophy of excuse—the philosophy of ultimate irresponsibility. For more than a generation it has undermined the moral and legal and individual social responsibilities upon which the stability of society must repose.

The linking of misbehavior to maladjustments and to forces beyond the control of the individual offender may frequently be justified, but not so often as to warrant a general philosophy of law which loses sight of the normal facts of individual responsibility and of personal freedom. Misbehavior, whether sinful or criminal, always includes an element of maladjustment, but sometimes there are adjustments which the individual must make on the level of the spiritual in order to meet the test of the material and the trial of the evil.

We must ameliorate bad conditions. We must strive by social action to lighten the load where it is unjust or unsafe, but we must recognize that in all this adjustment there are adjustments expected of the individual as well. We have rationalized too many ruthless tyrants in terms of their alleged adolescent frustrations. Too many maladjusted criminals have been explained in terms of the alleged conflicts and tensions in the hearts of purportedly great artists who were forced to be obscure paperhangers in Austria or of alleged potential great leaders of social movements who were destined to become gangsters and leaders of antisocial rackets which tore American communities apart because "society never gave them a chance." To much gangsterism and sheer criminality on the obscure levels of the underworld and on the higher levels of international action and diplomacy have been encouraged by this philosophy of excuse in the realm of conscience and on the level of courts. The war crimes trials have caused to resound in our century some echo, at least, of that voice of responsibility which spoke centuries ago with accents divine: "This night do they require thy soul of thee." They have reminded public servants of that accountability which is imposed on every free agent: "How is it that I hear this of thee? Give an account of thy stewardship, for now thou canst be steward no longer."

It is good for civilization that the philosophy of responsibility should be reaffirmed and that the philosophy of excuse should be subordinated to it, cut down to size. Civilization was not achieved by any such philosophy as that of excuse, by vagueness about accountability. Mankind did not emerge from recurring periods of social decline and even savagery by any such formula. Social progress has not been accomplished by swinging along with impersonal destinies, by riding the wave of the future, by the blind operation of uncontrolled, biological, economic, or social forces. It has been achieved by the vision and determination, by the self-knowledge and self-discipline of single individuals and of individuals in groups who have understood the meanings of these responsible, constructive words: "I know. I will. I do."

"'Lord, if Thou wilt, Thou canst make me clean.' And stretching forth His hands Jesus touched him saying: 'I will: be thou made clean.' And immediately his leprosy was cleansed" (Matthew 8: 1–4).

"And returning to himself, he said: * * * 'I will arise, and will go to my Father, and say to Him: "Father, I have sinned against heaven and before Thee. I am not worthy to be called Thy son; make me one of Thy hired servants"'" (Luke 15: 17–19).

"It is for us, the living, rather to be dedicated here to the unfinished work which they who fought here have thus far so nobly advanced. It is rather for us to be here fore us: that from these honored dead we take increased devotion to that cause for which they gave the last full measure of

devotion; that we here highly resolve that these dead shall not have died in vain; that this Nation, under God, shall have a new birth of freedom; and that Government of the people, by the people, and for the people, shall not perish from the earth" (Gettysburg Address—Lincoln).

"Poverty is the northwind that lashes men into Vikings. * * * What we call evils, as poverty, neglect, and suffering, are, if we are wise, opportunities for good. * * * If I am left alone, yet God and all the heroic dead are with me still. If a great city is my dwelling place, the superficial life of noise and haste shall teach me how blessed a thing it is to live within the company of true thought and high resolves. Whatever can help me to think and love, whatever can give me strength and patience, whatever can make me humble and serviceable, though it be a trifle light as air, is opportunity, whose whim it is to hide in unconsidered things, in chance acquaintances and casual speech, in the falling of an apple, in floating weeds, or the accidental explosion in a chemist's mortar" (Oportunity, John Lancaster Spalding).

It is easy to satirize these valiant concepts of an age perhaps more rhetorical, but also more resourceful, more self-reliant, more imbued with the philosophy of responsibility, more contemptuous of the philosophy of excuse. But the whole history of human achievement gives meaning to that rhetoric and attests to the worth of those who indulged it, who taught their children and told their fellow citizens and trained themselves to recognize that they could do evil, but must not, that they could transgress, but would not.

So we in our legislation, in our law courts, and in our social theory must recognize and make allowance for the inadequate and the unfortunate, but we must not treat their condition as the normal condition of mankind and we must not spin our moral philosophy around their deficiencies. In our sympathy we must not place emphasis on excuse rather than on responsibility and thus spread a demoralizing social philosophy. We must make responsibility the universal norm and excuse the challenged exception. We must state the rules rather than constantly find reasons why they do not apply. We might well return to a bit of the rhetoric that glorified heroism and achievement and tone down the rhetoric lavished on those who lack the moral wherewithal by which to try or who, having it, prefer to serve themselves and blame society rather than serve society and honor themselves.

We must recognize how the philosophy of responsibility enabled boys with withered legs to become useful citizens, leaders of their community, but above all, masters of themselves—while the philosophy of excuse has allowed men of real intelligence and potential parts to become the instruments of society's confusion and of their own damnation. Social stability and individual salvation still depend on the recognition of the central place of individual responsibility in whatever good may be accomplished or whatever evil must be suffered on the face of the earth over which God gave man dominion.

Specifically, it was the philosophy of responsibility that made America great. It is the basis of free self-government as free self-government in turn has been the basis of American greatness. Woodrow Wilson said some wise things about the relationship of self-government to the kind of character produced by the philosophy of responsibility. He said: "Self-government is not a mere form of institution, to be had when desired, if only the proper pains are taken. It is a form of character. It follows on the long discipline which gives a people self-possession, self-mastery, the habit of order and common counsel, and a reverence for law which will not fail when they themselves become the makers of law."

In business there is needed, most particularly, a constant reaffirmation of the philosophy of responsibility, an acknowledgment that circumstances are never so good but what a man can do stupid and evil things, and that circumstances are never so bad but what another man can do good deeds. The philosophy of moral responsibility is the very heart of good business; the philosophy of excuse is necessarily the blight of business.

To whom, however, does a sound philosophy of responsibility hold business answerable? Not to any abstraction, like government with a capital G, medicine with a capital M, science with a capital S, prosperity with a capital P—or the other divinities of the hour. In point of fact, the philosophy of responsibility is ill served when we invoke these abstractions and give them capital letters, as if they were gods—abstractions such as Labor, Management, education, diplomacy, medicine, science, Business itself. The philosophy of responsibility prefers to talk of these in terms of individual persons, persons who can rebuke me if I let them down, persons whom I please when I do the job properly.

For the philosophy of responsibility, "Labor" is not an abstract force; "Labor" is my father, going out to work at 6:30 in the morning, coming back at 5:30 at night, going to church on Sunday, enjoying a beer in the evening, voting as he pleases on election day. "Management" is not a blind force at work in social history, elusive, omnipotent, operating with occult laws; "Management" is a man, my father's boss, for example, intelligently and conscientiously entering with personal interest into the affairs of his employees' families to encourage and befriend, or absenting himself for 6 months of the year to bask in the sun while his business and his workers take care of themselves as best they can.

It will help break the bonds of the philosophy of excuse and restore the philosophy of responsibility if we reduce to lower case these capital letter abstractions before the presence and problems of which we cringe, and begin again to think in terms of individual persons lost in the maze of the capital letters.

"Education" isn't some sort of demi-urge at work in society. "Education" is a young girl going out to her first teaching job, a priest trying to build a college, a woman giving up the best years of her life to form the hearts and minds of someone else's children.

"Diplomacy" in the age of the philosophy of excuse is another of the blind forces in the vagueness of which we take refuge. In the philosophy of responsibility, "Diplomacy" was a champagne salesman from Germany with a grudge against England, or a man to be watched with great care as, with wily calculation, he meets the press to make a point for the Soviet, or, this month, "Diplomacy" is a stubborn, dogged, admirable man with a firm, clear conscience and a rugged sense of duty—but, alas, a cancer. John Foster Dulles, mourned today by all America, is no abstraction; he was a Christian with a sense of the philosophy of responsibility, totally unprepared to back down before any "waves of the future" in the form of communism, big business, or any other of the magic words which seduce the irresponsible.

So, too, "Medicine" is no abstraction. "Medicine" is a man who took special courses and developed special talents to take care of my mother or your baby; he's a man who answers the phone at night or doesn't; who stays by me as long as I need him—or quits.

"Science" is not a blind force, a capital letter abstraction. "Science" is a professor named Goddard, ridiculed as the "man in the moon" because he knew and loved too soon truths we are slowly coming to discern; "Science" is a young man in Alexandria, Va., married, with two children, preparing to don a space suit and set forth for new heights and depths of space as a new chapter opens in the story of the response of responsible men to God's command that man subdue creation and rule over it, not back down before it and be dominated by it.

"Business," finally, is not a blind law unto itself, another of these fancied historic and social forces which mesmerize the unthinking. "Business" is a storekeeper, worried about his taxes, wondering when the Salem Square project will be underway, trying to balance his books, meet his competition, pay his taxes and send his children to school. "Banking" is not an amoral, suprahuman, economic force. "Banking" is a man named Morgan, or, as I've lately discovered, a man named Mellon, or, as the advertising club has recognized tonight, "Banking" is a man named Ray Harold.

And to whom are all these men answerable? Are they responsible to "History"? "History" is rhetoric, another abstraction. Are they responsible to "Fate" or to "Destiny"? Such words can be illusory. Are they, perhaps, responsible to "America" or to "Humanity"? These are also abstractions, the capital letter words of which the philosophy of responsibility is wary.

Businessmen, like other men living under the philosophy of responsibility, are answerable to persons like themselves—to their clients, their customers, their families, their associates, their investors, their tax collectors; they are answerable to their own consciences, and so to themselves; above all, they must answer to their God, and He is not a philosophical abstraction, but a living person who will one day be their judge. He is not an undefinable force; He is as definite and as personal as that towering son of man whom Michaelangelo painted as coming in judgment to settle accounts with all the "you's" and "me's" crowded into the famed fresco on the Sistine Chapel wall.

We speak too much of abstract concepts as if they were unalterable forces; we too often pose as the victims of the dead hand of the past, the grave problems of the present, the overwhelming demands of the future. These capital letter tyrants must also be reduced to persons—and then we understand and face them.

What is the past? The past is a man named Adam—and it's also a God-man named Jesus. It's a brave man named Columbus and a nuisance named Napoleon; a bold man named Isaiah Thomas, a scholar named Woodrow Wilson, a poker player named Warren Harding, a smart Yankee named Cal Coolidge, an unreliable man named Benedict Arnold, a man of integrity named Al Smith, a devoted man named Herbert Hoover; it is these and a million other men—good, bad, and indifferent—to whose accomplishments and to whose shortcomings we are the heirs.

The present is not quite the abstract mystery we make it seem to be. Viewed from one angle it is a wily fellow named Mikoyan, a sturdy old German named Adenauer, a brave girl named Anne Frank, or some of the less attractive girls whose names turn up in the news from Las Vegas, Cap d'Antibes, and Sunset Boulevard.

And the future is no great mystery either, at least in terms of our responsibility toward it. For you and me, the future is a baby named Joey or a little girl named Jane, most of your obligations and mine can be stated in terms of what we owe them. Our moral stature, in the philosophy of responsibility, will depend on how we serve these and their counterparts for generations to come, our damnation may depend on the extent to which we defraud them.

Ray Harold represents the type of businessman who lives by the philosophy of responsibility in just such human terms. He is a citizen prepared, indeed eager to stand up to be counted, and, if need be, to be knocked down in the interests of the

building of a better Worcester community for individual persons present and future. He may have made mistakes; he may yet make many others. But such mistakes as his type of public servant makes are a cheap price to pay for the great contributions he makes to a community's progress. He can be relied upon not to take refuge in the philosophy of excuse; he believes in and exemplifies the philosophy of responsibility.

The Advertising Club's choice of him for the Isaiah Thomas Award constitutes a timely and effective Worcester endorsement of that proud, constructive philosophy.

The Trend Must Be Reversed

EXTENSION OF REMARKS
OF
HON. E. Y. BERRY
OF SOUTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 11, 1960

Mr. BERRY. Mr. Speaker, I have asked consent to insert in the RECORD an editorial appearing in the Bennett County Booster, Martin, S. Dak., in the January 21, 1960, issue of that weekly publication.

This newspaper speaks for a great many people in South Dakota who believe as the editor believes. It is for that reason that I reprint this editorial in the CONGRESSIONAL RECORD so that the people across the Nation may have the benefit of this editor's views.

The editorial follows:

THE TREND MUST BE REVERSED

When a farmer goes to his banker to borrow money, before he gets the loan the banker inquires into his financial status and investigates the business practices of the man.

If the farmer wishes to borrow money to buy more land when he already has more land than he can operate to good advantage, the farmer probably doesn't get the loan. The banker—or any other financial institution—would probably refuse him credit on the grounds that he should sell some of his land and use the proceeds of such sale to operate profitably the holdings he retains.

By the same token, if a businessman goes to a bank to borrow money to establish or buy into a new business, he undergoes the same detailed investigation. If the loaning institution finds that he already is involved in more businesses than he can operate profitably, the loan more than likely will be denied with the advice that he should sell some of his businesses and use the proceeds to operate his other businesses in a profitable manner.

We Americans, generally, are good, sound, level-headed businessmen—except when it comes to government and international relations. Then we throw out the window all the knowledge that we have gained through experience with good business practices.

For instance, on page 221 of the U.S. Government Organization Manual, 1958–59 issue, the Interior Department describes its vast empire by asserting that it has custody of 750 million acres of land. Thus this single agency claims to have jurisdiction over 32.3 percent of the total land and water area of the United States and all of its territories and possessions.

On page 254 of the same manual the Forest Service claims that it administers about 180 million acres. This acreage equals 8.1 percent of the total land and water area of the United States and all of its territories and possessions.

This is the landholdings of but 2 of the more than 700 Federal agencies which have landholdings, but these 2 are the largest.

Yet, the national debt continues to climb. It was estimated in President Eisenhower's budget that by the end of 1960, the Federal Government would be $284 billion in debt.

We, as taxpayers and furnishers of the capital for operation of this huge business, should thoroughly investigate the return the Government is getting from owning nearly half of the land area of the Nation.

If there is not a justifiable return, we should refuse to grant any more credit and advise the Government to sell much of its landholdings and operate its remaining holdings in a profitable manner.

A further investigation bears out the fact that this is very sound advice today, but should have been given years ago.

On this vast land empire the Federal Government operates nearly 20 percent of the Nation's industrial capacity. For the operation of this vast industrial empire, the American taxpayers were required to provide the capital—an estimated $250 billion gathered through taxes or included in the national debt—almost enough to wipe out the national debt.

Most of these businesses were established with the pretense that the Government can do a better job than private enterprise. This is a fallacious belief that is currently becoming far too popular for this country's good.

The contention that private enterprise either failed or refused to perform in any economic area has no basis in fact.

The Federal corporate activities, generally, do not operate in a profitable manner. Instead of assuming normal operating responsibilities and supporting the civic interest, they demand services of all kinds from every level of government. Despite their political preference and privilege, the Federal corporate activities have consistently lost more than $10 billion per year since 1948, and in 1959 the losses are estimated to exceed $19 billion.

The House Government Operations Committee estimates the Government's investment in its properties to be $262 billion. If the property could be sold back to the people at just 25 percent of cost it could cut the national debt by $65 billion and save the taxpayers nearly $2 billion in interest charges per year.

It would also save amortization costs, cut one million people from the Federal payroll that supply free services to the Federal corporations and would save nearly $13 billion per year in goods, services and facilities necessary for the one million Federal employees no longer needed.

Besides the revenue from the sale of the property, a conservative estimate of tax money saved would be nearly $40 million.

Instead of our Government being the greatest pauper in history it could be returned to a solvent position and regain the affection of its citizens.

The trend toward more Government services and more invasion of private enterprise can only lead to socialism and eventually communism. Unless the present trend is reversed we may expect just such a government within a few short years.

The Booster still believes, although we appear to be in the minority, that the least government is the best government.

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

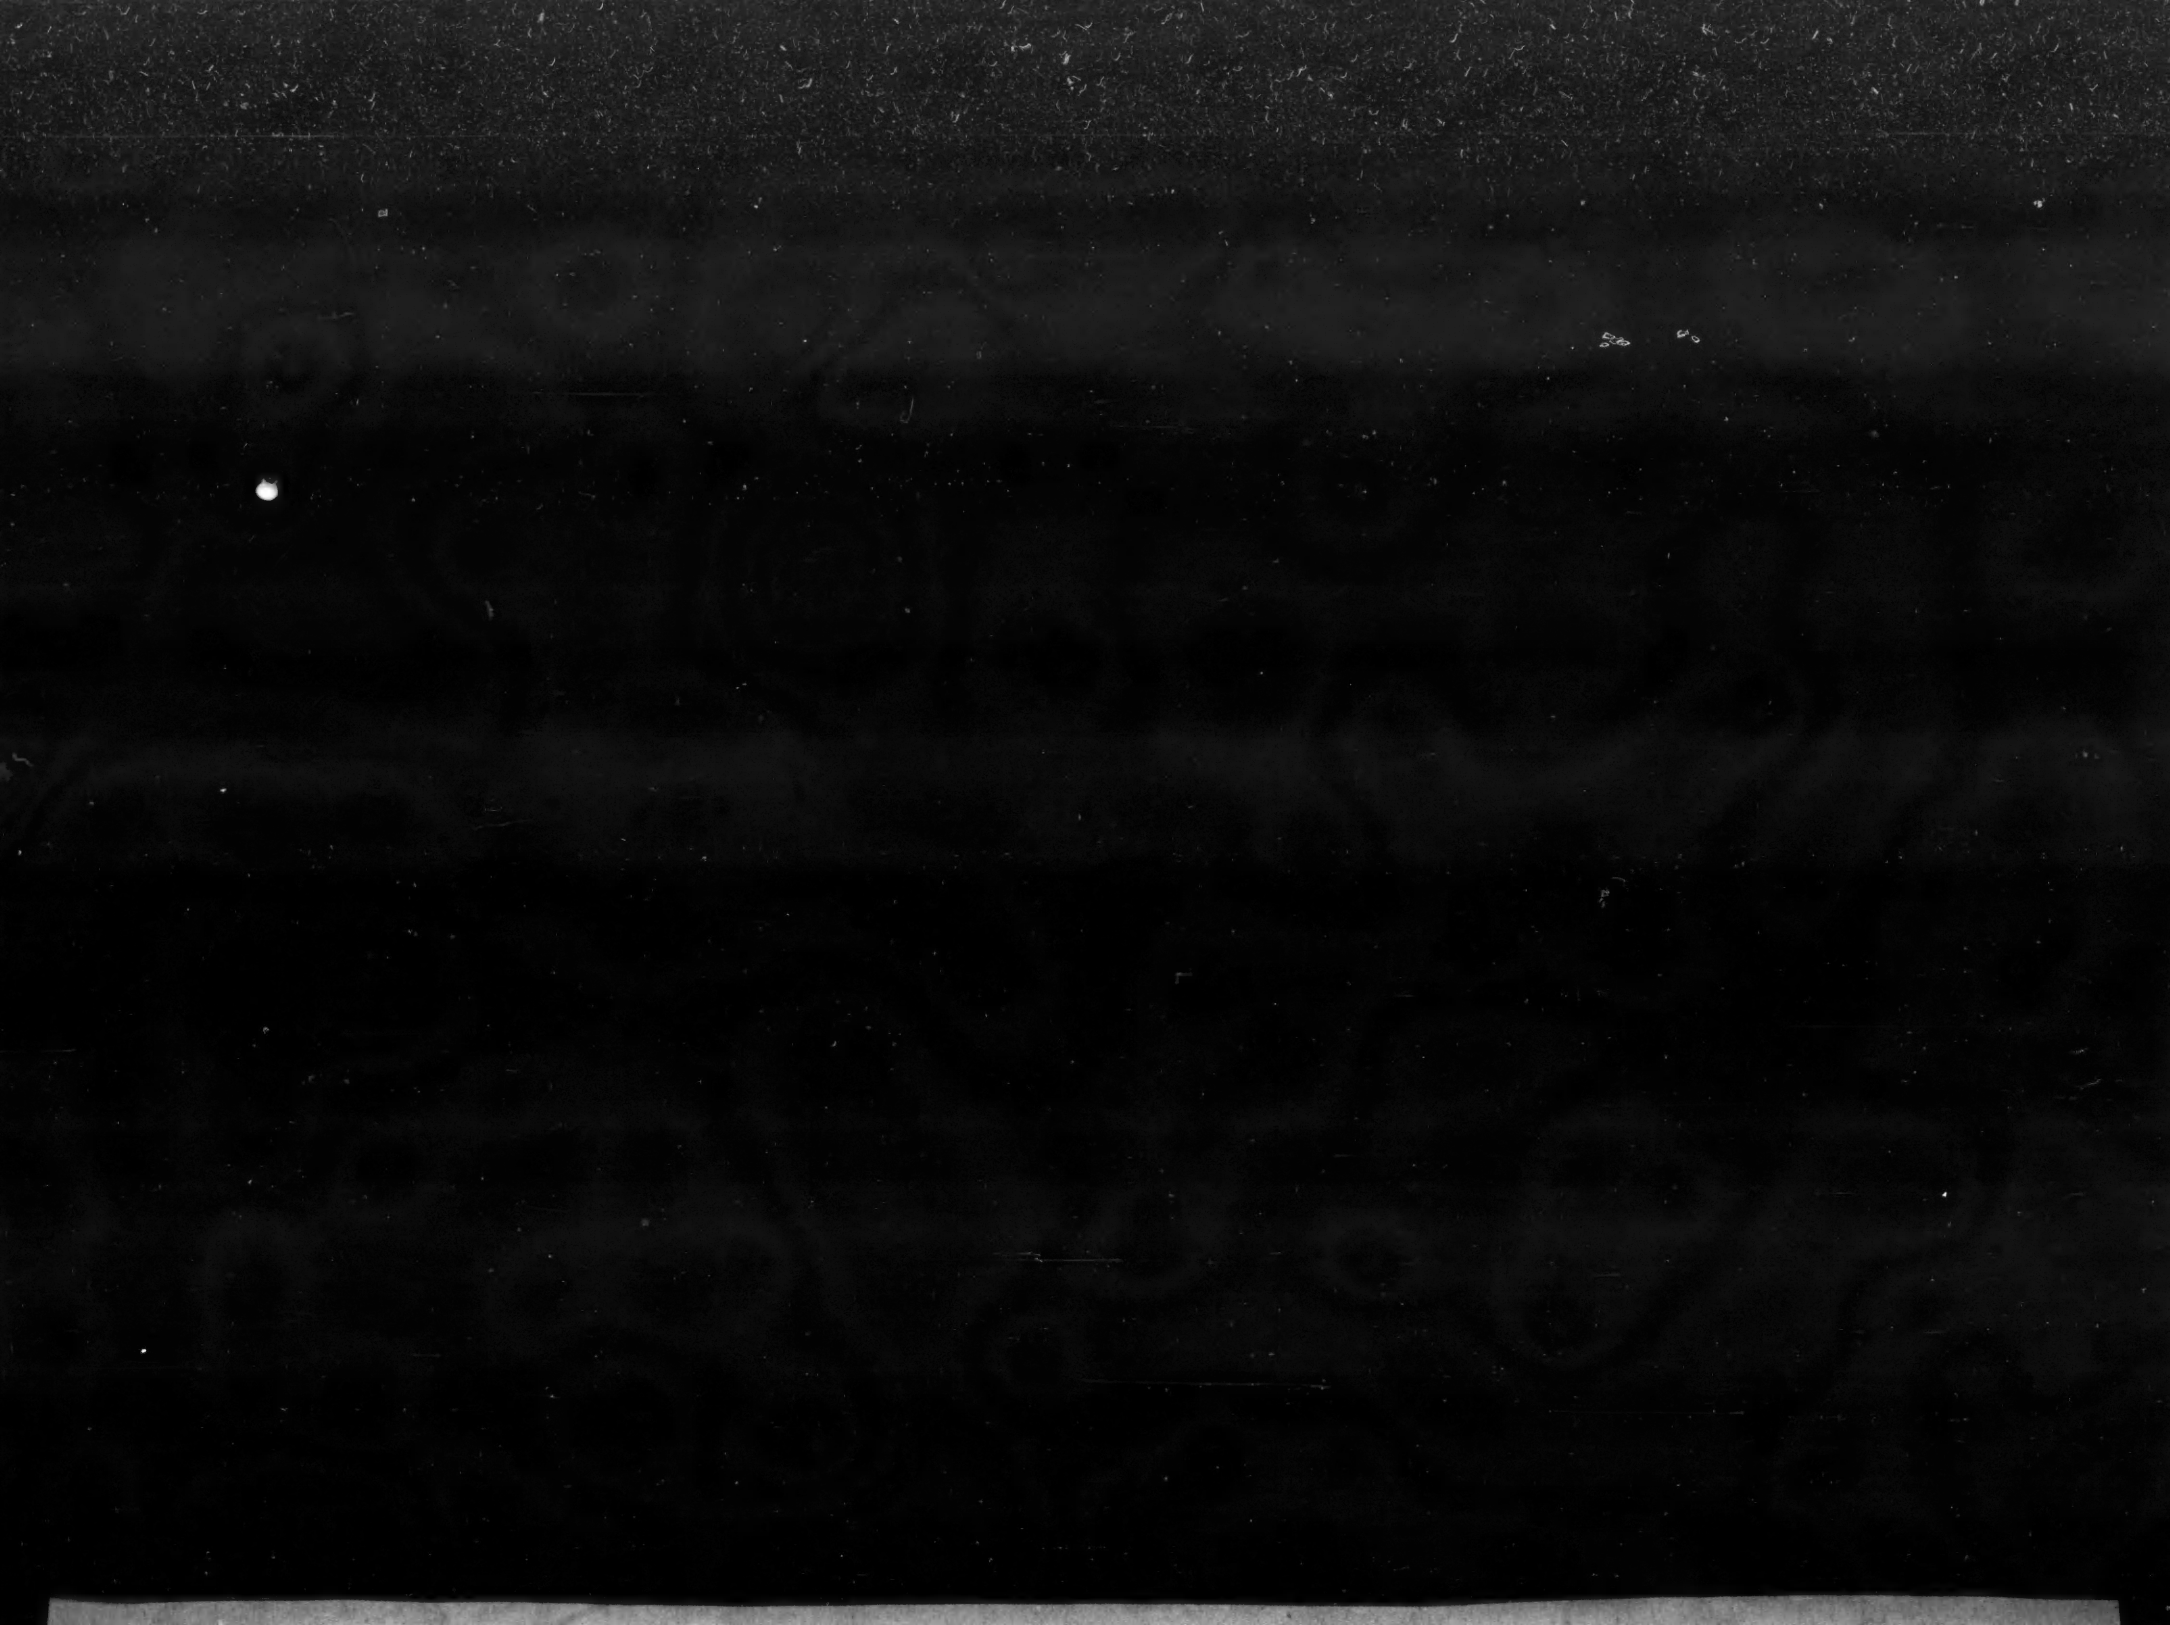
Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).



Appendix

The Common People

EXTENSION OF REMARKS
OF

HON. PRESCOTT BUSH

OF CONNECTICUT

IN THE SENATE OF THE UNITED STATES

Friday, January 29, 1960

Mr. BUSH. Mr. President, I ask unanimous consent that there be printed in the Appendix of the RECORD a sermon entitled "The Common People," which was delivered by Dr. William H. Alderson at the First Methodist Church of Bridgeport, Conn., on Sunday, January 17, 1960.

The sermon was inspired by the impact the President made on the people of the world by reason of his visit to the Middle East.

Dr. Alderson is one of the outstanding preachers of the Methodist Church today; in addition to carrying on his parish work, he is chairman of the committee on entertainment of the general conference of the Methodist Church to be held in Denver this year, and he is presently serving as grand chaplain of the Grand Masonic Lodge of Connecticut.

There being no objection, the sermon was ordered to be printed in the RECORD, as follows:

THE COMMON PEOPLE

"And the common people heard Him gladly" (Mark 12: 37).

There are verses in the Scripture which suddenly become incandescent, once your attention is fastened upon them. Set off all by itself in the book by Matthew is that verse which has no connection with what goes before or comes afterward, but which has carried strength and hope to countless people: "Come unto me all ye that labor and are heavy laden, and I will give you rest." "The Lord is my shepherd, I shall not want," becomes more soothing and consoling the more you repeat it. Paul says: "I can do all things through Him who strengthens me," and the more you read it the more tremendous it sounds. And like a bolt of summer lightning which illuminates a whole landscape in a flash, we have the word of our text: "And the common people heard Him gladly."

These words create instantaneous pictures in the mind. We see crowds of people everywhere. A multitude on a mountainside listening intently to a white robed figure whose eyes and manner and voice fascinated them; a tremendous crowd on the seashore with their attention riveted on a man sitting in a boat and speaking as they had never heard anyone speak before; the air full of shouts and singing as a man on donkey-back rode slowly along a narrow lane formed by pressing, turbulent crowds lining the highway leading from Bethany to Jerusalem; a subdued multitude watching a man die on a cross; these are familiar pictures to us. Crowds everywhere. It seems at times that Jesus lived among crowds.

And when Mark with one bold stroke puts these words into his story he is painting a hundred pictures with one sweep of his brush: "And the common people heard Him gladly."

1. Why did the common people hear Him gladly?

There are several reasons, and I think a brief look at them will help us understand the scope of the truth of this text.

(a) Doubtless many people in the crowds who surrounded Jesus were there out of curiosity. Why wouldn't they be? Life in the long ago could be terribly dull and uninteresting. The villages in which most of the people lived were small and drab. Doubtless they said many times: "Nothing ever happens here." Then rumors started. Travelers brought stories about a roving teacher, the like of whom no one had ever seen. Some claimed He could make the deaf to hear, the blind to see, the lame to walk, and dumb to speak. Someone even declared He had opened a tomb and called a man back to life. Who wouldn't go to have the routine of village and country life broken by a chance to see these things happen.

(b) But there was a deeper reason to be found for the presence of the crowds than the fact that they were curious. Mark in his direct way does not say: "And the common people stood and stared at Him." That would be the record if curiosity was all that prompted them. Mark says: "And the common people heard Him gladly." And one reason was that they could understand what He was talking about. Many of the teachers to whom they had listened had engaged in long, involved, abstract theological discussions. Doubtless they were very learned men, but how many of the common people understood what it was all about. How many ministers have we all listened to and while we felt that it was all very scholarly and contained many historical and literary allusions, yet it left us cold and wondering what the speaker was after.

But this was not true of this teacher who roamed the countryside in Galilee. He talked about sheep and goats, loaves of bread, torn and patched garments, grapes and thistles, children playing in the streets, lost money, boys running away from home, robbery and violence on the highway. And the common people liked it because they understood what He was saying. There were lessons to be learned from these everyday things which they had never thought of before. This man made them plain. They saw it now, though they had never thought of it that way before. No wonder they heard Him gladly.

(c) But there was a still deeper appeal to the words of this teacher. He gave to the common people a feeling of importance. When he talked to them they seemed to have a value no one else had ever ascribed to them. No one had ever really cared. Here was a man who seemed to care and he talked about a God who cared. Many of these people were slaves. They were ashamed of their lowly stations in life. This man raised humble service up to a level where it began to be the most important thing in the world. Here were outcasts and lepers with whom no one would deal. This man talked with them, ate with them, healed them. He looked straight into their eyes and said: "You are the salt of the earth, men can't get along without you. You are the light of the world, you are indispensable. God cares so much about you that even the hairs of your heads are numbered."

Is it any wonder that when it was rumored that he was to pass that way, "flails were flung aside on the threshing floors, hoes were dropped in the gardens, half-empty baskets were left in the vineyards and the forge fires died" while the common people tramped the dusty roads to find a man who talked straight to them about a God who cared for them. No wonder the common people heard him gladly. If the common people had failed to hear him with joy it would have been the most damaging possible reflection on the truth and validity of his message.

Now that brings us to the point where we can give this truth a turn in a direction which bears definitely upon our life today. One of my deepest convictions is the truth that in the long run you can trust the common people and their judgment. Just a month ago at this time our President was on an unprecedented trip around the world. As you all know he was visiting one country after another in the endeavor to build good will for world peace. Through the press, the radio and the television we were able to keep in close touch with the President's progress and the way he was received around the world. I discussed this phenomenon with one of my long time friends in this church, and as a result of that conversation this emphasis is in my message this morning.

What was the most remarkable thing about President Eisenhower's journey? Was it the political significance it will have on the coming election? Some politicians would like to charge that, but they cannot make it stick. Was it the concessions, secret or otherwise, which the President may have secured from various national leaders? Was it the chance to see at firsthand the needs of these countries? No; it was none of these. The great, heartening significance of this visit was the spontaneous response of the common people of the world to the sincerity and leadership of a man who is truly seeking peace. There has never been anything like it in all history and it gives the soundest hope for peace that the world has had in the last half century.

3. And that brings us to this final truth which is both cheering and sobering. It is this: "The people always get, at last, what they want." History is precisely the illustration of this truth. But you have to wait for the verdict of history. You may err in judgment if you draw your conclusions too soon. Back in colonial days the residents of this country were being severely taxed by England and were being given no voice in the matter. The famous protest, "taxation without representation is unjust," was born in those days. But with red-coated British soldiers, with fixed bayonets, marching in the streets, what could be done about it? If you look at history at that point you draw a false conclusion. But that isn't the end of the story. The common people reached the point where they would no longer tolerate such injustice and the embattled farmers who were the common people "fired the shot heard around the world" which led to a revolution and ultimate freedom.

You draw another false conclusion if you look only at a mob of the common people, acting under wicked leadership, standing in front of Pilate's judgment hall and crying for a crucifixion. They got a crucifixion that morning, but the whole world knows that was not the end of the story, but only the prelude to the opening of a new way of life to the whole world.

I think that our ultimate hope regarding Russia lies in this truth, "at last, the common people get what they want." I do not know whether it will come in Russia with a cataclysmic uprising which may make the streets run red with blood again, or whether it will be a leavening movement which will bring about gradual change from within; but I do know there is something invincible in the human spirit and the common people of Russia will not go on indefinitely suppressed by burdens too grievous to be born.

I think the same thing is true of the increasing, and now almost unbearable tax burden in this country. Our personal taxes are now so heavy that they leave nothing for people of modest incomes to save and invest. And I think the time is not far distant when the common people will demand and get an adjustment which will restore to them the spending control of their personal incomes. This will strengthen our free enterprise system and undergird our national economy until it will rest on the surest foundation it has ever known.

We, the common people, get what we want. The books which are printed, the music which is played, the radio and television programs which are offered, the business practices employed, the moral standards observed, are all what the common people want. If they are low in quality they will be changed only when the common people demand it.

This is our great hope for peace or for any other improvement in the life of the world. There is a rising tide of intolerance on the part of the common peoples of the world against this business of living in the constant threat of destruction. This is where Christianity and democracy go hand in hand leading the way to a better, safer world. Christianity gives us the idealism and the spiritual power. Democracy gives the common people the final word, the ultimate judgment. That's why this text is one of the most hopeful words ever written, for it was said of Jesus: "the common people heard Him gladly."

Informational, Educational, and Cultural TV Programs

EXTENSION OF REMARKS
OF
HON. CLIFFORD P. CASE
OF NEW JERSEY
IN THE SENATE OF THE UNITED STATES
Friday, January 29, 1960

Mr. CASE of New Jersey. Mr. President, I congratulate the three major networks on their decision to devote an hour each week of their most valuable time to cultural and educational programs which will start next November.

Such voluntary cooperation to improve television programing should be encouraged.

I ask unanimous consent to have printed in the Appendix of the RECORD a statement which I made on the subject on January 17.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT BY SENATOR CLIFFORD P. CASE

The suggestion by Chairman John C. Doerfer of the Federal Communications Commission Thursday that the television networks set aside a half hour each weekday night for informational, educational, and cultural shows makes a lot of sense.

It would give real meaning to the Federal Communications Act requirement that our television stations be operated in the "public interest, convenience, and necessity."

Such a step toward setting a floor or minimum standard during the preferred evening time would help achieve the goal of balanced programing. Possibly an hour, rather than a half hour, would be required for a realization of the full potential of this type of program. I mention this since minimum standards, once established, so often tend to become maximum ones.

I am pleased to read the initial responses of the three major networks. I recognize the strong pressures which competition forces on them in programing and I feel that this suggestion can help them achieve a higher standard of service by placing all of them on the same basis.

As the ranking Republican on the Senate Communications Subcommittee, I believe our subcommittee should determine promptly whether additional legislation is necessary in order to give effect to this suggestion.

Americans Want Action on Tax, Labor, and Farm Fronts

EXTENSION OF REMARKS
OF
HON. LESTER R. JOHNSON
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. JOHNSON of Wisconsin. Mr. Speaker, for every citizen who writes to his Congressman about the issues which face the Nation, there are hundreds who do not. Their opinions were sampled in a nationwide survey conducted by George Gallup, director of the American Institute of Public Opinion.

According to this poll, three problems loom largest in America's mind—taxes, labor, and the farm situation. As I have worked on farm legislation ever since coming to Congress in 1953, I was interested to see that the public is becoming increasingly aware of the farm problem and lists it as the third most important area in which Congress should act.

Under leave to extend my remarks, I would like to insert the results of this Gallup poll in the RECORD:

TAX CUT IS FIRST IN PUBLIC MINDS

(By George Gallup, director, American Institute of Public Opinion)

PRINCETON, N.J.—As the 86th Congress reconvenes, what problems or issues does the American public believe should be on its agenda for legislative action?

To get the answer, the Gallup poll assigned 158 members of its field staff to talk to a carefully selected nationwide sample of voters. In all, a total of 1,519 people were interviewed.

This survey, just completed, reveals three problems to be uppermost in the minds of the persons interviewed. These are:

1. Tax legislation: The cry for lower taxes has proved to be a persistent one over the years. The greatest number of people say they want Congress to deal with this perennial problem.

2. Labor legislation: A typical opinion often voiced in this survey was "Congress should straighten out the labor situation," or "Something must be done about these strikes, like the steel strike."

3. Farm legislation: With such terms as "surplus," "soil bank," and "subsidy" becoming household words in many quarters, the farm problem is cited next by the public as one with which they would like Congress to come to grips.

Here is the question which was put to a representative cross section of the American public:

"Suppose you were writing your Congressman or Senator about the things you think Congress should do, what would you say you want done by Congress?"

Mr. and Mrs. Average Citizen, disinclined to sit down and write his or her Congressman, has the opportunity to express an opinion through the medium of the public opinion survey.

Here are the problems or issues that the U.S. public would like to see the 86th Congress take up and act upon as it begins its 2d session, in order of frequency of mention:

PUBLIC'S AGENDA FOR CONGRESS

1. Tax legislation.
2. Labor legislation.
3. Farm legislation.
4. Keeping peace.
5. Social security, welfare.
6. High cost of living.
7. Aid to education.
8. Unemployment.
9. Civil rights.
10. Reduction of Government spending.

In addition to requests for legislation on major problems facing the country, this survey reveals a multitude of more specific concerns of the public, ranging from the regulation of the sale of cranberries to the pollution of rivers.

A sizable proportion—about one person in five—is either uncertain about what he or she would like Congress to act upon, or is not sufficiently aroused about any one problem to propose that Congress tackle it.

Tribute to the Late Frank S. Land

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Friday, January 29, 1960

Mr. HENNINGS. Mr. President, last November a very distinguished Kansas Citian died, Mr. Frank Land. Throughout the most of his life Mr. Land was devoted to helping youngsters, and whenever the Order of DeMolay meets today Mr. Land is there in spirit.

I ask unanimous consent that an editorial from the Kansas City News-Press entitled "Frank Land, Friend of the Boy," be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Kansas City News-Press, Nov. 20, 1959]

FRANK LAND, FRIEND OF THE BOY

Frank S. Land, although a resident of Kansas City, could truly be called a "citizen of the world."

Because he wished to help boys nearly a half-century ago, a worldwide organization came into being, and today, wherever the Order of DeMolay holds a meeting, the memory of "Dad" Land is revered.

The number of boys given a sense of direction and purpose by being members of De-

Molay is countless. Many a boy who belonged to that organization is a better man today because he was a member.

Frank Land was a civic leader without peer. His many solid contributions to our community will be remembered for generations.

But his wish to help boys will go down through the years as a living memorial of far more value than marble or bronze.

His epitaph could well be a phrase coined by a president of Optimist International, another organization devoted to lending a helping hand to boys:

"A man never stands quite so tall as when he stoops to help a boy."

California Congressman Insists on Firsthand Knowledge of Jets

EXTENSION OF REMARKS
OF
HON. HARLAN HAGEN
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, January 25, 1960

Mr. HAGEN. Mr. Speaker, there are many Members of Congress who produce the most effective results in this body through hard work with a minimum of fanfare and national publicity, and without whose efforts this body could not function. One of these persons is the beloved leader of the California congressional delegation, who is also the leader of the Democratic segment of that delegation. I refer to the Honorable HARRY R. SHEPPARD, a devoted legislator whose progress through life has been strictly of his own making and who has engaged in an interesting variety of activities, both humble and exalted.

This background is touched upon in a very excellent article under the byline of Harrison Humphries of the Associated Press, and carried nationally on or about the date of January 1, 1960. This artiele vividly describes the many splendid facets of the career of this man who is beloved by the California delegation and, I am certain, equally so by all Members of the House of Representatives who know him intimately. The article in question follows:

CALIFORNIA CONGRESSMAN INSISTS ON FIRSTHAND KNOWLEDGE OF JETS

(By Harrison Humphries)

WASHINGTON.—The elderly civilian walked briskly into a Florida airbase and asked to ride a B–52G Stratofortress during an aerial refueling exercise.

It was obvious that officers in command at Eglin Air Force Base would rather have their 75-year-old visitor watch the somewhat risky operation from the ground.

But military men don't say "No" to Representative HARRY R. SHEPPARD, Democrat, of California.

For 20 of his 23 years in Congress, SHEPPARD has been a specialist in appropriations for various functions of the military services, particularly the Navy. He is now chairman of the House Appropriations Committee panel reviewing proposed construction projects at all Army, Navy, and Air Force bases.

The request at Eglin was merely the latest demonstration of SHEPPARD's lifelong, intense curiosity.

A self-styled nomad in his youth, SHEPPARD at 29 had seen so many places and done so many things that he was hired by the fledgling silent movie industry to pick the outdoor settings for the adventures of Pearl White, Tom Mix, William S. Hart, Pola Negri, and other silent film personalities.

In his legislative career, SHEPPARD has been a frequent passenger on the Navy's warships. He had ridden in all types of the Nation's military aircraft, breaking the sound barrier a half-dozen times aboard jet fighters.

Citing his experience before dubious officers at Eglin, SHEPPARD insisted on going up in the B–52G. Thus he became probably the oldest man to ride in a jet bomber while it took fuel from a jet tanker.

"I believe firmly in the visual concept," SHEPPARD said in an interview. "I can get more knowledge from a few minutes actual experience than from listening to the testimony of experts for 10 days in a committee room."

Eglin was only 1 of 61 defense installations visited by SHEPPARD during the recent congressional recess. His inspection tour took him through the Midwest, Northwest, southern California, Arizona, New Mexico, Texas, and Florida.

In previous years, SHEPPARD has been around the world three times looking at U.S. military bases in the remote corners of the earth.

SHEPPARD is serving his 12th term in the House from California's 27th district—San Bernardino County. A Democrat, he already has announced his candidacy for reelection to a 13th term this November. He is a dean of the California congressional delegation.

Born in Mobile, Ala., January 10, 1885, SHEPPARD was an only child. He was orphaned at 16 when his parents, Dr. and Mrs. Edward H. Sheppard, were killed as a train hit their buggy.

SHEPPARD took his $1,680 inheritance, and by stretching it with odd jobs, acquired an engineering education at Georgia Tech.

Jobs were hard to find when SHEPPARD emerged from school with the class of 1907. He landed first in a Birmingham livery stable tending 24 horses for $10 a week and the privilege of sleeping in the harness room.

Then he took to the road.

"I was a nomad—over the hill to greener pastures," SHEPPARD recalled. "I traveled and did about everything."

He worked 3 years for a Michigan farm machinery manufacturer teaching farmers in Wisconsin, the Dakotas, Minnesota, and Kansas how to use their newly purchased threshing machines.

In 1914, when Hollywood was young, SHEPPARD was hired by Independent Picture Corp. as technical adviser on external sets.

His work took him to Alaska to select the settings for a silent thriller starring Tom Sanches. He led a company to New Mexico to film a Tom Mix western, "The Outlaws of New Mexico." He worked out the timing for Pearl White's leaps from horses to moving trains.

"For 3 years, I worked with virtually all of the leading movie characters of that era," SHEPPARD said.

In 1920, he opened his own consulting engineering office in Fresno, a business he sold in 1924 to join a biochemist, O. B. King, in establishing King Laboratories in Yucaipa, Calif., for the extraction of malic acid—used in medicines—from fruit.

SHEPPARD sold his business in 1934 and planned to take his wife, the former Kay Olsen, to Europe. The trip was postponed when he accepted the suggestion of a group of San Bernardino County citizens that he run for Congress.

Victor over seven Democratic opponents in the primary, SHEPPARD was elected in November 1936, to the first of 12 consecutive terms in the House.

A meticulous man, there's never a paper on his big glass-topped desk except the one he's working on. Filing cabinets and bookshelves along the walls are lined neatly on top with scale models of military aircraft, missiles, and ships.

SHEPPARD rises early and retires late. He usually is at his office by 7 a.m.

He and Mrs. Sheppard entertain occasionally at their big 12-room house in Washington and accept invitations infrequently.

"With personal friends, I enjoy dinner and a cocktail," he said. "But the major part of the invitations in Washington are showcase operations—planned for cause and effect. I don't go for them."

Deficiency in Education

EXTENSION OF REMARKS
OF
HON. J. W. FULBRIGHT
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Friday, January 29, 1960

Mr. FULBRIGHT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an excellent editorial from today's New York Times.

Mr. WILLIAMS of New Jersey. Mr. President, I have read the editorial which appeared in the New York Times today regarding educational deficiencies in the United States, and I am delighted to join the Senator from Arkansas in his request that it be printed in the RECORD.

The problems facing our schools will come up before the Senate shortly for serious consideration. It is my sincere hope that, underlying these discussions, will be the clear realization that the quality of education today will determine our status as a nation in the future. I think that the ideas presented in a New York Times editorial today present a straightforward and constructive summary of the deficiencies and needs of our schools. In stressing the need for quality as well as quantity, they have rightly urged that both sides of the problem be faced in a single legislative coin.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

DEFICIENCY IN EDUCATION

Making all due allowance for the political aroma of President Eisenhower's speech at a Republican fundraising dinner in Los Angeles, one cannot pass unchallenged his optimism on the subject of American education. "Time and again," said the President, "we hear spurious assertions that America's * * * educational * * * efforts are deficient."

So far as this newspaper is concerned, such assertions are not spurious but genuine. Earlier in the same talk President Eisenhower acknowledged that there are "great deficiencies"—the words are his—in the number of classrooms available for the constantly growing number of students. If there are great deficiencies, as there are, then there is nothing "spurious" in stating that America's educational efforts up to the present have been "deficient." The President apparently believes that his plan for

encouraging classroom construction by having the Federal Government help pay the debt service on local school bonds would remove the deficiency. We don't think the administration bill would begin to meet the problem.

What is that problem? Briefly stated, it involves a shortage of over 130,000 public elementary and secondary school classrooms at the beginning of the current school year. Secretary Flemming himself says that "we have barely been building enough schools each year to take care of annual enrollment increases * * *"—though 70,000 new classrooms were built last year. The problem also involves inadequacy of teachers' salaries, now averaging less than $5,200 a year, as well as the wide spread shortage of qualified teachers.

But the problem of American education goes deeper than lack of buildings or lack of equipment or lack of scholarships or lack of pay, or even lack of personnel. It involves something infinitely harder to improve than deficiencies in plant or salary scale. It involves quality: Quality of teachers, quality of instruction, quality of curricula, quality of students, quality of output, quality of standards. Here is the area of greatest deficiency that cannot be cured merely by plant or money.

Nevertheless, new plants and more money are primary essentials if America's educational deficiencies are to be remedied. A satisfactory aid to education bill would help meet this urgent need; and it is difficult to see how either party can face the people with a clear conscience next November if no action is taken in this direction.

Sinews of Strength

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Friday, January 29, 1960

Mr. MUNDT. Mr. President, last fall the visit of Premier Nikita Khrushchev to the farming heartland of America inspired Mrs. Margaret Scott Biskeborn of Chamberlain, S. Dak., to write an original oration for her son, Gary Biskeborn, to deliver in a high school public speaking contest. I believe the content of this oration is worthy of attention, and therefore I ask unanimous consent that the oration be printed in the Appendix of the RECORD.

There being no objection, the oration was ordered to be printed in the RECORD, as follows:

SINEWS OF STRENGTH

Mr. Khrushchev's visit to America has caused us to think deeply and to evaluate our beliefs, our freedoms, and the standard of our ideals which represent America. Mr. F. C. Christopherson in an editorial in the September 24 issue of the Sioux Falls Argus Leader said, "Yes, Mr. Khrushchev was in the heart of the Nation, Wednesday, and I like to believe that that great heart of America beat so vigorously and so adequately that he was compelled to realize that the American way has its sinews of strength—a strength so stout that it would be folly to test it."

What are these sinews of strength? What undergirds this great American heart, this American spirit?

Senator KARL MUNDT stated in Chamberlain Friday night, September 25, "America and Russia are competing in a contest between concepts and ideals, using these devices as a means successfully to attain those goals for which each nation is striving."

What are these ideals and ideas that we Americans believe in as a nation?

From our beginning the Declaration of Independence states, "We hold these truths to be self-evident, that all men are created equal, that they are endowed by their Creator with certain unalienable rights, that among these are life, liberty, and the pursuit of happiness."

Our Constitution became the cornerstone of our democracy, guaranteeing these certain inalienable rights in the Bill of Rights, to each individual citizen. Our Constitution insured these rights in the establishment of a democratic form of government, which upholds freedom of speech, public education, freedom of worship, wholesome living, justice, private enterprise, private ownership and our reward of merit system as a way of life. Basically then, the spirit of America is first expressed in the right of the individual citizen with respect and consideration for others; it means free hands, free lips, free choice, self-government, justice, education; this spirit of America has a concern to show love, harmony, and equality to all.

Underlying these great rights which we treasure as ours, lies the eternal truth that in order to have them to hold, we, as citizens, must constantly give of ourselves. We must accept our responsibility and fulfill obligations which freedom requires. We maintain that freedom when we cast our vote each election day; when we serve willingly in public service when requested. Each citizen must realize that he must live up to his highest in law observance, right moral living, industry, attainment, and concern for the welfare of others. If we fail in our duties as individuals in measuring up to what our free Nation requires of us, we weaken the great basic sinew of strength undergirding our American spirit.

Good, patriotic, right-minded citizens just do not come into being by "happenstance". The great stronghold for preserving and teaching American ideals and molding citizens is the family and home. Parents must realize and accept their responsibility to build right attitudes and a right spirit by maintaining a discipline in the home which children respect. A child who is allowed to disregard the discipline of a home or to know no discipline in his home, will later disregard the discipline of his school, his community and his Nation. A right home will build that sinew of strength, religious faith and reverence for God and His guidance, through regular family and public worship. A home molding a child in upright citizenship will teach him honesty, fair play, and standards of moral conduct; it will teach respect for law and consideration for others. Parents building right attitudes will teach children that goals are reached by hard work, and not by any sudden shortcut.

We would hope that Mr. Khrushchev felt the throb of Americanism pulsing through those families in America who strive to live up to these standards.

Our schools and our organizations within our communities supplement the family and home in the building of a right American spirit in a growing citizen. Our Y.C.L. organizations in our common schools, our FFA and FHA in high schools, give children their opportunity to measure up to responsibilities that are similar to those they will assume later as citizens. Our Boy Scouts, Girl Scouts, Church Youth Groups, Campfire Girls and 4-F organizations challenge members to live up to their very best. The 4-H pledge expresses well what the 4-H clubs, sponsored by our National Government, are trying to achieve.

"I pledge—
"My head to clearer thinking,
"My heart to greater loyalty,
"My hands to larger service, and
"My health for better living, for my club, my community and my country."

We believe Mr. Khrushchev must have felt the throb of Americanism expressed through the magnamity of adult leaders and sponsors of youth groups, who go the second mile in service to build our American ideals in youth.

Our adult community organizations who show concern for others in the giving of their time, talent, and money, carry on with the building of American spirit.

In his August 31 weekly report, "Your Washington and You," Senator MUNDT gives us a word picture of America as he would show our country to Mr. Khrushchev. "I would show him a typical American church on a Sunday morning with the happy God-fearing people moving in and out of that place of worship. I would show him a typical American farm in South Dakota, Iowa, or Nebraska, and let him observe firsthand how our American farm families enjoy the opportunities of public education, freedom of worship, wholesome living and the rewards and fruits of private enterprise. I would show him a few of our American small towns ranging from perhaps 1,000 in population to 10,000, because nowhere else except in the Anglo-Saxon countries do people in small communities enjoy the unique advantages and opportunities which they have in the United States. Finally I would show him some State capitols to try to make him understand how our system of states rights and decentralized government operates, while at the same time showing him our National Capitol in Washington with an explanation of its unique system of checks and balances.

"Add to these a few visits to large cities, industrial areas, educational institutions, and the inevitable parking lots which show more clearly than anything else how average Americans join those of vast means in enjoying the advantages of the good life under private ownership and individual freedom. The faces of happy Americans throughout this tour should convince Khrushchev that their grandchildren will also resist communism; that Americans are proud of our system and entranced with their freedoms; and that we are not warlike people with aggressive impulses, but peace-loving individuals believing in the brotherhood of man and the dignity and importance of the individual citizen."

The challenge to us living now and to each generation is to live up to our responsibility in the carrying through and the building up of our American sinews of strength so that the picture drawn by Senator MUNDT will continue to be viewed as the ideal way of life in contrast to the way of life produced by coercion, regimentation, and godlessness in Communist Russia. Freedom is indeed everybody's business and each of us should do our part to keep America American.

Jefferson National Expansion Memorial

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Friday, January 29, 1960

Mr. HENNINGS. Mr. President, the people of St. Louis, Mo., waited more

than 30 years for the start of major construction work on the Jefferson National Expansion Memorial on the west bank of the Mississippi. That construction began last year, but, under the provisions of the budget recommendations for fiscal 1961, it will be halted at the end of 1961 because of a lack of construction funds.

St. Louis is, I believe, rightly disturbed over this turn of events. The city's dismay is illustrated by editorials which have appeared in both of the city's major newspapers. I ask unanimous consent that these editorials be printed in the Appendix of the RECORD.

There being no objection, the editorials were ordered to be printed in the RECORD, as follows:

[From the St. Louis Post-Dispatch, Jan. 27, 1960]

CONGRESS AND THE RIVERFRONT

It is good news that Mayor Tucker was favorably received by the House Appropriations Subcommittee, which is considering Federal funds for the national memorial on the riverfront. Since Representative CLARENCE CANNON, chairman of the full committee, attended the meeting and supported the mayor, it is reasonable to hope that Congress will be asked to vote more than the utterly inadequate $1,650,000 recommended in President Eisenhower's budget.

The mayor pointed out that so small a sum would bring all work to a halt at the end of fiscal 1961. This would make the project much more expensive in the end, he added, not only because of possible inflation, but also because of the wasteful expense of an on-again, off-again work schedule. Such inefficiency would be only false bookkeeping economy.

In any case, the Government made a bargain with St. Louis at the outset of the project and again more recently when the National Park Service set 1964 as the date for completion of the work. The city has always kept its part of that bargain. Its share of the needed money is available. It is time for Washington to keep its word, and we believe that Congress will see to that.

[From the St. Louis Globe-Democrat, Jan. 20, 1960]

LET'S FINISH WHAT WE START

The White House was way off base when it asked Congress to cut to the bone funds for the Jefferson National Expansion Memorial on the riverfront. The St. Louis delegation asked for $5,686,875 to continue work on the riverfront project and $2,503,125 to finish what is under construction or under contract now.

The Budget Bureau's recommendation, endorsed by the White House, means that the project would grind almost to a complete halt at the end of the next fiscal year. That would kill any hope of completing the riverfront memorial in 1964—the 200th anniversary of the founding of St. Louis.

Interior Secretary Seaton has promised St. Louis that this project, on which so much of downtown redevelopment depends, would be completed in 1964. Now the Budget Bureau has, in effect, told Seaton and St. Louis to go peddle their papers.

The Federal Government, it might be added, has a commitment of more than 20 years standing to complete the memorial, as Senator STUART SYMINGTON said, in commenting on this stab in the back from the Budget Bureau.

At the same time that the Budget Bureau recommended a cut of 71 percent in the St. Louis riverfront development, it asked Congress for money to start 42 new water resource development projects.

Before Washington embarks on any new projects, it should finish what it has already started.

We are glad to see that the Missouri delegation has promised to fight the Budget Bureau's proposal tooth and nail.

History Is Made by Fuels Like These

EXTENSION OF REMARKS
OF
HON. GEORGE D. AIKEN
OF VERMONT
IN THE SENATE OF THE UNITED STATES
Friday, January 29, 1960

Mr. AIKEN. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an address on the subject "History Is Made by Fuels Like These," delivered by William R. Connole, a member of the Federal Power Commission, at the banquet of the Electric Consumers Information Committee, on January 19, 1960, in this city.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

HISTORY IS MADE BY FUELS LIKE THESE

(Address by Commissioner William R. Connole of the Federal Power Commission, at banquet of Electric Consumers Information Committee, January 19, 1960, Washington, D.C.)

In a recent issue of the Law Review of one of the best known eastern universities a story is told about a widely esteemed professor of law at the institution who would begin his first lecture to freshmen students by writing on the blackboard the numeral "2" and underneath it the numeral "4." Drawing a line underneath the two numerals he would turn to the class with an expression which plainly invited comment. An eager young student would invariably rise to suggest that "6" should be placed beneath the two numerals. No sooner would he have the words from his mouth than another would cry out: "No, the answer is '2'." The professor would show dissatisfaction with both of these answers until some bright young man would suggest that "8" would be the proper number.

Professor Schwartz finished the anecdote this way:

"What is the problem?" Ned Keedy asked them. When they had compounded their errors by successively proposing "addition," "subtraction," "multiplication," he triumphantly demonstrated that, for want of a plus, minus, or other sign of the operation to be performed, they could not know what the problem was. "And, gentlemen, unless you know exactly what the problem is, you cannot possibly give the right answer."

I think this classic "Mr. Chips" story, as delightful as it is, points up the message I would like to leave with you today. Surely no one who sets out to solve a problem, whether it be in the field of law, arithmetic, or national affairs, can hope to do so unless he has a complete understanding of what that problem is. In other words, there must be a frame of reference against which he is to relate a given set of facts in order to reach a conclusion.

Conspiciously absent in our national scheme of things is the frame of reference, the expression of national intention, against which our basic natural resource questions have to be resolved. Confronted with a set of facts indicating the types and amounts of energy that are available at home and worldwide and another set indicating possible consumption patterns and quantities at home and abroad, there is absolutely no certainty that any given person or set of interests will come up with anything like a meaningful answer. In short, despite our lengthy history and undeniable dependence on energy as the source of our national prosperity and international security, this country lacks any policy that guides us in the use of that energy. There is no definable, identifiable way in which a new problem can be related to our history or our future resource utilization.

What makes this lack so crucially important is the fact that all natural resource problems eventually reduce themselves to the energy resource problem. Given an abundance of low-cost energy, salt can be taken from the ocean, the vast tar sands and oil shales of the West can be utilized, barren lands can be made fertile, remote and low-grade coal seams made useful and, indeed, every natural resource present in any quantity would be as available as the most advantageously situated is today. Indeed, with the answers to such problems the question of feeding and caring for the teeming millions which will populate this globe will become relatively a simple matter.

Reducing it to the more mundane and immediate, it is difficult, indeed, it is impossible for Government agencies to operate under today's conditions without a clearly stated energy policy. To cite a few examples:

Recently, the Department of State, the Department of the Interior and, indeed, the Congress of the United States wrestled for months with the problem whether to curtail large scale imports of offshore petroleum produced in low-cost areas such as the Middle East and Venezuela. In the absence of a specific policy formulated in advance it was necessary to calculate the effect of large scale imports on the domestic economy and on the national defense in an atmosphere charged with urgency and subject to all the gales and storms of vested interest arguments. It is no wonder that the oil import policy which evolved has been something less than entirely satisfactory to anyone.

Many others can be cited, some in the area of the special concern of the Federal Power Commission. Certainly the so-called dump fuel issue is one of them. Another is the reciprocal issues arising from the imminent imports of natural gas from Canada. Although these certainly should have been apparent many years ago they, too, have never been the subject of national concern on this side of the border or of formal international discussion between Canada and the United States.

I urge the adoption, indeed, I state the absolute need of a national energy policy—clearly stated, soberly arrived at and flexible enough that it can fit conditions reasonably foreseeable.

The need for this policy is not due to the special interests of any one or more industries. No one has a greater stake in it than the consumers of energy in every form, whether they be consumers of electric energy or users of petroleum energy in their homes or automobiles. Indeed, if there is one thing that should be avoided in shaping a policy for energy used in this country it is the suggestion that such a policy is motivated toward one or more vested interest groups.

The American Petroleum Institute, the Texas Independent Producer and Royalty Owners, and similiar organizations tried hard and successfully for the creation of a petroleum policy favoring the use of domestically produced petroleum over foreign produced petroleum. The National Coal Policy Conference urges the limitation of imports of residual crude into this country for yet another reason.

There are other groups no doubt who could be identified favoring one or another of these positions. The important thing, it seems to me, however, is to combine efforts of groups such as these who have the energies and, perhaps what is more important, the economic incentive to emphasize one aspect or another of the energy policy question. The efforts of such groups together with an effective, dispassionate and objective consumer or user interest would go a long way toward realizing the dimensions of the problem that we are engaged in solving when we handle energy resource questions.

I have long recognized the fatal lack of an energy policy in this country and the need for some study to develop one. I applauded the efforts to make such a study when the President's committee was appointed some years ago to study the energy question. I was encouraged by the creation of a joint industry effort in the form of the National Coal Policy Conference combining as it did the coal industry, mining machinery industry, the electric utility industry, the railroad industry, and the mineworkers. I noted with considerable pleasure the interest in this direction contained in the President's budget message in which it is proposed to provide fuels research under contracts awarded the Secretary of the Interior. But none of these has proved enough.

In 1957, before the Independent Natural Gas Association of America, I urged that industry to place its prestige and power behind an effort to shape a national energy policy. I said: "The American energy picture is approaching a critical stage. We face the need for immediate formulation of a sound national fossil fuels policy, with Government coordinating and streamlining its efforts; industry and consumers assisting with sound planinng for future growth and use."[1]

In 1959, addressing the 42d annual convention of the National Coal Association, I again urged that industry to exert itself toward such an end and made these specific recommendations. A study should be initiated broad enough to cover all energy resources not just coal. This study should decide first in what direction our present energy use pattern is taking us. The study should be made by an objective group dominated by Federal Government using the facilities of industry and independent research groups. Finally the study should have as its aim Federal legislation.

While I doubt that it was the consequence of my suggestions, there was introduced less than 2 months after my suggestions, a concurrent resolution in the U.S. Congress calling for the establishment of a joint congressional committee to make a study leading to the development of a national fuels policy. Unfortunately, the resolution failed.

I now suggest to this group which represents itself as a champion of consumers of energy in this country and has as its purpose the improvement of the use patterns of energy in this country that it put its efforts behind the creation of a meaningful, effective, flexible national energy policy to fill the gap that is now so conspicuously apparent to anyone who addresses himself to this—the basic natural resource question of our time.

I propose to make some rather specific suggestions before I finish. But, lest there be any who still doubt the need for or the practicality of the suggestion that a national policy is necessary for this country, let me make this observation which should appeal to citizens of a democracy like ours. Overwhelmingly the majority of advanced nations whose economy is based on energy utilization are presently engaged in making such a policy or have already done so, yet none of them is dependent on energy to the extent of the United States.

Press reports indicate that France and Great Britain are so engaged. I am informed that the European Community is exploring the need for an energy policy more effectively to use the fuels and energy resources at command and, of course, our good friends the Russians would never miss as certain a bet as this. Izvestia states it this way in part: "In working out a long-range plan for development of our national economy, we are providing for the extensive but integrated use of oil, gas, and coal for our powerplants, industry, and transportation. * * * We intend to keep a very watchful eye on the country's natural energy fuels balance."

There is ample precedent in this country for the adoption of a policy that will state the problem before it sets out to solve it. Perhaps the most successful and familiar to this audience was the remarkably farsighted position of President Theodore Roosevelt who, under the able coaching of Governor Pinchot, made natural resource history in the early 20th century with his classic veto messages striking down piecemeal hydroelectric and river basin development. Because his actions were taken in the infancy of the hydroelectric industry and because we stand today at the threshold of an unimaginably more intensive use of energy resources at our command, I think the language used by President Theodore Roosevelt in the famous Rainy River message is especially timely:

"We are now at the beginning of great development in water power. Its use through electrical transmission is entering more and more largely into every element of the daily life of the people. Already the evils of monopoly are becoming manifest; already the experience of the past shows the necessity of caution in making unrestricted grants of this great power.

"The present policy pursued in making these grants is unwise in giving away the property of the people in the flowing waters to individuals or organizations practically unknown and granting in perpetuity these valuable privileges in advance of the formulation of definite plans as to financial or other ability to utilize the gift, and have sought it merely because it could be had for the asking.

"In place of the present haphazard policy of permanently alienating valuable public property we should substitute a definite policy."

Conceding now the need for such a policy, what should be in it? How should we go about making one? What must we avoid?

The last question, I think, is easiest to answer. Like the proverbial plague, any suggestion of industry domination or of single fuel preferences should be completely avoided.

The answer to the second question is not a great deal more difficult. I have already suggested part of the answer. The first step is the creation of an authoritative, dispassionate study group preferably oriented around the Congress but employing private research organizations and utilizing the mechanics of public hearings, to determine where we are now heading with the helter-skelter, carelessly confused energy use pattern that has accidentally evolved in this country's brief history. This will be the first and, indeed, the giant step in the direction of energy policy formulation.

The first question, of course, is the most difficult. While I hesitate to suggest what the study would finally recommend, it would seem safe to make some forecast based on my exposure to energy use in this country from the vantage of the Federal regulatory bench.

I think the energy policy that should dominate this country's use pattern should have as its bedrock foundation the idea that energy must cost the user as little as possible. Low-cost energy will be abundant energy and abundant energy is indispensable.

In order to implement this idea we must know what the costs of the various energy sources are. The current confusion of costs and value so clearly exemplified in the kaleidoscopic proceedings before the Federal Power Commission attempting to relate the cost to price of natural gas must be eliminated. We must know whether a given energy use source is being sold at a cost to the user which is equal to, more than or less than the input cost required to make that energy available.

In addition to the actual input costs for the several fuels, there are other economic costs that are equally as real, even though less exactly measured. Here I mean the costs to the economy of losing a large segment of, say, the coal industry or the domestic oil industry, if cheaply produced off shore oil were to capture an even greater share of our domestic energy market. Then again, there is the cost to society of not using an energy resource to its maximum advantage.

In yet another respect we must establish costs. I refer here to the cost in terms of national defense of permitting one or more energy source to dominate all others. This question, of course, is one on which I do not dare even suggest an answer. However, we must know what is being surrendered in order to gain some defense advantage. I do suggest that international security and prestige is sometimes made of more subtle stuff than warehouses full of missiles or ocean lanes filled with tankers.

I have indicated that I believe low cost is essential to any energy policy for the good of this Nation. I appreciate that the forces that would oppose any efforts to reduce the costs of fuels or energies are truly formidable. There is no doubt, for example, that the fastest way to reduce the average price per unit of petroleum energy in this country is to permit unrestricted imports of crude and refined products from the Middle East and Venezuela. The obvious and complex reasons which oppose such a suggestion need no telling here.

The point I make, however, is that unless we know exactly to what extent our national economy and international prestige depends on low cost energy no meaningful judgment could ever be made whether the cost of getting cheap offshore crude into this country is greater than the price to those who would buy it.

Before closing I should like to list one or two other areas in which I feel the need for energy policy will be most marked. Soon the vast natural gas resources of western Canada will be available for import into this country. Within a matter of 5 years the natural gas resources of the Middle East and Venezuela in all probability will be available through the use of ocean-going liquefied methane tankers. In this area alone the policy of the U.S. Government whether to encourage or on what terms to limit or indeed whether to discourage such matters is almost guesswork.

Or to cite another, the field of atomic energy with all its dazzling promises has yet to prove itself anything but a large-scale and very expensive laboratory experiment. In what manner does the best interests of this country require us to go on subsidizing this development?

The history of the United States is marked by unprecedented material prosperity. Not even the rigors of several major depressions since the onset of the fossil fuel age has slowed the incredible rate of growth that has characterized our standard of living. Not even several globe-shaking wars have inspired us fully to our international responsibility.

But this is not the result of any preordained, divinely instituted plan. Almost

[1] "Energy, Its Use and Abuse"; address before the Independent Natural Gas Association of America, Sept. 10, 1957, Houston, Tex.

entirely the prosperity and prestige of the United States has been due to the virtually insatiable natural resources at its command and, of course, none of these would be of any value were it not for the greatest resource of all, energy.

Coal, oil, natural gas—the history of the United States was made by fuels like these. They had a beginning, and they will have an end. The principles of prudence and good husbandry that motivate us in their use are yet to be formulated. We simply do not know what the problem is we are so boldly setting out to solve.

The history of this Nation's past was made by fuels like these. But history will make fools of us unless we decide now how we can best use the resources at our command.

Freedom Is Up to You

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Friday, January 29, 1960

Mr. WILEY. Mr. President, we recognize that the preservation of freedom is a task with which not only the Federal Government is concerned, but also it is the responsibility of private citizens.

Fortunately, there have been many efforts through private initiative which have helped to strengthen freedom in our country. These efforts have found voice through individual efforts and organizations, aimed at strengthening the fiber of our people and to improve our way of life.

Today, I should like to pay tribute to one such organization—Kiwanis International. At its 44th annual convention there was adopted an inspiring preamble to resolutions reflecting an inspired and broad understanding needed to help in today's problems. The preamble reads as follows:

BY OUR LABOR WE MOLD

Man, who is created in the image of God, must in these times have faith, abundant hope, and, most of all, charity. Charity is a virtue of the heart and is the concern of all mankind.

Effective charity demands action, and the activity of yesterday is meaningless unless we perform new deeds of service today.

We who have lofty ideals which inspire ideas, by our labors, mold them into acts. The work we have done is as naught unless we go ever forward and redouble our efforts, and God would have it so.

All men are not gifted with the same talents, but each in his own way and with earnest heart can work sincerely for his God, his community, and his nation.

Not every man can be a statesman, or a scientist, or a warrior; nor did God intend it so; but each as a child of God can be the best of whatever he is as he builds.

The spirit of these words, transformed by action into a living, moving force, will be of tremendous help in meeting the challenges that confront us.

In the December 1959–January 1960 issue of the Kiwanis magazine, there was published a platform for 1960 under the theme, "Freedom Is Up to You."

The issue also contained an editorial by Erwin B. Canham, editor of the Christian Science Monitor and president of the U.S. Chamber of Commerce, reflecting some of the great significance of this theme.

I ask unanimous consent to have the text outlining the objectives of the editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

FREEDOM IS UP TO YOU

(By Erwin D. Canham, editor, the Christian Science Monitor and president, U.S. Chamber of Commerce)

There is no question, it seems to me, that Canadians, Americans, and freedom-loving people everywhere are today facing far graver dangers than ever before. In time of war, public thinking and governmental action are geared and responsive to crisis. In time of prosperity and no hot war such as the free world has enjoyed, with the Korean interruption, for nearly 15 years, the danger of apathy is deadly.

Now comes the thaw: the Nixon and Khrushchev visits, the summit talks, the disarmament proposals, the projected Eisenhower trip to the U.S.S.R. There is every prospect that citizens who must be eternally vigilant to protect their freedoms will sink into deeper sleep than ever. It is well to remind ourselves of some home truths that remain unfinished business:

The armaments race, despite current discussions, remains deeply dangerous and heavily burdensome. There is no real sign of its lessening.

The causes that produce armaments are even more dangerous. Perhaps they are moderating a little. Possibly rivalry in world power is shifting from military to economic grounds.

If so, the economic contest with world totalitarianism may be just as menacing to freedom, in the long run, as military rivalry.

The vast, unsolved problem of Asia remains on the American doorstep, all the way from the looming power of Communist China to the tragic instability of southeast Asia and the uncertain future of India and the Middle East.

The American economy, severely damaged by the steel strike, takes another spiral turn into inflation.

And there is little sign that the Western world is awakening to wage a purposeful economic, political, and idealogical crusade for freedom.

On the other hand, beneath the surface, there are some sound elements of encouragement:

Communism is not penetrating into the great nations of western Europe.

With the opening of the Iron Curtain, many ideas from the West are spreading like wildfire in the Soviet Union. The Soviet people, far from showing hate and anger toward nations their government has attacked with propaganda for 43 years, shows curiosity and friendship, especially toward the United States and a profound hope for peace.

The American economy has elements of strength, as well as of inflation. Technological change is making progress. There is a return to functionalism in the automotive industry.

More Westerners are asking questions about the goals, values, and principles of their society. Some healthy soulsearching is going on.

The battle for individual freedom, people are recognizing, begins in the individual. It begins with his own standards and values: the purposes of his life. Then it extends into society; into business and professional forms and activities, into government. For many years, Americans and Canadians have been finding voluntary methods of solving problems. Voluntarism is the answer to statism. Just as long as any vacuum area of unfinished business or unsolved problems is left, some aggressor will push in. Communism thrusts into any vacuum area left around the world. Statism thrusts into any vacuum area in national society.

So the first way to project individual freedom into organized, social freedom is in voluntary organization for the solution of problems. That is why so many million Americans give freely so much of their time and talent for the solution of civic problems and the advancement of collective goals. Every successful American belongs to more than a few voluntary organizations, which are the channel for his social input. Such organizations help to integrate and articulate a free society.

But government at municipal, State, National, and global levels remains a major challenge. No government will grow smaller in the years just ahead. As we move out into space, we will need government capable of coping with the space age. That means more able, responsible, intelligent, dedicated, and honest men and women in government. The profession of politics must become perhaps our most respected and challenging profession. It needs our very best talent. Our very best people must work at politics—at all levels—but beginning with the levels nearest to the people. This means elective levels. The civil service, important as it is, is not so important as the decisionmaking elected official.

The economic challenges presented in different ways by the Soviet Union—with its impressive growth rate, its advancing technology, its undeniable dedication—by West Germany and other European states, and by Japan are vitally affecting North America. America, with its position as leader of the Western nations, must curb its inflationary spiral while supporting a growth rate that will unfailingly keep its economy ahead of the Soviet Union's. Its technology must be modernized, its productivity advanced so that the Nation will not be outstripped by the new factories and the hard-working peoples of Germany and Japan.

The danger from Moscow is, of course, far the greater. For the Soviet growth rate, without exaggerating it a bit and recognizing the low base from which it started, spells economic power. It spells power to support a vast armaments position, power to invade selected markets and bind nations with economic shackles, power to aid underdeveloped nations with subversively intended economic support. It represents power to proclaim and exemplify to the world the false claim that communism solves people's problems and meets their needs better than the free system does.

We are in the most competitive world of our lives. To preserve freedom, and help it spread, we must work hard, intelligently, zealously, boldly. There is a world to gain—or lose.

From 1959 to 1960; an Opinion

EXTENSION OF REMARKS
OF
HON. JOHN L. McCLELLAN
OF ARKANSAS
IN THE SENATE OF THE UNITED STATES
Friday, January 29, 1960

Mr. McCLELLAN. Mr. President, I ask unanimous consent that there may be inserted in the Appendix of the RECORD an article entitled "From 1959 to 1960; an Opinion," written by Dr. George S. Reuter, Jr., president of the Educa-

tional Research Association of Arkansas, College Heights, Ark.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

FROM 1959 TO 1960; AN OPINION

(By Dr. George S. Reuter, Jr., president, Educational Research Association of Arkansas, College Heights, Ark.)

Some events need no date. It could have been 1959, but it was June 17, 1947, when Ruth C. Reuter, wrote:

"Seated here now
I think of you,
And the sweetness of
Your love—so true.

"I ponder back
Upon the thing
That filled my heart
And made me sing.

"Oft times in nearness
I fail to see
The love that binds
My heart to thee.

"But remember still
What e'er befall
The love is there
And it is my all.

"Though we're apart
One thing stands true:
My heart will be
Always, with you.

"Parting brings sorrow;
But just the same,
Life is made sweeter
On meeting again!"

In 1959, Les Cox wrote "Silver Jubilee" and thus gave the world a reason to rejoice:

"Twenty-five long years ago
A great event took place;
For 'twas that year the 'Sword' was born;
And how it's grown with grace.

"The pilot on that happy year
Was our own John R. Rice;
And how we thank our blessed Lord
For one so great and nice.

"Down through the years he's proved that he's
A man that's more than wise;
For when the Devil tempts with sin
He shouts, 'No compromise.'

"He scoffs at those who dare to change
The great truths that he's heard;
For with a zeal that's born of saints
He takes God at His word.

"His bank account is very large—
But 'monetary'—no;
For his wealth is the souls he's saved,
And Jesus he loves so.

"He's tireless in his ministry,
And travels countless miles;
And when he's blue you'd never know,
Because he always smiles.

"His Christian friends, with prayers and funds,
Have backed each noble deed;
For they all know, to 'harvest souls'
You first must plant the 'seed.'

"His staff and Christian family
Are 'powers behind the throne';
For great things aer not wrought of God
By man's own power alone.

"So to the 'Sword' and John R. Rice:
You've shown us heaven's key
So may God bless you everyone,
This silver jubilee."

It was Emerson who said that "every revolution was first a thought in one man's mind," and it was Andre Malraux, Minister of Culture of France who stated: "• • • Culture has two unsurmountable boundaries: servitude and hunger. That we may have the privilege of contributing to eliminate them, or creating a civilization which resembles our hope and which becomes the first one to place all great human works in the service of all men who long for them."

Last year the educational world looked to the centennial programs that honored Horace Mann and John Dewey. Mann died the year Dewey was born. Both gave much to American education.

Ladies contribute much to any civilization. Dr. John R. Rice recently stated five principles that should make ladies even greater in 1960:

"1. Christians should be more conservative in dress than worldly people.

"2. A Christian girl or woman should not intentionally emphasize sex nor try to have sex appeal for men.

"3. Christian women ought not to make themselves conspicuous by being unnecessarily different from other nice people.

"4. A Christian should set out to observe the spirit of the Scriptures where they speak in matters of dress.

"5. The Christian woman should always remember that her chief adornment is that meek and quiet spirit which in the sight of God is of great price."

To make 1960 the "golden year" that our President expects, the author of the 1959 book, "For Conscience' Sake," has described the ideal citizen: "I believe the answer is that a properly disciplined wife often becomes a better wife again than one who hasn't been married before. From a personal standpoint, I can testify, that no man, royal or otherwise, ever had a more wonderful wife than I do. She bore three fine sons to her first husband and he later died. We were married and she has brought much light into my life. I would put her up against any queen who ever lived as to beauty, charm, goodness, companionship, and Christian virtues."

In conclusion, to go from 1959, where many good events happened, to 1960, America may expect greater activities if the goals are worthy and the determination is strong.

Preeminence of Michigan as Skiing Spot

EXTENSION OF REMARKS
OF
HON. PHILIP A. HART
OF MICHIGAN
IN THE SENATE OF THE UNITED STATES

Friday, January 29, 1960

Mr. HART. Mr. President, when we think of skiing and other winter sports, we tend to think of Sun Valley, or Squaw Valley, or one of the New England skiing areas. It will no doubt be of interest to a good many people, as it was to me, to learn that Michigan placed five men among the eight on the Olympic riding team: Bob Wedin of Kingsford, Jon St. Andre of Ishpeming, Dick Rahoi of Iron Mountain, Willie Erickson of Kingsford, and Rudy Maki of Ishpeming. The national championships will be held Saturday, January 30, at Iron Mountain, Mich., where we have the world's highest ski scaffolding.

Mr. President, I ask unanimous consent that the interesting article from the Detroit News of January 27 on this subject be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

WHY STATE, U.S. SKIERS IMPROVE

The eyes of ski jumping enthusiasts have been fixed on Michigan's Upper Peninsula this month. The U.S. Olympic team was selected last week end at Ishpeming and the national championships will be held Saturday at Iron Mountain.

Michigan placed five men among the eight on the Olympic riding team—Bob Wedin, Jon St. Andre, Dick Rahoi, Willie Erickson, and Rudy Maki. Two of them, Rahoi and Maki, are repeaters from the 1956 squad.

To discover what chances our ski jumping team has in the upcoming Winter Olympic games, the Detroit News Sports Quiz has turned to Lloyd Severud, the first American-born skier to serve as coach. Severud, a native of Chetek, Wis., is five-time national senior champion. Staff members Larry Middlemas, Bob Sieger, and Paul Preuss did the interviewing:

Question: "How would you compare our current squad with those that have represented us in past Olympics?"

Answer: "I feel this is the strongest team we've produced so far. We don't have to depend on any one or two skiers. We have good balance from top to bottom."

Question: "Will European countries continue to dominate the ski jumping event?"

Answer: "The Finns will be the team to beat again. They've dominated the sport in recent years. There's no doubt that the Norwegians will be tough and the Germans, too, if they come. The Russians could figure in it."

Question: "Has any ski jumper from this country ever won an Olympic medal?"

Answer: "No. Gordie Wrend finished fifth in the 1948 games. We've never had anyone do better."

Question: "How about this year?"

Answer: "We have our best chance of getting a man higher than ever before. I thing the intense team spirit we have will help. Of course, I haven't had a chance to study the foreigners much. They've been developing just as we have."

Question: "Why do you rate this year's team so highly?"

Answer: "We have four veterans on the team with international competition under their belts and some of the best youngsters we've ever produced."

Question: "When young riders are mentioned, 19-year-old Gene Kotlarek, of Duluth, comes to the fore. How good is he?"

Answer: "Gene has more natural ability than any other American boy I've ever seen. And he's going to reach greater heights. He has to keep going if he doesn't want another American youngster to pass him up."

Question: "Who might that be?"

Answer: "Bob Wedin, a 19-year-old Kingsford, Mich., boy. Bob has been our most consistent rider in training. He reached a new peak in the trials at Ishpeming."

Question: "How would you compare the styles of the two boys?"

Answer: "Bob owns one of the most natural landings you'll ever see. Landings are where you win points, and Gene has been working on his. Their air styles are similar. Both float very smoothly. Gene has been getting longer distances but his jumps vary more than Bob's."

Question: "To us nonskiers, you ski riders look like the bravest or craziest guys in sports. How do you develop that nerve?"

Answer: "We just think there's no feeling to compare with springing into the air and rolling into full flight. It takes a certain cockiness. Not in an unpleasant way, but just confidence. You get in the air and feel like saying, 'Just look at this.' You wish you never had to come down."

Question: "Is there any reason why our youngsters are getting better?"

Answer: "These kids coming up now are the first riders we have who always used the European 'torpedo' style. It's a style we've been trying to pick up for some time. Our older riders had to make a switch."

Question: "Just what are the peak years for a ski jumper?"

Answer: "It's hard to say. The boy between 19 and 24 seems to have the coordination and can time his takeoff best. I'd say these are peak years, but Art Tokle is 37 and he made the team again." (Tokle was on the 1952 U.S. Olympic team.)

Question: "At what age do most ski jumpers get started?"

Answer: "Junior tournament life begins at about 10 or 11. Of course, at 5 and 6 you'll find kids trying out on little backyard 'rabbit ears'."

Question: "What are we doing to develop our top riders?"

Answer: "For the past 4 or 5 years the Central U.S. Ski Association has been running a training camp at Duluth. We take 16 young skiers who show the most potential. Kotlarek is a graduate of the camp."

Question: "Five of the eight riders named to the Olympic team are from Michigan. How do you account for this?"

Answer: "The youngster in the Iron Mountain and Ishpeming area seem to have a team spirit that normally produces better performances. They ski as if on a team, always working with one another. They also get top advice here.

"After all the Upper Peninsula has produced some great skiers. One of the top examples is Ishpeming's Bietila family. Two of the boys, Walter and Ralph, were on Olympic teams."

Question: "How long has the Olympic squad been in training?"

Answer: "We selected the team last year and started training December 25. We've been on skis every day that it was possible."

Question: "How many rides a day have the squad members been taking?"

Answer: "Each man determines his own amount of riding. However, if he shows any signs of tiring and losing his coordination we send him to the showers. We have been making films of two rides of every man each day."

Question: "How have the movies worked out as a training device?"

Answer: "They have proved ideal. Many times a rider can't understand what he is doing wrong until he sees the mistake on film. We try to show the movies the same day they were taken. They help to show us our good and bad points, much the same as they do in football and other sports."

Question: "After all this work, how long are our riders actually on the run at Squaw Valley?"

Answer: "They take only two rides in competition. With all the training and effort that goes into this team, the total time the four boys will spend on the jump will be about 3 minutes."

Question: "What do you think of the hill that will be used at Squaw Valley?"

Answer: "I was out there when they held the North American championships. There's no better hill in the United States."

Question: "Does it differ much from the hill at Iron Mountain where the national championships will be held?"

Answer: "The profiles of the hills are quite similar. There is a difference in that you ride down a natural hill at Squaw Valley while there is a scaffolding at Iron Mountain."

Question: "How does this make a difference to the skier?"

Answer: "You don't notice your speed as much on a natural hill, so it can make timing a little harder. You see the boards go whizzing by on a scaffolding."

Question: "What distances do you think they will make at Squaw Valley?"

Answer: "Somewhere between 85 and 90 meters (slightly less than 300 feet). I don't want our boys to go any farther than that."

Question: "Isn't a rider supposed to get all the distance he can?"

Answer: "If a rider looks down and thinks he is going to outjump the landing area he'll forget to maintain form and come right down. I'd rather have the boys play it safe."

Question: "Then more than distance goes into determining the winner of a ski jump?"

Answer: "The winner is actually determined on a point system. On a hill where 200 feet is the longest possible jump, distance and the skier's form, such as taking off, in the air and landing, count equally. As the jumps go past 200 feet, distance becomes slightly less important and form slightly more. It works the other way when you go under 200 feet."

Question: "How many judges are there at a big meet such as the Olympics?"

Answer: "Five. They all mark down a score, but the high and low scores are thrown out and only the middle three are used. This is to prevent favoritism."

Question: "Do ski jumpers take time to look around or do they concentrate on picking out a landing spot?"

Answer: "I try to encourage a certain amount of looking around. It keeps a rider alert. There is no trouble picking out a place to land unless a rider tenses up. Then things become a blur."

Question: "Where does most of the trouble on a ride develop?"

Answer: "90 percent of it stems from the takeoff. A rider may push off wrong, or early, or light, or weak. There are lots of things he can do wrong then."

Question: "Skijumping is looked upon as a dangerous sport by the layman. Are there many serious accidents?"

Answer: "I'm in my 34th season and I rarely even sprain a knee."

Question: "What keeps the accident rate down?"

Answer: "We never ski on bad areas. Accidents usually occur because the hill is not in good shape. Accidents decreased greatly when we did away with the little upshoots that used to be placed at the end of the runway."

Question: "You yourself only weigh 120 pounds. Is there any advantage in being small?"

Answer: "For one thing, you have less wind resistance. Also, it's easier to coordinate 120 pounds than it is 200. We have no 6-footers on the team. The normal weight is between 150 and 170 pounds."

Question: "What about the national championships Saturday?"

Answer: "All I know is I'm sure the members of the team will give a good account of themselves."

PRINTING OF CONGRESSIONAL RECORD EXTRACTS

It shall be lawful for the Public Printer to print and deliver upon the order of any Senator, Representative, or Delegate, extracts from the CONGRESSIONAL RECORD, the person ordering the same paying the cost thereof (U.S. Code, title 44, sec. 185, p. 1942).

LAWS RELATIVE TO THE PRINTING OF DOCUMENTS

Either House may order the printing of a document not already provided for by law, but only when the same shall be accompanied by an estimate from the Public Printer as to the probable cost thereof. Any executive department, bureau, board, or independent office of the Government submitting reports or documents in response to inquiries from Congress shall submit therewith an estimate of the probable cost of printing the usual number. Nothing in this section relating to estimates shall apply to reports or documents not exceeding 50 pages (U.S. Code, title 44, sec. 140, p. 1938).

Resolutions for printing extra copies, when presented to either House, shall be referred immediately to the Committee on House Administration of the House of Representatives or the Committee on Rules and Administration of the Senate, who, in making their report, shall give the probable cost of the proposed printing upon the estimate of the Public Printer, and no extra copies shall be printed before such committee has reported (U.S. Code, title 44, sec. 133, p. 1937).

GOVERNMENT PUBLICATIONS FOR SALE

Additional copies of Government publications are offered for sale to the public by the Superintendent of Documents, Government Printing Office, Washington 25, D.C., at cost thereof as determined by the Public Printer plus 50 percent: *Provided*, That a discount of not to exceed 25 percent may be allowed to authorized bookdealers and quantity purchasers, but such printing shall not interfere with the prompt execution of work for the Government. The Superintendent of Documents shall prescribe the terms and conditions under which he may authorize the resale of Government publications by bookdealers, and he may designate any Government officer his agent for the sale of Government publications under such regulations as shall be agreed upon by the Superintendent of Documents and the head of the respective department or establishment of the Government (U.S. Code, title 44, sec. 72a, Supp. 2).

RECORD OFFICE AT THE CAPITOL

An office for the CONGRESSIONAL RECORD, with Mr. Raymond F. Noyes in charge, is located in Statuary Hall, House wing, where orders will be received for subscriptions to the RECORD at $1.50 per month or for single copies at 1 cent for eight pages (minimum charge of 3 cents). Also, orders from Members of Congress to purchase reprints from the RECORD should be processed through this office.

CONGRESSIONAL DIRECTORY

The Public Printer, under the direction of the Joint Committee on Printing, may print for sale, at a price sufficient to reimburse the expenses of such printing, the current Congressional Directory. No sale shall be made on credit (U.S. Code, title 44, sec. 150, p. 1939).

CHANGE OF RESIDENCE

Senators, Representatives, and Delegates who have changed their residences will please give information thereof to the Government Printing Office, that their addresses may be correctly given in the RECORD.

Appendix

Cordell Hull Award Presented to Speaker Sam Rayburn

EXTENSION OF REMARKS
OF

HON. JOE L. EVINS

OF TENNESSEE

IN THE HOUSE OF REPRESENTATIVES

Monday, February 1, 1960

Mr. EVINS. Mr. Speaker, it was my privilege along with many Members of the Congress to attend the recent banquet of the Committee for a National Trade Policy at which our distinguished, able, and beloved Speaker of the House, the Honorable SAM RAYBURN, was presented the Cordell Hull Award.

This was an occasion of particular pleasure to me because both Speaker RAYBURN and the late great Secretary of State Cordell Hull are Tennesseans. Both of these great Americans stand with our greatest sons in service to the Nation and in the love, respect, and admiration by which they are held by our citizens. Mr. RAYBURN was born in Roane County, adjoining the district which I have the honor to represent in the Congress, and Mr. Hull was born in Pickett County, one of the fine counties of the great Fourth District of Tennessee which I represent. Judge Hull preceded me in representing the people of that area in the Congress and I indeed counted it an honor to be able to number him as one of my constituents.

Secretary of State Herter, in presenting the Cordell Hull Memorial Award to Speaker RAYBURN, said that the award is bestowed upon Speaker RAYBURN for his vision and statesmanship in furthering the internal trade policies of Franklin D. Roosevelt's Secretary of State.

Speaker RAYBURN in his speech of response and acceptance said that "this is a particularly appropriate time" to recall the life, deeds, and ideals of Cordell Hull in promoting two-way friendship and free flow of trade between friendly nations.

Mr. Speaker, under leave to extend my remarks in the RECORD, I include the text of the address of Secretary of State Herter, and the text of your address on this occasion.

REMARKS BY THE HONORABLE CHRISTIAN A. HERTER, SECRETARY OF STATE, AT A DINNER HONORING THE HONORABLE SAM RAYBURN, SPEAKER OF THE HOUSE OF REPRESENTATIVES, GIVEN BY THE COMMITTEE FOR A NATIONAL TRADE POLICY, MAYFLOWER HOTEL, WASHINGTON, D.C., JANUARY 28, 1960

I am honored to have been selected by this outstanding and highly commendable organization, the Committee for a National Trade Policy, to present the Cordell Hull Memorial Award to your distinguished guest. The interest that your group manifests in seeking solutions to our trade problems is most sincerely welcomed by your Government.

It is particularly appropriate that tonight your gathering will honor one who has helped to solve so many problems in the field of interstate and foreign commerce, the Honorable SAM RAYBURN of the great State of Texas.

When Texas was admitted as a State in 1845, there were many who regarded it as one of the most underdeveloped regions in the world, and some who thought it would always remain so. But as we all know, in the years which have intervened, Texas has done a remarkable job of belying that thought.

I say we all know this, and I can see no imminent danger that Texans will let us soon forget it.

In trade, Texas is justly famous as an exporter of oil, cotton, cattle, minerals, lumber, and pretty girls. The State imports a wide variety of consumer goods, machinery, finished textiles, and of course they still buy U.S. postage stamps from outside the State.

In 1887 Texas imported SAM RAYBURN from Tennessee, and it has had reason to be very proud of this importation ever since. The balance of payments position as between Texas and Tennessee was markedly changed as a result of this move.

No one has ever claimed that the CONGRESSIONAL RECORD is a compilation of the world's greatest literature, but it is often fascinating reading. I have had a small job of research done in the pages of the RECORD of the 63d Congress which reveals that SAM RAYBURN delivered his first speech in the Halls of Congress on May 6, 1913. And the pages of the proceedings on that day uncover some remarkable facts which may or may not be dismissed as sheer coincidence. For on that day, although several other hotly contested issues were debated on the floor, including the question of whether women should be given the right to vote, SAM RAYBURN addressed himself to the pending tariff bill, making an eloquent plea in favor of tariff reductions. And on that same day, another Member of the House spoke on another section of the tariff bill—a section which incorporated the novel idea of a Federal tax on personal income. The Member explaining various features of this section was the Honorable Cordell Hull, Member of Congress from Tennessee. On that night of May 6, 1913, I daresay that no one could have forseeen that on the night of January 28, 1960, an award honoring the memory of Mr. Cordell Hull would be presented to Mr. SAM RAYBURN, both natives of Tennessee, both renowned in the annals of the Nation, both able statesmen, and both distinguished Democrats. And that differences of view as between the two major political parties at least on the subjects of the tariff and foreign policy have with the passage of the years become sufficiently bettered as to make seemly the presentation of this award by a Republican Secretary of State.

From my own experience as a Member of the House of Representatives, I can testify that "Mr. SAM" has developed a patient and understanding tolerance for Republicans. He has a keen eye for those situations which call for the partisan approach and those which call for the bypartisan or nonpartisan. Cordell Hull also possessed this virtue, and in his memoirs he refers to his friendship with Congressman E. J. Hill of Connecticut. Of Congressman Hill he says:

"From 1907 forward Mr. Hill, a Republican, and I sat for hours at a time of Sundays and evenings discussing tariff, trade, and other business conditions * * * I owe much to him for the inspiration that drove me to study the interrelation of trade throughout the world."

Now I must concede that the choice of words here and the quick identification of Mr. Hill as a Republican might be taken to mean that Cordell Hull found it quite remarkable to have discovered a Republican who knew anything about world trade, but the noble sentiment is really not thereby impaired.

Returning to Mr. SAM's first speech in Congress on that memorable day in 1913, it is remarkable how early it became clear that devotion to country is his guiding star, transcending all others. Proof of this I believe is found in his initial address. If you will indulge me for a further minute, I should like to read to you a couple of brief excerpts from his message that day. He began by saying this:

"Mr. Chairman, as a new Member of this great body, I, of course, feel that I should have regard for the long-established custom of the House, which in a measure demands that discussions of questions shall be left to the more mature Members * * * but I feel that as a representative of more than 200,000 citizens of the Fourth Congressional District of Texas, I should be allowed to break in a measure whatever of this custom remains, and exercise my constitutional right to speak my sentiments on this floor and refuse to be relegated to that lockjawed ostracism typical of the dead past."

Now, from that day to this night, so far as I am aware, Mr. SAM has not had reason to complain of "lockjawed ostracism." Even so, he chooses to speak only when he has something to say, and then he speaks sparingly.

After making a well-reasoned plea for tariff reductions, "Mr. SAM" closed with these words:

"I came to this body a few weeks ago with childlike enthusiasm and confidence. It has always been my ambition to live such a life that one day my fellow citizens would call me to membership in this popular branch of the greatest lawmaking body in the world. Out of their confidence and partiality they have done this. It is now my sole purpose here to help enact such wise and just laws that our common country will by virtue of these laws be a happier and a more prosperous country. I have always dreamed of a country which I believe this should be and will be, one in which the citizenship is an educated and patriotic people, not swayed by passion and prejudice, and a country that shall know no East, no West, no North, no South, but inhabited by a people liberty loving, patriotic, happy, and prosperous, with lawmakers having no other purpose than to write such just laws as shall in the years to come be of service to human kind yet unborn."

These words, spoken 47 years ago, are the words of a great man. They have been followed by deeds which testify to his greatness. All Americans are ever grateful that SAM RAYBURN has served this Nation these many years. As a close friend and long-time ad-

mirer of his, I am very proud to present the Cordell Hull Memorial Award to this distinguished gentleman.

REMARKS OF HON. SAM RAYBURN, SPEAKER OF THE U.S. HOUSE OF REPRESENTATIVES, IN ACCEPTING THE CORDELL HULL AWARD AT A BANQUET OF THE COMMITTEE FOR A NATIONAL TRADE POLICY, INC., MAYFLOWER HOTEL, WASHINGTON, D.C., ON THURSDAY, JANUARY 28, 1960

This is a happy occasion for me.

In the first place, it is a high privilege to be presented to you by my fine friend and former colleague in the House of Representatives, Secretary of State Christian Herter, who in my judgment is a worthy successor to the man in whose memory we gather tonight.

Any citizen of this country or any other would feel deeply honored to be the recipient of the Cordell Hull Award. Coming as it does from an organization dedicated to carrying on the great work to which Cordell Hull gave the tremendous energies of his mind and body, this award symbolizes America in her finest role—that of the good neighbor.

For 42 years—a goodly portion of any man's life—my life was warmed by the close friendship, the wise counsel and the stirring example of Cordell Hull. I never cease to be inspired when I think of that good man's love of his country, his dedication to peace in all its aspects, and his record of matchless public service.

From the days of his humble childhood in a Cumberland Mountain log cabin, Cordell Hull had only one ambition and one aspiration—to serve mankind and to help men everywhere to live together in unity.

History now records how close he came to the fulfillment of that boyhood dream.

Not long before his death he is supposed to have told a friend that out of his long adventurous career he was proudest of four things.

First, that he had helped in the shaping of the United Nations. His role in this effort was so great that Franklin Delano Roosevelt referred to him as "the Father of the United Nations."

Second, he had initiated the policy of nonpartisanship in the conduct of our foreign affairs.

Third, he had put into practice the good neighbor policy in cooperation with the other American nations.

And fourth, he had headed up the drive toward a more liberal trade policy through the reciprocal trade program.

Any one of these accomplishments would be the mark of a distinguished career in American politics, but here are four mighty undertakings.

He might easily have mentioned many other things out of his busy and fruitful lifetime.

From humble beginnings he rose to a member of the Tennessee Legislature, a Tennessee circuit judge, a captain in the Spanish-American War, and he served 24 years in the Congress of the United States—22 years in the House of Representatives and 2 years in the Senate. After that he served nearly 12 years as Secretary of State under Franklin Roosevelt, the longest time one man ever held that high office. In an office once occupied by such towering figures as Thomas Jefferson, James Madison, Daniel Webster, John Marshall, John Quincy Adams, John C. Calhoun, John Hay, and Charles Evans Hughes, he established himself as one of the truly great Secretaries of State.

This modest man might have recalled that he had the high honor of leading the American delegation to the London Monetary and Economic Conference, to four Inter-American Conferences and to the Moscow Conference in 1943. He was much too humble to have mentioned that public opinion polls year after year found him to be the most popular member of President Roosevelt's Cabinet.

Many people now have forgotten that from 1921 to 1924 in the period of greatest Republican ascendancy in this century, Cordell Hull as chairman of the Democratic National Committee helped to rebuild a defeated and discouraged Democratic Party giving not alone of his energy but also lending substantial amounts of his own money as well.

It was altogether fitting that the world paid homage to this man of peace in 1945 when he was awarded the Nobel Peace Prize.

I want to reminisce a few moments about Cordell Hull, the human being. He was one of the first close friends I made after I came to Congress on March 4, 1913, the day Woodrow Wilson became President of the United States.

I lived in the old Cochran Hotel as did many other Members of Congress including Cordell Hull. Each night after supper most of these men would pull their chairs together at the end of the big old lobby and for several hours they would explore together in serious candor the great issues of the hour. As a freshman Congressman I listened with rapt attention, and I have often thought that this was the best school of political science I ever attended.

Perhaps because we both had been born in Tennessee or perhaps because we held very similar views on political issues, Cordell Hull and myself became warm personal friends. As the junior member of that partnership, I was the great gainer profiting from his experience and wisdom.

When the Underwood Tariff bill was taken up by the House of Representatives in 1913, it included the first constitutional income tax. Cordell Hull was the author of this tax plan. During that debate, I made my maiden speech in Congress in support of the bill. This tax plan has been the cornerstone of our fiscal policy from that day to this.

Before World War I, Cordell Hull became convinced that "unhampered trade dovetailed with peace; high tariffs, trade barriers, and unfair economic competition with war * * * I reasoned that, if we could get a freer flow of trade—freer in the sense of fewer discriminations and obstructions—so that one country would not be deadly jealous of another and the living standards of all countries might rise, thereby eliminating the economic dissatisfaction that breeds war, we might have a reasonable chance for lasting peace."

He also opposed high tariffs because "I believe (they) meant a higher cost of living for American citizens. They assisted in building trusts and monopolies. By cutting down the sales by other countries to us, they also cut down the purchases by other countries from us."

Cordell held the doctrine that other countries could not continue to buy from us unless they could continue to sell to us. He knew that other people could build walls against our products as easily as we could build walls against theirs, and that they had done so with a vengeance in times past.

In his momoirs he told the story of how a simple incident in the Tennessee mountains impressed the importance of trade upon his youthful mind.

"When I was a boy on the farm in Tennessee," he recalled, "we had two neighbors—I'll call them Jenkins and Jones—who were enemies of each other. For many years there had been bad feeling between them—I don't know why—and when they met on the road or in town or at church, they stared at each other coldly and didn't speak.

"Then one of Jenkins' mules went lame in the spring just when Jenkins needed him most for plowing. At the same time Jones ran short of corn for his hogs. Now it so happened that Jones was through with his own plowing and had a mule to spare, and Jenkins had a bin filled with corn. A friendly third party brought the two men together, and Jones let Jenkins use his mule in exchange for corn for the hogs.

"As a result, it wasn't long before the two old enemies were the best of friends. A commonsense trade and ordinary neighborliness had made them aware of their economic need for each other and brought them peace."

He carried this faith in liberal trade into action throughout the rest of his life.

Someone once said that "the only monument in life that Cordell Hull ever wanted was a deep nick in a tariff wall."

Cordell Hull had an almost religious belief in what came to be known as the good neighbor policy. He believed that we could not look for closer cooperation throughout the world unless we first showed that cooperation could work in the Western Hemisphere.

Friendship, he knew, is a two-way street. To have friends, we must be a friend. Patiently, tirelessly through the years Cordell Hull labored with great success to make one free neighborly community of all the American nations. Out of this concept of the good neighbor policy grew our point 4 program and eventually our continuing determination to help the underdeveloped nations of the world to a better way of life.

I loved and followed Cordell Hull as a statesman, but my fondest memories concern his qualities as a human being. I don't think he ever knew what it was to be afraid. When he believed something to be right and true, he never ceased to battle for it. He had a deep yearning to make the path a little smoother and the burden a little lighter for all people wherever they lived. He never sought credit for anything that he accomplished. The only reward he wanted was the accomplishment of his purposes. In his personal life as well as in his political philosophy he embodied the concept of the good neighbor.

He had that rare combination of gentle humility and rugged strength which were also Lincoln's qualities.

I think this is a particularly appropriate time for us to remember Cordell Hull and the great political ideals for which he stood.

In a time when our relations with our sister American Republics are troubled, when our own Vice President is insulted in a neighboring country, when American property is being expropriated almost daily, it might pay us to try to envision how Cordell Hull would have treated this situation.

The same is true of the increasingly competitive trade situation in the world. As nations recover from the devastation of war and competition for markets becomes fiercer, we hear new demands from every side for higher trade barriers. Now let us think—how would Cordell Hull have met this situation?

In closing, let me say again how deeply touched I am by this honor which you have paid me in the memory of one of the giants whom I was privileged to call my friend.

In the beautiful library which I have built in my home town as a gift to all the people, I have many treasured mementos. The Cordell Hull Award which you have so kindly given me tonight will have an honored place among them and will rest there forever for people to see.

It might have been of Cordell Hull that the poet Shelley wrote, " 'Til the future dares forget the past, his fate and fame shall be an echo and a light unto eternity."

And I think one may fairly say of him as once was said of Thomas Jefferson: "The honors which other men had given him were unimportant; the opportunities he had given to other men to become free were all that really counted."

Governor Brown Makes Eloquent Case for Proposed National Resources and Conservation Act of 1960

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Monday, February 1, 1960

Mr. ENGLE. Mr. President, I am proud to be a coauthor with the eminent and respected senior Senator from Montana, Senator MURRAY, of his proposed Resources and Conservation Act of 1960, S. 2549, which I hope and believe will be adopted by this Congress. I am pleased that the State of California, through our distinguished Governor, has lined up actively in support of this important legislation. Governor Brown's statement on S. 2549, which he presented in person on January 26 before the Senate Committee on Interior and Insular Affairs, is clear and convincing testimony. I hereby offer it for publication in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

STATEMENT REGARDING S. 3549, BY HON. EDMUND G. BROWN, GOVERNOR OF CALIFORNIA, BEFORE COMMITTEE ON INTERIOR AND INSULAR AFFAIRS, WASHINGTON, D.C., JANUARY 26, 1960

I wish to express my sincere thanks to your committee for this opportunity to appear before you. I especially am grateful for the honor and courtesy you have bestowed upon me by convening at this time to hear my statement.

The members of this committee are keenly aware of the importance of full resource development to the welfare of our Nation. An inventory and program for national resource development becomes increasingly necessary with the addition of our two newest States and their different types and abundance of natural resources.

This bill provides the method for coordinating information and policies which can lead to a sound and positive approach to the development of our natural resources. As I have already written Senator MURRAY, population is multiplying beyond any earlier estimates, our needs for food, water and other natural resources are spiraling. Nothing on the domestic scene is of greater importance to future generations of Americans than sound policies and effective programs to make use of our multitudinous natural resources, land, water, energy, air, minerals, forests and fisheries.

To illustrate by 1950 in comparison to 1900 the American people were taking from the earth: 2½ times more bituminous coal; 3½ times more iron ore; 4 times more zinc; 26 times more natural gas; 30 times more crude oil. Since 1900, the total withdrawal of water has doubled about every 25 years.

Perhaps it will be helpful if I defer for a few minutes some comment on the importance of this legislation to the people of the entire Nation and speak more specifically about the West and the West's role in the future of our country. This is the geographic area that offers the elbowroom for population and economic expansion. Its proper development is vital to our survival as a world power.

I have spent my entire life in the West and I have witnessed what has been, and still continues to be, perhaps the greatest mass migration of human beings in history. The West has been able to absorb this tremendous influx of new residents, not only because of its vast expanse of virgin lands, but also because of enlightened Federal investment in its natural resources during the thirties and forties.

However, especially in the years since 1952, the Federal administration's perspective of the national necessity for westward expansion appears to have become dim and distorted. Preoccupation with budget-balancing and an almost servile eagerness to bend to the will of selfish interests has been substituted for vision and courage. The pioneer has been replaced by the budgeteer. High interest rates have become more important than high dams.

The development of the West—a great storehouse of natural resources—is a challenge and opportunity for the entire Nation. America's booming population demands more space for economic expansion, for living area, and for recreation. Just space itself is an increasingly precious and scarce resource for human existence in this age of mounting urban density, air pollution, and traffic congestion.

Already the country's expanding population is spreading over the wide reach of the West. The census of our 11 Western States is growing at almost twice the rate of that of the rest of the country. And this is just the beginning.

Failure by the Federal Government to recognize and prepare more fully for this irrepressible westward movement could have disastrous economic and social effects on every section of the Nation. Preparing the West for the vast new populace certain to rise there is essential for a nation whose population is expected to soar to 370 million within just 50 years. There can be no relief from that situation if the basic development of the West is allowed to stagnate for lack of resource programs. In the East, the South, and Midwest, it would mean increasingly overcrowded urban areas and an ultimate ceiling on national development.

Fortunately, this need not happen. Federal investment in the water resources of the 11 Western States will pay huge dividends in terms of ample living space, agricultural land, and industrial expansion capable of sustaining an ever-growing citizenry. All of that will help provide and spread the revenue base for the public services necessary for our increasingly complex society. Federal investment in the development of our water resources will also pay off by providing flood control which would save countless lives and prevent untold millions of dollars in property damage. Finally, it will stimulate to a tremendous degree a booming recreation industry that is contributing substantially to our national economy, and can do so far more in the age of shorter working hours which lies ahead.

It is simply good business for the Federal Government to recognize and invest in the vast potential of the West in the interest of the entire national economy. A study based on Federal Internal Revenue collections reveals that farmers and townspeople on and in the vicinity of western reclamation projects paid $340 million in income taxes during the 1958 fiscal year. A very sizeable share of those payments came from non-farm residents whose occupations stemmed from irrigation farming activities. Federal taxes from those areas alone have totalled $3½ billion since 1940, 11 percent more than was spent for project construction since the start of the reclamation program in 1902. These tax payments are in addition to regular project repayments which return, in the form of water and power revenues, 92 percent of the funds expended for reclamation projects.

The benefits of western development are manifest for the entire nation in private as well as public ways. Thus, a growing and prosperous West provides a constantly expanding and more lucrative market for eastern industries. The $53 billion market of the Western States was three times the export market of the United States in 1956.

For example, the turbines, the generators, the complex electrical equipment necessary for western water power projects spell jobs, prosperity and a broader tax base in Schenectady, N.Y.; Gary, Ind.; Pittsburgh, Pa.; and other eastern and midwestern manufacturing centers.

Similar benefits also will accrue to the entire Nation as a result of informed and intelligent development of fish and wildlife programs, the proper use of our vast forests and rangelands and national and regional parks, throughout America.

Important as this legislation is to the West, it is even more important to the entire Nation. It is essential if we are to meet the needs of our people during the next 50 years. They will not be met by the shortsighted policies of the past 7 years. Full employment of our people in the years ahead demands full employment of our natural resources.

And may I at this point commend your committee, Senator MURRAY, for the farsighted attitude you have taken not only toward the development of our own Nation's natural resources, but also in studying the relative rate of progress of the United States and other countries in resource development.

I have in mind particularly the recent intensive study made by your committee and the Public Works Committee of the Senate of the water resource development programs of the Soviet Union. I would venture the prediction that, in the long run, the rate of development of our natural resources and of our productive capacity could have more effect on the standing of the United States among the nations of the world than our progress in missile development, for our storehouse of natural resources and our ability to use these resources wisely provide the real foundation for the strength and continued vigor of our Nation.

We should bear in mind, too, that the so-called undeveloped nations of the world—nations which in most cases are not yet committed to the East or the West—may be more impressed by the manner and rate of development of our natural resources than our armed might.

So, I commend your committee and the Public Works Committee for your study of the Russian program of water resource development. I have read your subcommittee's report with great interest, yet also with great concern. It is most disturbing and disheartening to learn that the Russians' present rate of growth in electric power capacity is faster than that of the United States. It is deplorable, too, to learn that the Russians have built bigger dams, bigger turbines, and longer and higher voltage transmission lines than we have.

For many years we took pride in the fact that Grand Coulee was the world's largest dam. Today, a Russian dam already in operation has relegated Grand Coulee to the No. 2 position, and soon another Russian dam will lower Grand Coulee to the third position.

It is significant that much of the Russians' progress and the slippage in our program have taken place during the period when our administration has expounded the backward looking, unproductive, no new starts policy—a policy which the administration has seen fit to reverse only this year as the elections approach. While the Russians, on their side of the Bering Sea, have proceeded with vigor

in building massive dams and water resource projects, we have just begun, under the prodding of a Democratic Congress, to plan the giant Rampart Canyon project on our side of the Bering Sea, in Alaska.

In the past we have not needed the example of the Russians or any other nation to think in big terms and act in big terms. I do not believe we need such examples today. The challenge is clearly here, if we but face up to it. In our great and expansive West, different time zones and different river flow conditions make obvious the need for interconnections of our regional power systems. We need extra high voltage transmission systems which will be operated on a common carrier principle to transmit power generated by both public and private power utilities. Such long distance transmission lines would not only make possible more effective utilization of our water resources, but also would provide for the best development and use of our fossil fuels. Yet, in the face of this crying need for giant transmission facilities, a recent report of the Bonneville Power Administration calls for a completely inadequate interconnection between the great Northwest and northern California systems.

I am convinced that the people of the West and the people of the Nation will not be satisfied with such myopic planning—planning that does not show faith in our future. This week, therefore, I am ordering the employment by the State of California of a consulting engineering firm to make a study of plans for a truly adequate extra high voltage transmission interconnection between the Bonneville Power and Central Valley systems. I am hopeful that other affected States will join in such a study. I want to emphasize that I am in complete agreement with our neighbors in the Pacific Northwest that in building any tie line between our regions, first rights to any usable power should remain in the region of origin for use by both public and private agencies.

The need for planning and building high voltage regional interconnections in the West—and, in fact, the entire country—is but one example of the need for the bill which is being discussed before your committee today.

To summarize, Senate bill 2549 gives promise that future Federal resource programs will receive the national attention they deserve and it holds out the promise that resource development programs will be devised on a scale and scope that the Nation's welfare demands.

In closing I call your attention to this advice inscribed on the wall behind the Speaker's chair in the House of Representatives:

"Let us develop the resources of this land; call forth its power; build up its institutions; promote all its great interests, and see whether we also in our day and generation may not perform something worthy to be remembered."

MacArthur Is Authentic American Hero

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. MARTIN. Mr. Speaker, under leave to extend my remarks in the RECORD, I include an editorial from the Fall River (Mass.) Herald-News in praise of the outstanding services to the Nation of Gen. Douglas MacArthur.

MACARTHUR IS AUTHENTIC AMERICAN HERO

General MacArthur's 80th birthday was an opportunity for the Nation to express again its appreciation of the immense services he has rendered it. The general has always been a controversial figure. His personality has little of the charm and warmth that made President Eisenhower a hero with the general public. But there have been few, if any, substantial criticisms of MacArthur as a general. He has been a military man, first and last, and it is as a great general that he will be remembered long after the political controversies in which he was involved have been forgotten.

He was the architect of the strategy which led to the successful conclusion of the war in the Pacific. He dominated that sector of World War II as the European theater was never dominated by any one man. In war victory is all-important. General MacArthur won. Furthermore, he won against great odds. His achievement cannot be exaggerated. It is as great in its field as any achievement of this warlike century.

Beyond that, however, General MacArthur displayed a remarkable capacity as the American administrator of Japan when the United States entered that conquered country. It had been supposed that MacArthur would be arrogant and dictatorial, and that he would make American-Japanese relations worse instead of better. Nothing of the sort happened. He showed a real flair for handling the extremely delicate relations between the occupation forces and the Japanese. He was conciliatory and friendly. As much as to anyone, the present accord between the United States and Japan is due to him.

MacArthur is one of the Nation's great heroes, and Americans everywhere will hope that he will have many years more to enjoy the continued respect and gratitude of his countrymen.

Texas Banker Heads Commission To Plan Banking Centennial in 1963

EXTENSION OF REMARKS
OF
HON. LYNDON B. JOHNSON
OF TEXAS
IN THE SENATE OF THE UNITED STATES
Monday, February 1, 1960

Mr. JOHNSON of Texas. Mr. President, in 1963, when the banks of America observe the centennial of commercial banking, they will have had the benefit of several years of intensive work by a committee headed by a Texas banker, Mr. Ben Wooten, of the First National Bank of Dallas.

It is wholly fitting that American bankers should have tapped Ben Wooten for this important job. He is a man to whom important jobs naturally gravitate, as those who know him best long ago learned. In addition to being a genius in the field of finance, Mr. Wooten is a grand human being, a citizen deeply devoted to the cause of good government, and one who has made vast contributions to the advancement of his city and his State.

The Dallas Morning News recently published an article telling some of the goals Mr. Wooten hopes to see attained in the centennial observance of American banking. I ask unanimous consent that this informative article be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Dallas Morning News, Dec. 10, 1959]

WOOTEN HEADS BANKING'S 1963 CENTENNIAL

(By Al Altwegg)

Headed by Dallas banker Ben Wooten, American banking is currently girding itself for its biggest effort.

In 1963, the banks of America will observe their centennial under the slogan "100 Years of Commercial Banking." Already a full year of planning work has gone into the programs.

Heading the planning is a special commission set up by the American Bankers Association which Mr. Wooten calls "the heaviest banker committee that's ever been appointed."

Too modestly, he adds, "Of course, the chairman—he's a lightweight."

But he proves the importance that the Nation's bankers are attaching to the centennial by pointing out that he has on his committee real heavyweights like the president of the Bank of America in San Francisco, the Nation's biggest bank, and the president of New York's Chase-Manhattan Bank, the second biggest.

Entirely independent of the centennial celebration, Mr. Wooten will also head the ABA's World Monetary Conference in Harriman, N.Y., next March.

Mr. Wooten outlined plans for American banking's centennial in a speech at the ABA convention in Miami Beach the end of October.

"Few people consider the fact that consumer credit, granted directly and indirectly by banks, keeps the levers clacking, the wheels whirring, and the goods rolling off the assembly line," he said.

Discussing his point Wednesday, he said he thought the big thing Russia's Khrushchev learned on his recent U.S. visit was the importance of consumer credit.

Mr. Wooten noted that just 2 weeks after Khrushchev returned to Russia, a system of consumer credit was started in the Communist U.S.S.R.

What the banks of the Nation hope to do in 1963 is bring home that same lesson to the people of the United States.

The occasion being observed will be the 100th anniversary of the signing of President Abraham Lincoln of the National Banking Act of the United States, which created the Office of Comptroller of the Currency and provided for chartering commercial national banks.

The observance will be sparked locally by banks in almost every metropolis and hamlet in the country, with talks before service clubs, essay contests, commemorative stamps and coins, proclamations, and a factual history of banking to be written by experts starting in the near future.

"What we want is for people other than bankers to put banking under the microscope and tell folks what they find," Mr. Wooten said.

He believes that banking can stand such close scrutiny by outsiders and come out looking like the constructive force in the economy that it is.

Mr. Wooten says that U.S. banking was until very recently the only system in the world where the individual can walk in and do business directly with the banks.

"Nowhere else in the world is the bank so close to the individual and the individual

so close to the bank as in the United States," he says.

And he emphasizes that it was only last year that banks in England began making consumer loans for the purchase of automobiles and other goods to individuals.

In this country, on the other hand, banks do much such financing.

In his own bank, Mr. Wooten said he found that 56,310 individuals had consumer loans last Thursday.

One think Mr. Wooten would like to see changed, as a result of the centennial celebration in 1963, is the "prejudiced folklore" about banks that is reflected in those western movies in which the banker is so often a villain.

He might even hope to see the day when Hollywood produces adult westerns in which a banker rides up in the last scene on the white horse of the hero and wearing a white hat.

Lester S. Moody

EXTENSION OF REMARKS
OF
HON. PAUL BROWN
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. BROWN of Georgia. Mr. Speaker, Hon. Lester S. Moody, executive secretary of the Augusta, Ga., Chamber of Commerce, received one of the U.S. Army's highest awards, the Decoration for Outstanding Civilian Service, at the chamber of commerce banquet held last Thursday night in the Bon Air Hotel at Augusta. Mr. Moody is the first resident of the Southeast to be chosen for this honor which he richly deserves.

The engraved medal was accompanied by the following citation:

For outstanding service to the Department of the Army in connection with the Corps of Engineers civil works activities in the southeastern section of the United States and the Army's military mission in the State of Georgia. From 1926 to 1959, as secretary of the Augusta Chamber of Commerce, Mr. Moody has successfully promoted broader knowledge and deeper interest in the water resources in the Southeast.

His eminent record of civil and patriotic service, his sterling character, and long-standing relationships with the military service place him in a position of such stature that his influence is widely known and felt.

In this connection, the Augusta Chronicle of January 30 had a splendid editorial, "Deserved Recognition," which I wish to include at this point under leave to extend my remarks:

DESERVED RECOGNITION

Few people in any community are more deserving of recognition and honor for public service than is Lester S. Moody, the able and indefatigable secretary of the Augusta Chamber of Commerce. His friends, therefore, and the city at large are pleased that the U.S. Army has given to him its highest award for outstanding civilian service.

The medal and citation for this service was presented to him Thursday night at the annual dinner of the chamber of commerce by Maj. Gen. F. M. Albrecht, division engineer for the South Atlantic division, U.S. Army Corps of Engineers, who praised Mr. Moody in the highest terms possible for the contribution he has made to the area.

Not only in his unflagging efforts to promote development of the Savannah River and the water resources of the area has Mr. Moody rendered conspicuous service to the community. He has devoted time and energy to all plans for Augusta's progress and as a man, a citizen, and a friend to many has earned the admiration and affection of Augustans familiar with his tireless efforts.

The Chronicle joins the Army in saluting this outstanding citizen of Augusta.

Tribute to John W. Kemp, Recipient of Annual Award to Outstanding Physically Handicapped Person in Wisconsin

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, February 1, 1960

Mr. WILEY. Mr. President, each year the President of the United States awards a trophy as a special honor to a physically handicapped American who has surmounted his or her own handicap to become a useful American citizen; who has also helped to encourage, inspire, or facilitate the employment of other handicapped Americans.

The President's trophy—a beautiful sterling silver plaque, mounted on a mahogany base—is the handiwork of the students of the Institute for the Crippled and Disabled, New York City.

Regardless of sex, age, race, creed, or formal education, any such physically disabled American citizen is eligible for nomination as the Handicapped American of the Year.

Today I would like to pay tribute to the individual, Mr. John W. Kemp—a candidate for the President's trophy—who received the award for the outstanding physically handicapped person in Wisconsin. By grit, courage, and spirit, Mr. Kemp has done a splendid job not only in achieving a personal triumph over a handicap—multiple sclerosis—but also in making a constructive contribution to the life of his community.

I ask unanimous consent to have a brief résumé of Mr. Kemp's triumphant battle printed in the Appendix of the RECORD.

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

JOHN W. KEMP, ASSISTANT CASHIER AND DIRECTOR OF PERSONNEL, MARINE NATIONAL BANK, MILWAUKEE, WIS.

Mr. Kemp has been afflicted with multiple sclerosis for the past 22 years and has been confined to a wheel chair for approximately 9 years.

He has been employed at the Marine National Bank for the past 25 years, starting as a clerk, but in spite of his affliction, he has risen to his present position. His influence has been felt by many individuals, who have contacted him. He possesses a wonderful personality and radiates confidence to others who are handicapped.

Mr. Kemp is a happily married man and the father of one daughter, who is a freshman at Marquette University.

He has been a director of the Multiple Sclerosis Society for the past 4 years and a vice president for the past year. He has also been active in work for the community chest and other charitable affairs.

Walter Trohan's "Report From Washington"

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. PUCINSKI. Mr. Speaker, I wish to take this opportunity to congratulate Mr. Walter Trohan, chief of the Chicago Tribune Washington Bureau, on the launching of his new column "Report From Washington," which will appear in the Chicago Tribune 3 days a week starting today.

I am indeed very happy to learn that Mr. Trohan, who has observed the Federal Government in Washington and followed the activities of the leaders of our Government throughout the world, has agreed to prepare such a column for his newspaper.

There are very few men in the journalistic fraternity who have had as much experience and knowledge about the functions of our Federal Government as has Mr. Trohan. Mr. Trohan's penetrating articles have brought to the people of the Midwest a better understanding of their Government for well over a quarter of a century.

In the United States we have the most complicated form of government ever devised by man; these complexities are a natural phenomenon of a nation which attempts, above all, to preserve the individual freedoms and liberties of its people. But, we, as Americans, can appreciate and respect these complexities only as long as the individual American has a thorough understanding of their significance. Throughout the years Mr. Trohan has fearlessly interpreted our intricate structure of government for his readers, and I am sure that because of his efforts the people of my own community will be better able to understand their obligations as citizens.

I wish Mr. Trohan many years of success in his new venture, and it gives me great pleasure to include in today's CONGRESSIONAL RECORD his first column:

REPORT FROM WASHINGTON

(By Walter Trohan)

WASHINGTON, January 31.—With this effort a reporter for more than three decades unwillingly makes his bow as a columnist. More than a year of resistance to editorial reason ends herewith in acceptance of the terrifying prospect of trying to fill yawning columns every Monday, Wednesday, and Saturday with informative and, if possible, entertaining observations on the Washington and world scenes.

There is no joy or woe of the political animal that I do not know. Please bear with the personal pronoun in this initial column, because an explanation would seem to be in order. I have lived among politicians in this and other capitals continuously for more than a quarter of a century. I have eaten their bread and salt and drunk their water and wine. I have deathwatched elections and danced at the joyous nuptials of inaugurals. I have shared thousands of confidences and listened to millions of words.

I have been guilty of stringing lofty platitudes and pious incantations together for politicians so that they might shine before their fellow men. What is worse, I have had

to listen without protest while they boastfully claimed what I put together as their own. Not only have I nursed their minds, but I have also nursed their egos, which has made me something of an expert on travel in outer space. I have written their lives, chronicling their most shining deeds and their darkest hours.

LIKES POLITICIANS BUT RESPECTS FEW

Let me make it clear that I like politicians, but I can respect very few. It is difficult to take many politicians seriously and impossible to take them as seriously as they would like. Every politician likes to regard himself as the irresistible charmer, a dragon-slaying hero after the manner of St. George, and the immovable man of principle. All too often they are all too ordinary, even as you and I. We should not glorify their shenanigans even though we must suffer them in the hope that some day the ideal leader will spring from their number.

The pace on national and international sciences has become so hectic and the tempo of modern life so demanding that it would seem columns of comment and interpretation are necessary. This is in itself a tremendous responsibility because the longer I live the more I have come to believe that the most sacred and solemn act that can be performed by one who assumes the role of interpreter is to say, "I believe this to be true" or "I believe that to be false."

For many years I have served joyously, and not without profit, as your eyes and ears. I have been present where you could not be and reported on what you wanted to know. Now, I undertake to instruct. All the greatest rewards of teaching and all the dire penalties of misinformation hang about the act of passing judgment on matters which are far easier merely to relate.

FINDS JUDGMENT OF TRUTH IS NOT EASY

It is not easy to sit in judgment on truth. Pontius Pilate jested and washed his hands, because he could not recognize truth. Truth is difficult to recognize, which is why some enterpreters differ, although others refuse truth recognition for reasons best known to themselves.

Truth should never be betrayed by those charged with the duty to inform or interpret. Truth is our most important possession. A few weeks ago I heard Pope John XXIII express the wish, in a Vatican audience, that when newspaper men come to the end of their lives and are about to face God in judgment they will be able to look back and say in fulfilling their mission they faithfully served the cause of truth.

This service to truth is no easy obligation. It is something to be assumed with awe and reverence. In my case the prospect is not a little frightening. Writing a column is a challenge of itself because it involves mastery of a new technique—in my case at a comparatively late date. But, difficult as it is to write, it is far, far more difficult to think. If I fail, and well I might, it will not be for lack of trying, but more importantly it will not be because of deliberate outrage of truth.

Tribute to the St. Louis Post-Dispatch

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE SENATE OF THE UNITED STATES
Monday, February 1, 1960

Mr. HENNINGS. Mr. President, Missourians are justly proud of their many fine newspapers and, of course, of their internationally famous School of Journalism at the University of Missouri.

One of the outstanding Missouri newspapers is the St. Louis Post-Dispatch, winner of many journalistic prizes and known over the Nation as a fearless, honest, objective newspaper.

I ask unanimous consent that an editorial from the Mexico, Mo., Evening Ledger be printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

[From the Mexico (Mo.) Evening Ledger, Nov. 24, 1959]

A GREAT NEWSPAPER IS A GREAT PUBLIC SERVANT

The importance of a great newspaper not only to its community and State but to the Nation should never be discounted.

You may not agree with the editorial policies of such a publication. You may not agree with its political attitude, but to be a great newspaper it must be honest in its policy, objective in its presentation of the news. It must have integrity in its editorial thinking.

But it must also be fearless in its defense of the public's interest, unswayed by pressure groups, or personal considerations. Nothing will cause it to deviate from its responsible and constructive activities.

The St. Louis Post-Dispatch fulfills the category adequately in every way. Alert in defense of the public's interest in all fields. Its activities in safeguarding Government from the infestation or control by hoodlums and racketeers has been marked over the years. It had much to do with cleaning up the Pendergast situation, which was a serious threat to this State not so many years ago. It has made it too hot for the hoodlums to take over Missouri's largest metropolis. It watches the public's interest at the State capital with alert attention.

There are other great papers, but just now we are talking about our St. Louis Post-Dispatch, of which as a Missourian we are justly proud. A great public servant.

John J. O'Connor

EXTENSION OF REMARKS
OF
HON. JOSEPH W. MARTIN, JR.
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. MARTIN. Mr. Speaker, the death of John J. O'Connor removed one of the colorful and dynamic figures who served in Congress in the early days of the New Deal. He was a man of great ability, a powerful orator and persuasive in debate. No "rubber stamp" was John. He disliked many of the Roosevelt proposals and never hesitated to express himself forcefully. He made a great contribution to the useful role of Congress by discussing fully all questions in the days when the Republicans were so weak in numbers. His independence and frankness brought down upon him the wrath of F.D.R., and he was singled out to be purged together with Senator Millard Tydings and Senator George, of Georgia. John was the only successful purge of that year and that by a very small margin.

John was chairman of the "fighting Rules Committee" of that time of which I was privileged to be a member. That fact as well as the fact that he was born in Raynham, a town in my district, brought us into close friendship. I knew well his brother Basil, a law partner of President Roosevelt, as well as the other members of his fine family. Ardent Democrats but they always voted for me for Congress. His good mother, when over 80, hired a taxi to go to the polls to help me in one of my more exciting campaigns.

When I last saw him a year ago I realized he appeared to be not as well as he was in the old days but nothing of an alarming nature.

John J. O'Connor was an outstanding Congressman and a great American. He served his country with great ability during a tempestuous period. Those of us who knew him regret keenly his passing. To his family I extend my deepest sympathy in their hour of sorrow.

Claims Court No Place for Mr. Durfee

EXTENSION OF REMARKS
OF
HON. WILLIAM PROXMIRE
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, February 1, 1960

Mr. PROXMIRE. Mr. President, I commend to the careful attention of my colleagues an editorial which appeared in Nashville Tennessean, a newspaper with an outstanding national reputation, on January 30, 1960. This editorial opposes the nomination of James Durfee, Chairman of the Civil Aeronautics Board, to the U.S. Court of Claims on the ground that he is not qualified for the position, which requires a highly technical and specialized background.

The Nashville Tennessean's interest in this judgeship is particularly pertinent, because the man whom Durfee would succeed on the court if his nomination is confirmed by the Senate is retired Judge Benjamin H. Littleton, a Tennessean. Judge Littleton, as the editorial points out, was exceptionally well-qualified to serve on the Court of Claims.

I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

CLAIM COURT NO PLACE FOR MR. DURFEE

The Senate Judiciary Subcommittee is weighing the nomination of Mr. James Durfee, Chairman of the Civil Aeronautics Board, to the U.S. Court of Claims, and thanks to Senator WILLIAM PROXMIRE, there are heavy opposition arguments to weigh.

Senator PROXMIRE has raised questions about Mr. Durfee, both on the grounds of qualifications and violations of the code of ethics of the agency he heads. And the Wisconsin Senator has documented instances in which Mr. Durfee accepted the hospitality of airlines which has cases pending before his board for weekend golfing trips and airlines flights to Mexico, Rome and elsewhere.

Senator PROXMIRE has further argued that Mr. Durfee's, a native of his own State, lacks the technical training and experience required. This is a point Mr. Durfee and his supporters can't challenge very well.

Mr. Durfee would succeed Judge Benjamin H. Littleton, who served as assistant U.S. attorney for middle Tennessee, special attorney for the Treasury Department, a member of the board, and later chairman of the tax court of the United States before joining the claims court. In contrast, Mr. Durfee has no tax or government claim experience, no actual judicial experience, or any substantial background in claims matters.

A court in which the largest and most technical civil cases in America are decided is no place for one lacking a high degree of experience and legal skill. The judiciary subcommittee thus cannot escape the obvious: Mr. Durfee won't do.

Representative Olin E. Teague Honored by Paralyzed Veterans of America

EXTENSION OF REMARKS
OF
HON. ERWIN MITCHELL
OF GEORGIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. MITCHELL. Mr. Speaker, one of the real pleasures I have had in serving in the House of Representatives is the privilege of being associated with, and serving under the chairmanship of the very able and distinguished gentleman from Texas, the Honorable OLIN E. TEAGUE, chairman of the Committee on Veterans' Affairs. As we know, his combat record with the Army during World War II was outstanding. His reputation for courage, ability, dedication, and just plain hard work is both well known and well deserved. Through my close association with him, I have come to admire and respect him and to consider him a warm personal friend. During his career, OLIN TEAGUE has had many high honors bestowed upon him. He is now the recipient of another, which I am sure will give him more genuine satisfaction than any of the many awards that he has earned.

For his fine work in the field of veteran's affairs and more particularly for his efforts on behalf of a small group of veterans most deserving of the Nation's gratitude, the Paralyzed Veterans of America, have presented to our colleague from Texas a beautiful bronze plaque, inscribed as follows:

Presented to OLIN E. TEAGUE in recognition of his most significant contribution to the field of paraplegia, Paralyzed Veterans of America, 1959.

I request unanimous consent also to include as a part of the extension of my remarks the full text of the letter from the Paralyzed Veterans of America, Inc., to our esteemed colleague, extending the award to him.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

PARALYZED VETERANS OF AMERICA, INC.,
Franklin Park, Ill.

Hon. OLIN E. TEAGUE,
Chairman, Committee on Veterans' Affairs, Old House Office Building, Washington, D.C.

DEAR SIR: The 13th national convention of the PVA, held in New York City in July of 1959, unanimously endorsed a resolution to present our national award to you in recognition of your tireless efforts on behalf of veterans.

The name "Speedy" may seem an insignificant title to give to our national award, but the attitude of our happy-go-lucky man in the wheelchair is truly significant to us. Beneath his carefree exterior lies the deadly serious business of living which he goes about every day of his life. Yet, in spite of the difficulties which beset him, his attitude betrays the fact that he can still enjoy those parts of life and society which are still open to him.

People like you, Mr. TEAGUE, have enabled him to develop this attitude by helping him overcome obstacles which proved too big for the individual and his small organization. Each and every member of the PVA wants you to know their deep gratitude and hope you will accept this small token of their appreciation.

Ours is a debt of everlasting gratitude.

Very sincerely yours,
DWIGHT D. GUILFOIL, Jr.,
President.
HARRY A. SCHWEIKERT, Jr.,
Legislative Director.

A Lesson in Utility Budgeting—Expenditures Up, Rates Down, Taxes Nil

EXTENSION OF REMARKS
OF
HON. CLAIR ENGLE
OF CALIFORNIA
IN THE SENATE OF THE UNITED STATES
Monday, February 1, 1960

Mr. ENGLE. Mr. President, I commend to the attention of the Congress, and to our various budget officials in the executive branch, the sound financial operating record of the Sacramento Municipal Utility District in California.

This public district, popularly known as SMUD, is not afraid of capital expansion nor of the high budget that steady growth requires. The board of directors of SMUD recently approved a 1960 budget of more than $53 million, which is about $10 million more than it ever spent in 1 year before; yet at the same time it expects that its average charge for electric power will go down to 1.37 cents per kilowatt-hour, one of the lowest retail rates in the country. The actual rate structure is unchanged; the decrease in the average charge will be due to increased power usage in 1960.

Furthermore, SMUD is able to do this without collecting any taxes. It finances its large construction program, as well as all its current operations and maintenance work, entirely from revenues. This includes the issuance of revenue bonds specifically authorized by the voters of the district. Some of the details of how this is being done are told in a news article in the Sacramento Bee of December 20, 1959, which I would like to offer for the RECORD. This accomplishment certainly reflects the able management of SMUD by its board of directors headed by Chairman Royal Miller as well as its operating officials headed by Paul E. Shaad, general manager and chief engineer, and James K. Carr, assistant general manager.

I know that some critics of public power will hasten to note that although SMUD does not rely on taxes for its support, neither does it pay taxes to any other agencies of government. That is true. But the taxpayers of the community still are better off because, as the article points out, the net savings to the community due to SMUD's low electric rates are about double the tax benefits that property owners of the district would receive if the electric utility system were privately owned and operated.

I ask that the news article referred to be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

SACRAMENTO MUNICIPAL UTILITY DISTRICT SETS RECORD 1960 BUDGET BUT ELECTRIC RATES WILL BE UNCHANGED

(By Tom Arden)

While the Sacramento Municipal Utility District in 1960 will operate with its highest budget ever, users of the district's electricity will continue to enjoy one of the lowest power rates in the Nation.

Paul E. Shaad, general manager and chief engineer of SMUD, assured directors there will be no need for a change in the rate structure to finance next year's expenditure program of $53,491,000, up $10 million from 1959.

SMUD is the only major agency in Sacramento County which does not rely on taxes for support. It gets its revenue solely from its power system. Electric energy sales in 1960 are expected to bring in $19,442,161, an increase of $2,047,000. Operating expenses for the year are estimated at $10,860,000.

A large chunk of the new budget—$24,306,000—will be used for continuation of construction on SMUD Upper American River power and water project.

BOND SALE SET

SMUD will sell a second block of revenue bonds in 1960 to finance much of the work. Work underway is financed from the first $25 million block sale from a $85 million bond issue authorized by the voters in the district several years ago. Here again there are no taxes involved. Revenue from power sales will pay off the bonds.

According to general manager Shaad, the key to any successful electric system is high power usage.

In this, he noted, SMUD rates among the leaders in the Nation. In 1960, Shaad said, SMUD customers are expected to use an average of 9,087 kilowatt-hours of electric energy compared to 8,408 in 1959.

The per capita power use, Shaad added, for SMUD customers has more than doubled since January 1, 1947, when the Sacramento area electrical distribution system was taken over by the public utility from the Pacific Gas & Electric Co.

RATES GO DOWN

SMUD over the years actually has reduced power rates and some residential electricity rates are as much as 40 percent lower than customers would have to pay if they were served by the PGE.

While SMUD does not pay taxes, the net savings to the community because of low electric rates is said to be more than double any tax benefit property owners of the district would receive under a privately owned utility.

Because of the greater use of electricity, SMUD customers in 1960 will pay an average of 1.37 cents per kilowatt-hour for power compare to 1.42 cents in 1959.

SMUD's present source of power is entirely from the Federal Government's Central Val-

ley project. However, Shaad's budget message indicates the district will have to begin buying from the Pacific Gas & Electric Co., also in 1960.

The SMUD–CVP contract provides for a maximum demand of 290,000 kilowatts. The 1960 summer peak and SMUD is estimated at 317,800 kilowatts and next December's peak is expected to be 327,100 kilowatts.

The district will pay the Federal Bureau of Reclamation about $6,180,000 for Central Valley project power in 1960 and about $260,000 to the Pacific Gas & Electric Co.

BIG POWER USER

It is expected the Central Valley project will provide the district 1,514 million kilowatt-hours of energy and the Pacific Gas & Electric Co. another 30,300,000. Toward the end of the year the SMUD's Upper American River hydroelectric plants will get going and 23,500,000 kilowatt-hours is expected from this source in 1960.

Total power usage of 1,568,200,000 will be about 200 million kilowatt-hours higher than the amount used in 1959.

The 1960 budget contemplates payment of 4.08 mills per kilowatt-hour for Central Valley project power from the Government and 8.68 mills for power from Pacific Gas & Electric Co. Shaad explained, however, the high cost per kilowatt-hour from the Pacific Gas & Electric Co. reflects the fact monthly demand payments of $34,220 are budgeted from February through June with no delivery of power during these months.

The SMUD budget reflects the growth of a district which is fast becoming one of the major utilities in the Nation.

The district expects to add 98 employees during the year to bring its total to 850.

MORE WORKERS

Shaad said 27 new workers will be needed to meet distribution system construction and maintenance requirements forecast for 1960. SMUD customers are expected to grow to 161,000, an increase of 9,000 for the year.

Eleven employees will be required late in the year for operation and maintenance of the district's hydroelectric generation facilities in El Dorado County; 16 more workers will be needed for general services; 13 for the engineering department, and 31 for the increased workload.

Recent U.S. Trade Mission to Italy Termed a Success

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following most gratifying letter from Mr. William Sword, of Wilkes-Barre, in which he sets forth his impression of the recent U.S. trade mission to Italy, of which he was a member. Mr. Sword speaks from a position of wide and varied experience in his capacity, for many years, as chairman and director of Wilkes-Barre's Committee of 100, an organization that has been very successful in encouraging new industries to locate in my congressional district of Luzerne County. It is, indeed, comforting to know that this mission to Italy was a satisfactory and constructive one.

WILKES-BARRE, PA., *January 9, 1960.*
The Honorable DANIEL J. FLOOD,
House Office Building,
Washington, D.C.

DEAR DAN: First, I don't think I have officially thanked you, and of course Gene, which I hereby do, for the help that you were in having me assigned to the recent trade mission.

Officially, as a member of the Appropriations Committee, I think you should know that whatever money you Members of Congress appropriate for this particular work, I believe is money very, very well spent. Excluding myself, the other three members of the trade mission, I am sure, did an outstanding job in promoting American ideals and ideas, and I am sure that the people whom we had the pleasure and honor of talking to in Italy have a better understanding of how American business operates and that the pure food laws of America apply just as well to American businessmen as to exporters from Italy. I am sure in a half dozen instances this was a very touchy subject, but when our boys finished, I am sure there was a better understanding.

I hope, in some small way, I was able to make clear to the leadership of southern Italy that it is possible for a distressed community to do something for itself rather than be completely dependent upon the Government for every improvement.

I think it is a program that could very well be expanded if possible, for it is "people to people" on a very common ground. The question and answer periods which were held on every possible occasion, I am sure clarified very much in the minds of southern Italian leadership how they might go about improving the economic conditions in their areas by some initiative on their part.

Again, I think that this program is very worthwhile and should be given every encouragement by the Congress. I would further like to spell out to you the very efficient way in which this thing was handled by the Department both in Washington and in the field. I assure you that it was a revelation to me to see the devotion that was given to this program by the interested people from the director down, and I think they should be commended for a job well done.

Sincerely yours,

WILLIAM O. SWORD.

Progress in Superior, Wis.

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, February 1, 1960

Mr. WILEY. Mr. President, as the Nation enters the decade of the 1960's, we look forward to 10 years of challenge and progress.

Across the country, forward-looking communities are laying constructive plans to take advantage of the opportunities of the future. Today, I should like to pay tribute to one such community—Superior, Wis. Possessing a deep, natural harbor, Superior is looking forward to new economic life, particularly resulting from the opening of the St. Lawrence Seaway. As a result of the opening of the seaway in 1959, this outstanding port has already experienced a doubling of traffic in foreign vessels, stepped-up grain and ore shipment, and extensive construction.

However, the splendid community is not putting all its eggs in one basket. As it looks ahead, plans are underway to promote progress in all aspects of complex economic life of the community.

This requires planning in a great many fields, including finance, services, construction, education, health, transportation, manufacturing, and others. In addition, they are designing and undertaking realistic plans for beautifying the community and making it a better place in which to live for its citizens.

Recently the Superior Telegram published a special progress edition, entitled "Superior—Opportunity Unlimited,' containing numerous constructive articles reviewing the way in which a community can take hold of the challenges confronting it and move ahead.

Reflecting the kind of forward-looking attitude that is the backbone of progress, I ask unanimous consent to have printed in the Appendix of the RECORD a thoughtful, constructive article by Mayor L. M. Hagen, entitled "City's Future Success Dependent on All," on the need for community cooperation to promote progress.

In addition, I ask unanimous consent to have a splendid article from the special progress edition of the Evening Telegram, outlining the specific ways in which the fine citizens of Superior are undertaking programs to pave the way for an ever-brighter future for this splendid city, also printed in the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

CITY'S FUTURE SUCCESS DEPENDENT ON ALL

"Looking forward, the atmosphere in which we expect to produce future community success should never be taken for granted or overlooked. Every living and growing thing does best where the climate, soil, and atmospheric conditions are most suited to its needs. This truth also applies in the field of human and community accomplishments."

That's the comment of Mayor Lawrence M. Hagen, who issued the following statement for the Evening Telegram progress edition:

"All community and group success requires a mutuality of understanding. There should be common objectives and cooperative effort, where all are working together with mutual respect and common interests. Because people have various degrees of progressiveness and understanding, it is certain that there will be differences in their ideas, diligence, and methods. This points out the need for coordination and guidance. Certainly, there will be mistakes and errors in judgment. And, while errors cannot be permitted to go unnoticed, there are ways by which they can be handled without the kind of condemnation that leads to friction, lack of confidence, or loss of prestige which result in unfavorable community climate.

"The technical part of community problems may be difficult, but the real important part of our job, or any job, is usually our morale or group attitude.

"Failure almost always begins with an unfavorable atmosphere, and that has to do primarily with a community failing to work effectively and agreeably together. Fairness, understanding, integrity, and tact in people of a community are just as necessary in qualifying us for success as are technical ability and skill of your public servants.

"A governing body which truly concerns itself with society as a whole will have as its allies, the whole society. We in the city administration have endeavored to reach this goal through good solid administrative programs, accomplishments, and business conduct that is in concert with and not opposed to public good.

DECISIONS

"There is more than sentimental relationship between the city administration and citizens. It is a bone-sinew and perspiring brow relationship that all the presently intangible but very real challenges lie, to impel the community to join with its government to preserve the value of our city and help solve the unprecedented problems of the times.

"The time is practically upon us when public officials and civic minded citizens must abandon hesitant school boy fears, as the decisions which are going to have to be made in the future are almost terrifying.

"There must be boldness in imagination and design in our city. There should be a start made toward constructive citizen support toward downtown business district and north end urban renewal. These areas must be made presentable with the opening of the Superior-Duluth High Bridge in about 2 years.

"Superior, like every other city in America, is undergoing what might be called an agonizing reappraisal of its assets.

"One of a community's principal assets are its people. Their morale, pride, and enthusiasm fit into the future plans for Superior. Henry Ford once said that, 'There are not big problems. There are just a lot of small problems, and the difference between the old Model T and the new Lincoln was planning.'

"Our harbor potential is the envy of the civilized world.

"With natural gas brought into our city we have another asset toward economic growth and greater impetus. This versatile, new energy source has already been put to work at hundreds of new and branch manufacturing jobs where it has reached other communities and will do much for us in reduced and stabilized fuel costs.

"With our strategic location for land and water shipment, abundant manpower, healthful climate, harbor and industrial sites, beautiful residential areas and recreational opportunities beyond compare, and with citizens of civic-minded substance having the mental flexibility to adjust to the needs of the future, we will not fail to grasp this great challenge.

"The future success of Superior and its people must be an inside job—that is, the heartfelt support and cooperation of everyone."

LARGE GAINS SEEN IN CITY'S ECONOMIC FORECAST

Growth by land, lake, and sea keynotes Superior's progress story for 1960 with the St. Lawrence Seaway in a leading role, supported by a doubled foreign vessel traffic, stepped-up grain and ore shipments, and extensive construction.

This significant economic forecast means heavy gains in manufacturing, in retail and wholesale trade, broadened school and religious facilities, as well as more jobs for local workers.

Port executives estimate that the Twin Ports' foreign vessel trade will be at least doubled in 1960 in addition to the regular lake traffic. The Twin Ports has already exceeded some of the most optimistic expectations in seaway transportation. The seaway so far has brought an estimated $2 million expenditure to the Twin Ports in the way of tugboat service, labor, lumber, and fitting boats for grain loading, supplies, and purchases by seamen. Next year is expected to bring improved operations and tonnage increases.

The Wisconsin Grain and Warehouse Commission has increased its working force by 12 year-round men because of the vast grain movement brought about during the 1959 navigation season by the opening of the seaway. Local elevators currently, because of this steady flow of grain, now have storage space to accommodate the grain which will be brought into the city during the winter by train and truck.

Officials of the Twin Ports U.S. Immigration and Naturalization Service anticipate a greatly stepped-up foreign-vessel traffic for the Superior-Duluth harbor in the 1960 navigation season which they feel will call for an increase next year in their Twin Ports staff. During 1959 the I. & N.S. officials inspected 154 oversea vessels on which were 5,277 crewmen. In addition the office inspected 145 Canadian and American Great Lake vessels on arrival from Canadian ports. These vessels were manned by a total of 6,795 crewmen.

The Great Lakes Storage & Contracting Co. which began its operations in Superior in 1950 is prepared to move ahead as the seaway develops. Since the firm started operations here, it has improved its property continuously and in 1959 constructed a steel building which was filled with 930,000 bushels of wheat. The Conner's Point dock includes 17 acres, all under concrete.

The Great Northern Railway sees favorable business conditions generally for 1960 and anticipates a considerably heavier ore movement when the Great Lakes shipping season opens in the spring. Although the steel strike seriously interrupted the ore movement this season, it failed to alter the 1959 track improvement and maintenance program to any extent.

The selection of an architect for the Superior Memorial Hospital will be made in early 1960 and construction is expected to start later in the year. The hospital will be built on a 40-acre tract on Tower Avenue, between 28th Street and South Superior, at an estimated cost of $1,800,000 to $2 million.

Architectural plans are complete for a new cathedral convent to house the 30 sisters of the Cathedral School. Also being planned for possible 1960 construction is the Newman Club Center at Superior State College.

Amundson Products will enlarge their plant this year for expansion of glass bow operations and two additions will be built on the Stockade Motel.

In the area construction picture are a new elementary school at Clear Lake—bids to be invited soon—a new wing on the Birchwood School, and a manufacturing plant for the Hiabob Hydraulic Loaders, of Ely, Minn., at Ashland.

More jobs for more local workers because of the local economic progress is the outlook of the Superior office of the Wisconsin State Employment Service. The WSES bases its forecast on the employment progress the area has made in the past year as a result of the seaway. Heaviest gains are anticipated in manufacturing and wholesale trade.

The Lakehead Pipe Line Co., of Superior, will have a $4 million allotment in a $9,300,000 expansion program announced recently by the Interprovincial Pipe Line Co., of Canada. Interprovincial's program for 1960 calls for enlargement of existing buildings at the diesel-driven pumping units at Superior and Saxon, construction of two pumping stations in Minnesota, and additional tankage at Clearbrook, Minn.

The Superior parochial schools are keeping abreast of the needs of students by introducing into the system in 1959 and 1960 various innovations and educational experiments. New courses have been added this year and new equipment provided. This progress in education will continue in 1960.

The Northern Pacific Railway expects to spend $38 million in improvements and construction in 1960 with $1¼ million allocated for the Lake Superior division. This means new rails, bridge and culvert repairs and replacements, as well as new buildings and improvements to various facilities.

Central Cooperatives, Inc., will continue its goal in 1960 of combining all of its Superior operations under one roof. They have now completed basic architectural plans for a large, modern single-story distribution center on a 40-acre plot between 28th Street and South Superior where in 1959 a modern shopping center was opened. The 1960 sales goal has been set at $18,648,000, which is a 9-percent increase over 1959.

The Superior Vocational School, one of the city's greatest assets in the educational field, continues each year to introduce new courses for the benefit of both youths and adults. During the year 1958–59, there were 1,907 people enrolled in the training program.

The Superior-Lidgerwood-Mundy Corp., one of the city's most important industrial plants, whose products are internationally known, installed a new department in the plant in 1959. The plant now manufactures bakery equipment in addition to its other products. The expansion added some 30 men to the corporation's payroll.

Carl Hanson, owner and operator of the Stockade Motel on East Second Street, will build an addition on his motel.

Holzberg's Cleaners is building an addition to the plant at 1402–1406 Belknap Street. The addition will consist of office and storage space at an estimated cost of $8,000.

The Huron Portland Cement Co., doubled its production in 1959 by constructing a clinker grinding mill at an estimated cost of $25,000. The new mill brought the total capacity of the plant to 5,000 barrels of cement per day. The cement clinkers are being transported here from the company's cement clinker mill at Alpena, Mich., the world's largest single cement mill.

A new beauty salon, modern in appointments to a high degree, was opened this year in Superior. The House of Charm is conveniently located.

The Harry Swansons opened their new pet shop at 1327 Banks Avenue, which contains an outstanding variety of tropical fish from many countries of the world, together with many types of pets.

Next door to the Swanson's shop is the new Carroll Hobby Shop, operated by Jim and Rachael Carroll and containing a complete line of hobbies, games, toys, and gifts.

Better mail delivery for Superior resulted when the Post Office Department put into service 12 new three-wheel "mailster" vehicles. Each vehicle can carry up to 500 pounds of mail. The vehicles are especially adaptable for use in cities that cover a large area.

The Superior Savings & Loan Association has moved into its new home at 12th and Tower Avenue and marked its great progress event with a 3-day open house, December 15 to 17. The new one-story building is modern in detail and designed with provisions for expansion within the present unit and provision for future enlargement as business requires. The rapid growth of the association and future projects called for the new and expanded space.

A new radio station, WQMN, owned by Quality Radio, Inc., went on the air during the summer of 1959 with the studio located at 1320 Tower Avenue, and a 186-foot tower on Maryland Avenue. The daytime station covers Wisconsin and Minnesota and features music and news.

Radio-television station WDSM; Superior-Duluth, remodeled its Superior studio at 921 Tower Avenue, during the late summer.

The YMCA camp at Lake Nebagamon will have a new craft cabin through a gift of $1,500 from the Superior Rotary Club. The cabin which will bear a Rotary sponsorship plaque, will house craft activities, office and canteen quarters for the camp.

The Soo Line Railroad conducted the impact which resulted from the long steel strike by making improvements in its service, its staff and managerial techniques, which, President G. A. MacNamara declared, are "difficult to measure in terms of dollars, but are every bit as important as improvements in equipment and fixed facilities." The company plans in 1960 to complete its central traffic control installations started this year and extend its mechanized car reporting system to embrace the entire system.

A new telephone, called the Princess, and a new piece of telephone equipment known as the Rapidial will be available to telephone users in 1960. The new telephone is the answer to many requests for a smaller telephone. The Rapidial speeds up automatic dialing. In 1959 the Wisconsin Telephone Co. hit a new high with 15,464 telephones in service in Superior, an increase of 350 over the previous year.

Link Bros., Inc., of Minong, has leased the Bensen Motors Building here and after remodeling will carry a complete line of appliances, furniture, outboard motors, boats, and other items. The firm will use the adjoining lot for expansion of the Link Ford agency used-car display.

The 1960 summer season will find Superior's parks and waysides in top shape for the comfort and pleasure of an expected influx of tourists, as well as for local residents. Pattison Park, which attracted an estimated 225,500 persons last season, will provide extended bathing facilities in the way of lockers for the bathhouse, supplemented camping facilities, and excellent roads and parking lots which will all be resurfaced.

Plans for future progress at Superior State College were accelerated this year by the realization of a long-range expansion goal. Four new buildings at a total cost of $3 million have been completed in the last 16 months. The 98-student increase over last year, previous top enrollment year, represents a percentagewise increase second largest among the Wisconsin State colleges. Besides acquisition of the new buildings and peak enrollments, Superior State College has a larger faculty and expanded curriculum.

St. Joseph Hospital has made long strides toward improved patient care in the way of additional equipment, redecoration, and air conditioning. Outstanding among these improvements is the new auxiliary-sponsored coffee shop which provides a place of relaxation for relatives and friends of patients.

Since Wisconsin legislation enacted this year provides that all territory in the State must be within a high school district by July 1, 1962, an expansion of local services to include surrounding country area is seen in the near future. This expansion could mean construction of one senior high school building, and housing all the seventh, eighth, and ninth grade students in the present two high schools.

Superior will be the center for the 1960 census in district 10, which takes in 14 counties. The local office at 928 Tower Avenue will hire 213 enumerators who will take the count in their own areas. The canvass will be on population and housing.

Superior and northern Wisconsin should benefit substantially through a recent move which calls for trucking reciprocity with Canadian Provinces of Manitoba, Saskatchewan, and Alberta when the present agreement expires in July. Present agreements provide that Canadian truckers pay one-fifth of the normal license fee, and that Wisconsin truckers are granted full reciprocity in Canadian Provinces. Granting reciprocity is expected to increase the use of Wisconsin's northern highways by Canadian truckers.

A Canadian trucking firm has already informed the mayor that it will be ready to send 100 units along Highway 2 as the need requires when the new reciprocity goes into effect. The Gill-Pix Transportation Ltd., of Calgary, stated it will need 10,000 gallons of fuel oil per month on the Wisconsin route.

Building permits issued since May in the city assessor's office point to a large future construction program on residential properties. During 1959 there were 238 new units in residential ratings valued at $1,063,270, plus alterations totaling $84,605. Mercantile new construction and alterations totaled $1,147,875.

In view of a greatly advanced grain movement in 1960, encouraged by a highly successful first season for the seaway, elevator operators at the Twin Ports are now in the process of improving their grain handling facilities to accommodate the 1960 season. Improvements include dock and elevator modernization and deeper channeling of the elevator slips.

A bill for deepening 17 miles of local harbor channels, which will involve the removal of 5,500,000 cubic yards of material at an estimated cost of $5 million, has now reached Congress. The Senate Public Works Committee will hold a hearing soon to consider the deepening project. As soon as an appropriation is available the Army Corps of Engineers will let contracts in order that local and area industries may capitalize on the harbor investment as early as possible.

Port officials are making every effort possible to encourage foreign ship owners and shippers to route their vessels and cargoes through the Twin Ports during the 1960 navigation season at a subtantial savings in transportation costs. Traffic surveys and pilot shipments this year indicate a greatly broadened distribution in the future.

The Northwestern Refining Co., of St. Paul, has purchased waterfront property with plans for large storage facilities and a bulk depot with an outlet on the Great Lakes.

The Donovan Construction Co., of St. Paul has purchased land on Connor's Point for a proposed $5 million elevator.

The Fraser-Nelson shipyard is now in the heaviest winter season in its history, with 26 lake freighters winter berthed at Superior and Duluth this year. Largest project for this winter is the conversion of the bulk freighter *D. O. Mills* to a conveyor type, self-unloader which involves an expenditure of well over a million dollars.

Officials of the Lake Superior refinery, one of Superior's leading industries, are currently studying plans to double the plant's capacity. Presently the firm is engaged in an asphalt expansion program which will provide the plant with the most modern facilities for asphalt production.

The Superior Water Light & Power Co.'s $2 million gas expansion program with the arrival of natural gas in Superior, is evidence of the power company's confidence in Superior's future. The natural gas program provided additional employment in Superior and as the gas program expands through increased sales of natural gas service, further employment and job opportunities will result, the company stated.

John Lynch, chairman of the Douglas County Board of Supervisors, has outlined a three-fold plan for a strong county industrial development program and land management policy to protect the uses of county land as important county projects for 1960.

Two mining companies, the Bear Creek Mining Co. and Cerro de Pasco are testing for mineral deposits in upstate counties. Although results are not yet determined, reports appear encouraging.

The Douglas County extension office is bringing its services to more people each year with 638 families contacted this year through farm and home visits and 1,104 people calling at the office for advice on agricultural and home economics problems.

The Wisconsin Conservation Department is developing its wildlife projects in northern Wisconsin. Over 3,500 acres of land were purchased in 1959 by the game management division for wildlife projects, 2,300 feet of level ditches dug in dry marshes, three flowages constructed involving 2,469 feet of dike, and numerous other activities.

State and county highway officials are ever mindful of the important part well-groomed highways have in the development of an industrial area. Superior will take a $1-million share in the State highway program for 1960 in the way of construction of a route on U.S. 53 to connect the highway with the interchange of the Superior-Duluth high bridge. Considerable improvements in highways in district 8, including those leading into Superior, are already underway and are expected to be completed in the coming year. These include grading, structures, sand subbase course, gravel base course, curb and gutter construction, surfacing and resurfacing.

The new year will bring a number of improvements to Douglas County highways with resurfacing and bridgebuilding already planned for various areas. The projects governing chemical weed and brush control will be continued as well as the centerlining work. The year 1959 was a very successful one because of favorable weather conditions.

In turn, conservation and highway beautification experts and garden club members watch all angles associated with roadside beautification in an effort to promote neatness, provide comfortable waysides, and an attractive view of the countryside.

Force of Principle

EXTENSION OF REMARKS
OF
HON. JOHN W. McCORMACK
OF MASSACHUSETTS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. McCORMACK. Mr. Speaker, the present crisis in France on the Algerian problem is a matter of great concern of a worldwide nature. Its successful solution is not only vital to France, but to the free world.

In my remarks, I include an excellent editorial, "Force of Principle," appearing in the January 29, 1960, issue of the Catholic Standard of Washington, D.C.

In my remarks, I also include an article, "De Gaulle Rates Allies' Support," written by William S. White, and appearing in January 29, 1960, issue of the Washington Star, of Washington, D.C.

The articles follow:

FORCE OF PRINCIPLE

De Gaulle's hour of trial is fateful for the free world. If he and the best interests of France prevail there are sound hopes for stability in north Africa and Western Europe.

The policy under trial is not merely a test of strength with some hot-headed colonials. It is a trial of the force of principle.

De Gaulle came to power promising a reign of principle consonant with the glorious history and honor of France. Many observers thought that calling him to power was like inviting a dreamer to run an electronics plant. The problems he faced were fantastically complex, and had resisted all the solutions and compromises of the practical politicians. Despite these misgivings De Gaulle proclaimed that he would run his government on principle . Everyone who knew De Gaulle and his life knew what he meant.

De Gaulle's attempt, therefore, is a test of the force of principle applied to the most complex political situation today. To put it more precisely, it is a test of whether the principles enunciated by De Gaulle can evoke enough support among the citizens of France to succeed. It is a test of whether these citizens can bridle their natural resentment against the FLN rebels and pledge their support to a magnanimous and enlightened project that is worthy of a Christian nation. This is not to say that everything that De Gaulle and his government have done or will do is infallibly correct. But they have based their appeal on the force of principle as the correct governmental policy.

If France and De Gaulle meet this test they will deserve a unique position in the leadership of the world. They will have demonstrated that the force of principle can succeed where no other force can.

DE GAULLE RATES ALLIES' SUPPORT—FRENCH LEADER DESCRIBED AS DEFENDING FREE SOCIETY AGAINST COMMON ENEMY

(By William S. White)

For the second time in his long career, Charles de Gaulle of France is a figure of heroic resistance in a Western World that already owes him much. And that world is now refusing to give him one-fifth of the support he deserves.

Half a generation ago, this man of great haughtiness—but of great honor—staked his life and his country on a seemingly hopeless fight against the Nazi occupation of France. Raising the Cross of Lorraine as his banner, he reclaimed France's integrity and her will to resist and live.

At last, after bitter years, he was able to sit, ramrod stiff, in the cathedral of Notre Dame at a mass said on a memorable summer day in thanksgiving for the liberation of Paris.

This correspondent remembers that day, for he was present in the cathedral. And he recalls, too, the cold, total unapproachability of that remote figure in the uniform of a general of the French Armies—the personality which was then, as now, making it humanly difficult for many to pay him his due.

Perhaps Charles de Gaulle is too right, too consciously, to be liked too much.

But today De Gaulle is still standing strongly (and all but alone, too, this time, among the statesmen of the West) against the common enemy of the free society. This enemy has many faces, for different times. Some of them, like the Nazi face, are more evil than others, and so openly evil as to leave no room for argument. But all of them are destructive faces. And all of them can be spelled with the single word extremism.

Alone among the free world's leaders, De Gaulle has fully understood the true challenge of this century. Everywhere the contest at bottom is between those who wish to find imperfect, but workable, solutions and those who violently and on principle reject all solutions except the one that is quite impossible to obtain. This is the solution af absolute perfection—in their eyes.

The tragedy of Algeria lies in this. De Gaulle has worked with devotion to find a middle way. He has on the one side the Arab Algerian independence extremists who demand everything all at once. And he as the French settler extremists who really would refuse to give a single inch to the independence movement.

He is the head of a country that is an irreplaceable ally of the United States and Britain. But when all the ifs and ands and buts and maybes are stripped away, it comes to this: We and the British have hemmed and hawed with him. Why? Because we dared not be called "colonialists," even where the epithet would have been nonsense.

President Eisenhower, for example, long since publicly indorsed the moderate De Gaulle formula for Algeria. But in a subsequent showdown in the United Nations, on an extremist motion calling for support of the Algerian rebels instead, the United States said neither yea nor nay. We "abstained."

This sort of thing has made it far more difficult for De Gaulle to vindicate his middle course. He desperately needed our all-out backing, for the man in the middle is always the special target of the crackpots on both extremes of an issue.

The British have given De Gaulle even less help. And to now the thing in Algeria seems really to have got out of hand, whereas firm Allied support for the De Gaulle plan would surely have given some pause to both sets of extremists.

We and the British were afraid of this and and of that—most of all that we might offend the world's emotionalists who demand total "independence" for everybody, everywhere, by tomorrow morning. Maybe this tender regard for them is fine, in theory. But a terrible fact remains.

It is France, it is De Gaulle, who is our ally. It is not the emotional extremists, or even "the Afro-Asian bloc." And if De Gaulle falls now, France falls with him into a chaotic vacuum which will never be filled in our interests by all the "Afro-Asian blocs" and all the "independence" extremists in all the world.

Letter from Taiwan

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Monday, February 1, 1960

Mr. CARLSON. Mr. President, I have read with great interest an article from the editorial column of the Iola Register. The article is in the form of a letter written by a former citizen of Iola, Kans., who is in the Orient with a Fulbright Scholarship Commission to teach chemistry at Tunghai University, Taichung, Taiwan (Formoa).

This letter is particularly interesting in view of the information it contains regarding the attitude of the citizens of Taiwan, their economy, and their determination to preserve the freedoms they enjoy under a democratic government.

I ask unanimous consent that the letter be printed in the Appendix of the RECORD.

There being no objection, the letter was ordered printed in the RECORD, as follows:

LETTERS FROM TAIWAN

You asked about the people here. This letter is in answer to that question.

The first impression we got, and one that has been continually strengthened, is that the people are happy, contented, cheerful, and friendly. They are at work at all conceivable hours, and you see women doing construction work and men doing draft animals' work, but they take it easy. They are frequently sitting where we would be standing, laughing and chatting, taking their time between strokes of the mattock or trips with baskets of dirt on the ends of a carrying pole.

There are practically no fat ones, but on the other hand there are no children who show the spindle legs and potbellies of semi-starvation. I have seen only one beggar; Peking used to swarm with them.

Chiang Kai-shek's government is pretty good. It suffers from having no long tradition of self-government behind it, and from the feeling that still persists to a considerable extent from the days of the emperors that public office is the opportunity for private profit. But who are we to say that there is none of that in the United States? The situation here is more like that in American politics a hundred years ago, and progress is made more difficult by the absence of a foundation of Judeo-Christian morality.

But Chiang has invented a system for improving things which I believe is working. There is a department of the government the sole business of which is to investigate the workings of the rest of the government, checking for honesty, efficiency, good judgment, and obedience to the constitution. Scandals are discovered, and government officials are found to have taken bribes, but the misdemeanors are discovered and punished, instead of being S.O.P. the way they used to be when I was in China before.

I believe that the people are thoroughly behind this government, and that the government is continually improving. The flood relief and restoration have been handled very well.

The situation of the people here has been immensely improved since Chiang Kai-shek came over from the mainland. The death rate has been cut in two. Malaria used to affect 2 million people; now there is a reward offered for the reporting of any case.

An underfed population has been more than doubled in number, and is now well fed and exporting rice, sugar, hogs, pineapples, etc. Industrialization is proceeding at a reasonable rate in a sound manner. In principle, private enterprise is favored; they are working at the problem of reducing currency restriction and government ownership.

Don't let anyone talk to you about Chiang's "aging army," as though it was composed of the personnel he brought over with him. They have universal military service here, and the average age of the soldiers remains constant.

We are continually seeing training maneuvers, and the men are strong young fellows. They appear to be in good humor and are well behaved. They get lots of training. I can hear target practice every morning beginning at dawn.

People here understand the Chinese Communists better than anyone else. In the first place, they are Chinese. In the second place they are in personal contact with the people who are continually escaping, penniless and at the risk of their lives, from the Red hell on the mainland.

These refugees are the people who really know how things are under the Communists, not those who pay a visit to Peiping and are shown what the Communists want them to see, and certainly not those who swallow any of the fine words about accomplishments and intentions which Peiping puts out.

They remember what many in the West seem to have forgotten, that Peiping is responsible for civil wars in Korea, the Philip-

pines, Vietnam, Quemoy and Laos; that they invaded Tibet in cynical disregard of treaty and are busily engaged in wiping out all the tribesmen there who object to having their culture extirpated.

They know that the violent encroachments against India's frontier are completely in line with the Reds' announced and steadily maintained adherence to the use of war as an instrument of national policy, and that the Red goal is the complete dominance of Asia.

But they also know that the Peiping regime has almost completely lost the support of the Chinese people (who credulously welcomed them at the end of the Japanese occupation) and is meeting with one rebellion after another.

These have, so far, been ruthlessly and bloodily suppressed, but the army comes from the people and its allegiance to the regime is becoming less certain. A large-scale Hungary may erupt at any time.

Everybody here, including me, believes that the United States should be unremitting in its hostility to the wicked crew in Peiping. We should do nothing to increase its prestige (recognition, admission to the U.N. or to summit conferences) and anything that is possible to weaken it.

Worst of all would be to follow the stupid Conlon Report and try to recognize two Chinas, the mainland and a "Republic of Taiwan." This would be equally resented by both sides, and would sound the death knell of hope for half a billion people. All the uncommitted peoples of Asia (and probably Africa) would take it as a signal to get onto the Communist bandwagon.

I fervently hope that if and when chaos does boil up on the mainland, we will give the green light to Free China and Korea to go in and clean things up, providing all needed material and sea and air support.

EWING C. SCOTT.

Will E. Neal

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 1, 1960

Mr. SAYLOR. Mr. Speaker, Dr. Will E. Neal symbolized an unselfishness that needs to be popularized and perpetuated if America is to reap the full advantage of her human potential. Dr. Neal practiced medicine for 45 years before becoming a Member of the House of Representatives. Rather than turn to an easy life of retirement, he chose to serve where his experience and aptitude might be of further value to his community, his district, and his country.

Dr. Neal's terms of office were in the highest tradition of one who devotes his life to the brotherhood of man. His mature thought, careful deliberation, and independent conclusions produced a record of outstanding contributions in Congress. I often talked with him about matters before the House which he insisted upon considering from all perspectives, with careful study and hours of pondering constitutional implications, so that his final decision would be certain to be in the interest of the general welfare. He did not respond to hard sell approaches to issues because he felt that careful diagnosis of every problem was a prerequisite to proper voting on all legislation.

Our departed colleague was a gentleman, a scholar, and a patriot. His equanimity, judgment, and sincerity were respected by everyone regardless of party affiliation.

The thought occurs to me that Dr. Neal's life needs to be portrayed more thoroughly among our peoples, if only to dispense with the notion that a person's active participation in business, government, and the sciences should normally cease when he reaches the twilight of his career on earth. Here was a man who had passed the three-quarter-century mark before his election to Congress the first time. His keen intellect and quick step belied those years, while, unfortunately a vast majority in our midst resign themselves to a life of inactivity long before they approach that age level. By assuming Dr. Neal's vigorous attitude and optimistic temperament, countless others might find far more enjoyment and opportunity for accomplishment in their upper years.

With the passing of Dr. Neal we have lost a firm friend, a solid Christian, and a dedicated patriot. He will be mourned far and wide, not only by the multitude of men, women, and children whom he attended in his extensive medical practice, but by every American who appreciates his devotion to duty while a Member of the Congress of the United States.

Lack of Facilities for Training Physicians

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Monday, February 1, 1960

Mr. JAVITS. Mr. President, the crisis in America's program of medical education is described in some detail in a series of articles by Dr. Benjamin Fine, education editor of the North American Newspaper Alliance. His findings demonstrate that there is a growing reliance upon foreign trained physicians. This critical shortage of doctors is caused in part by the fact that existing medical schools do not have the facilities to admit enough students to solve this problem. With the growth of America's population, and the increase in the number of older people, many more physicians are needed to take care of the health needs of people than our schools can presently produce.

In this connection, I have proposed that a Health Services Study Commission be established to look into all aspects of the health problems and needs which our country faces. This was incorporated in Senate Joint Resolution 43, introduced by me, and cosponsored by several of my colleagues. Right now, for instance, we are confronted with alarming statistics indicating that the proportion of doctors and hospital beds avaliable for our growing population is steadily declining. We had 9.7 hospital beds per 1,000 population in 1948 while in 1958 the figure had dropped to 9.1 per 1,000, despite the fact that our supply of hospital facilities has grown more than 10 percent in the last decade. Meanwhile, from 1949 to 1959 the supply of doctor of medicine physicians has dropped from 135 to 132.7 per 100,000 population and the Public Health Service has estimated that it will continue falling to 130.5 by 1970, and to 125.9 per 100,000 by 1975, which was about the ratio we had back in 1930. Therefore, appeals for increased Federal participation in the construction of hospitals and medical training facilities, and in providing scholarship aid in the form of loans or grants to medical trainees are clearly indicated.

I ask unanimous consent that the articles under the general heading "Our Doctor Crisis" by Benjamin Fine, which appeared in the Washington Evening Star, on January 4, 5, and 6, be printed in the Appendix of the RECORD.

There being no objection, the articles were ordered to be printed in the RECORD, as follows:

OUR DOCTOR CRISIS—BRIGHTEST STUDENTS BOYCOTT MEDICINE

(By Dr. Benjamin Fine)

NEW YORK, January 4.—The Nation's brightest college students are boycotting the medical profession. They are not applying for admission to medical schools.

Fewer talented students enter the schools of medicine each year. In some cases, medical schools have to scrape the bottom of the barrel to get enough students to fill their classes.

A serious shortage of doctors confronts the Nation. With the population increasing rapidly, and the number of new doctors entering the profession leveling off, the shortage will become increasingly severe. Moreover, many physicians now enter upon specialized fields of medicine, with the result that the traditional family physician is getting scarcer each year.

DANGERS CITED

The recent report of the Surgeon General's consultant group on medical education, consisting of 22 prominent educators and doctors, brought out the dangers that confront this country unless immediate action is taken. Studies made by the education research service of the Association of American Medical Colleges, and by other agencies, point to the serious crisis that is developing in medical school education.

The total number of medical school applicants is decreasing in the face of increased enrollments and graduates from colleges. In 1950, for example, 2,296,592 students enrolled in the Nation's colleges. That year 22,279 students applied to medical schools. But, with 3,258,556 students in college in 1958, only 15,172 men and women sought admission to schools of medicine.

Ironically, many students do not apply because they have heard how difficult it is to get into a medical school. Many apply to 10, 20, or even 30 schools. Actually, the total number that apply, while going down, does not tell the full story. More than half the medical schools have residence requirements—they admit students only from their own State, or from the immediate region.

Accordingly, some State medical schools have very few students from which to choose, while others, particularly the private col-

leges in the East, may have 20 or 30 applications for each vacancy.

"A" STUDENTS FEWER

The percentage of students entering medical schools with an average grade of A has been decreasing.

College grade average for first-year medical students:

	Percentage	
	1950–51	1957–58
A	40	18
B	43	66
C	17	16

Moreover, the Journal of Medical Education reports that the scores of all first-time applicants for each of the years from 1952 to 1957 show that a decline has occurred, as measured by the medical college admission test. Another indication of lowered quality: The percentage of students withdrawing during their freshman year in medical schools increased from 5.5 percent in 1954–55 to 7.8 percent in 1957–58. Fewer students were available for the second year from the 1957–58 class than from the 1956–57 class.

Why, in the face of a grave need, has the number of students, and the academic quality of these students, decreased?

Various reasons are offered by authorities. The competition from other professions is increasing. During the last decade the number of persons who have gone for the Ph. D. degree has grown more rapidly than the number entering the medical profession.

TIME IS A HANDICAP

The length of time it takes to complete a medical education has become a serious handicap to many. The would-be doctor must go 3 or 4 years to an undergraduate college, 4 years to the medical school, and from 1 to 6 years in internship and residency or fellowship training. It is not unusual for a medical student to train for 10 or 12 years before he can open his own office.

Cost is an important factor, too. A recent study shows that the average annual cost is $2,386 for unmarried medical college students and $3,271 for married ones. Sixty percent of the graduating students are married. And it appears likely that another round of tuition raises is about to take place.

Medical school tuition is higher than other tuition fees in the same university. And when he has completed his 4 years, the student must accept an internship or residency which will pay him little more than a subsistence wage.

The Journal of the American Medical Association warns that medicine must make active efforts to inform young people of the challenges this profession offers or it will suffer a serious loss of the best young talent.

The Surgeon General's report makes a number of specific suggestions. It urges that medical students be helped through State and Federal scholarships and loans. It urges that States that do not offer medical facilities to their students take steps to remedy this situation.

OUR DOCTOR CRISIS—8,400 ALIENS IN UNITED STATES HELP BRIDGE SHORTAGE

(By Benjamin Fine)

NEW YORK, January 5.—On last November 7, Martyn Green, celebrated English Gilbert and Sullivan star, parked his car on an automobile elevator in a private garage here.

As the elevator started to rise, Mr. Green stepped out of the car to check a knocking he had heard in the engine. Somehow, his foot slipped from the elevator. It was crushed between the rising platform and the wall.

More than half an hour later, using a policeman's penknife, Dr. P. Shamsuddin, a 25-year-old Knickerbocker Hospital intern from Madras, India, amputated the badly crushed left leg of the actor at the scene.

At a press conference later, Dr. Shamsuddin criticized the hospital. The ambulance which brought him to Mr. Green, he said, did not contain proper equipment. The hospital in turn, while praising the intern's surgical skill, produced statements that he had to be called three times before he responded to the emergency case.

Dr. Shamsuddin left the country a week later. The story, including his charge that New York hospitals were less adequate in training facilities than those in his native land, soon dropped from the headlines.

EIGHT THOUSAND FOUR HUNDRED ALIEN DOCTORS

But perhaps its most significant aspect was not noticed. For Dr. Shamsuddin was but 1 of 8,400 physicians from 91 countries serving in 846 U.S. hospitals last year. In 1951 only 2,100 aliens were serving as interns and residents in America.

Comments the recent report of the U.S. Surgeon General's consultant group on medical education: "These figures raise the question of whether this country, with its wealth, should be dependent on other nations for a net inflow of physicians to serve our people, when there are so many urgent needs for medical service in other parts of the world.

"In no other field of education is there a situation in which the United States draws to the same extent on persons educated in other nations to maintain its high level of service."

NEED GROWS GREATER

Medical education simply is not keeping pace with this Nation's health needs.

A gap exists, and is growing wider, between the country's need for physicians and its capacity to produce them. At present the 85 medical schools graduate about 7,400 doctors a year. But by 1975, the authorities say, the Nation will need at least 11,000, an increase 3,600 graduates.

And this will mean, according to the Surgeon General's group, between 20 and 24 new medical schools, at tremendous cost. The report recommends that the Nation launch a billion-dollar program to expand and strengthen the existing medical schools and construct two dozen new ones.

The Federal Government would be called on for half this amount—about $500 million spread over 10 years. The rest would come from foundations, corporations, philanthropists and industries. Medical education is mighty expensive. Many believe private sources alone cannot carry the financial load.

MANY TRAINED ABROAD

Many of the 249,000 physicians practicing in the United States have been educated in other countries. In 1958 a total of 7,809 physicians were licensed to practice for the first time in this country. Of this number, 150 were graduates of Canadian schools and 1,166 of other foreign schools. Four hundred American students who had gone abroad to study medicine were in this group.

So 17 percent of the physicians who entered practice last year received their medical education in countries other than the United States. The report of the Surgeon General shows that the number of foreign graduates admitted to practice in this country has increased greatly in recent years. In 1950 only 458 doctors from outside the United States were licensed to practice medicine here. In 8 years the number has just about tripled.

In New York, typical of other large cities, foreign medical school graduates comprise nearly half of the interns and residents at the hospitals. The national average is 33 percent.

TO RAISE QUALIFICATIONS

Although the foreign students fill an important need for interns, they are for the most part unfamiliar with the English language or with the American standards of clinical practice, according to the Hospital Council of Greater New York. Many hospitals look on foreign interns as a cheap form of labor.

Stiffer qualifications for the foreign trained interns is in prospect. Next summer the Education Council for Foreign Medical Graduates will begin testing foreign doctors' knowledge of English and professional training before permitting them to be employed in the United States.

Of the 5,200 doctors in the New York City hospitals, 2,700 are graduates of United States and Canadian medical schools. About 500 more are American citizens trained abroad. The rest are aliens. The new tests are expected to result in a 30 percent failure rate for the foreign interns. This will still further aggravate the serious shortages that now exist.

The proportion of physicians engaged in the private practice of medicine has decreased from 86 percent in 1931 to 69 percent in 1957. What is even more significant, the proportion serving as family physicians has declined over this same period from 75 to 45 percent.

ENTER OTHER FIELDS

Physicians are now employed in hospital service, teaching, research, industry, administration, and other types of institutional practice. This may help modern medicine reach new heights. But it also reduces the proportion of physicians in private practice.

Actually, the ratio of physicians in private practice to population has dropped from 108 per 100,000 in 1931 to 91 per 100,000 today. The Surgeon General's report predicts that if present trends continue, the ratio will drop to 85 per 100,000 by 1975.

The number of physicians engaged in full-time teaching, research, public health, industrial medicine, military service and all other activities except private practice has quadrupled in the last 30 years.

More than 25,000 physicians are spending all or part of their time in teaching or research. Another 10,000 physicians are in military service. State and local health departments employed 2,300, while the same number were found in industrial medicine.

BECOME SPECIALISTS

To add to the shortage of family doctors, many physicians now become specialists. In 1931 only one private practitioner in six considered himself a specialist; by 1940, one in four. And today, half of all physicians in private practice limit themselves to specialty practice. The number of family physicians has decreased from 117,444 in 1931 to 102,000 in 1957.

"If the minimum goal of maintaining present ratios of physicians is to be met," the Surgeon General's report concludes, "the present medical school facilities must be increased substantially and new schools must be established."

OUR DOCTOR CRISIS—BIG MEDICAL SCHOOLS PROGRAM URGED IN UNITED STATES

(By Benjamin Fine)

NEW YORK, January 6.—A billion-dollar program to strengthen medical education in the United States is needed at once if we are to meet the growing shortage of physicians.

Today the United States has 85 medical schools and 6 schools of osteopathy. Forty-five of these schools are privately endowed. Since 1940, three new private and five public medical schools have been established. Medical schools are most heavily concentrated in the Northeastern United States. Nine States have no medical school.

But medical schools have not kept pace with the population growth in this country. A study recently completed by the consultant group on medical education, appointed

by the Surgeon General of the Public Health Service, reports that this Nation faces a critical shortage of doctors. The existing medical schools cannot possibly admit enough students to solve the problem. Even if they receive more funds, the existing schools could expand only to a slight degree.

MEDICAL SCHOOLS NEEDED

Those who have studied the situation propose a vast system of new medical schools for the country. The Surgeon General's report recommends from 20 to 24 new schools, to be located in various parts of the United States.

A growing America will need more physicians, the report stresses.

But it will be costly to add 20 or more new medical schools. Few private universities will be willing to undertake this gigantic task. The budgets for the medical schools are usually much higher than for the rest of the college. The report of the Surgeon General estimates that the average medical school, with an enrollment of 400, has an operating budget of $1.5 million annually. This is supplemented with Federal research funds.

EINSTEIN COLLEGE CITED

One of the newest medical schools in the country, under private auspices, is the Albert Einstein College of Medicine of Yeshiva University, in New York. This medical school graduated its first class last June. It now admits 100 students a year. The total cost of the medical building together with the two hospitals that are part of the medical center, will be close to $100 million.

The university embarked on this project 5 years ago under the direction of its president, Dr. Samuel Belkin. Despite the tremendous drain on the university budget, the medical school has become a vital part of the institution. The newest aspects of medical training have been introduced.

"I believe that higher education should assume some of the responsibilities of providing trained medical men for this country," Dr. Belkin observed, in explaining why the Albert Einstein College of Medicine was founded. "It is essential that additional facilities be offered for the welfare of our Nation."

MANY SOURCES MUST HELP

The greatest obstacle to expansion of the Nation's medical schools and construction of new schools is money. To secure the $30 million that was needed to found the Albert Einstein College of Medicine, Dr. Belkin served as consultant and adviser to the board of trustees and covered literally every part of the United States during the development campaign.

But private funds alone will not be sufficient to build new medical schools. Few private institutions will be willing to undertake the tremendous task of getting the $50 million or so that is necessary to launch a new grade A medical school. The support must come from many sources: State and local appropriations, endowments, gifts, and grants, and from the Federal Government.

"The Federal Government over a period of the next 10 years should appropriate funds on a matching basis to meet construction needs for medical education," the Surgeon General's report declared. "When Federal funds become available to aid medical education, a National committee should be established to advise the Surgeon General on the administration of such funds."

STRONG FACULTY STRESSED

The importance of a strong faculty must not be overlooked. There is a growing shortage of competent faculty members. Among medical schools today the variation in faculty size is great. The number of faculty members ranges from fewer than 100 to more than 300. Schools with large programs for research, medical care and training of residents and Ph.D.s have relatively large faculties.

The ratio of faculty to students is high. A third of the schools of the United States have an average of seven equivalent full-time faculty members to 10 students—280 for a school with 400 students. For the middle third of the schools, the average is four faculty for 10 students, or 160 for the 400-student school. The low third averages three faculty to 10 students, or 120 full-time faculty members in a 400-student school.

The consultation group feels this average for the bottom third of the schools can be considered a minimum acceptable level if it includes a balance of full-time and part-time teachers. A faculty of at least this size is necessary to insure the minimal research and medical service which the proper medical educational environment requires.

Medical education faces a serious challenge in getting an adequate number of faculty members. In recent years some medical schools have been unable to get the faculty they needed, even though the positions were in the budget.

HIGH QUALITY VITAL

A warning is issued by the Surgeon General's committee that expansion must not proceed at the expense of quality. Back in 1910 the late Abraham Flexner made a study of the 150 medical schools that existed at that time. More than half were found to be completely inadequate, and doing a poor job. The resulting uproar forced them to close, and indeed, brought about a revolution in medical education.

The medical profession and the public would not permit such conditions to return. However, this country can have both quality medical education and quantity. It seems absurd to have to depend in large part for our medical staff upon foreign countries. Our standards, by and large, are higher than those found in any other country of the world.

PROPOSALS

These recommendations are made by the Surgeon General:

New medical schools should be established only with the type of faculty, facilities, financing, and university affiliation that will allow them to carry out a satisfactory educational program for a well-qualified student body.

Greater attention must be given to the problems of existing schools whose educational plants or programs are now inadequately financed.

Schools should consider the effect of unreasonably restrictive admission policies on the quality of their students and the need for a student body with diversified interests and background.

There must be continuing appraisal of the length and content of the medical curriculum, including evaluation of experiments being made to shorten the period of training.

The shortage of doctors in this country is serious. As our population grows, the shortage will become more pronounced. Everything must be done to prevent the medical profession from deteriorating. The time has come as the Surgeon General points out, for action.

Excerpts From an Address by Senator Joseph S. Clark

EXTENSION OF REMARKS

OF

HON. ELMER J. HOLLAND

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 1, 1960

Mr. HOLLAND. Mr. Speaker, I am very pleased to place in the RECORD excerpts from the speech of Senator JOSEPH S. CLARK, Democrat, of Pennsylvania, made on Friday, January 29, 1960, at the Roosevelt Day luncheon of the Allegheny County Democratic Committee, Pittsburgh:

"I am confident," said Senator CLARK, "that we will elect a Democrat President and win for our party control of the State senate while we are about it. There are four reasons for this belief:

"First, we are the majority party in both Pennsylvania and the Nation. The 1958 and 1959 elections proved that.

"Second, this year we will be running against real Republicans, not a national military hero. The issue between the parties will be clearly drawn. Simply stated, it is democracy against plutocracy. The choice is clear.

"Third, our candidate for the Presidency will be running against RICHARD NIXON. The people of this country have too much commonsense to elect as their President either the old NIXON or the new NIXON.

"Fourth, Mr. NIXON must run on the Eisenhower record. In Walter Lippmann's trenchant phrase, the Eisenhower administration has put 'private comfort and private consumption ahead of national need. The President has spent his 7 years in office reducing the share of the national income devoted to public purposes. We are falling behind in the race [with international communism] because we are not allowed to run.'"

Senator CLARK deplored the emphasis given to what he called "popularity polls."

"The partisan press," he said, "is already consigning us to defeat—but elections are not won on Gallup polls in January. It is the official count at the ballot box in November which determines who wins.

"We all remember 1948. Let us also observe how close the parallel is between Mr. NIXON and Mr. Dewey."

CLARK stated that the Republican issues of "peace, prosperity, and progress" would break down under Democratic attack. "It is we, not they," he said, "who are taking the lead for peace through disarmament and a revision of the United Nations Charter.

"It is we, not they, who are advocating the governmental policies necessary to achieve lasting prosperity: an end to tight money and high interest rates, a first-class educational program, adequate aid for depressed areas, and an equitable tax system which will give us the revenues to reduce our national debt and still meet our responsibilities at home and abroad. It is we, not they, who understand the need for strong governmental action to assure progress through sustained economic growth and a rededication to the spiritual principles which made our country great."

Senator CLARK cited an editorial reprinted by the Washington Post from the New Republic which, he said, well described the Eisenhower thesis. The President's message, the editorial said, is "save now, be strong later; save now, educate later; save now, cure unemployment later; save now, reclaim our towns and cities later; save now, research later the cause and remedy for mortal disease; save now, build housing later; save now, clear the air later; save now, purge our streams later; save now, nourish later the people—and the hopes—of new nations."

"The American people," the Senator continued, "are getting ready for the coming political breakthrough. We can achieve it by sending a Democrat to the White House supported by a Democratic Congress next year. Our only danger lies in apathy and a failure to take the initiative. We must stick to our party platform, pass the bills we said we would, let the vetoes fall where they may, and carry the issues to the country. I refuse to believe that the American dream has become so faded that we will continue to

shut our eyes to overcrowded schools, underpaid teachers, inadequate colleges, hospital shortages, old people without medical care, men and women working at poverty wages, polluted streams, slums in our cities, a stagnant economy and unemployment areas shifting for themselves, and all this for the purpose of providing another tax cut for the rich and well-to-do.

"Only under our party can our country redeem itself and move forward to national well-being at home, national security abroad, and that sound and idealistic world leadership to which our destiny calls us."

Charles H. Perkins Is Honored by All-America Rose Selections

EXTENSION OF REMARKS
OF
HON. KENNETH B. KEATING
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, February 1, 1960

Mr. KEATING. Mr. President, one of my distinguished constituents, Mr. Charles H. Perkins of Newark, N.Y., was recently honored by the rose industry of America when All-America Rose Selections, Inc., presented him with a plaque in recognition of his long service to the gardening public. It is fitting that this organization, which includes the Nation's leading growers and introducers, should honor this important person in the rose industry.

Mr. Perkins has been a leading figure on rose matters for 60 years. He is a founder, charter member, past president, and for many years was chairman of the publicity committee of All-America Rose Selections. He has been president of Jackson & Perkins Co. of Newark, the world's largest rose growers, for many years.

His activities have not been limited to the rose field. He is widely known as an outstanding citizen and fine gentleman whose friends are legion. Mr. Perkins has been especially interested in the selection of the rose as our national flower, a goal which I share with him, and which has recently been given great impetus as the result of a national poll showing the rose is by far the favorite bloom of the American people.

As a cosponsor of Senate Joint Ressolution 63, to designate the rose as our national floral symbol, I hope the results of this nationwide balloting will spur favorable action. As a Senator from the State where the finest roses are grown, approval of this resolution would give me special pride.

In the meantime, I have noted with great interest the recent honor bestowed on my good friend, Charlie Perkins. A fine editorial in the Cleveland Plain Dealer recently called him a most estimable gentleman. I agree wholeheartedly with that, Mr. President, and I ask unanimous consent to have this editorial printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

A WELL-DESERVED HONOR

It may mean nothing to a lot of people to learn that Charles H. Perkins of Newark, N.Y., has received the All-America Rose Selections, Inc., plaque for long service to the rose and gardening public. But to those who, even now, are poring over catalogs, and who later will labor, lovingly, with roses, it means a very great deal.

Mr. Perkins, president of the Jackson & Perkins Co., has been in the rose industry for 60 years. He was one of the founders of All-America Rose Selections, which tests new roses, and which has had much to do with improving this beautiful flower.

We—who hold the rose in the highest esteem—congratulate Mr. Perkins on his well-merited honor, and we wish we knew one ten-thousandth as much about roses as this most estimable gentleman.

The least the rose bloc in Congress could do, it seems to us, is to have the event noted in the CONGRESSIONAL RECORD.

Honor

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Gen. Mark W. Clark, U.S. Army, retired, as it appeared in This Week magazine of January 31, 1960.

General Clark is now president of The Citadel, Military College of South Carolina. He fought in two world wars. In 1943–45 he led the victorious Allied armies in driving the Germans out of Italy. After serving as U.S. High Commissioner for Austria and Deputy Secretary of State, he succeeded General Ridgway as Allied commander in Korea. What we need today is more honor in every field of endeavor.

His article follows:

HONOR

(By Gen. Mark W. Clark)

I have always believed that everyone needs to impose upon himself some rigid code of personal ethics. The Ten Commondments are probably the most perfect example of such a code.

But it seems to me that young people, who perhaps need rules of conduct the most, tend to shy away from long complex lists of "do's" and "don'ts." That is why we at The Citadel have established our honor code which consists of just one rule expressed in nine words: "A cadet does not lie, or cheat, or steal."

Just nine words. But what important words they are, for without them none can hope to build a decent or a happy life.

Of course, The Citadel's honor code is only a beginning. Of course, our 2,000 cadets know that there is more to character than merely not lying, cheating, or stealing. But these negatives are important as a starting point. A man can then go on from these "don'ts" to more positive rules of life. If as a boy, he learns what not to do, then as he matures the positive values will slowly move into place. "Do unto others * * *." "Love thy neighbor"—these "do's" are the true capstones of a moral code. But the "don'ts," learned in childhood, are its foundation.

Employment of Negro Workers

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, February 1, 1960

Mr. JAVITS. Mr. President, a particularly serious example of the denial of equal employment opportunity because of color, occurring in the Nation's Capital, has been eliminated by the agreement of the Reinforced Rodmen's Union to make possible the employment of qualified Negro workers. This is a small but important victory which makes jobs on Federal construction projects in the Nation's Capital available to all workers on an equal basis, and it is hoped that it will spark the elimination of discriminatory practices which have involved contractors, trade unions and the President's Committee on Government Contracts in lengthy negotiations.

In this connection, I ask unanimous consent to have the editorial entitled "Patience and Pressure," which appeared in the Washington Post on January 29, 1960, printed in the Appendix of the RECORD.

There being no objection, the editorial was ordered to be printed in the RECORD, as follows:

PATIENCE AND PRESSURE

District Commissioner McLaughlin was able to report last week a significant step toward breaking down racial discrimination in Federal construction projects in Washington. The Reinforced Rodmen's Union has finally agreed to hiring practices which will insure referral and employment for a limited number of qualified Negro rodmen. This bit of progress was brought about by a combination of patience and pressure. Victor Daly of the Council on Human Relations and Irving Ferman, executive vice chairman of the President's Committee on Government Contracts, share credit with the Commissioner for the achievement. We hope that they will now move forward with equal resolution to end racial discrimination by the International Brotherhood of Electrical Workers which nakedly excludes Negroes from membership, and thus from jobs on major Federal construction projects.

Although the source of discrimination in hiring undoubtedly lies in the practices of some of the building trade unions, it is impossible to absolve contractors from a major measure of responsibility. Every Government contract has a nondiscrimination clause requiring the contractor to hire on merit. That clause has gone unenforced for far too long. The President's Committee on Government Contracts has rendered a most useful public service in bringing this situation to light and in urging contract compliance; it has no enforcement power, however.

The General Services Administration, which lets contracts for Federal office buildings, and Congress itself, which lets contracts for construction on the Capitol and on congressional office buildings, have direct responsibility for seeing to it that nondiscrimination is made a reality. Denial of jobs because of race is ugly business in any area. It is especially obnoxious when the Government of the United States is involved.

Garrison Diversion Unit

EXTENSION OF REMARKS
OF
HON. QUENTIN BURDICK
OF NORTH DAKOTA
IN THE HOUSE OF REPRESENTATIVES

Monday, February 1, 1960

Mr. BURDICK. Mr. Speaker, I am happy to advise my colleagues that the North Dakota County Commissioners Association has gone on record supporting the early development of the Garrison Diversion Unit. Resolution adopted at their recent convention follows:

RESOLUTION OF THE NORTH DAKOTA COUNTY COMMISSIONERS ASSOCIATION SUPPORTING THE EARLY DEVELOPMENT OF THE GARRISON DIVERSION UNIT—ADOPTED AT CONVENTION AT WILLISTON, N. DAK., JANUARY 12–14, 1960

Whereas the development of the Garrison diversion unit in North Dakota will provide the citizens of North Dakota an opportunity to beneficially use their fair share of the water from the Missouri River for irrigation, municipal water, recreation, fish and wildlife enhancement, lake restoration and other multiple uses and will replace, in part, the lost land resource resulting from the contribution of the State of 548,000 acres of Missouri River bottomland for use of Missouri River mainstem reservoirs; and

Whereas the new opportunities that will be provided through the development of the project, particularly in the project area, will increase and stabilize the agriculture, business, and industrial income in the State and will be the basis for more jobs, more business establishments and more people, thus reversing the trend of a static or declining growth in the State; and

Whereas the development of the Garrison diversion unit will benefit all sections of the State of North Dakota through a broadened tax base, new industrial development and a readily available stable and bountiful feed supply for nonirrigated areas of the State during periods of drought; and

Whereas irrigation development as will be provided in the project area will permit the establishment of an expanded livestock enterprise in the State, enhancing the welfare of the agricultural economy of the entire State and at the same time permitting North Dakota farmers to direct their production of food to meat products and reduce their contribution to the surplus problem resulting from the production of wheat and other cereal grains; and

Whereas the farmers and others in the project area have demonstrated their enthusiastic support of the Garrison diversion unit and for its early development through the organization of irrigation districts and continued efforts to obtain the approval of the project by Congress and the agencies of the Federal Government concerned; and

Whereas bills have been introduced in the U.S. Senate and House of Representatives of the 86th Congress that propose certain modifications to the authorization of the Garrison diversion unit and it appears that hearings by the appropriate committees of Congress on these bills can be scheduled if the project report is transmitted to Congress at an early date: Now, therefore, be it

Resolved by the North Dakota County Commissioners Association at their convention duly assembled at Williston, N. Dak., January 12–14, 1960, That this association wholeheartedly endorses the early construction and development of the Garrison diversion unit and urges the Bureau of the Budget and the Department of the Interior to transmit the report on the Garrison diversion unit to Congress at an early date and further urges the Congress of the United States to approve the project and the modifications to its authorization as proposed in bills now pending before it, and appropriate adequate funds to initiate construction of the project works without delay; and be it further

Resolved, That copies of this resolution be forwarded to Senators MILTON R. YOUNG and NORMAN BRUNSDALE; Congressmen DON L. SHORT and QUENTIN N. BURDICK; the Secretary of Interior; the Director of the Bureau of the Budget; the Commissioner of Reclamation; Gov. John E. Davis of North Dakota; the North Dakota State Water Conservation Commission and the Garrison Diversion Conservancy District.

Our Next President—Roy Roberts Wants Eisenhower Qualities

EXTENSION OF REMARKS
OF
HON. FRANK CARLSON
OF KANSAS
IN THE SENATE OF THE UNITED STATES

Monday, February 1, 1960

Mr. CARLSON. Mr. President, in this political year, most everyone is thinking and talking politics. One of the keenest observers in the Nation in regard to political trends and the thinking of the people is Roy Roberts, president and general manager of the Kansas City Star.

Mr. Roberts started his early career as a newspaper reporter under the tutelage and guidance of William Allen White. In his early newspaper training, as a member of the Kansas City Star staff, Mr. Roberts spent many years in the Senate Press Gallery, prior to returning to Kansas. On his return to Kansas, he held many important positions in the Star office; and he is recognized as the outstanding newspaperman in the Middle West.

In an interview with Frank K. Kelly, of the North American Newspaper Alliance, Mr. Roberts discussed our next President. The article on the qualities he stresses for our next President should be read by everyone.

Therefore, I ask unanimous consent that the interview with Mr. Roberts be printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

[From the Washington Evening Star. Jan. 27, 1960]

OUR NEXT PRESIDENT—ROY ROBERTS WANTS EISENHOWER QUALITIES

(By Frank K. Kelly)

Published in Missouri but widely circulated in Kansas, Nebraska, Iowa and other farm States, the Kansas City Star has reported on "the bread basket" center of the country for more than 70 years. During much of that time, Roy Roberts has been the paper's most active man—as a reporter, as an editor, as a political figure. He is now president and general manager of the Star.

A huge man with a hearty, happy face, a booming voice and a ready laugh, Mr. Roberts approaches the future with exuberance. Age hasn't dulled his interest in the Nation's course.

"Our problems may get tougher, but our opportunities become greater with the years," Mr. Roberts said, when I sat down to talk with him. "The years ahead are going to be exciting. We have a marvelous world, growing and changing all around us."

What would it take to make a man a successful President in the 1960s? Mr. Roberts didn't pause.

LIKES EISENHOWER QUALITIES

"Some of the qualities Ike is now showing," he said. "Tackling the big problems in a big way Ike's always had the stuff. The new Ike is simply the old Ike gone to work harder than ever. The departure of Sherman Adams was a great thing for Ike personally. He wasn't meeting enough people, talking to enough people. Now he's doing it. He's showing what he's capable of. He's in there swinging."

True enough, Mr. Eisenhower seemed to be swinging hard at the international problems—the cold war, the Berlin crisis, disarmament, and other foreign policy issues. But about our problems here in the United States—the farm problem, for example—what could Mr. Eisenhower or the next President do about that? I told him that most midwesterners seemed to believe the problem is very hard to solve.

PROBLEM SEEMS TOUGHER

Mr. Roberts looked baffled. "The farm problem seems tougher every year," he said. "I used to think I knew what we could do about it, but I don't anymore. The farmers are moderately well off, but they're not happy. They don't think they're getting a fair share of the national income."

I recalled that the price indexes in recent months had shown the price of farm products at about 89 percent of the 1947–49 level, while the price of finished goods was around 128 percent.

"No President can cure all the farmer's ills," Mr. Roberts said. "Any candidate who promised to do that would be lying."

I urged him to outline for me his ideas on the personal qualities the White House occupant of the 1960's should have.

"The basic things are trite," Mr. Roberts said. "The man must have commonsense—enough to cut through to the heart of very complex questions without getting confused by the ramifications. He must have impeccable integrity—so that the people believe in him and trust him. He must rely on solid ability—not on glamour or big promises. He must know the world picture and understand it thoroughly."

Mr. Roberts paused, his round face taking on lines of solemnity. "And he must have an endless amount of patience. He can't get mad at people. He can't let his emotions throw us into war."

He thought that national problems were now so complicated that we had to depend on the President to make major decisions which might have been subjected to popular debates in other periods of our history.

CAN'T AFFORD MEDIOCRITY

"That's why we can't afford a mediocre President anymore," Mr. Roberts said. "We're fortunate in having a number of highly intelligent men available. Just to name two of them, I'd cite LYNDON JOHNSON and DICK NIXON. JOHNSON is one of the ablest men I've seen in the last 30 years. NIXON as Vice President has been trained for the top job. NIXON has grown a great deal, learned a lot.

After my talk with Mr. Roberts, I drove north and west to Lincoln, Nebr. As I traveled I raised the questions I had put to other people in other States. I found the Nebraskans, like the people of the East and South, more concerned about the preservation of peace than anything else.

Some of them were far from being enthusiastic about the policies of Secretary of Agriculture Benson, but very few attached any blame for the defects of the farm program to the President. The President, they felt, was

struggling to save the world from the catastrophe of an atomic war—and this was his primary job: To be a world leader.

Let's Put Our Ex-Presidents in the Senate

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. FLOOD. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by the Honorable James A. Farley which will appear in the February 7, 1960 issue of This Week magazine:

LET'S PUT OUR EX-PRESIDENTS IN THE SENATE

(By James A. Farley with Jack Harrison Pollack)

At the dedication of the Truman Library in Independence, Mo., a few years ago two former Presidents of the United States met. Half ruefully, half jokingly, Harry S. Truman asked Herbert Hoover:

"Just what is the role of a former President?"

After a thoughtful pause, Mr. Hoover answered: "The only thing for an ex-President to do is to take pills and dedicate libraries."

Yes, our former Presidents have kept their senses of humor. But what they were talking about is no laughing matter. It's a tragedy—not so much for the ex-Presidents themselves as for our country.

We have often been guilty of wasting our national resources. Right now we are wasting a supremely invaluable one: the wisdom and experience of our former Chief Executives. We have two, now. Next January 20 we will have another: Dwight D. Eisenhower. His experience, both as general and President, and his firsthand acquaintance with world leaders, will make him extraordinarily valuable—provided we don't push him off into the sidelines and forget him.

But that's exactly what we're going to do unless we take a simple but highly important step: pass a statutory law making all former Presidents lifetime, nonvoting Senators at large. I am convinced that this is the best possible way to keep and use the wisdom and abilities of our Presidents after they leave the White House.

In the Senate a former President would be constantly available to Congressmen needing his help and advice. Any former President, whatever his party and whatever his record as President, acquires a vast amount of information and insight that Members of Congress and the general public can never have. This is the priceless experience that we are wasting.

WHERE EX-PRESIDENTS COULD HELP MOST

Further, a former President would find the Senate an excellent forum in which to speak out on major policy questions. This would be especially important in foreign and military affairs, areas where a retired Chief Executive would have substantial special knowledge. Since he would not represent any State or section, and would not have to worry about reelection, he could speak with exceptional force and freedom.

Bills to make ex-President Members of the Senate have been introduced in Congress. Most of these bills would grant all senatorial privileges except the right to vote, which would require a constitutional amendment. I hope one of these bills is passed during the present session, because this reform, long overdue, is more important today than ever.

One reason is that we may now anticipate that future Presidents, including the one to be elected this year, will leave the White House with many years of service still before them. Most of the present leading candidates for nomination are comparatively young men: Vice President Nixon is 47, Senator Kennedy is 42, Senator Humphrey 48, Senator Symington 58, Governor Brown 54. And no matter who is elected he will not serve more than 8 years because there is now a two-term limitation on the Presidency.

For that matter, even in the past most Presidents had many years still before them when they left the White House. You may be surprised to learn, as I was, that 25 of our Presidents before Eisenhower lived an average of 11 years in retirement. That's 275 years of potentially valuable service wasted.

There is a human side to the question, too. In the past a former President has often been in actual financial need. In 1958 Congress finally gave every former President a pension and funds for a staff and office to handle his enormous correspondence.

But from the human point of view, that isn't much. A man who has held the greatest office in the world is bound to feel neglected and left out of things when he is suddenly retired with nothing to do. In many cases, this has led to bitterness and tragedy in a President's final years.

There have been some happy cases of an incumbent President wisely using the services of a predecessor on a special assignment.

During the Truman administration, former President Hoover directed the highly successful Hoover Commission which helped reduce Government inefficiency. Similarly, back in 1902, President Theodore Roosevelt made Grover Cleveland chairman of an effective body which investigated the bitter anthracite coal strike.

THEODORE ROOSEVELT'S WASTED YEARS

But these cases are rare. More typical of what happens to a President after leaving office is the case of Theodore Roosevelt. This dynamic man who was barely 50 when he finished his second term, wanted to run again but refrained because of his 1904 pledge that he wouldn't be a candidate in 1908. So instead he went big game hunting in Africa for a year. But in 1912 when the Republicans renominated Taft, Roosevelt bolted the party to run for President again himself as a Progressive, or "Bull Moose." Democrat Woodrow Wilson easily won in this three cornered election, and because I strongly believe in America's two party system, I don't think that Theodore Roosevelt added to his glory by becoming identified with this short-lived third party.

During the 10 years after he left the White House, restless Teddy Roosevelt dissipated his energies in so many directions that in 1919 he died an unhappy, embittered man. What a pity that this brilliant ex-President wasn't given a dignified, constructive job in the U.S. Senate where his versatile and inexhaustible vitality would have aided the country.

CONGRESSMEN FAVOR IT 4 TO 1

In spite of such conspicuous examples of waste of executive ability, whenever bills have come up in Congress to provide more useful occupations for our ex-Presidents after they have left office, these bills have been quietly pigeonholed. Yet few legislators I've talked to oppose the idea in principle. Representative FRANK CHELF, Kentucky, author of one of the recent bills to put ex-Presidents in Congress, reports that four out of five of his colleagues favor it overwhelmingly.

The late Senator Robert A. Taft, among others, agreed that it would be a fine thing. Most lawmakers—like most Americans—are just indifferent to the idea of making ex-Presidents Members of the Senate. But if the idea could ever be debated openly and brought to a vote, I think it would be adopted.

The idea isn't new. Back in 1889, it was mentioned in Congress. James Bryce, the distinguished English historian—one of the shrewdest observers of the American political scene—commented on our strange failure to take advantage of our ex-Presidents' abilities. In his famous book, "The American Commonwealth," he wrote, "They managed things better at Rome, gathering into their Senate all the fame and experience, all the wisdom and skill of those who had ruled and fought as consuls and praetors at home and abroad."

In 1906 historian Charles Francis Adams also urged putting our ex-Presidents in the Senate, warning, "We have lost absolutely the value of their ripe experience and great abilities * * * these eminent citizens were cut off from public utility at the maturity of their powers and during the best years of their lives as counselors. * * *"

In England, the Prime Minister is selected from the majority party in the House of Commons. A Prime Minister may lose his position in a national election, but the chances of his losing his seat in the House of Commons are small. Thus Winston Churchill went on serving his country after he ceased to be Prime Minister. And some former Prime Ministers, like Clement Attlee, take seats in the House of Lords.

It's high time we adapted the British system to our own needs and stopped treating our ex-Presidents as unemployed has-beens. Wasting their experience and abilities has always been wrong. Today, when we need their wise counsels as never before, the problem is urgent. Let's put them in the Senate where they belong.

I was in favor of giving former Presidents a seat in the Senate until I passed 75 years. Since then I have less taste for sitting on hard-bottomed chairs during long addresses.

Even so, I believe that former Presidents should be given a seat in the Senate but without a vote.

Their long memories, their hard knocks, and their ample experience could aid many committees and could shorten up a lot of tangled debates.

HERBERT HOOVER.

DECEMBER 22, 1959.

AFTER THE WHITE HOUSE: THE YEARS FAMOUS PRESIDENTS WASTED

George Washington, 2 years: After leaving the Presidency, he farmed and invested in real estate, became a leading land speculator.

John Adams, 25 years: Although he lived to be 90, he did little but follow the career of his son, John Quincy Adams.

Thomas Jefferson, 16 years: He occupied himself with architecture and writing until his death at 83, founded the University of Virginia.

Andrew Jackson, 8 years: He left the White House with $90 in his pocket, sold lumber as fuel to steamboat captains.

Ulysses S. Grant, 5 years: He invested in a Wall Street banking house. Crooked partners drove the firm into bankruptcy, leaving Grant penniless.

Grover Cleveland, 12 years: He resumed law practice. Many Americans were shocked that an ex-President should argue in court for a living.

Theodore Roosevelt, 9 years: Only 50 when he left the White House, he hunted big game, organized an unsuccessful third party.

Nation Prosperous, Democrats Learn

EXTENSION OF REMARKS
OF
HON. HUGH SCOTT
OF PENNSYLVANIA
IN THE SENATE OF THE UNITED STATES
Monday, February 1, 1960

Mr. SCOTT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD an article entitled, "Nation Prosperous, Democrats Learn," written by the celebrated and much respected columnist, John M. Cummings, and published in the Philadelphia Inquirer of January 31, 1960.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

NATION PROSPEROUS, DEMOCRATS LEARN

(By John M. Cummings)

Considering the number and the conspicuousness of Democratic targets, President Eisenhower and Vice President NIXON and other Republican orators manifested commendable restraint in the "dinner with Ike" program across the Nation last Wednesday.

There was none of the personal vituperation of the sort leveled at Vice President NIXON, the lone candidate for the Republican presidential nomination, at the Democratic dinner in Washington a few days earlier.

The President himself, speaking from Los Angeles in a closed circuit television program heard in 82 other cities, gave to the country assurance that we are the strongest in the world economically and militarily. He stressed the peace and prosperity slogan which the Republicans will rely on to bring home the bacon in next November's election.

To this not a few speakers added the word "progress." What you will hear, then, is peace, prosperity, and progress as the Republicans fare forth to the political wars after the two major party conventions have chosen their candidates.

Pennsylvania Democrats gave concrete evidence of the prosperous state of the Nation as they met in Harrisburg last week to select delegates-at-large to the party's national convention in Los Angeles. So many Democrats are anxious to go to the west coast meeting that two delegates will be present for every vote allotted to Pennsylvania. In other words the 81 votes will be cast by 162 delegates, including those to be elected in the congressional districts.

Alternates, party functionaries, camp followers and the like will swell the Pennsylvania army moving westward to something like 300 persons.

Governor Lawrence and other Easterners protested against the choice of Los Angeles as the convention city. They listed a number of reasons for their opposition, among them the cost of the transcontinental journey.

The cost, from all accounts, was not considered in picking the delegates-at-large. Indeed, there was quite a scramble for designation by the State committee, all of which indicated Eisenhower prosperity is no idle phrase in Democratic ears.

There is prosperity. There is more employment than at any other time in the history of the country, as Secretary of Labor Mitchell, who spoke at Philadelphia's $100 dinner, testifies. Democratic candidates for the Presidency are acquainted with the futility of railing against a condition that is gratifyingly felt by so many of our people.

Nor can they denounce peace. This would be a violation of a fundamental rule of conduct for political orators regardless of party. There remains, then, the old standby—personal abuse, vilification, denunciation.

This seems to be the one phase of the preconvention Democratic campaign in which all the candidates are in agreement. For this day and for every day until the election, the target of the choice of the Los Angeles convention and others on the stump, will be Vice President NIXON.

NIXON's ability to stand up under fire has been amply demonstrated. Thoroughly demonstrated, too, is his facility for returning shot for shot. Paul Butler, chairman of the Democratic National Committee, seems to feel the best way to get at NIXON is to accuse him of hard, vigorous—and successful—campaigning in his California fights, first for a seat in the House and later for a place in the Senate.

Governor Lawrence journeyed to Missouri Saturday to speak at a fundraising dinner. He is going into the State of Harry Truman and Senator SYMINGTON not because he is interested in the Senator's unannounced candidacy for the Presidency, but because, in his own words, "I'm a helluva orator."

It has been reported from time to time that Lawrence and other influential Pennsylvania Democrats are interested in the prospects of SYMINGTON. They feel he has fewer liabilities than Kennedy or Humphrey, Johnson or Stevenson. It is for this reason so many politicos are interested in the Governor's interpretation of the "Missouri Waltz" in the home State of Harry Truman.

It is accepted in many quarters that Senator SYMINGTON, a Cabinet officer under President Truman, is the personal candidate of the former President. This may be so and on the other hand, his effort at President making left a lot to be desired at the Democratic convention 4 years ago. He backed the then Governor Harriman, who was defeated by Stevenson. By the way, where is Harriman these days? Has anyone here seen Stevenson?

A New York Newspaper on Lyndon Johnson

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. ANFUSO. Mr. Speaker, Senate Democratic Leader LYNDON B. JOHNSON recently visited New York where he addressed the Cathedral Club in Brooklyn.

In keeping with the course he has followed in Congress, his address was constructive and forward looking. He called upon Americans for unity rather than division.

Senator LYNDON B. JOHNSON was well received in New York. Americans there who met him found out the same thing that Americans have found out everywhere—that he is a responsible, able national leader.

I ask unanimous consent to have printed in the Appendix of the RECORD an editorial from the New York Mirror of January 23, on his visit.

CLOSER LOOK AT LYNDON

The tall Texan who is not (as yet, at least) a candidate for the Democratic nomination for the presidency has visited our city, met many of our distinguished citizens, and left the impression that he is of presidential stature whether or not he decides to enter the party sweepstakes.

We refer, of course, to LYNDON JOHNSON, majority leader of the Senate, whose record has been one of statesmanship rather than partisanship despite the fact that he is outstandingly skillful as a party chieftain.

Whatever his future fortunes, it was good to have a closer look at an eminent Senator who is first and foremost an American.

Tribute to Warren Hicks, Pioneer in Preservation of Civil Rights

EXTENSION OF REMARKS
OF
HON. ALEXANDER WILEY
OF WISCONSIN
IN THE SENATE OF THE UNITED STATES
Monday, February 1, 1960

Mr. WILEY. Mr. President, we recognize that the question of just what additional action can and should be taken to protect the civil rights of all citizens is one of the major, but most controversial, issues before Congress.

Respecting the rights and opinions on both sides of the question, I find myself on the side of those who would—in proper, constructive, logical, practical ways—attempt to assure that the constitutional privileges of all who qualify as citizens should be fully protected and preserved.

We realize, of course, that the situation is accompanied by long-established modes of thinking patterns, economic problems, and other factors. These are not conditions that can be changed overnight, either by the waving of a magic wand—or even by the enactment of legislation.

Neither can we ignore them.

As a member of the Judiciary Committee considering legislation on the subject, I feel a particular responsibility to the people of the country to assure that the rights of minorities—and if only certain selected criteria are established, each of us belongs to such a group—are faithfully and zealously protected.

We recognize, of course, that the cooperation of individuals, community and State governments, as well as appropriate action by the Federal Government, are necessary if we are to be successful in this field.

I believe the Congress, for example, has a great responsibility for reexamining the situation and taking the necessary steps to further strengthen our laws.

At this time, I would like to pay tribute to an individual who, at the age of 94, has made a significant contribution in this field, Mr. Warren Hicks, of Madison, Wis.

During his lifetime, Mr. Hicks has served as a pioneer not only in civil rights, but in education and vocational education on the State and National level.

Today I received a letter from Rebecca C. Barton, director of the Governor's Commission on Human Rights of the State of Wisconsin, containing a résumé of the splendid work by Mr. Hicks. As a fine example of individual action, I

ask unanimous consent to have the letter printed in the Appendix of the RECORD.

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

GOVERNOR'S COMMISSION ON HUMAN RIGHTS,
Madison, Wis., January 26, 1960.

When Mr. Warren E. Hicks, at the age of 91, received a civic service award in Milwaukee on June 6, 1957, he was participating in a series of honors bestowed on him during a long, useful and distinguished career. Now that he is 94, and as keen in mind and generous in spirit as ever, we who constitute his host of friends and admirers hope that he will recognize our feeling that here is one "prophet with honor in his own country."

We honor him for many things. He is acclaimed as a pioneer in education and in vocational education both on the State and National level. He showed that good teaching and good administration were possible and desirable combined in one individual. Practical yet imaginative, he paved the way for new ideas and for the blueprints necessary to achieve them. Through his varied experiences in various States as an educator, he advanced sound and workable programs while always keeping to the courage of his convictions.

The secret of his success in life would seem to lie much deeper than his professional skills. People cannot talk to Mr. Hicks even briefly without becoming aware of his great interest in them as individuals. He likes people, he respects them and he is conscious both of their infinite variations and of their common humanity.

As director of the Wisconsin Governor's Commission on Human Rights since its inception in 1949 I have had occasion to become aware of this deeper aspect of Mr. Hicks' contribution. Our commission was set up by statute to "disseminate information and to attempt by means of discussion as well as other proper means to educate the people of the State to a greater understanding, appreciation and practice of human rights for all people, of whatever race, creed, color or national origin, to the end that Wisconsin will be a better place in which to live." Without the groundwork in public opinion which leaders such as Mr. Hicks established, a commission such as ours would never have come into existence and could never function effectively. Warren E. Hicks was a pioneer in education but he was also a pioneer in matters pertaining to the aspiration of the human spirit. Because he believed what he taught and practiced what he preached about the worth and potential of each individual in a democracy, he has served as an inspiration to thousands of citizens in this country and many more thousands around the world. Thus we honor him as a king among public-spirited citizens.

The famous story of his spelling contest in Cleveland as assistant superintendent of schools in 1908 has now achieved the status of a legend. It was certainly a historical landmark for the advance of human rights. Today we might take a similar accomplishment as a matter of course, but back in 1908 leadership was needed. Mr. Hicks led the way and kept to his convictions about equal opportunity for all children, of whatever race, creed, or color, in such a manner as to appeal to the conscience and decency of a whole Nation.

It all began when Mr. Hicks decided to stage a spelling match not just for Cleveland pupils but for other cities and States. Newspapers ran a headline: "Hicks Challenges the Nation to a Spelling Contest." Such interest was aroused that the National Education Association took charge of arrangements. Thirty-four cities sent teams and 510 eighth graders participated. Children came 2 weeks in advance to drill.

So far so good. But a snag developed. The New Orleans Board of Education appropriated $1,500 to pay expenses of their team but ordered its return on discovering that Cleveland had a Negro contestant, Helen Bolden. However, Warren E. Hicks would not compromise. Cleveland refused to remove Helen and New Orleans decided to remain in the contest anyway.

When the great day came, 10,000 teachers at the National Education Convention in Cleveland attended the contest in the Hippodrome. Each of the 510 contestants spelled 100 words in writing and 4 words orally. The young Negro girl, Helen Bolden, was the only one not to miss a single word. The entire audience rose spontaneously in tribute.

The dramatic climax to Mr. Hicks' belief in equal opportunity was somewhat "like a shot heard round the world." Negroes and whites all over the country rejoiced in the establishment of principle. Audiences and radio stations everywhere began to ask for the story. In the intervening years radio stations have worn out their original recordings and asked for more. The true story has been broadcast repeatedly to Europe and other countries as an example of the best in American democracy. The incident itself is long since history, but it lives in the hearts of all of us who share these values, who strive toward these goals and who are eternally thankful for Warren E. Hicks as a leader and friend of man.

Sincerely yours,
REBECCA C. BARTON,
Director.

Centenary of the First Jewish Prayer in Congress

EXTENSION OF REMARKS
OF
HON. ROMAN C. PUCINSKI
OF ILLINOIS
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. PUCINSKI. Mr. Speaker, it was 100 years ago today that the Congress of the United States first gave full and formal recognition to the Jewish religion, and to the position of the rabbi as preacher and religious teacher, by selecting a rabbi, Morris Jacob Raphall, of New York, to open a session of the House of Representative with prayer. This 100th anniversary of the occasion is suitably observed by the invocation offered in our behalf today, but there is the happy difference that there is today nothing to surprise anyone in the presence of a Jewish rabbi in this post of honor, and nothing unusual in the event when the Members of our National Legislature bow their heads humbly as a Jewish religious leader speaks for them to the Lord and Master of us all.

Well may our hearts echo today those holy words, spoken in Hebrew and in English by Rabbi Raphall a hundred years ago and prized in Christian as in Hebrew tradition:

The Lord bless thee and keep thee. The Lord show His face to thee and have mercy on thee. The Lord turn His countenance to thee and give thee peace.

I am particularly gratified that the House of Representatives of the Congress of the United States has paused long enough today to reflect on this 100th anniversary of the first Jewish prayer offered in Congress. It is significant that we, as Members of Congress, should pay tribute to this momentous occasion because it indeed reflects that in this country we Americans have respected the rights of equality and freedom of religion since the very founding of our country.

Today's observance is particularly significant when we reflect that in many corners of the world and, unfortunately, even in some isolated areas of our own country, the evil specter of religious bigotry is again being manifested.

By paying tribute to this 100th anniversary today, we in Congress unequivocally state that the legislative branch of our Government shall never condone such bigoted conduct. I trust that the example we have set here today will be an inspiration to all men of good will and, in its own way, contribute to a halt in these outrageous attacks on religious institutions throughout the world. By this tribute today, we have again demonstrated that we recognize religious freedom and tolerance as the very cornerstone of our democracy.

I wish to add my own note of congratulations to Rabbi Israel Goldstein, who delivered this morning's opening prayer, for his inspiring words. Rabbi Goldstein is the spiritual leader of the Congregation B'Nai Jeshuran, in New York City. It is significant that Rabbi Raphall was the spiritual leader of this same synagogue 100 years ago when he opened the session of the House of Representatives with a prayer. Rabbi Goldstein's inspirational message today reconfirms the deep dedication of the Jewish people to the institutions of freedom and liberty and tolerance throughout the world.

I should also like to congratulate Dr. Abraham G. Ducker, president, Chicago's College of Jewish Studies, for calling this very significant anniversary to my attention. It was indeed through Dr. Ducker's suggestion that we have been able to arrange today's tribute to the 100th anniversary of the first invocation delivered by a rabbi in the House of Representatives.

Federal Aid for Schools

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES
Monday, February 1, 1960

Mr. JAVITS. Mr. President, there has been a steadily growing public awareness of the need for Federal aid to schools primarily for the construction of classrooms. The shortage at the present time has been estimated to be almost 140,000 classrooms. The Senate will soon be discussing the entire question of Federal aid to education, including, I trust, the proposal sponsored by Senator COOPER and myself. This proposal would

provide a 4-year, $4 billion program on a matching basis for the construction of 100,000 classrooms, and it would also include a provision to encourage and stimulate increases in teachers' salaries.

The Committee for Economic Development, which is composed of some of our leading businessmen and educators, has just issued a report urging prompt large-scale Federal aid to schools in low-income States. A summary of that report entitled, "We Can Have Better Schools," has been published by the New York Times of February 1, 1960.

I ask unanimous consent to have the article printed in the Appendix of the RECORD.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

BUSINESS UNIT ASKS U.S. AID FOR SCHOOLS

(By Fred M. Hechninger)

Large-scale Federal aid to public schools in low-income States was recommended by the Committee for Economic Development yesterday.

The proposal for an annual Federal expenditure of about $600 million was accompanied by a call for drastic "mandatory" reorganization of the public schools in order to assure greater efficiency and economy.

The proposals represent the first major endorsement of Federal aid to education by a national organization representing business and industry as well as academic leadership.

The committee is composed of 180 leading businessmen and educators. Its support of Federal aid can be expected to be highly influential in the current debate over such legislation in Washington. While it did go as far as recent recommendations by the Democratic Advisory Council, it considerably exceeded the administration's proposals.

"The national interest in good schools everywhere and the national interest in a decentralized school system are not irreconcilable," the 90-page report, "Paying for Better Public Schools," said. The solution calls "for the assumption of an important but limited responsibility by the Federal Government," it said.

But while supporting the idea of decentralized schools, generally known as local control, the report urged a "fresh attack" on a system that it feels is broken up into too many self-contained small parts.

It said that a large proportion of the present 45,000 local school districts were "much too small to provide good schools at all or to provide any kind of schools effectively." The committee demanded State action to reduce the total to less than 10,000 school districts.

The statement called a 2,000-student school system the minimum size at which "a complete school program" could be conducted. It said that "substantial educational advantages continue to accrue until a school system has perhaps 25,000 students."

SUMMARY IS ISSUED

The statement was issued by the group's Research and Policy Committee under the chairmanship of T. V. Houser, former board chairman of Sears, Roebuck & Co. A 22-page summary and action program entitled "We Can Have Better Schools," was prepared by Ralph Lazarus, chairman of the subcommittee on education and president of Federated Department Stores, Inc., Cincinnati.

Other recommendations were:

Assumption of a larger share of the financial burden for the schools by the States, with distribution of State funds through "foundation programs." A foundation program provides for special distribution of funds, in addition to the regular State aid allowance, to help needy districts to offer a minimum, or foundation, level of education.

Federal grants "to support public schools in those States where income per public school child is substantially below the national average."

More effective organization of citizens on the local, State and Federal level who appreciate the need for improved education.

The committee's stand on Federal aid contrasts sharply with the view of the U.S. Chamber of Commerce, which in recent weeks has reiterated its opposition to such expenditures.

Even in the committee report, the Federal aid issue met with some dissent. Of the 51 committee members who voted, 3 said the CED proposals did not go far enough. They want a broader program of Federal support to schools in all States. Nine members indicated that they did not support, or had reservations about, the recommended aid program.

EIGHTY PERCENT GOAL SET

The report considers any State that falls below 80 percent of the national average of expenditure per pupil as being "a reasonable standard below which school expenditures are unacceptably low."

But by also using a yardstick the State's average income per student, the plan would prevent States from collecting Federal aid by permitting their own effort to support their schools from dropping below their ability to pay.

Using 1957–58 statistics, the committee estimated that the total cost to the Federal Government would have been $556 million. However, four States would have had to provide a total of $51million out of their own resources in order to qualify for Federal aid under the proposed scheme.

CURB ON STATES

No State would be permitted to fall below its own efforts, made prior to the start of Federal aid.

The committee warned that no Federal controls or conditions must be associated with the proposed grants.

"We stress in the strongest possible terms that the program should include no Federal requirements for loyalty oaths, and no control of subject matter, teaching methods, teacher qualifications, or any other aspects of the educational process," the report stated. The funds could be used either for capital plant or current operating expenditures.

Trade Agreement Extension Act

EXTENSION OF REMARKS

OF

HON. JOHN P. SAYLOR

OF PENNSYLVANIA

IN THE HOUSE OF REPRESENTATIVES

Monday, February 1, 1960

Mr. SAYLOR. Mr. Speaker, I am happy to join in support of the resolution proposed by the distinguished gentleman from West Virginia [Mr. BAILEY]. While it is the duty of Congress to reverse as quickly as possible some of the illogical trade policies that are directly responsible for so much unemployment in this country, the resolution will meanwhile serve notice that Congress will not tolerate further international agreements handing over domestic markets to foreign producers.

The headlong drive for free exchange of goods in international commerce has caught up with us with a vengeance. Time was when a comparatively few of us stood up here on the House floor to appeal for relief from unfair foreign competition. Now that the grave perils of the free-trade theory are beginning to divulge themselves in a multitude of industries and communities of the land, the demand for corrective measures is becoming increasingly more audible.

Those of us whose constituencies depend heavily upon coal and the railroads for a healthy economy are particularly pleased to note the growing ranks of opposition to policies that subordinate the interest of American labor and industry to diplomatic motives. For years we were practically alone in our crusade for a limitation on the imported residual oil that has created such havoc in the economy of mining regions in Pennsylvania, West Virginia, Virginia, and eastern Kentucky.

Time was when the term "selfish interest" was applied in the case of anyone who sought tariff or quota protection to give American miners and railroaders a chance to reclaim their jobs. The free trade army—commanded by leftover State Department leftwingers—insisted that everyone would ultimately benefit by opening the doors of this country to any and all alien commodities. Down and down went U.S. tariffs, setting us up for today's serious predicament that becomes more critical as the inflow of foreign products and the outgo of gold continue almost unchecked. The resolution under consideration here today can be an important means of getting us back in the proper direction. Actually, it should be welcomed by the diplomats who have been representing us at meetings of the General Agreement on Tariffs and Trade, because this action by Congress would provide a medium of getting themselves off the hook which they assisted in setting up and which is now being used to strangle American labor and industry. Once the resolution is adopted, our generous "GATTeers" need only explain to their suave friends at the international roundtable that it is the sense of Congress that no further trade concessions be made in the next 2 years. Sorry, but our orders are to "stand pat" before we sacrifice any more industries. That is all that need be said when the boys gather at Geneva or wherever else the good fellows who trade off domestic markets without semblance of a quid pro quo plan to meet their foreign friends this year and next.

Meanwhile, back at the legislative branch, perhaps we will be able to plan for a showdown on the entire foreign trade program. Perhaps we can get an answer to the question of whether we are willing to permit our own factories and plants to shut down in order to please people elsewhere in the world. There is a possibility, too, that by now we can even convince the policymakers in the State Department of the fallacious reasoning behind the free trade doctrine. Somehow those credulous functionaries were unable to comprehend that the manufacturing facilities erected at various points around the globe at the expense of the American taxpayer would

produce materials directly competitive with our own products. Now the picture becomes more vivid with the rush of American dollars into alien areas where labor and materials are cheap. When the average hourly earnings in industrial occupations amount to more than $2 in the United States, slightly more than 60 cents in the United Kingdom, and less than 25 cents in Japan, there is no doubt about why we are being undersold all along the line. And behind the products made abroad—in addition to the reputations of leading foreign companies—are such labels as National Cash Register, Remington Rand, Hamilton, Singer, Ford, General Motors, Chrysler, General Tire & Rubber, and scores of other established brand names.

Since the end of World War II American business has invested more than $27 billion in factories, oil wells, mines, and other enterprises in foreign lands. One large manufacturer cut employment from 9,000 to less than 5,000 in a factory here after opening a similar plant in Europe. A steel processor laid off his 1,000 employees in New York State to set up shop in Japan and take advantage of cheap labor there and low tariffs here. Indeed, transferring job opportunities to Europe, South America, and Asia has become a principal export activity of the United States.

Speaking for the congressional district which I represent, I can testify that our coal, railroad, pottery, ceramics, glass, machine tools, and other industries have suffered constant oppression from imported materials. Now our steel industry has become a target of shippers from countries where labor is cheap and standards of living far below ours. Unless we take action, not a single area of the country—whether it be industrial or agricultural—will escape similar fate. Now is the time to transmit our views to the State Department. Let us give this resolution the support it needs and thus get started on the way back to a sane foreign trade program.

Surrender to Whom

EXTENSION OF REMARKS
OF
HON. KARL E. MUNDT
OF SOUTH DAKOTA
IN THE SENATE OF THE UNITED STATES
Monday, February 1, 1960

Mr. MUNDT. Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD a statement recently broadcast on a program referred to as "Life Line."

"Life Line" is a patriotic and religious educational movement.

One of its activities is production of a daily radio program conducted by Mr. Wayne Poucher, radio minister for "Life Line." This program consists of a public affairs commentary and a short sermonette. Originating in Washington, this program is broadcast over more than a hundred stations throughout the Nation.

Mr. Poucher has been acclaimed by listeners as one of the more powerful profreedom voices speaking in America today. I feel members of Congress will benefit from reading one of his latest broadcasts entitled, "Surrender to Whom?"

There being no objection, the statement was ordered to be printed in the RECORD, as follows:

SURRENDER TO WHOM?

Right is not a fortress in which the patriot can sit safely protected from the rest of the world. Rather, the cause of freedom is one which must be brought boldly out into the world. We must be ready to defend it and diligent in advocating it. Only in this way can we turn back the mistaken hordes, who are continually intensifying the propaganda for their ideas.

Patriots too frequently talk only to one another. Thus they sometimes find that they comprise a narrowing, rather than a widening, circle of influence. We must guard against this tendency. The mistaken are well aware that the constant hammering home of their ideas is essential to their success. Patriots cannot afford, in this time of grave peril, to be any less zealous on behalf of freedom.

If you should tire of the struggle to maintain freedom in America and become inclined to give up, to whom would you surrender except to someone who would cut your throat during the ceremony of yielding? The advocates of freedom can expect no mercy from the mistaken. They will not give quarter.

Authorities who have studied the methods of communism in nations where its adherents have seized power solemnly state that one-third of the population of the United States is marked for liquidation if the anti-freedom forces take over. How could anyone consider surrender?

While blatantly repeating the big lie of peaceful coexistence, the international mistaken, aided by followers working from within, already have subjugated 17 countries with a population of over 900 million people—about one-third of all the humans on earth.

As the No. 1 target of the conspiracy, the United States is the prime objective of anti-freedom espionage. FBI Director J. Edgar Hoover declares that between 70 and 80 percent of Russian officials in the United States are members of the Communist intelligent services. The number of such personnel assigned to the United States has sharply increased—by nearly 50 percent in the last 5 years.

These espionage activities expose the utter fallacy of so-called peaceful coexistence. In recent years pseudo appeals for peace by the leaders of the worldwide conspiracy have been more than matched by intensified espionage efforts in the United States. Using blackmail, bribery, and similar techniques, these agents of the mistaken, many with diplomatic immunity, are stepping up their efforts to obtain our military, scientific, and industrial secrets for use against us.

If we should weaken and consider surrender, let us remind ourselves that we would be surrendering to persons who have an utter contempt for individual freedom and for the true principles of citizenship as expressed in a society based on law and order. This contempt is fed in America by the moral and physical weakness of some of our citizens. There are too many among us who are willing to surrender a principle of morality to the illusions of expediency. Where weakness prevails, fear takes over—and fear can cause a citizen to evade his duty and even to give up his birthright of freedom.

The rule of fear is the rule of tyrants. It is the seed of fear that Nikita Khrushchev hopes to plant in our minds when he threatens to unleash on us what he terms "the most devastating war ever known by mankind." In a criminal sense, this is blackmail—ballistic blackmail. It is the same seed of fear the hoodlum strives to plant in the minds of prospective victims of a protection racket.

The end results of the mistaken's complete contempt for the rights of others are tragic in nature. Today, in Communist China more than 500 million persons have been herded into communes. In this completely regimented existence, families have been broken up, private property confiscated, work militarized, and the individual robbed of all freedom of choice in his personal life.

Nor let us forget the Soviet brutalities in Hungary; the rape of Tibet; the imprisonment and degradation of the consecrated men whose only crime was teaching the word of God.

All the activities of the mistaken everywhere in the world should strengthen the determination of patriots not to yield their freedom. There must be no thought of surrender. There must be thought only of ways and means of saving our precious freedom.

Agreement on Need

EXTENSION OF REMARKS
OF
HON. GLENN CUNNINGHAM
OF NEBRASKA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. CUNNINGHAM. Mr. Speaker, many Congressmen and Senators are concerned about the plight of the Nation's railroads. As a Representative from Omaha, one of the Nation's major rail terminals and headquarters of the Union Pacific Railroad, I of course share this concern wholeheartedly.

Congress has as recently as 1958 recognized the need for corrective legislative action with the passage of the Transportation Act of 1958. Much more remains to be done, not only at the Federal level but by the States and other subdivisions.

Under leave to extend my remarks, I include an editorial from the Washington Evening Star of January 30, which contains an outstanding review of the problems of this vital industry. There is one line of the editorial which we must never forget: "Whatever the result, the railroads have one sound premise; namely, that the Nation needs them."

The editorial follows:

AGREEMENT ON NEED

President Eisenhower was echoing some often emotionally expressed appeals of the railroad industry when he told his news conference that there should be "a real overhaul of all the regulations and controls" as a step toward giving the carriers "a chance to be prosperous." It is doubtful if any railroader would differ with the President's opinion that they are governed "by antiquated laws and regulations" and they have, in fact, pinpointed 1887 as the birth year for today's regulatory antiquities. Modifications in the years since have fallen far short, in the industry's view, of giving it a fair

deal in the mid-20th-century transportation economy.

The railroads' complaints are many, and all are not directed exclusively at the Federal Government. They do blame Uncle Sam primarily, however, for placing them at a competitive disadvantage by granting direct or indirect subsidies to other systems of public transportation—highway, air, water, and pipeline. Daniel P. Loomis, president of the Association of American Railroads, recently estimated Federal aid to competitive transport at $17 billion in less than 15 years since World War II. In the same period, he said, the rails spent $14 billion in private capital for their own modernization. They complain, also, of Federal restrictions against diversification—letting the railroads themselves engage in other forms of transportation—of the difficulty in getting approval of mergers which would improve service and utilization of facilities, and prohibitions against more competitive ratemaking.

Many State authorities likewise are villains in the railroad books, because of reluctance to permit local rate changes or to approve abandonment of unprofitable services. Most of all, the States and even local communities are assailed for their heavy tax take. The levy per mile of road in New Jersey, highest in the country, is estimated at five times the national average. Even the featherbedding problem, which the industry claims cost it $500 million yearly for work not done, is blamed in part on State safety laws as well as upon union demands.

Obviously, some of the railroads' problems are of their own making—as Mr. Eisenhower pointed out. Furthermore, the Transportation Act of 1958 dealt favorably with some of the industry's grievances against Federal policy—including ratemaking. Both the Department of Commerce and the Senate Commerce Committee currently are engaged in transportation studies which may lead to further corrective legislation. Whatever the result, the railroads have one sound premise, namely, that the Nation needs them. As basic freight carriers, their service cannot be transferred entirely to any combination of competing systems. If their economic health is not preserved, as a private-enterprise industry, it is not an exaggeration for railroad spokesmen to point to nationalization as the undesirable alternative.

Anti-Semitic Attacks

EXTENSION OF REMARKS
OF
HON. VANCE HARTKE
OF INDIANA
IN THE SENATE OF THE UNITED STATES
Monday, February 1, 1960

Mr. HARTKE. Mr. President, all of us have read about the outbreak of desecrations of houses of worship in this country, in Germany, and in other lands. Some of us have seen these expressions of hate. Occasionally we have rationalized that these have been the work of youngsters, mere juvenile pranks.

Some of us have had the opportunity to deplore these incidents while we were out in our constituencies. Some of us have not. Few of us have brought them to official attention through the RECORD.

I for one, Mr. President, hesitated stating my own anger on this floor until the proper time arose. For one thing, I think we all recognize that there are, indeed, publicity seekers who would seize upon the additional notoriety of official Senate cognizance in order to further their own psychopathic tendencies to desecrate houses of God.

The other day I received in the mail a very excellent presentation of official German positions in this matter. I was impressed.

It is very important, it seems to me, that responsible governments not condone such lawlessness. It is important that responsible governments which do not condone anti-Semitism or other hate take steps to halt any manifestation of such hate. This is why we applaud the German Government. This is why, Mr. President, I believe it is important that we implement what our Constitution states about the sanctity of the individual and his beliefs. This is one reason why I favor strong legislation to halt those who would bomb or desecrate a house of God, a cemetery or any other building, or who would stop an individual from voting because of the color of his skin or the church he attends, or who would do bodily harm to an American for some such reason.

Millions died because of a madman who killed and made war in the name of a symbol—the swastika. To condone desecrations of any kind would be to condone evil. But to condone desecrations by swastikas or to make light of them is an evil in itself.

Mr. President, I ask unanimous consent to have printed in the Appendix of the RECORD the statement to the West German Bundestag, other statements of the Embassy of that country, and the statement of Willy Brandt, mayor of West Berlin.

There being no objection, the statements were ordered to be printed in the RECORD, as follows:

A DISGRACE—BUNDESTAG CONDEMNS ANTI-SEMITIC INCIDENTS

Anti-Semitic incidents in the Federal Republic during recent weeks have produced protests from every quarter, both official and public, as well as countermeasures designed to curb National Socialist or anti-Semitic attitudes. The position of the German Federal Government on this question is well known and has been frequently cited in the press. Chancellor Konrad Adenauer has made his own position amply clear on more than one occasion; and recently, during a radio and television address, he stated: "The unaminity of the entire German people in condemning anti-Semitism and national socialism has been demonstrated in the strongest possible way." On January 20, Prof. Carlo Schmid, Vice President of the Bundestag, made the following statement to the Bundestag, endorsed by the four parties represented in that house. The declaration was received with loud and prolonged applause.

"On Christmas Eve ruffians daubed swastikas and anti-Semitic abuse on a house of God belonging to the Jewish congregation in Cologne. Since then, there have been other similar occurrences in the Federal Republic involving filthy scribblings of anti-Semitic or Nazi sentiments.

"It is a disgrace that this could happen in our country. This disgrace is not mitigated by the fact that in other countries, too, walls have been smeared with swastikas and abuse of the Jewish people. We Germans have no right to point our fingers at others. It is true that in other countries there has been ruffianism under the sign of the swastika; but in our country 6 million Jews were murdered in the name of this symbol. For this reason, what has happened in Germany during these weeks is a greater disgrace than it would be elsewhere. And for the same reason, our reaction against it must be stronger and must proceed from greater introspection.

"It seems certain that the excesses, which are shameful to us, have quite different causes and agents. In several cases destructive self-aggrandizement, the desire to appear in the newsreels and papers, may have played a role. In several cases political sectarianism was involved, which, moreover, may have been planned in some place or another. In several cases it was a show of juvenile delinquency. We must not be content with these conclusions. Most of these juvenile delinquents were scarcely 10 years old in 1945 and had never met a Jew face to face. That they give vent to their emotions by scrawling anti-Semitic slogans, instead of overturning automobiles and breaking windows, indicates that many of them still have, below the threshold of consciousness, recesses which have not been cleared of rubbish. Parents may be to blame for this; teachers may be to blame for it; feelings of inferiority may be at the bottom of it; and perhaps in some places there is still a psychological climate which calls up such phantoms.

"That this is the case is of concern to all of us. To all of us it poses a task which we will have to manage. We Germans shall have failed as long as anyone can say without fear of being ostracized: The attitude of the Third Reich toward the Jews was disagreeable foolishness, because it made the whole world our enemy. We shall fail as long as there can be any discussion—intended to exculpate us—about whether there were 6 million or only 3 million Jews murdered. We shall fail as long as every child is not taught, and does not understand, that the problem is not whether 6 or 3 million, but rather whether none or one was murdered. But above all, we shall fail as long as we regard what has happened to the synagogues not as a question of morality but from the point of view of the possible damage which the Federal Republic may have suffered as a result.

"Many have expressed regret, foremost among them the representatives of the Jewish congregations, that the press has made so much fuss about this filthy business. Certainly a dozen juvenile delinquents were incited by such fuss. But perhaps this is good: For there are situations in which the sleeping hounds of hell must be awakened so that their barking will bring us to the realization of how close we are to hell.

"Only if we uncover the evil still at work here and there among the German people shall we be able to exorcise it. And in doing so, of course, we should have help from abroad. People in other countries should see not only the dirty work, but they should also see the reaction of countless men and women, especially of countless young people, among us. These young people should not be permitted to feel that they are alone, or that they too are counted among the outlaws. They should be given brotherly encouragement. If this is done, these hateful phantoms from our past will vanish."

WIDESPREAD POPULAR REACTION AGAINST ANTI-SEMITIC DEMONSTRATIONS

TRADE UNIONS, YOUTH, CHURCH, AND UNIVERSITY GROUPS PROTEST

Following the desecration of the Cologne synagogue, the directorate of the German Federation of Trade Unions passed a resolution condemning these anti-Semitic demonstrations. It stated, in part: "The directorate of the German Federation of Trade Unions, as the representative of the workers,

employees, and officials of the Federal Republic, is profoundly shocked by the desecration of synagogues, churches, and memorials to the victims of national socialism. In accord with honest and decent men everywhere it severely condemns these horrible deeds." The federation demanded that all parties in the Federal Government and in the State governments take immediate action to combat the pernicous activity of right-wing radical and anti-Semitic groups.

YOUTH GROUPS

On behalf of 6 million young Germans, united in the German Federal Youth Council, the council's chairman issued the following declaration condemning actions of anti-Semitic and Nazi nature: "The 6 million young Germans who belong to the 14 large democratic youth organizations united in the nonpartisan and interdenominational German Youth Council have categorically dissociated themselves from these irresponsible activities. The German Youth Council protests against the identification of the young generation of Germany with such elements and declares: German youth has nothing in common with those individual offenders. In recent years German youth has often given proof of the fact that to them mutual esteem is the natural prerequisite for living together in a democratic form of society. These young people have shown that they are seriously endeavoring to overcome the Nazi past. Prompted by the recent incidents, the German Federal Youth Council appeals to all young Germans: Make use of every opportunity to prevent incidents of this kind! Prove by word and deed that German youth refuses to have anything to do with racial hatred or political instigation."

THE PROTESTANT CHURCH

The directorate of the United Evangelical Lutheran Church in Germany, in Hanover, also issued a condemnation of these anti-Semitic demonstrations, and appealed to the older generation to assist young people in clearly forming their own judgments about the history of the Hitler period and the times leading up to it. The reaction of the German public should not confine itself to declarations of sympathy for Jewish citizens, it said, but should bring about a realization on the part of the public of its own culpable negligence.

THE UNIVERSITIES

In West Berlin more than 2,000 professors and students of the Free University signed a declaration of the German-Israeli study group protesting against anti-Semitic incidents. At the University of Mainz the general student council and the student parliament demanded the exclusion of all so-called neo-Nazis from study at German universities.

These popular protests bear witness to Chancellor Adenauer's statement that the unanimous and spontaneous condemnation of anti-Semitism and of national socialism by the German people is the one hopeful aspect of these terrible events.

THE GOVERNMENT'S INVESTIGATION

The Federal Ministry of the Interior has conducted an investigation into the number and the background of recent anti-Semitic incidents in the Federal Republic. This investigation, though not yet complete, provides sufficient material to allow certain conclusions to be drawn about the nature of these incidents; and in the light of this material they may be placed in the proper perspective. For example, it is apparent that the majority of these acts were committed anonymously. The persons involved did not wish to be identified. It is also apparent on the basis of the information available that most of these persons do not have any political affiliation and have not been involved previously in any kind of political activity.

From December 24 to January 14, 93 persons were arrested for complicity in anti-Semitic or Nazi activities; and, almost without exception, all confessed to their involvment. It is significant to note that 16 of the 93 were intoxicated when they committed the acts. The investigation established that 17 were under 14 years of age; 37 were between 14 and 21; 22 between 21 and 30; and 17 were over 30 years of age. Only 3 were members of the rightwing German Reich Party; 10 acknowledged sympathy for the party's program; and the remaining 80 had no radical political interests of any kind. On the other hand, 17 of the 93 admitted that their actions were motivated by anti-Semitic or Nazi sentiments. The investigation also indicated that 39 had no political motives whatever, but acted solely out of a desire for publicity, encouraged by press, radio, and television reports, or could be classed as juvenile delinquents.

Court action against those arrested has been swift. As of January 14, judgment had been passed on 11 of the accused. Verdicts so far range from 4 weeks to 17 months, with some lesser terms for juveniles. None of the convicted have been given the possibility of parole.

It is noteworthy that reports on these incidents have caused large-scale resignations from the German Reich Party as well as cancellations of subscriptions to right-wing publications. All evidence proves that there is no truth in the allegation that German youth is anti-Semitic or in any way organized in Nazi or neo-Nazi units. There are approximately 15 rightwing youth organizations in the Federal Republic which have a total of only 3,000 members. They are carefully watched, and any of their activities which violate the constitution are promptly and severely punished.

Though there is no evidence available that anti-Semitic literature has been mailed from the Federal Republic, German authorities have asked Jewish congregations all over the world to cooperate by informing them of the titles, authors, and publishers of any such literature that may appear.

ANTI-SEMITIC DEMONSTRATIONS

RIAS, BERLIN

"It is regretable that the scribblings of Nazi and anti-Semitic slogans is still headline news everywhere in the world—particularly so, because such worldwide publicity encourages the continuation and spread of this cowardly and primitive behavior carried on under the cover of night. Beyond that, however, it would be equally regretable, if the public and the authorities, especially in Germany, would believe that everything is in order again as soon as this pathological political pornography disappears. In having the right to organize, radical groups also have the opportunity to influence our young people—even if relatively only a small portion of them—before they have a chance to develop defenses against the poison of radicalism. And this points up the most neglected aspect of postwar life in our country: namely, the inadequate teaching of youth about the shameful events of the past and about the conditions which produced them."

FRANKFURTER RUNDSCHAU, FRANKFURT (SOCIAL DEMOCRATIC)

"It would be foolish to deny that there is uneasiness in Great Britain about Germany and that this has been intensified by the scribbling of some political fools. Now that the ice of the cold war is melting, the old rubble comes to the surface again. We talk much about our unconquered past. We are now being made aware of the fact that it also stands between the Federal Republic and her allies."

SUEDDEUTSCHE ZEITUNG, MUNICH (INDEPENDENT)

"What have we done wrong during the past 10 years? Not only the teachers, who must be forced to teach current history; not only the parents, who take part in the secret conspiracy of silence about the past of who, by snide remarks, dispell the effect of the school's teachings; but all of us who live complacently, as if we had not started the Second World War and, indeed, almost won it. In an atmosphere of prosperity, which we heedlessly enjoy, the burden of unacknowledged guilt, or guilt borne without understanding, causes a politically fatal disease. Our standards are, for the most part, materialistic ones; our indifference toward the probationary period given us is immoral; and that we are successful for the time being blinds us to the realization of our situation and deafens us to our inner voice. No success, however, is ever so great that it will counterbalance the lack of human kindness and political wisdom."

RHEINISCHER MERKUR, KOBLENZ (INDEPENDENT)

"The unanimous surge of abherrence which swept over the Federal Republic after the crime in Cologne is undeniable proof that the anti-Semitism of the Third Reich has lost its collective suggestiveness. After the horrible mistreatment of the Jews by the Hitler regime, anti-Semitic excesses cannot reckon with secret approval or quasi-tolerance, because the ruthlessly atheistic race madness of that regime, which was directed against Jews and Christians alike, has destroyed among Christians the residues of medieval prejudices. The flood of letters to the congregation of the Cologne synagogue is proof that today thousands of Germans would protect their Jewish fellow citizens with their lives if these nationalist fools would again try to harm them."

KHRUSHCHEV BEFORE THE SUPREME SOVIET

DER TAGESSPIEGEL, BERLIN (INDEPENDENT)

"The Soviet Union approaches the summit meeting with a far-reaching modernization of its armed forces; and not only in the military field does Khrushchev modernize the Soviet system. In connection with the number of reforms which he has brought about one often hears in the West talk about a liberalization of communism. This is a total misunderstanding which can only lead to dangerously false conclusions. Khrushchev modernizes communism in all areas with the single goal of getting the greatest efficiency from the system and the people."

FRANKFUETER ALLGEMEINE ZEITUNG, FRANKFURT (INDEPENDENT)

"The Soviet Premier's announcement should be interpreted in the context of the strategic concept of the Soviets. It is part of an overall plan. The 1.2 million soldiers who can be spared will be transferred to the labor force to bolster the economy. We must understand that they are growing stronger by having less. This form of disarmament is indeed unilateral and unique, and it makes genuine disarmament even more urgent."

GOVERNING MAYOR OF BERLIN, WILLY BRANDT, COMMENTS ON ANTI-SEMITIC DEMONSTRATIONS

In the past weeks there have been a number of deeply regrettable, revolting, shocking happenings which we have to face and combat.

Unfortunately, some of them have taken place in Berlin, too.

Whoever again beats the macabre drum of racial hate, of anti-Semitism—above all in Germany—is challenging everything that basically has not been atoned for after the millions of murders in the gas chambers and extermination camps.

Whoever conjures up the evil spirit of nazism not only condemns himself morally and legally but commits the most evil outrage on his nation.

What we have experienced in the last 2 weeks must not be either minimized or exaggerated or distorted.

It is bad enough that here and there the swastika has cropped up again, that Jewish houses of worship have been besmeared and Jewish citizens been harassed.

That must not be minimized, above all in Berlin. And we have not had the slightest inclination to fool ourselves. Berlin truly has not lacked in decisiveness and determination. Here neo-Nazi groups will not be allowed to operate. We will crush them wherever possible because that is our moral and national duty.

In Berlin we have had a happy example of the swift action of justice and police authorities. We will continue to act swiftly and vigorously because we will not allow the air we breathe to be poisoned.

There have been many spontaneous demonstrations of the feelings of our people, above all by the youth of our city.

We have proved that Berlin is a clean city, a city that has not gone through bitter experiences in vain, a city that will not allow its fight for freedom and self-determination to be endangered or distorted by a few who refuse to learn, or by a few hoodlums.

The people of the free part of Germany, above all of Berlin, will know how to prevent relapses into the evil past.

In the last few days I have had many talks with Jewish fellow citizens and they have confirmed that they know where we stand.

I have asked them not to doubt this city and its community. After all that is behind us we will not allow ourselves to be confused by propaganda drumfire.

Above all, I appeal to people in foreign nations—get exact information before you give a final verdict.

Do not confuse the overwhelming majority of Germans who have broken with the grim shame and the crimes of the past with the political hoodlums who have been in the news recently.

And last but not least, do not do Berlin an injustice.

We stand for freedom. For us, antinazism and anticommunism are one and the same.

We will not depart from this path. I therefore ask confidence in Germany—from Berlin I appeal for Germany.

Why Can't Some of Our Universities Be Fair to the U.S. Congress?

EXTENSION OF REMARKS
OF
HON. A. S. HERLONG, JR.
OF FLORIDA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. HERLONG. Mr. Speaker, Congress has been made a whipping boy by some of the universities and colleges of the country over the question of the loyalty oath required of those students seeking Federal loans to carry on their education. Under leave to revise and extend my remarks, I offer the very thought-provoking editorial which appears in the February issue of the American Legion magazine. The editorial is as follows:

WHY CAN'T SOME OF OUR UNIVERSITIES BE FAIR TO THE U.S. CONGRESS?

If ever you want to run for Congress, make sure first that you have the hide of a rhinoceros.

Latest example is the beating Congress is taking these days from some of our university presidents. To say that Congress is being maligned by intellectual cheating is putting it mildly.

Remember when the Soviet Union sent up the first sputnik?

"How come?" everybody wanted to know. Where is the vaunted U.S. superiority in science and education, that it lets the Reds beat us into space?

Our colleges took the brunt of the early criticism. Why weren't they training more and better scientists than Russia?

The colleges said, of course, that what they needed was more money—more for themselves, more for their students. Just give us the money and away we go.

When you get to Congress you'll find that's what they all say.

Anyway, Congress stopped, looked, listened, and believed.

Somewhat over a year ago Congress passed the National Defense Education Act. It allows Federal loans for college students, in the hope that that will help some of them make a contribution some day to U.S. science in the fields in which we are competing with the Soviet Union.

Congress asked but one assurance. It asked that when a student should get one of those loans he would state that he is loyal to the United States and would have no part in overthrowing the United States by illegal and violent means.

Some 1,370 colleges and universities have accepted this, and so have 120,000 students in those 1,370 colleges.

Not so 16 other colleges, including Yale and Harvard. They are raising so much hell about it that they have refused to go along with the program.

What did Congress do to offend them?

Well, say Yale and Harvard and the 14 others, what do you mean by asking our students to say they'll be loyal to their country and wouldn't be traitors? We want this money with no strings attached or we don't want it at all, and we won't let our students make any such pledge in order to get Federal help to go through college.

This being America, of course, any objections are entitled to their day in court. Maybe Yale, Harvard et al., have some good, solid, sensible and fair arguments that Congress should listen to respectfully.

Last December 20, A. Whitney Griswold, president of Yale, got the stage in the New York Times magazine to state the case of the 16 "rebels." But if you expect he was solid, sensible and fair to Congress, you're mistaken.

President Griswold set forth three main objections to his students pledging loyalty before borrowing U.S. defense funds. Let's look at his three complaints.

1. He said that Congress is just picking on students and teachers, singling them out for distrust and bad faith.

2. He said a loyalty oath and affidavit wouldn't make students loyal.

3. He said that one loyalty oath leads to another, and went to great pains to set forth that this could lead to persecutions and official inquiries into the minds of all of us.

Are these complaints fair, just and reasonable? Let's look at them one at a time.

Complaint No. 1: The Congress, says Griswold, has singled out teachers and students for "distrust" from among all others who get Federal subsidies and loans. Farmers, veterans, social security beneficiaries, for instance, don't have to take loyalty oaths to get Government checks. Even Federal officials who do take loyalty oaths don't have to sign non-Communist affidavits. So, President Griswold tells the people, the Congress is just picking on students and teachers.

Comment: Either way you look at it, President Griswold is kidney punching.

First consider whether Congress shows no faith in the colleges and students.

The whole student loan program is an act of faith in the colleges and students by the Congress.

No college is asked to guarantee that the students who get this help will ever produce the results desired. Congress took the colleges at their word, that if they and their students had more money our country might give the Soviet Union a go of it in scientific education.

Of course some of the sudents who get these loans will go into pro football, others may make a big thing of stock speculation or take over pater's delicatessen, or go into advertising—even as some of the lads the taxpayers have educated at West Point and Annapolis have done.

But Congress smiles in the face of such certain adversities for its program, and looks at the good side of the gamble. Some of those students, it has faith, will stick to their chosen field of learning and rise to eminence in it some day. Of these, some will contribute to the advancement of science in the United States.

The Federal loans will make it easier for them to carry their heavy load of studies, free them from dishwashing and waiting on tables, make them better scientists faster. Congress places faith in colleges and students alike that this will be so.

Does President Griswold come forth in the midst of his criticism, to admit that maybe Congress has shown some small faith in his team? He does not.

Second, in directly accusing Congress of "singling out" colleges and students for "distrust" Griswold is faking the facts, not playing fair with Congress, making an unjustifiable slur on the motives of Congress.

In order to assume hurt feelings—which by the way is the main complaint of the 16 colleges—Griswold has to pretend. He pretends that the difference between asking for a loyalty oath in the student loan program, and not asking for it in, say the social security program, stems from an insulting estimate by Congress of the difference between the people who may be benefited.

Yale's president has to pretend (and he does pretend) that there is no difference in the programs that could account for asking loyalty assurances in one program but not in the others.

Is there no difference between the programs, quite apart from the people?

Of course there is.

This is a defense program.

If it works at all, some of the students who are helped by it will, some day, work on the intimate secrets of science projects in which we are competing with the Soviet Union.

Any fairminded person would concede that Congress—whether or not it has the right answer—has more reason to fear national betrayal here than it does of an elderly widow who gets a social security check in the mail.

Yale's president concedes no such true motive in Congress at all. He stakes the main argument of all 16 "rebel" colleges on a nasty and unjustified accusation that Congress is just trying to insult the colleges. And this, dear reader, is what you can expect too, even from the highest seats of learning, if every you get to Congress.

Complaint No. 2: Loyalty oaths and affidavits, says Griswold, will not make the stu-

dents loyal. A disloyal person can and maybe will lie in order to reap advantage.

Comment: Of course the oath and affidavit won't make anyone become loyal to the United States. No Member of Congress has said so, nor given Griswold any reason to believe that he thinks this is the reason for the oath.

The purpose of the oath and affidavit is as clear to Griswold as it is to you.

Its purpose is (1) to prevent lending Federal defense funds to such few students who are unable to pledge loyalty to the United States, and (2) to give grounds for prosecuting any students who take the oath, accept the loans, and then use their education to serve an enemy of the United States.

Does President Griswold admit this obvious motive of the Congress and speak intelligently to the point on it? He does not. He doesn't show Congress the courtesy of mentioning the true purpose of the oath and affidavit. He talks instead about whether the oath will make students loyal all by itself, just as if this were what Congress expected.

Then he knocks that argument down, as if by so doing he were showing how stupid Congress is. The notion that the oath might create loyalty originated in the 16 colleges, not in Congress. The stupidity of discussing it at all originates in Yale, Harvard, etc. To pretend Congress is that stupid is academic cheating.

Complaint No. 3: The great danger of permitting such oaths, says Yale's president, is that they lead to political and religious test oaths, to prying into all our personal beliefs by prosecuting officials, and to inquisitions, jailings, religious persecution, findings of criminal guilt by thought-police, etc.

Comment: All of a sudden, President Griswold is talking about a completely different kind of oath from the one Congress has asked. His final main argument, like the others, beats Congress over the head for things Congress didn't do. He asks us to believe that Congress is really taking the first step toward Hitlerism, sovietism, witchhunting, religious persecution, gestapoism, Castroism.

President Griswold knows that it is not true that one oath leads to another. Oaths don't cause evils. They are tools of society and societies, not causes. Evil oaths come from evil societies. The Hitler oath (which President Griswold actually cites in his criticism of Congress) did not come from an earlier oath, but from the evil nature of Hitler.

President Griswold knows that his claim that oaths, unsupported by evil people, lead from bad to worse is pure poppycock.

On his own Yale campus there is a century of experience with college-sanctioned fraternities exacting horrendous, secret oaths amidst trappings of medieval passwords and handclasps and awful portents, which—if you were to believe Yale's president—would long before now have catapulted Yale back into the Dark Ages.

His complaint against Congress in this respect is therefore not an act of intelligence, but another accusation. It is an unspoken charge that the present Congress of the United States is evilly inclined toward political and religious persecution and thought control.

If President Griswold has a passing personal acquaintance with a cross-section of the Senate and House of Representatives, his dark charge that they would wreck American liberties is shocking beyond belief.

Suppose he speaks from ignorance of how loyal to liberty Congress is? His accusation is still a miserably unfair attack, based as it is solely upon evidence that before lending U.S. defense funds Congress wants assurances of loyalty to the United States akin to what every President from Washington to Eisenhower has given, to what every Boy Scout has voluntarily pledged for 50 years, to what 21 million living and millions of dead war veterans have given for the privilege of defending their country with their lives.

If this is all that the complaints of the 16 colleges out of 1,386 add up to, they are playing dirty pool and owe Congress an apology.

And now it's time to get back down to business. Those sputniks are still going up, and the question of the day still is: "How come our great universities aren't putting out scientists, in the midst of all their great tradition of academic freedom to equal what the regimented, thought-policed scholars of the Soviet Union are doing in space science and rocketry?"

Congress has thrown you the ball, President Griswold. How about picking it up and running with it?

Group Insurance Protection for Federal Employees

EXTENSION OF REMARKS

OF

HON. THRUSTON B. MORTON

OF KENTUCKY

IN THE SENATE OF THE UNITED STATES

Monday, February 1, 1960

Mr. MORTON. Mr. President, I ask unanimous consent that an article written by my distinguished colleague from Kansas Senator FRANK CARLSON and appearing in the February issue of the Journal of American Insurance be printed in the Appendix of the RECORD.

My colleagues will recall the dynamic and effective leadership that Senator CARLSON provided in the enactment of the Federal Employee Health Benefits Act. He has consistently championed such legislation during his 9 years in the Senate.

There being no objection, the article was ordered to be printed in the RECORD, as follows:

HEALTH BOON FOR UNCLE SAM'S STAFF

(By Senator FRANK CARLSON)

A new era of security-assured independence will open for 2,300,000 Federal Government employees and their families this year in the anniversary month of Independence Day.

On July 1 they'll come, for the first time, under the protection of a new, Government-wide group health insurance program, comparable to those already serving some 90 million workers in U.S. private industry and their dependents. This will be made possible by the Federal Employee Health Benefits Act, passed by the 86th Congress just before adjournment last summer.

Heretofore, the employees and their families, about 4½ million people in all, have had to arrange their own health plans, and many have been carrying inadequate coverage. But with the participation of such a large group, they now should be able to get broader coverage for their money. And, certainly the biggest boon to most of them, the Government will assume half the cost of their insurance.

While the Government will share the cost, just as many private employers are doing nowadays, it is notable that it did not seek to set up a big new bureaucratic branch to run its own health insurance program. In fact, such a possibility was never even considered—a tribute, I think, to the job private enterprise has done in providing health insurance benefits to 123 million Americans who are covered today.

This program is expected to cost about $214 million a year. Thus, the cost to the taxpayers will be about $107 million annually. Of this, no more than 1 percent will go for administrative expenses—again, because private insurers will be running the program.

All Federal employees are eligible to participate—public health workers, post office employees, Congressmen and their staffs, the employees of every government department, agency, bureau and office in Washington, in all 50 States, in U.S. territories, and workers stationed overseas. It has been estimated that 75 to 90 percent of them will sign up.

They'll have a choice of the following plans:

(1) A regular cash indemnity policy with an insurance company. It will reimburse the employee for hospital and medical costs incurred. The insurance carrier, chosen by the Civil Service Commission in December from about a dozen of the Nation's largest, will be Aetna Life Insurance Co. Aetna will reinsure with all other qualified companies wishing to participate:

(2) A service-type plan, such as Blue Cross-Blue Shield. It generally makes a settlement with the hospital or doctor directly.

(3) An existing group health insurance program operated by one of the national government employee organizations, such as the National Federation of Post Office Clerks, or by the agency for which the employee works. Such plans have been set up by the FBI, Central Intelligence Agency and Office of Civil and Defense Mobilization, for example. Some of these plans have been in operation for a number of years, providing hospital and medical coverage for thousands of employees at cost.

(4) Comprehensive group-practice prepayment plans, such as those offered by Group Health Association in Washington, the Kaiser Foundation on the West Coast or the Health Insurance Plan of Greater New York, or individual-practice prepayment plans. Many thousands of Federal employees also are covered by these programs.

In every case, the principal effect of the new law will be that the Government will now pay half of each employee's insurance premiums. If an employee has been paying $10 a month for his coverage, for example, he now will have to pay only half that. Since half of our Federal employees make less than $4,800 a year, and some half a million earn less than $4,000, it's clear what a help this will be to them.

It may be that rather than continuing his present coverage at half the cost, the employee will choose to increase his protection, perhaps paying $15 a month for it. He'll improve his $10 coverage by a third, yet pay only $7.50. And many employees now facing the terrible risks of illness without any insurance at all will be able to buy group coverage at a price they can afford.

Naturally we had to set limits on the amount the Government will match under the new law. For instance, for a single employee the Government will pay $1.25 to $1.75 per pay period (biweekly). For an employee plus his family, the Government's share can range between $3 and $4.50 biweekly. That's for a policy under the cash indemnity or service benefit plans. The employee is free to choose the level of coverage he wants, and the Government, within these limits, will match his payments.

For members of employee group plans or prepayment programs with set subscription charges, the Government will pay up to $2.50 a pay period for a single person and $6 for a family as its half.

LAW TOOK YEARS OF EFFORT, COMPROMISE

The employee's half will be deducted from his paycheck. His half actually may be more than half his total premium if he chooses to buy more extensive coverage than the maximums prescribed in the new law.

It took many years of effort to achieve the passage of this legislation. Since 1947 Federal employee health insurance bills had been considered by the Congress, but they got nowhere because the groups involved could never agree on the provisions. Finally, though, agreement was reached among the employees, the administration, the insurance industry, Blue Cross-Blue Shield, the American Medical Association, American Hospital Association, and the various employee group health plans. Our subcommittee, headed by Senator RICHARD NEUBERGER of Oregon, held extensive hearings last April, and in July the Senate passed the bill 81 to 4. The House then held its hearings, made some changes in the bill, and approved it 383 to 4. A conference committee ironed out the differences between the two versions, and the final bill, cut down somewhat from the original in costs, was signed into law by President Eisenhower on September 28.

Some of us in Congress and the administration tried to cut the costs still further, thinking of our already gigantic national debt and the effect of new spending on the Federal budget. We thought $50 million as the Government's share of this plan would have bought some good benefits. But with some groups asking for $145 million and more, there had to be some compromising. The administration also fought for years to hold the Government's share to one-third of the total cost, while the employees' organizations thought the United States should pay two-thirds. So the final 50–50 cost sharing was a compromise too.

PLAN COMPARABLE TO PRIVATE INDUSTRY'S

No one connected with the bill would even pretend it is perfect, or that it will work without some complaints and adjustments. But in view of the deep-rooted disagreements over a Federal employee health insurance plan during the past 12 years, I think all parties are pretty well satisfied that this is a good, workable law. At least the Government—the Nation's largest employer—has recognized its obligation to its employees, and is now offering them a health plan every bit as generous as they'd find in most private industries.

With medical and hospital costs what they are nowadays, few families feel they can be without a health plan of some sort. Along with the retirement program, the group life insurance plan adopted 4 years ago and generous sick leave provisions, this health insurance program is probably the greatest "fringe benefit" our civil servants could get. Some 27 percent of the Government's $13 billion annual payroll item already has been for fringe benefits. Financing half of this new health plan will boost those figures still higher. Nevertheless, if the Government is to compete with private business for competent, high-caliber employees, it cannot lag so far behind industry in the insurance protection it offers. This unfortunately has been true for some years. Now this new law goes far toward alleviating that situation.

This legislation does not include retired Government employees and their dependents. However, bills are being considered this session which would provide them with a health plan, too.

RESERVES NEEDED TO AVOID RATE INCREASES

There is another omission in the new law that I think will have to be watched: It does not require the accumulation of a sufficient reserve to cover the future rises that must be expected in hospital and medical costs. To keep boosting the rates for this program to cover these rising costs would be unfair both to employees and to the taxpayers who pay the Government's share. Yet that is exactly what will have to happen, if past experience is any indication.

The people taking Blue Cross in New York City, for example, had their rates boosted by a third in 1952, another 22 percent in 1958, and a whopping 26½ percent last year. Needless to say, there are a lot of unhappy Blue Cross subscribers in New York City. Other plans weren't all that bad off; nevertheless, rates have been rising constantly, and the experts say we can expect hospital costs alone to go up at least 5 to 10 percent for the next 8 or 10 years. It takes a good reserve to cover increases like that without having to ask the policyholders for higher premiums every year. Yet this law requires setting aside of 3 percent of the premiums at the most for reserves. So when these cost increases come, as they will, the only solution will be to raise the insurance premiums or cut down on benefits. Either way, our Federal employees are going to get hurt.

It is my hope that once the plan begins operating and we see how it is working out, we can hold new hearings and, if necessary, amend the present bill to fit the needs. For the time being, though, we have a program we can be proud of, and our Government employees will rest a lot easier come July 1, knowing they are protected by health benefits as generous and reasonable as they'd find anywhere. Adequate insurance means peace of mind, and it's time our Federal Government workers got their fair share of both.

The Hydrogen Bomb—Suggestions for Control of Superweapons

EXTENSION OF REMARKS
OF
HON. CHESTER BOWLES
OF CONNECTICUT
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. BOWLES. Mr. Speaker, 10 years ago tomorrow, on February 2, 1950, a distinguished New Englander rose in the Senate to make an historic speech. His subject was the arms race in the hydrogen age and the major leadership required from America if the world was to avoid self-destruction. The speaker was the senior Senator from Connecticut and my good friend, the late Brien McMahon.

This was a speech on which he had labored mightily. I shall never forget the earnestness and determination with which he outlined his dramatic proposal in the Governor's office in Hartford shortly before he presented it to the Senate.

Into this effort Brien McMahon poured his whole heart and soul. The fact that he was the chairman of the Joint Committee on Atomic Energy, lent strength and persuasion to all that he said.

In the intervening decade this speech has become famous, and justly so. For it was not only a statesmanlike presentation of the crisis that confronted us in 1950 when we decided to produce the hydrogen bomb. The analysis and the proposal remain just as pertinent, and twice as impelling, today as they were 10 years ago.

The Senator supported the decision to proceed with the production of the hydrogen bomb; indeed he thought that any other decision would have been inexcusable.

But he was troubled to the depth of his being over "resigning ourselves to a generation of waging the cold war." "Arrayed against the choice of such a policy," he concluded, "is 5,000 years of recorded history" of the outcome of arms races, as well as the knowledge of what such a choice would do over the years to American democracy, economically, psychologically, and morally.

The alternative choice in policy, as Brien McMahon saw it, was to move "Heaven and earth to stop the atomic armaments race," regarding "no suggestion as to startling or unconventional for careful consideration." He thought a "fresh proposal for atomic peace" was urgently required, and went on to propose a "global Marshall plan."

In return for general acceptance of effective safeguarded nuclear disarmament, he suggested that the United States each year for 5 years commit $10 billion to the following three programs: President Truman's point 4 proposal, the peaceful development of atomic energy, and general economic aid abroad.

"I suppose that my suggestions will be termed impractical or theoretical in some quarters," Senator McMahon concluded. "Before they are condemned, however, I would ask that whoever condemns them produce a better proposal."

Mr. Speaker, who will say that in the intervening years our leaders have given us proposals on anything like this scale or scope? Brien McMahon was prophetic not only in his statement of the challenge, but in his expectation that little or nothing would be done about it commensurate with the need.

Yet the challenge and the fateful choices are with us still. Only the danger deepens. The risks have multiplied and so has the terror.

I am deeply convinced that in the very near future the historic opportunities may be gone for the kind of action Senator McMahon urged. Indeed, if before 1970 we have not brought the enormous risks we are running under better control, history itself may be behind us.

With all this in mind, Mr. Speaker, I have asked for a special order today in tribute to Senator McMahon's foresight. With the forbearance of the House, I should like to read a slightly condensed version of this remarkable speech—in his words, as he gave it, 10 years ago:

THE HYDROGEN BOMB—SUGGESTIONS FOR CONTROL OF SUPERWEAPONS

Mr. MCMAHON. Mr. President, the President of the United States has now given orders to build the hydrogen bomb—to create, in deliverable quantities, those chunks of the sun technically known as thermonuclear weapons.

The scientists feel more confident that this most horrible of armaments can be developed successfully than they felt in 1940 when the original atomic bomb was under consideration. The hydrogen development will be cheaper than its uranium forerunner. Theoretically, it is without limit in destructive capacity. A weapon made of such material would destroy any military

or other target, including the largest city on earth.

The President's decision was dictated by the severe realities of the world which we inhabit today. He had no choice, and his decision under present circumstances is right.

American renunciation of the hydrogen bomb would mean embracing the folly of disarmament by example. Densely populated American cities are made to order for an explosive that will level hundreds of square miles. Communism suffered a defeat in prestige when our democracy completed the earliest atomic bombs, but this prestige defeat would be more than recouped, assuming that Russia were to complete hydrogen bombs soonest. Furthermore, if the Kremlin believes that it cannot outproduce us in ordinary atomic weapons—imagine calling the destroyers of Hiroshima and Nagasaki ordinary—its logical strategy is to excel in the thermonuclear field. All such factors as these serve to warn America against complacency.

Voluntary acceptance of the idea of being less well armed than other nations in this era of our greatest vulnerability runs completely counter to the traditions of our leaders—and, I might add, to good commonsense. In my judgment, a failure to press ahead with the hydrogen bomb might mean unconditional surrender—in advance—by the United States to alien forces of evil.

But please note my insistence that we possess no monopoly upon the hydrogen-bomb idea. If we win the race to build this weapon first, it will be only a matter of time—and possibly a short time—before the Kremlin achieves success also. Let me warn, with all the solemnity at my command, that building hydrogen bombs does not promise positive security for the United States; it promises only the negative result of averting for a few months or years well nigh certain catastrophe. Do not for a moment overlook the obvious—that Soviet Russia broke our atomic-bomb monopoly sooner than we had expected, and she would break any hydrogen-bomb monopoly with equal or greater speed. Mr. President, I have the idea that in discussing this subject we are dealing with something which is extremely important. We are plunged into a truly terrible arms race.

What are we going to do about it?

There are really, I suggest, no more than two broad policies from which to choose. One consists in resigning ourselves to a generation of waging the cold war—that is, striving endlessly to contain Russia's outward pressure, pouring out our substance to stay ahead in the weapons competition even after the Kremlin becomes armed with hydrogen bombs, and cherishing indefinitely the hope that Soviet tyranny will somehow see the evil of its ways and reform itself from within. Arrayed against the choice of such a policy is 5,000 years of recorded history, which teaches again and again and again that armaments races lead to war—under today's conditions, hydrogen war.

But even if this policy could enable us to avoid armed conflict for a whole generation, it would undermine and corrupt that which we prize more highly even than the absence of hostilities: I refer to liberty. How is it possible for free institutions to flourish or even to maintain themselves in a situation in which defenses, civil and military, must be ceaselessly poised to meet an attack that might incinerate 50 million Americans—not in the space of an evening but in the space of minutes?

Consider what sustained fear does to the individual—especially to the individual enterpriser. It contaricts his imagination, paralyzes his initiative, and even affects his personal morality. It constitutes the most subtle and potent of poisons. Consider the crushing burdens already imposed upon our private enterprise economy. Consider, too, the restrictions on freedom already brought about by the atomic bomb and by its pressures upon us to accept loyalty checks, espionage counter measures, and widening areas of official secrecy. For a preview of the future if the armaments race continues, multiply the effect of these factors by something like 1,000 times—to allow for the 1,000-times greater energy release of the hydrogen bomb—and if you are candid and realistic, I believe you will find it is difficult indeed to see a dominant role for freedom in such a picture. To stay alive we will find ourselves more and more compelled to imitate the totalitarian rival.

The other broad policy which we may choose consists in moving heaven and earth to stop the atomic armaments race, to establish world-wide atomic peace, and to make possible atomic-created abundance among all men. In pursuing that policy we would tap to the roots the resources of our ingenuity and imagination; we would regard no suggestion as too startling or unconventional for careful consideration; and we would be guided, disciplined, and inspired by our code of ethics and democratic peace-loving decencies.

It is my intense conviction that our decision, born of necessity, to build the hydrogen bomb must be accompanied by the immediate initiation of a moral crusade for peace having far greater potential effect than any physical weapon, even chunks of the sun.

Mr. President, if we should fail in the business of working in a crusade for peace, we would deal a severe blow both to our moral position and to our fervent hopes for a secure future. The people of the United States want harmony among nations infinitely more than they want a new bomb. A fresh proposal for atomic peace, as dramatic as it is sincere, impresses me as urgently desirable.

Yet, through Bernard Baruch's immortal address of more than 3 years ago, we have already undertaken one major peace effort—and it was unsuccessful in that today we remain as far distant from atomic agreement as when we started. Why did this honest peace effort fail to impact successfully upon all mankind?

The answer is obvious and may be summarized in three words: Russia's Iron Curtain. The people of Russia, thanks to the Iron Curtain, have been prevented from knowing the true and desperate nature of the atomic crisis. They have been kept from learning, due to the Iron Curtain, how we extend toward them the hand of friendship and offer a just atomic control plan for their protection and incalculable benefit as well as our own. Any information on the subject that reaches the Russian people is first twisted and distorted into the Red focus of the Kremlin's official line.

We all know why the Soviet elite members maintain their curtain. It is because, using Churchill's phrase, "they fear our friendship more than they fear our enmity." A prison cannot be operated with too many doors and windows unguarded and unlocked. The men of the Kremlin do not want us to look in. Above all, they do not want their own people to look out. This explains not only the Soviet clinging to the curtain but also the Soviet rejection of an atomic inspectorate and other essential controls.

It is completely accurate to say that, in final analysis, Russia's Iron Curtain is responsible for our enormously reluctant decision to make hydrogen bombs, for the curtain prevents the Russian people from appreciating that we want and seek atomic peace; they, therefore, bring no effective pressure upon their rulers to accept atomic peace; the rulers maintain their absolute sway through popular ignorance; and the atomic armaments race rushes madly onward.

But though we may justly blame the Iron Curtain, we must also blame ourselves for failing to bring our message of peace and conciliation adequately to the attention even of those peoples who enjoy reasonably free access to information. Few of our own leaders have recognized that global control of atomic energy is the heart question of all foreign policy and that the German dilemma, the Austrian treaty, the status of Japan, and like matters are relatively insignficant compared to the overriding issue of whether or not more atomic weapons shall enter into existence with each month and year which passes.

If a new crusade for peace is not to miss its objective, as did the peace effort which we launched with such high hopes in 1946, we must not only crack the Iron Curtain and gain the ear of the Russian people, but we must also gain the ear of people on the near side of the barrier, including the many in our own country who do not yet grasp what is at stake.

We have spent $29 million a year on what we are pleased to call the Voice of America. It should be called the whisper of America. We spend in this country over $30 million a year to advertise cosmetics, and $29 million, I repeat, to sell the most precious commodity we have to sell—freedom, itself.

All over the world today—perhaps because listlessness and mediocrity have characterized our attempts to sell what America is, what America wants, and what America intends—there exists misunderstanding as to our attitude. The 30 years of vilification emanating from behind the Iron Curtain in Moscow have taken a toll on our reputation as a peace-loving and a peace-living nation. There are millions of people abroad who observe our armaments expenditures and fail to grasp that these are for self-defense.

They should appreciate the truth, but they do not. We assume that our actual good intentions and actual good feelings must be known to them; but they see that we devote billions to guns, tanks, planes, and atomic weapons—and day and night the Communist propaganda machine hammers into them the theme that American armaments are designed for conquest. Even worst, they do not see—at least with the same clarity—the huge resources being diverted to munitions inside Russia; for the Iron Curtain conceals such activity.

I advocate, Mr. President, a U.S. program of attention-arresting foreign broadcasts that would compare in size and scope to the Soviet effort along this line, and that would genuinely deserve the name, Voice of America. I favor exploring the efficacy of printing millions of leaflets for worldwide circulation, explaining a new U.S. proposal for atomic peace. We should publicly and repeatedly challenge the Kremlin to make known the terms of this proposal to newspaper readers and radio listeners inside Russia. We should publicly and repeatedly challenge the Kremlin to permit a meeting of the United Nations in Moscow itself, so that the trend of international discussions and our own sincerity would be more likely to enter the mental horizon of the average Russian.

There are other possible methods of creating a window in the Iron Curtain. Some have already been made known to the Senate; others will occur to us if we give the problem sufficient thought; all should receive the most painstaking scrutiny. At almost any cost we must assure that the Russian people have opportunity to consider, side by side, the atomic proposals of their own rulers and our atomic proposals, and that the Russian people act as part of the world jury which brings in a verdict covering this monumental issue.

More than ever it is true that an ineffective agreement would be worse than no agreement at all. More than ever there is no escape from strict control of raw materials, strict control of plants, and continuous inspection. We can enter into no scheme of a type which would only serve to mislead us and induce a false sense of security.

The new approach I have in mind is somewhat different. Although it flows from many weeks, and indeed months, of continuous reflection, I offer it only as an example of the bold steps which the Soviet atomic explosion, the shadow of the hydrogen bomb, and the pyramiding arms race should persuade us to consider.

We now spend about $15 billion annually for armaments. Why not offer to take two-thirds of this sum, or $10 billion and, instead of amassing sterile weapons, use it to foster peace throughout the world for a 5-year period? Why not offer to spread the annual $10 billion over three programs: President Truman's point 4 proposal, development of atomic energy everywhere for peace, and general economic aid and help to all countries, including Russia? Such a global Marshall plan might combine with the marvelous power of peacetime atomic energy to generate universal material progress and a universal cooperative spirit. In exchange for our own contribution of $10 billion annually, which we would save from the military budget, we would ask, first, general acceptance of an effective program for international control of atomic energy, and, second, an agreement by all countries, enforced through inspection, that two-thirds of their present spending upon armaments be devoted toward constructive ends. Administration of the annual $10 billion which we offered to make available for 5 years would be carried out through the United Nations.

Such a proposal, if advanced by our Government, might vividly bring home to all the world's population—in a manner far more successful than we have so far used—the profundity of our desire for peace. It would accomplish this result even if it accomplished nothing else. If the proposal were actually accepted, we would have concluded the cheapest monetary bargain in the history of the world; we would have probably saved mankind from destruction by fire; and we would have paved the way toward a new era of unimagined abundance for all men, based upon atomic energy constructively harnessed.

At present only one-third of the world's 2,200 million people receive enough food to sustain life on a decent basis. The other two-thirds live continuously at the margin of starvation. Mr. President, it is atomic energy that opens up the vision of expanding material decencies until there is enough to go around for all, until every last hungry mouth is filled. Perhaps, through the expenditure of a few extra tens of millions of dollars we can conquer the riddle of photosynthesis and extract from the processes of plant growth a means of multiplying many times the world's food supply. Perhaps through atomic power for industry and agriculture we can transform the deserts of Africa, Asia, and the Americas into blooming crop-producing acres, and the arid hills of the world into gardens. It is almost impossible to overestimate what all-out concentration upon atomic energy for peace might accomplish in terms of remaking and improving the physical environment of mankind.

I might point out that we have already poured billions of dollars into foreign economic aid, asking nothing in return, and still Communist propaganda has blackened our motives in the eyes of millions of men. Here, in accordance with my suggestion, we would ask effective control of the atom and substantial disarmament—which every man and woman in the world has a right to expect without any further inducement on our part. Yet we would in fact provide further inducement, in the form of $10 billion annually for 5 years, as proof of our overwhelming will to peace.

At the same time it goes without saying that we would provide no such funds unless they were associated with the measures needed to rescue humanity from hell on earth, control of the atom, and disarmament.

I suppose that my suggestions will be termed impractical or theoretical in some quarters. Before they are condemned, however, I would ask that whoever condemns them produce a better proposal.

I am willing to have my suggestions today judged against the background of Mr. Baruch's words spoken more than 3 years ago—words which I have quoted and which I now repeat:

"We are here to make a choice between the quick and the dead.

"That is our business.

"Behind the black portent of the new atomic age lies a hope which, seized upon with faith, can work our salvation. If we fail, then we have damned every man to be the slave of fear. Let us not deceive ourselves: We must elect world peace or world destruction."

Mr. President, I would write those words upon the heart and mind of every statesman in the world in the crisis in which we find ourselves today.

This much, Mr. President, I would add: In 1945 and 1946, when our thoughts were focused upon the Hiroshima bomb, we enjoyed an opportunity to wage atomic peace that somehow, despite the magnificence and generosity of our proposal to the United Nations, we did not fully exploit. Our present concern with the hydrogen bomb furnishes a second opportunity. I do not think a third will be given us.

I believe that every morning each Member of the U.S. Senate and House of Representatives, and each high official of the executive branch of this Government, should glance at the sun and reflect that what he sees there, millions of miles away, threatens to be recreated on this earth, in our own cities, in Washington, New York, Los Angeles, Chicago, and New Orleans. This is a time for soul-searching, for nationwide and worldwide debate, and for the launching and maintaining of that moral crusade for peace which alone can save us and lead mankind along the righteous paths of security, abundance, and liberty.

Mr. BOWLES. Mr. Speaker, few words uttered in the halls of Congress in our lifetimes have been more prophetic than these. Ten years have passed since they were spoken.

Pressures, crosscurrents and conflicts continue to breed confusion about American disarmament policy. The stubborn issues surrounding effective control system for the cessation of nuclear tests have hamstrung the negotiators in Geneva for months. The concept of a sliding scale, relating the number of on-site inspections to the yield of nuclear explosions, is a new and hopeful one. Perhaps our new threshold proposal embodying it will help clarify the American posture in the bomb test talks at Geneva and bring us measurably closer to an effective agreement.

Meanwhile the world remains confused about the major purposes of American policy. The President's goodwill visits have made a favorable impact, but what we now need is followthrough. More than anything else we need the dramatic and purposeful effect of a standing proposal for peace like that suggested by Brien McMahon. It is imagination like his which we have been missing and which is so essential. It is leadership of this caliber which understands the sweep of history and grasps the essential issues of our generation.

Drifting into catastrophe is always easier than building the foundations for peace. But Americans have not always chosen the easiest path. We do not need to succumb to fatalism, as tempting as that may be.

As long as there are Americans like Brien McMahon among us, we will still have the means as a Nation to inspire confidence in our purposes and to lead the world to peace. If this hope is naive, then it is naive to hope.

Importance of Training of Juveniles

EXTENSION OF REMARKS
OF
HON. JACOB K. JAVITS
OF NEW YORK
IN THE SENATE OF THE UNITED STATES

Monday, February 1, 1960

Mr. JAVITS. Mr. President, some weeks ago I learned about an unusual experiment conducted by one of my constituents in rehabilitating boys who were on their way to becoming juvenile delinquents. I believe that his brief statement which he sent to me describing his experiences and conclusion is worthy of the attention of all who are interested in ways to meet the problem of juvenile delinquency.

Sol Gelber is today at the age of 40, a successful businessman, married, with several children of his own. As the president of Daysol Metal Products Corp., of Brooklyn, N.Y., he has set an example which I hope others will study.

I ask unanimous consent to place his account of his experiences in the appendix of the RECORD:

There being no objection, the letter was ordered to be printed in the RECORD, as follows:

BROOKLYN, N.Y.

Having been brought up on the lower East Side in the midst of poverty, I therefore have witnessed boys turning to crime simply because of not getting proper guidance toward the feeling of responsibility and importance. This is my main reason for employing boys leaning toward crime and those that have had brushes with the law.

My experiences with these boys have been very satisfactory. There of these boys have become foremen in their respective departments and are doing a wonderful job. Their attendance is 100 percent, and it is very noticible that their interest in their job and responsibility is above normal. The reason I say that is because in working with them it seems to me that they want to prove to me and to themselves that confidence in them will be paid back in full.

I employ about 45 people and have had about 25 of these boys employed by me. The boys Brotherhood Republic, an organization primarily for the purpose of helping boys in trouble, recommends these boys to me. I am a graduate of the Boys Brotherhood Republic—a self-governing house that is run for boys, by boys.

SOL GELBER,
President, Daysol Metal Products Corp.

Strikes and the Public Interest

EXTENSION OF REMARKS
OF
HON. FRANK THOMPSON, JR.
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. THOMPSON of New Jersey. Mr. Speaker, I include for the information of my colleagues a thought-provoking article by Prof. Archibald Cox of Harvard University wherein he discusses a proposal for new labor legislation. The article was published in the February 1960 issue of the Atlantic magazine.

STRIKES AND THE PUBLIC INTEREST

(By Archibald Cox)

The steel strike has precipitated a demand for new legislation providing a better solution to labor disputes which endanger the Nation. With the settlement of the steel strike, the pressure will ease, yet we should not put our heads back in the sand. Emergency disputes will continue to press upon us.

In 12 years, the emergency-disputes provisions of the Taft-Hartley Act have been invoked on 16 occasions. Since World War II, there have been five major steel strikes. Two nationwide railroad strikes were averted by drastic presidential intervention after the machinery of the Railway Labor Act had been exhausted, and a more serious dispute in the railroads now looms over the horizon. East coast shipping has been tied up five times during this same period. The country has survived each apparent crisis without a catastrophe. But even in management circles, there is wide agreement that the emergency provisions of the Taft-Hartley Act are inadequate.

The boards of inquiry, which are charged with reporting the facts to the President before he seeks an injunction and again after 60 days, have sometimes engaged in useful mediation, but they can do no more. The injuction may forestall calamity by keeping the wheels of industry turning for an additional 80 days. It can take the leadership off the hook if management or union blunders into an unwanted strike, or if the rank and file compels union officials to sanction a strike against their better judgment.

In the typical case, however, the injunction simply postpones the showdown by relieving both employer and employees of the necessity to bring about a settlement. For example, the steel companies would surely have felt more pressure to make concessions if they had not known that they could renew operations under an injunction. Employees grow more obstinate when put back to work under a court decree. All the disputes handled under the Taft-Hartley procedure, except two, have been settled either at the outset or after the injunction was lifted and the renewal of the strike brought about a negotiated settlement.

It is sometimes said that the real pressure for a settlement under the Taft-Hartley Act comes from the balloting which the Government conducts upon the employer's last offer of settlement. A vote to accept the offer puts irresistible pressure upon the union leaders, but the evidence available shows that the employees almost always support their leaders and vote to strike. The political strategy of the referendum distracts both sides, but especially the union leaders, from collective bargaining, just when negotiations are most important. The future, if not the existence, of the union is at stake. The resulting emotionalism, particularly if there is a big vote against the company's offer, may make it even harder for the union leaders to make the necessary concessions.

In canvassing the alternatives to the Taft-Hartley Act we must keep in mind the dilemma which confronts us. All of us desire three things, with varying degrees of emphasis: to preserve an economic system in which wages and conditions of employment are fixed by private contract rather than Government regulation; to give employees effective bargaining power through unions of their choosing; and to avoid the interruption of operations in a business essential to the national health or safety.

It is impossible to pursue all three objectives to complete satisfaction. We can avoid Government regulation and prevent strikes—at least in theory—if we are willing to turn over to management the exclusive power to fix wages and conditions of employment. Yet a strike is the only effective way for employees to exercise bargaining power, for it is nonsense to talk about 200,000 coal miners or 300,000 steelworkers individually bargaining with their employers. Theoretically, we can eliminate strikes and safeguard the interests of both employers and employees by substituting compulsory arbitration or Government regulation, or we can have free collective bargaining and suffer the interruptions which threaten the national welfare. The legislator's task will be to find the workable accommodation which will bring the largest measure of satisfaction in terms of all three objectives, even though a bit of each must be sacrificed in order to attain the others.

UNIONS AND THE ANTITRUST LAWS

One rather popular solution calls for removing the immunity which labor unions enjoy under the antitrust laws. The Sherman Act was applied to unions from 1890 until 1940, but only to formulate judicial policies for preventing strikes and boycotts which the courts regarded as unjustifiable interference with an employer's business. Even in suits filed by the Department of Justice the courts were not concerned with the size of unions or their monopolistic power.

There is nothing in experience to indicate how the Sherman Act can be used effectively to prevent the growth of excessive union power or to avoid the conditions giving rise to emergency disputes. Indeed, the basic theory and concepts of the antitrust laws are inapplicable to labor unions. The antitrust laws are designed to ensure free markets by preserving and enforcing competition among a sufficient number of sellers of goods and services having such equal power as to prevent any one of them from controlling prices, supplies, or quality to the detriment of consumers. But labor unions do not compete against one another in the sale of labor.

The Hartley bill and Ball amendment of 1947 proposed to eliminate industrywide bargaining (a misnomer for industrywide unionization) by confining the bargaining rights of each union to a single employee and then forbidding the several companywide unions to combine or conspire by coordinating their negotiations either directly or through an international union. In the automobile industry, there would be one union for Ford, one for General Motors, one for Chrysler, and one for each of the smaller companies. The same pattern would be enforced throughout the economy with a possible exception for very small firms in a single industrial area, such as the garment shops in New York City.

Obviously this proposal would provide no safeguard against a national emergency dispute arising at a single plant. In 1952–53, a strike at one plant of American Locomotive Co. cut off the entire supply of nickel alloy pipe used in the gaseous diffusion plants of the Atomic Energy Commission. In 1952, North American Aviation Co. was the only producer of jet airplanes needed in the Korean conflict.

Breaking up the international unions would hardly affect the course of negotiations in the oligopolistic industries, such as the producers of steel, automobiles, and copper. One could hardly expect each companywide union to negotiate without an eye upon the others; the companies do not make prices in that fashion. The decentralized negotiations last winter between the major airlines and bargaining committees from the various International Machinists Association locals, which made their own decisions, resulted in a succession of strikes as each companywide group sought to leapfrog to a higher wage than that of the preceding settlement. The aluminum, aircraft, and lumber industries, where there have been rival unions, have felt the same wage pressures as if they were dealing with one union.

In an industry where the firms are smaller, to break the labor union into company fragments, each of which is forbidden to bargain in consultation with another fragment or a parent international, would affect the course of collective bargaining by weakening the labor unions and destroying a great many. The employees of a single company are too small a unit to support the experienced officials and professional staff required to negotiate and administer contracts effectively. But these are not the industries in which the inflationary wage pressures are serious, nor, except for coal mining, do they experience national emergency disputes. The great vice of the proposed antitrust weapon, therefore, is that it would kill and maim innocent bystanders while leaving the ostensible targets unaffected.

Even if such a program were theoretically sound, it is impractical. A program of breaking up labor organizations could not succeed without a vigorous effort to break up giant corporations too. We cannot turn back the clock.

FLEXIBILITY THROUGH CHOICE

Many students of industrial relations are now convinced that the best hope for avoiding national emergency strikes, while preserving a large measure of freedom and private responsibility for the terms of the settlement, lies in legislation which opens the door to a wide choice of procedures. I favor this method, but would divide it into two parts: industry procedures and Government procedures.

Each industry in which a labor dispute might affect the national health or safety should be admonished by law to create a standing procedure for resolving disputes which will not yield to the ordinary processes of negotiation. This procedure would include private mediation, factfinding with or without recommendations, voluntary arbitration, or reference to a permanent bipartite board with power to decide by a stipulated majority. There are endless possibilities. The essential points are: first, that it be a standing procedure which survives the termination of regular collective bargaining agreements; second, that it come into play at an early stage in negotiations before positions have hardened; and third, that it give reasonable assurance of avoiding an emergency. The Railway Labor Act should continue to provide the machinery for the railways and airlines until modified, but they should be brought under the second stage of the choice-of-procedures plan.

Experience under the Railway Labor Act, despite recent failures, and in atomic energy installations seems to show that the best settlement procedures are those devised for a particular industry by its own management and labor, taking into account its peculiar background, technology, customs, and needs. The central issues in labor relations have become too complicated to be resolved by splitting the last nickel or finding a happy formula under pressure of a crisis. Consider,

for example, the complexities of increasing industrial productivity by electronic devices or atomic energy with adequate provision for human costs and a just allocation of the monetary savings. Reaching a settlement of the work rules issue on the railroads will require complete revision of an elaborate structure, including methods of wage payment, which dates back to 1920.

The new statute should provide that, upon request of the industry or a recommendation by the Secretary of Labor, the President should appoint a board of public responsibility, chosen from men of experience and high standing in the field of industrial relations, who would serve as the occasion required. Such a board should have two duties: To assist the industry in setting up its own procedure and to serve the functions of an industry procedure whenever there is none. Except for this and the normal work of the Federal Mediation and Conciliation Service, the Government should not be brought into the first stage of the procedure.

PRESIDENTIAL INTERVENTION

Notwithstanding the industry procedures, there will always be some critical disputes. There should, therefore, be established by statute a National Emergency Disputes Board, which the President would summon and consult whenever the Secretary of Labor certified the existence of an unresolved dispute which he considered an imminent threat to the national health or safety. The Board should be composed of the Secretaries of Defense, of Commerce, and of Labor, and two eminent citizens, one with a background in management and the other from labor, neither of whom is currently associated with parties to the controversy. Clinton Golden and Sidney Weinburg illustrate the type of man required.

The National Emergency Disputes Board should have three functions: First, to arrange a settlement, if possible, or a method of obtaining a settlement without the cessation of normal operations; second, to make all possible arrangements for protecting the national interest in the event of a strike or lockout; and third, to hear the parties and advise the President upon the single question of whether a strike or lockout would do immediate harm to the national health or safety. The hearing not only would deter hasty Government action but also would focus public pressure upon the parties.

If the President finds after studying the report of the Emergency Disputes Board that an emergency is imminent, he should have statutory authority to follow five courses of action, singly, consecutively, concurrently, or in any sequence:

1. He might appoint a factfinding board with power to mediate and also to make public recommendations for the settlement of the dispute.

2. A board of inquiry might be appointed for the purpose of arranging voluntary arbitration, or, if this fails, reporting to the public the blame for imperiling the national health or safety.

3. Since an injunction may be the only way to stop a strike, the statute should authorize the President to obtain an injunction for as long as 6 months. The public health and safety are more important than the rights of either party.

4. The President should also have power to seize and operate the industrial property affected by the dispute. Such a step would be as distasteful to employers as are injunctions to unions, but the very aim is to make presidential intervention objectional to both. Since strikes would be forbidden during the period of government operation, the President should be authorized, but not required, to appoint an adjustment board to recommend any changes in wages and conditions of employment for the period of government operation. The parties would be under heavy pressure to adopt these interim conditions as the terms of the final settlement in order to terminate the seizure, but the appearance and some of the reality of voluntary action would be preserved. The pressure is less than under compulsory arbitration, which I reject, even as an available procedure, upon the ground that it would too easily become the normal course.

In Massachusetts the employer may elect either to allow the Commonwealth to operate the business for his financial account or else to sue for just compensation, the measure of which would presumably include an allowance for the employer's inability to use the strike-bound property. This method of financial adjustment seems to have worked pretty well, but I am inclined to think that the Government should also have the right to elect to pay only just compensation; otherwise, seizure might become a sham, a method of breaking a strike without disturbing the management's control or the owner's profits.

The act of seizure is a drastic measure, but it is not a novel remedy. Its use by the Federal Government began in 1918. It was fairly common in World War II. Several States, notably Massachusetts and Missouri, have seizure statutes. When a business becomes financially insolvent, an equity or bankruptcy court may assume possession and operate the business for the benefit of interested persons. Seizure is little more than an executive receivership imposed because the company and union are insolvent in their labor relations.

5. Finally, the President should be given his most important power in explicit terms—the power to do nothing. Sometimes the parties negotiate agreements very promptly after they are convinced that no one else will carry the burden.

In academic discourse it is easy to argue that the country has never faced a true emergency as a result of a peacetime strike, that the President has ample constitutional authority to deal with a crisis, and that we can best preserve collective bargaining by repealing all legislation applicable to emergency disputes. In my opinion, muddling through will not meet the challenges of the atomic age and space exploration.

The flexibility of the choice-of-procedures approach is an important asset, but its chief advantage over other solutions to the problem of national emergency disputes lies in the capacity for preserving uncertainty as to the form and extent of Government intervention. Any set course of procedures enters into the calculations on both sides, with the result that their negotiations tend to run the full course before the parties buckle down to business. This weakness has frequently developed under the Railway Labor and Taft-Hartley Acts; the 1950 coal strike is a good illustration, and history may record the recent steel strike as another. In ordinary labor negotiations, the risks and costs of a strike are among the most powerful factors in bringing about an agreement. The choice-of-procedures approach creates new uncertainties. Some alternatives would be objectionable to employers, others to unions. The stage would be set for active mediation in which the President or his representative would not hesitate to influence the substance of the bargaining nor to remind both sides that his choice of a procedure in the event of continued disagreement might be influenced by his judgment that either party was unreasonable. Thus armed with a variety of weapons, the Chief Executive would probably be spared the use of any.

The policy of the Eisenhower administration has been to avoid Government interference with collective bargaining. My suggestions go so far in the other direction that some may suggest that it would be better to formalize the Government's responsibility by establishing a labor court or wage regulation board. Space prevents more than two short observations upon the point.

First, I am convinced that during the next 10 or 20 years, in an age in which international tensions, the challenge of space exploration, and an exploding population strain the productive capacity of our economy, we will be unable to ignore the public interest in the substance of collective bargaining agreements. The problems of inflation and automation are only two examples.

Second, there is a vast difference between compulsory arbitration or a labor court or a Government wage board and Government participation through mediation or factfinding. The former involve adjudication or regulation supported by legal sanctions. When the Government participates through mediation, its representatives may persuade, cajole, and even threaten, but in the end they must secure agreement without the power to command. Thus, the suggested techniques preserve the challenge to creativity presented by the necessary for securing common consent.

Progressive Development of the Law

EXTENSION OF REMARKS
OF
HON. THOMAS C. HENNINGS, JR.
OF MISSOURI
IN THE SENATE OF THE UNITED STATES

Monday, February 1, 1960

Mr. HENNINGS. Mr. President, one of the most distinguished lawyers in the United States is George M. Johnson, of California, a member of the U.S. Commission on Civil Rights. Last year it was my pleasure to preside over the Judiciary Subcommittee which recommended confirmation of Mr. Johnson's appointment to the Commission. At that time I was most impressed by his dedication to the principle that members of the legal profession should be more than mere drawers of papers; should be, in fact, persons taking an active part in the progressive development of the law they serve. This theme runs through an address recently delivered by Mr. Johnson to the Federal Bar Association, and it is a provocative speech which should come to the attention of the Congress. I therefore ask unanimous consent that it be printed in the Appendix to the RECORD.

There being no objection, the address was ordered to be printed in the RECORD, as follows:

ADDRESS TO THE 1959 ANNUAL CONVENTION OF THE FEDERAL BAR ASSOCIATION IN WASHINGTON, D.C., BY GEORGE M. JOHNSON, MEMBER OF THE U.S. COMMISSION ON CIVIL RIGHTS, SEPTEMBER 25, 1959

I sincerely appreciate the opportunity to address the distinguished group of professional colleagues, comprising the Federal Bar Association. I believe, it is generally agreed that, in a democratic society, members of the legal profession have a special responsibility to participate actively in the formulation and development of the law. To the extent that this is a correct appraisal, it would seem to follow that members of the Federal Bar Association, by virtue of their identification with legal problems of our National Government, should have a special interest and, perhaps, responsibility in the formulation and development of the increasingly complex areas of American public law. This assumption finds support in the im-

posing list of 32 standing committees set out on page 25 of your annual convention program. I am sure you will excuse, or at least understand, my slight disappointment that no Civil Rights Committee is listed. Perhaps this vexatious area of public law is covered by the Juvenile Delinquency Committee.

When I received the invitation to participate on this program, I was in Brazil engaged in a short and independent pilot study of the role of law in race relations in the Western Hemisphere. I had selected Brazil for the pilot study because of the multiracial composition of the population, the country's general reputation for racial tolerance, and the fact that Brazil had enacted a national civil rights law in 1951.

The subject of my independent pilot study in Brazil and the theme of this convention, "Western Hemisphere Solidarity" are sufficiently related to suggested that I might contribute to your deliberations by talking about some of my observations in Brazil. After I accepted your invitation, however, the report of the U.S. Commission on Civil Rights, of which I am a membr, was releasd to an unsuspecting public. To say that the report has been received with mixed emotions is, perhaps, an understatement. In any event, it now seems appropriate to discuss some aspects of the report which may be of special interest to lawyers with a responsibility for the formulation and development of American public law.

In creating the Commission on Civil Rights in 1957, Congress directed the Commission specifically to perform four tasks:

1. To investigate sworn complaints that certain citizens are being deprived of voting rights because of color, race, religion or national origin.

2. To collect and study information concerning legal developments constituting a denial of equal protection of the laws.

3. To appraise Federal laws and policies with respect to equal protection of the laws.

4. Submit to the President and to Congress a final report, with findings and recommendations, not later than September 9, 1959.

Thus, the Commission is an independent factfinding, study and appraisal agency and, significantly, it is given no enforcement powers or authority to correct any inequalities it may find.

It is readily apparent to lawyers that denials of equal protection of the laws because of color, race, religion or national origin have been judicially interdicted in relation to a wide range of subject areas, such as registration and voting, education, housing, employment, administration of justice, transportation and Government facilities. Had the Commission been able to begin its operations immediately after the statute creating it became law, obviously, it could not have performed its assignment with respect to all the subject areas embraced in the constitutional phrase "equal protection of the laws." Actually, and for reasons beyond its control, the Commission was unable to begin full-scale operations during the first 8 months of the maximum 2-year period provided in the statute. Under these circumstances, the Commission somewhat arbitrarily selected the subject areas of education and housing, in addition to voting, which the statute expressly required it to cover. In all candor, it should be said that, even in the three areas selected, the Commission's work was less than exhaustive for the Nation as a whole. However, the Commission faithfully reported what it did, how it did it, and what it found. In the judgment of the Commission, what it found supports the recommendations it has made.

Before discussing some of the Commission's specific recommendations, it seems appropriate to raise with this distinguished group of lawyers, an issue which needs to be given serious thought and about which more needs to be said. I refer to the role of law in race relations. Is law the proper tool or social sanction for the control of intergroup conflicts? It is often said that because prejudices are at the root of intergroup conflicts, especially interracial conflicts, the only solution is to rid people's minds and hearts of race prejudice and this cannot be accomplished by laws. Stating the issue in this manner is, in my humble judgment, inadequate for at least two reasons. First, it fails to recognize the important distinction between prejudice and discrimination; and second, it assumes that laws are powerless to change attitudes.

On the importance of distinguishing between prejudice and discrimination, Prof. Melvin Tumin, in his recent book, "Desegregation, Resistance, and Readiness," on pages 46 and 47, has this to say:

"Prejudice literally means prejudgment. But it has come to stand for a set of unfavorable beliefs about and desires for distance from certain types of persons.

"More often than not, unfavorable qualities are ascribed to whole groups of persons on the basis of limited experience with a few members of that group.

"By contrast, discrimination refers to types of actions taken to keep distance from the disfavored group."

Professor Tumin then goes on to say that:

"For some time now it has been fashionable to contend that there is an automatic connection between prejudice and discrimination. This implies that the prejudiced person naturally tends to practice discrimination. As a corollary, it is held that discrimination cannot be eliminated except as one first removes the prejudicial feelings which underlie the tendency to discriminate.

"More recent research and theory, however, have been very persuasive in demonstrating that there exists a gap between the things we call prejudice and that which we call discrimination. In this gap a variety of factors can be interposed which will either facilitate the acting out of the prejudice or inhibit the prejudiced person from discriminating."

It is submitted that laws requiring racial segregation in areas of intergroup relations, such as education, transportation, public facilities, and public accommodations, have facilitated the acting out of racial prejudices. Moreover, the enforcement of such laws has made it difficult for prejudiced persons to change their minds and hearts on rational bases of experience. Logically, antisegregation laws inhibit the acting out of prejudices and provide opportunities for prejudiced persons to have experiences which may change their minds and hearts. Those who favor legislation as an appropriate tool for the control of intergroup conflicts are concerned, primarily, with preventing discriminatory conduct and patterns of behavior. In volume 20 of the University of Chicago Law Review, pages 363 to 413, Messrs. Maslow and Robison describe, in considerable detail, the success of the legislation approach in intergroup conflicts.

The assumption that laws are powerless to change attitudes, recalls to mind one of my law school professor's description of rebuttable presumptions. He said, in substance, that they are "bats in the night that vanish in the sunlight of facts." There is considerable evidence that laws can and do change attitudes. This evidence is discussed by Professor Tumin and also Messrs. Maslow and Robison. Gordon W. Alport, in his book, "The Nature of Prejudice," objectively analyzes the pros and cons of the issue under discussion in a chapter titled "Ought There To Be a Law?" One of his conclusions is:

"Law is intended only to control the outward expression of intolerance. But outward action, psychology knows, has an eventual effect upon inner habits of thought and feeling. And for this reason we list legislative action as one of the major methods of reducing, not only public discrimination, but private prejudice as well."

There is sound reason, therefore, for the Commission decision to include legislation in its recommendations. The facts which the Commission found, put in bold relief the sobering fact that, in mid-twentieth century America, a substantial portion of our citizenry is unwilling to follow the rule of equal rights. With the facts collected, studied, and reported, pursuant to congressional direction and mandate, the President and the Congress may be aided in the formulation and development of methods for remedying the defects found to exist. The Commission gave serious thought to methods and, as directed by the Congress, has included in its report a number of recommendations for consideration by the President, the Congres, and the people. Now that Congress has approved an extension of the Commission's life for an additional 2 years, I am sure the Commission will welcome a serious and critical analysis of its first report by interested members of the Federal Bar Association.

As Hon. John A. Hannah, Chairman of the Commission, stated last week, with reference to the report: "The Commission made 14 recommendations in its report * * * 13 of the 14 were unanimous decisions, and on the 14th, there was only one formal dissent. Three additional proposals going beyond the 14 recommendations were advanced vigorously by three or less Commissioners and objected to with equal vigor."

Time does not permit a discussion of all the recommendations and proposals. However, because the thrust of the Civil Rights Act of 1957, was on denials of the right to vote, some analysis of a significant recommendation in the subject-area of voting may be appropriate.

The Commission recommended, with one formal dissent, that upon receipt by the President of the United States of sworn affidavits by nine or more individuals from any district, county, parish, or other political subdivision of a State, alleging that the affiants have unsuccessfully attempted to register with the duly constituted State registration office, and that the affiants believe themselves qualified under State law to be electors, but have been denied the right to register because of race, color, religion, or national origin, the President shall refer such affidavits to the Commission on Civil Rights if extended.

The Commission shall:

1. Investigate the validity of the allegations.

2. Dismiss such affidavits as prove, on investigation, to be unfounded.

3. Certify any and all well-founded affidavits to the President, and to such temporary registrar as he may designate.

The President upon such certification shall designate an existing Federal officer or employee in the area from which complaints are received, to act as a temporary registrar.

Such registrar-designate shall administer the State qualification laws and issue to all individuals found qualified, registration certificates which shall entitle them to vote for any candidate for the Federal offices of President, Vice President, presidential elector, Members of the Senate or Members of the House of Representatives, Delegates or Commissioners for the Territories or possessions, in any general, special, or primary election held solely or in part for the purpose of selecting or electing any such candidate.

The registrar-designate shall certify to the responsible State registration officials the names and fact of registration of all persons registered by him. Such certification shall permit all such registrants to participate in Federal elections previously enumerated.

Jurisdiction shall be retained until such time as the President determines that the presence of the appointed registrar is no longer necessary.

As many of you are aware, this recommendation has received wide attention. It is important that it be understood exactly. The reasons for the Commission's recommending it are of consequence. Of no less consequence is the fact that five of the six Commissioners voted for this recommendation. Upon what knowledge was it made? The Commission investigated sworn complaints of denials of the right to vote by reason of color or race in eight States. In Alabama and Louisiana, where it determined to hold formal hearings, it met open resistance by State officials. Nevertheless, on the basis of testimony of witnesses, the examination of voting records and field investigations, the Commission found that "a substantial number of Negroes are being denied their right to vote."

The Commission further found that such infringement is usually accomplished through discriminatory application and administration of State registration laws. Discriminatory registration is by no means the sole problem, for where there is no registration board or none capable of functioning lawfully there can be no registration. Where the Commission found these situations, "the majority of the electorate already registered were white persons." Beyond this, and it bears emphasis, the provisions of the Civil Rights Act of 1957, dealing with intimidation, threats, and coercion, have been unsuccessful. I know of no Negro being registered as a result of this provision of law. Cases in Alabama, Georgia, and now in Louisiana brought by the Attorney General have, at this time, been unsuccessful.

Let me add, that this recommendation should not be misconstrued. It does not require that the entire statewide machinery be inoperative before it takes effect. It requires only that at least nine individuals from any district, county, parish, or other political subdivision of a State submit well-founded allegations that the affiant is qualified but has been denied the right to register because of race, color, religion, or national origin.

I submit that this recommendation has many distinct virtues. First, it is temporary. This means that as soon as any area complies with the law, and applies the law in a nondiscriminatory manner, the temporary registrar-designate is removed. Second, it seeks to use as registrar-designates, existing Federal officers or employees in the area from which the complaints are received. Thus, the temporary registrar will not be imported from foreign soil. Third, it does not go to the point of establishing continuing supervisors over all Federal elections, but requires only that the temporary registrar register individuals he finds qualified under applicable State laws. These individuals will then be enabled to vote in Federal elections.

I have discussed this particular recommendation, in some detail, because it has attracted nationwide attention. Other recommendations are made in the subject-areas of education, and housing, and voting as well. My failure to discuss other recommendations is due entirely to considerations of time and should not be interpreted as indicative of their relative unimportance. The Commission can be aided appreciably by your thoughtful criticisms of its efforts as it undertakes to complete its assignment.

I often wonder whether members of the legal profession in this country appreciate fully their distinctive role and concomitant responsibilities. Jerome Hall, in his book, "Living Law of Democratic Society," has this to say:

"Because a democracy is a distinctive legal organization, the issues confronting thoughtful citizens are legal problems. Serious efforts to solve legal problems are lead inevitably to relevant fundamentals. Thus, the crucial questions of the mid-20th century, whatever else they may involve, are ultimately jurisprudential ones.

"In thousands of country seats throughout the length and breadth of this continental Nation, the courthouse is the focal point of local interest as well as the symbol of law and justice. The lawyer represents this enduring aspect of the American character and it is therefore no accident that, whatever he may sometimes become in the great metropolis, he continues to be a public leader, carrying on the tradition of the Founding Fathers in a much more complex world than that in which they lived."

Commission Chairman Hannah has often voiced his conviction that the problem of civil rights transcends in importance all other domestic issues that this country faces. I am in complete agreement with him. While the problem today is, to a large extent, a race and color problem, it is by no means limited to any particular section of the Nation as the Commission's report on housing reveals. None of us has all the answers and there is a desperate need for imaginative but thoughtful leadership at National, State, and local levels. It does not seem unrealistic or unreasonable to assume that members of the Federal Bar Association should contribute substantially to such leadership and, in so doing, make a meaningful contribution to Western Hemisphere solidarity.

Augustus Owsley Stanley

EXTENSION OF REMARKS
OF
HON. FRANK W. BURKE
OF KENTUCKY
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. BURKE of Kentucky. Mr. Speaker, under leave to extend my remarks I include the following tribute to the great Augustus Owsley Stanley, former Governor of Kentucky and former U.S. Senator from Kentucky. The remarks of Senator GATES YOUNG and Senate Resolution No. 5 of the Kentucky General Assembly reflect the esteem in which Augustus Owsley Stanley was held by all Kentuckians:

ADDRESS BY SENATOR GATES F. YOUNG SPONSORING A RESOLUTION REVERING A. O. STANLEY

Mr. President, in the closing hours of Tuesday, August 12, 1958, the Master Architect, Creator and Builder of the Universe, in His infinite wisdom, called from His earthly associates the soul, and stilled the voice of Augustus Owsley Stanley, one of Kentucky's most illustrious sons.

In presenting this resolution I not only seek to have the memory of A. O. Stanley inscribed upon our records, but I do honor to myself and refresh the memory of this great Kentuckian in the hearts and minds of some other of "his boys."

I am one of "his boys." He had many others throughout the width and breadth of Kentucky. Among them our present highway commissioner, Senator Earle Clements; our former commissioner of economic security, V. E. Barnes; and our lovable and capable colleague, the senator from Fleming, who served as a page in the house of representatives in 1916, while the incomparable Stanley was Governor. And not the least of them, Emerson Beauchamp, our commissioner of agriculture.

Had I the vocabulary of a Webster or a Churchill my attempt to pay proper respect to the late Augustus Owsley Stanley would still be feeble and inadequate.

He was one of the great of his time.

Born in 1867, when Andrew Johnson was President, his life spanned three epochal eras. He lived through the service of 17 Presidents of the United States. Thirteen States were admitted to the Union during his lifetime. The new State of Alaska was acquired from Russia; the Southern States were readmitted to the Union. The 14th, 15th, 16th, and 17th amendments to the Constitution were adopted. The east and west coasts were tied together with spans of steel by the opening of the Union Pacific Railroad.

Edison announced his phonograph and introduced the electric light.

The first telephone exchange was installed.

The French Atlantic cable was laid.

Brooklyn Bridge was opened—Statue of Liberty unveiled.

The Spanish American War was fought.

The prohibition amendment adopted and repealed.

The woman sufferage amendment adopted.

U.S. Navy fliers circled the globe, and the North Pole reached by Navy plane.

Yes, during the 91 years of his life, our country abandoned its swaddling clothes and became great, as he grew and became great.

Kentucky has had its Clays, Carlisles, Breckinridges, Bradley, and Morrow, but none excelled Stanley.

God anointed his vocal chords with the roar of thunder; the sharp, whiplike clap of lightning; the softness of the coo of contentment of a baby in its mother's arms, and the silver and golden glow of the morning and evening skies.

In public service he fought the battles of the Kentucky tobacco farmer against the tobacco trust—the battle of the American steel users against the steel trust.

The freedom of the peoples representative in these legislative halls from domination by outside influences.

Courage had no man in public or private life to a greater degree.

He forced the passage of Kentucky's anti-pass law.

He saved the life of a Negro murderer from a mob in one of our western counties with his great persuasive language, thus avoiding a stain upon the Commonwealth's name.

Like an armed warrier, like a plumed knight he marched through life and threw his shining lance full and fair against the foreheads of his adversaries.

Under the headline "Giant of the Stump," A. O. Stanley was last of the great orators of Kentucky politics.

Our own beloved Allen Trout closed his article with this moving and appropriate language:

"From the hundreds of thousands of golden words spoken by Governor Bradley, one short passage was selected to carve above his grave in Frankfort Cemetery, near the graves of Stanley and Morrow.

This passage is a tingling classic. It is his benediction upon the throng which gathered June 12, 1910, to hear him dedicate the magnificent new State Capitol, on an eminence across Kentucky River from the cemetery bluff where he and Stanley and Morrow are entombed.

May we not now, in fancy, turn it into an epitaph for the fresh-buried Stanley and his two matchless peers, already back to the dust from which they sprang? Here is Bradley's benediction:

"May the summer's sun shine brightly, and the winter's snows fall lightly as they deftly weave their white mantle above you.

May the tempests abate their fury as they sweep over you. May the springtime entwine its most beautiful garlands above you; and may each of you, reunited with your loved ones in that realm beyond the stars where summer's heat and winter's cold are unknown, where the grass never withers and the flowers never fade, abide in His presence forever."

Kentucky's beloved Stanley has crossed the river to the Celestial City. But, the life and deeds of A. O. Stanley linger in the memory and affection of a multitude of Kentuckians.

SENATE RESOLUTION 5

Joint resolution honoring the memory of Augustus Owsley Stanley

Whereas Augustus Owsley Stanley, one of Kentucky's most illustrious sons, has heeded the call of his Creator ending a life of faithful service which reflected the highest honor upon him and contributed incalculably to the progress of this great State and indeed this Nation; and

Whereas the accomplishments of this statesman and incomparable orator were such that it is deemed fitting and proper that his memory be perpetuated by inscription of his biography upon the journals of the senate and house of representatives as follows:

Augustus Owsley Stanley, six times representative in Congress from the old second district, Governor of Kentucky, U.S. Senator, member and for many years chairman of the International Joint Commission, was born in Shelbyville May 21, 1867, a son of the Reverend William and Amanda (Owsley) Stanley. His father was captain of a company in the "Orphan Brigade" and also a judge advocate general in the Confederate Army, later becoming a minister of the Christian Church. After attending private schools, Augustus Owsley Stanley entered Alleghany Academy at Nicholasville, Ky., continued his studies at the University of Kentucky (then State College) from 1886 to 1888, and was graduated with the degree of bachelor of arts from Centre College at Danville in 1889. The degree of doctor of laws was conferred upon him. He was a member of Omicron Delta Kappa honorary fraternity and Sigma Alpha Epsilon social fraternity.

Upon completion of his studies at Centre College he entered upon a career of schoolteaching, including 2 years at the old Mackville Academy, studying law at night, to the practice of which he was admitted in 1894. He followed his profession in Flemingsburg until 1898, when he moved to Henderson, Ky., where he continued his practice until 1924.

He entered the political arena by being selected a Democratic presidential elector from the Second Congressional District in 1900. He was elected to the 58th Congress in 1902 and served 12 consecutive years. During his congressional service he won nationwide attention by his vigorous endeavors on behalf of the tobacco growers of Kentucky, was sponsor of the legislation which brought about the regulation of the giant tobacco trust.

His stature locally and nationally was enhanced by his selection for the chairmanship of the congressional committee investigating the monopolistic practices of the United States Steel Co. in its acquisition of large deposits of iron ore in the Northern States.

On April 29, 1903, Congressman Stanley married Miss Susan Soaper of Henderson, and to this union there were three sons born—Augustus Owsley Stanley, Jr., William Soaper Stanley, and Marion Shelby Stanley, who, while a student at the University of Kentucky lost his life in an airplane accident.

In 1915, following nomination by the Democratic Party, he was elected Governor of Kentucky and served in that office until May 18, 1919, at which time he resigned to enter the U.S. Senate, having been elected in 1918. His service in that august body which terminated on March 3, 1925, was marked by the same courage, honesty, and dedication of purpose which was characteristic of his service as a Congressman and as Governor of the Commonwealth. Upon leaving the Senate he entered the practice of law in Washington, the Capital of our Nation, in association with Joseph P. Tumulty, former secretary to President Woodrow Wilson. In May 1930 he was appointed a member of the International Joint Commission, and became Chairman of that body on March 7, 1933, in which position he served until 1954.

He was a member of the Christian Church, the Benevolent and Protective Order of Elks and of the Pendennis Club.

Augustus Owsley Stanley was a dedicated, unrelenting, nondeviating and most articulate champion of democracy having upon at least one occasion given voice to his philosophy in these terms:

"Democracy with me is more than a conviction—it is an abiding faith and now I reverently dedicate 'the bitter little that of life remains' to the service and the success of democracy. And when the tale is told and the journey ended, I shall not have repaid the debt to the people I devoutly love and to the cause I shall maintain until my arms are palsied and my tongue is stilled in death."

Truly, it can be said of Augustus Owsley Stanley that he was one of the—

"Tall men, sun crowned, who live above the fog,
In public duty, and private thinking."

And one of those—

"Men whom the lust of office does not kill;
Men whom the spoils of office cannot buy;
Men who possess opinions, and a will;
Men who have honor, who will not lie."

Now, therefore, be it

Resolved by the General Assembly of the Commonwealth of Kentucky:

Section 1. That when the senate and the house of representatives do this day adjourn they do so in memory of Augustus Owsley Stanley.

Sec. 2. That the general assembly does hereby extend to the family of Augustus Owsley Stanley its profound and deepest sympathy and does commend the members thereof to Almighty God who is forever near to those who trust him for solace.

Sec. 3. That the clerk of the senate cause copies of this resolution to be transmitted to each of the Members of the Congress representing the Commonwealth of Kentucky with the request that a copy thereof be spread upon the record of proceedings of the Senate and the House of Representatives and made a part of the CONGRESSIONAL RECORD.

Sec. 4. That a copy of the Journals of the Senate and the House of Representatives wherein this resolution is recorded be presented to Mrs. Susan Soaper Stanley, Mr. Augustus Owsley Stanley, Jr., and to Mr. William Soaper Stanley.

Attest:

JOHN W. WILLIS,
Chief Clerk of the Senate.

(S. Res. 5 was signed by His Excellency, Gov. Bert Combs, on January 25, 1960.)

When the American Medical Association Disapproves: Everything's "Socialism"

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES

Monday, February 1, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an editorial appearing in the Detroit (Mich.) News of Friday, December 11, 1959.

The chronic use of the term "socialized medicine" by the American Medical Association has been much like the bell to Pavlov's dog.

Everything that the AMA has ever opposed is now cataloged as "socialism" or "socialized medicine."

This habit of taking the easy way out and calling things the AMA opposes socialism and socialized medicine has finally attracted unfavorable attention in the press after long and excessive use by the AMA.

Occasionally the general public is impressed by this gratuitous insult to their collective intelligence. I insert into the Appendix of the CONGRESSIONAL RECORD an article appearing in one segment of the press which apparently is fed up with the misuse of the word for anything and everything in sight.

The article follows:

[From the Detroit News, Dec. 11, 1959]

WHEN THE AMERICAN MEDICAL ASSOCIATION DISAPPROVES: EVERYTHING'S "SOCIALISM"

The genius who coined the term "socialized medicine" but neglected to define it gave the medical profession a handy brick to heave at anyone or anything that threatens to upset the status quo as set down by the American Medical Association.

The brick is now flying toward the unfortunate William S. McNary, executive vice president of Michigan Blue Cross. It seems he personally favors a partial Federal subsidy of the costs of hospital insurance for retired men and women. The subsidy would be paid from an increase in the social security tax.

The AMA is already vigorously on record as opposed to a bill now before Congress (Forand bill) which provides for a somewhat lesser form of the said McNary suggests. That is all that some physicians need to know. The AMA has spoken, it's "socialized medicine." The profession will be run by a Government bureau within a week. Run for the hills, McNary has busted the dam.

It ought to be said that McNary developed his plan for submission to a U.S. Senate subcommittee which is surveying the problems of the aged. One of the problems is the cost of medical and hospital care of retired persons of low income. The problem is complicated because most retired people have lost the benefits of their group medical insurance. It's a matter needing solution and this is McNary's idea of how to solve it.

Since "socialized medicine" is undefined it is almost impossible for anyone to prove that anything suggested in the medical field is not, in fact, socialism or socialistic. If the AMA or any physician flings the brick there is no more defense against it than there is against the atom bomb.

It would be a difficult task no doubt, knowing doctors, to get the profession to agree on a definition of what they mean when they say "socialized medicine."

For instance, the Federal income tax laws permit the taxpayer under certain circumstances to deduct the costs of medical and dental care and the costs of drugs. Is this "socialized medicine" or isn't it? The aged blind are granted certain benefits, too. Is this socialism? The employee unable to work temporarily because of illness gets a tax break. This must smack of socialism because the patient can use the money he doesn't have to pay the Internal Revenue Service to pay his doctor. This is a subsidy, but does AMA regard it as "socialized medicine"?

And, if you're hit by a car on the streets of Detroit, you probably will be rushed unconscious to Receiving Hospital where your life may be saved by a doctor on a government payroll. For sure this is "socialism" and even violates that sacred precept of free personal choice of one's physician.

Yes; we badly need a definition. When we get one we can decide, each of us, whether we support that type of medicine or not. If we don't get one, more and more of us are going to be convinced that the term means anything the AMA happens to be against.

And meanwhile, we'll continue to wonder why doctors—so very intelligent individually—sound so inept when they speak with a collective voice.

U.S. Science Academy

EXTENSION OF REMARKS
OF
HON. GEORGE M. WALLHAUSER
OF NEW JERSEY
IN THE HOUSE OF REPRESENTATIVES

Monday, February 1, 1960

Mr. WALLHAUSER. Mr. Speaker, I introduced a bill today providing for the creation of a commission to conduct a complete investigation and study, with recommendations, relating to the establishment of a U.S. Science Academy.

My bill differs, I believe, in several important respects with many of those previously introduced. I would like to point out some basic differences to the Members.

It does not provide for the establishment of an academy, but for the establishment of a Hoover-type commission, which seems to me to be the proper approach to the problem of evaluating all of the facts that would be necessary to eventually establish such an Academy.

Again, the bill conceives that the Academy would train and assist unusually qualified students, who have completed their college training, in the fields of physical science, mathematics, or engineering, and whose services would be retained by our Government for a specified number of years after graduation.

In this atomic and space age, it should be obvious that scientific progress is essential for the future welfare and security of our country, and I believe that it is important for us to have the very best brains of our youth available to the various arms of our governmental establishment. They could assist materially in progressing toward not only a more secure life for our people, but also for one containing as many human comforts as possible.

I urge the Members of this august body to study this legislation and to join with me, on a bipartisan basis, if they choose, in introducing identical bills, so that its concept will have full support.

Paying for the Public Debt

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, February 1, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following editorial which appeared in the New Republic magazine, February 1, 1960, issue. No one can dispute the facts set forth in the editorial and I fail to see how anyone can disagree with the conclusions:

PAYING FOR THE PUBLIC DEBT

One of the few arguments the Treasury lost last year with a supine Congress was its effort to repeal legislation which placed a 4¼-percent interest ceiling on long-term Government bonds. This year Secretary Anderson is back to the charge once more. In a recent speech he maintained that the burden of the national debt was heavier because the Treasury was compelled to borrow only at short term, at a time when long-term lenders could invest their funds more profitably in mortgages and other securities. Because of this limitation on the Treasury, business borrowers had to pay higher rates also, and Treasury financing needlessly cluttered the capital markets because of the constant necessity to refund maturing debt. Almost anyone might sympathize with the Secretary when it is realized that in the next 12 months more than $84 billion of Federal bonds will mature and the Treasury will be obliged to sell equivalent amounts in the open market.

How the economists of the American Economic Association, to which these remarks were addressed, responded we do not know. But in the past Secretary Anderson's position has won the support of most responsible experts in the field of debt management. The major argument is comparatively simple: the proper role of the Federal Reserve System is to make money scarce when inflation threatens and to make it plentiful when recession impends. It can scarcely operate unhampered if it must take care that Treasury bond issues find ready buyers, for it must provide the funds which enable purchases to be made. Therefore the less frequently the Treasury has to appeal to the money market, the more smoothly monetary policy will work. This is the argument for lengthening the structure of debt maturities which the Eisenhower administration has often promised and never performed.

In this specific instance, however, there are good reasons to challenge the cogency of the general analysis. Despite appearances, Congress was not succumbing to a fit of economic illiteracy when it refused to lift the interest ceiling. Instead, it was registering the only judgment that was, as a practical matter, within its political power on the monetary policies of the Federal Reserve System and of the Treasury which has been working so closely with it.

Many congressional liberals are convinced that recent monetary policy has curtailed economic growth, needlessly enlarged unemployment, and missed the real causes of inflation, which have more to do with the pricing policies of our oligopolists than with the rate of interest. Representative CHESTER BOWLES expressed that sentiment last week in a letter to Speaker RAYBURN: "In my opinion the single most costly economic blunder of recent years has been this administration's success in curbing economic expansion. A key element in their program has been the raising of interest rates which has added substantially to the cost of all new business expansion, home financing, and all automobiles, furniture and consumer durables bought on time."

When Congress refused to raise long-term interest rates on Government securities, it indicated its resentment against policies which bore most heavily upon consumers, small businessmen, and local and State governments. Since the Federal Reserve System is an independent agency, Congress can affect its policies only by a major legislative battle or by such warnings as this one. In plain speech, Congress has told the administration that interest rates are too high for the health of the economy. At the same time, it has seen no reason to allow the Treasury to reward investors with artificially high interest rates over the entire life of a long-term Government bond. Congress appears to believe that when the Federal Reserve System repents of its sins, interest rates will fall enough so that the Treasury can borrow all that its heart desires at 4¼ percent or less.

No doubt this is an awkward way to make an economic point, but Congress has no other way of emphasizing a position which has a good deal more to recommend it than the cautious, restrictive timidity of the ruling monetary authorities.

Legislative Program of Affiliated Young Democrats of New York

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, February 1, 1960

Mr. ANFUSO. Mr. Speaker, under leave to extend my remarks, I wish to insert into the RECORD the State legislative program for 1960 of the Affiliated Young Democrats of New York. This program was adopted at a meeting of the organization on December 26, 1959, in New York. My good friend Harold R. Moskovit is the State president of the organization and Richard H. Wels is the chairman of its legislative committee.

The legislative program of the Affiliated Young Democrats of New York is as follows:

NEW YORK STATE LEGISLATIVE PROGRAM FOR 1960

The Affiliated Young Democrats of New York State, at a meeting of their legislative committee held on December 26, 1959, at the Hotel Piccadilly, New York City, urged the State legislature to adopt the following legislation that they will recommend to their legislators for introduction this year:

"Primary elections for all State officers; right to vote at 18 years; antibias housing legislation; to enact legislation reapportion-

ing both congressional and legislative seats; Presidential preference primaries; abolition of electoral college; mandatory use of voting machines in primary elections; new State science college to meet the new advances in science; more State scholarships; court reform; recommend changes in selection of board of elections to include Bronx, Queens, and Staten Island; favor permanent spring primary and mandatory election of district leaders; selection of board of regents on nonpartisan basis; we favor one family court in New York City; more aid for State education and higher salary for teachers; urge New York City Charter Commission; continue State constitutional committee and recommend constitutional reform as needed; favor maintenance of the present 15 cents subway fare in New York City; fair Sabbath law; State aid for child care; extension of rent control; advocate printed record be published and made available to public of full proceedings of the legislature; more aid for juvenile delinquency with more State correctional institutions; record of names and salaries of all employed in the State legislature; examination every 5 years for all motorists and all funds collected from gasoline taxes and motor vehicle licenses be used for the State highway system; more money for public health; do away with special elections for State legislators; and we favor a reduction of State taxes to the greatest extent compatible with a solvent State government."

Also "urged passage of consitutional amendments to exempt $500 million in New York City school bonds."

"The above legislation will be introduced in the present State legislature by their 17 members in the State senate and 31 members in the State assembly," stated Richard H. Wels, who is chairman of the legislative committee of the organization and presided at this meeting.

Francis A. Jamieson

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, February 1, 1960

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following editorial which appeared in the New York Times of February 1, 1960, together with an article which appeared in the Trenton Times of January 31, 1960. Frank Jamieson was a distinguished newspaperman who served as a special assistant to Gov. Nelson A. Rockefeller and won the Pulitzer Prize for his coverage of the Lindbergh baby kidnaping story. He was also the uncle of our colleague, Representative FRANK THOMPSON, JR., of New Jersey.

The editorial and article follow:

[From the New York Times, Feb. 1, 1960]

FRANCIS A. JAMIESON

We join in the tribute that Governor Rockefeller paid Saturday to Francis A. Jamieson. He was indeed, as Governor Rockefeller said, "a remarkable human being with a rare combination of wisdom and humanity, intelligence, warmheartedness and love."

Frank Jamieson's career touched nothing that it did not adorn. He was one of the most capable political reporters of our time. As the wartime head of the news department of the Office of Inter-American Affairs, and later as acting director, he worked with great vigor and success to increase mutual understanding between the United States and the Latin-American countries. Since 1946 he had been public relations adviser to Governor Rockefeller and his brothers.

In all these fields he was a wise and trusted counselor. When ill health compelled him to husband his strength he remained a witty and charming companion.

As an adviser of the men who administer one of America's great fortunes, Mr. Jamieson had the rare satisfaction of knowing that he had helped good causes throughout the Nation. But his acts of kindness were not confined to humanity in the abstract. He never spared himself in his efforts to help anyone who needed it, and he has left the world a richer and friendlier place.

[From the Trenton Times, Jan. 31, 1960]

FRANK JAMIESON DIES—AID TO ROCKEFELLER—EX-TRENTON NEWSMAN WAS WINNER OF PULITZER PRIZE

Frank A. Jamieson, special assistant to New York Governor Nelson A. Rockefeller and winner of the Pulitzer Prize for his coverage of the Lindbergh baby kidnaping story while a Trenton newspaperman, died early yesterday in New York Hospital.

He had been in poor health for about a year, but it was not until Friday that he entered the hospital. The cause of death was not disclosed.

Jamieson was a brother of Crawford Jamieson, Trenton attorney and former State senator, and an uncle of Congressman FRANK THOMPSON, JR.

WAS NATIONALLY KNOWN

He was nationally known as a newspaperman, public relations expert, political adviser, and fundraiser.

When informed of Jamieson's death yesterday, Governor Rockefeller said:

"His death is a deep personal loss to me and the entire family. He was one of the best of newspapermen. In addition, he was a remarkable human being with a rare combination of wisdom and humanity, intelligence, and warmheartedness, and love."

STARTED WITH STATE GAZETTE

Although his formal education ended while he was still in high school, Jamieson reached pinnacle after pinnacle as a writer. His first job was as a correspondent for the Trenton State Gazette in the early 1920's. His interest in newspaper work was first nourished by Frank Thompson, father of Congressman THOMPSON and husband of Jamieson's sister, Mrs. Beatrice Thompson. The elder Thompson was a political reporter for the Trenton Times.

As Jamieson became experienced in the newspaper profession, he joined the Associated Press and established the Trenton Bureau at the statehouse in the middle 1920's.

COVERED LINDBERGH KIDNAPING

It was during the Lindbergh kidnaping developments that Jamieson won national attention as a newspaperman. The first complete story of the kidnaping flashed from the Trenton Bureau. When the tragic report of the finding of the baby's body shook the world, it was Jamieson's story that was read first.

He scored one of the great news beats in history when he reported the body of Charles A. Lindberg, Jr., son of the famous flier, had been found a few yards off the road outside of Hopewell.

SCORED FULL HOUR BEAT

Jamieson had obtained advance information on the finding of the body from the Governor's office and had relayed it to New York. The Associated Press had the story on the wire a full hour before the State Police made the formal announcement.

The Pulitzer Prize of $1,000 was given Jamieson for the best reportorial work in 1932 for his coverage of the Lindbergh kidnaping case. Another $500 was given Jamieson by the Associated Press. Each award was based on his prompt, full, skillful, and prolonged coverage of the kidnaping case.

Soon after his success in Trenton, Jamieson went to New York with the Associated Press, only to leave the news service to become a public relations and fundraising consultant. He was associated with John Price Jones.

DIRECTED EDISON CAMPAIGN

When Charles Edison entered the political arena to compaign for New Jersey Governor in 1940, Jamieson took a leave of absence to direct the campaign. Edison was impressed with Jamieson's ability and offered him a post in the administration. Jamieson refused and returned to Jones.

While handling the first family welfare drive in New York City, Jamieson met Winthrop Rockefeller, the drive chairman, and the friendship that followed was to influence the rest of his life.

Through Winthrop Rockefeller, Jamieson met his brother, Nelson Rockefeller. Then, when President Roosevelt named Nelson as coordinator of the Inter American Affairs during World War II, Jamieson was invited to head the press division in Washington. The principal job was to prevent the insidious propaganda of Axis Germany from destroying the good will of Latin American countries toward the United States and her Allies.

Before he left Washington, Jamieson had succeeded Rockefeller as coordinator.

After the war, Jamieson returned to New York to become adviser in public relations and other affairs to Nelson and Winthrop Rockefeller, two other brothers, David and John D., and a sister.

Jamieson was a key figure in the political life of Nelson Rockefeleir. He directed his successful campaign for Governor of New York and put him in the national spotlight as a possible candidate for President.

One odd twist of his association with Governor Rockefeller was that Jamieson came from a family that was strongly Democratic. His father and grandfather before him were powers in Democratic politics in Mercer County. His brother, Crawford, was once Democratic county chairman.

Jamieson was the son of William M. and Mary Ellen Jamieson. Born in Trenton 55 years ago, he attended Trenton High School, but quit to enter the newspaper profession before he reached his senior year.

In addition to his brother, Crawford, and his sister, Beatrice, who is executive director of the Mercer County Tuberculosis and Health League, he is survived by another sister, Mrs. Marguerite Flanningan of Jersey City.

He also leaves his wife, Mrs. Linda Eder Jamieson, of New York City, and three daughters. They are Mrs. Joan Ellen Zucker, whose husband, Alex Zucker, is a nuclear scientist at Oak Ridge Tenn., and Misses Marguerite and Frances Jamieson. His daughter, Joan Ellen, was of his first marriage to Mrs. Charlotte Wiggin Jennings.

Services will be held tomorrow at 4 p.m. at the Funeral Church of Frank E. Campbell, 81st and Madison Avenue, New York City. Burial will be private. Friends may call at the funeral home today from 3 to 5 p.m.

Cuba: Bolder U.S. Action Required

EXTENSION OF REMARKS
OF
HON. DANIEL J. FLOOD
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. FLOOD. Mr. Speaker, in various addresses to the House, I have emphasized that recent incidents of turmoil to the south of us should not be viewed as isolated events. Instead, they are part of a general plan of Caribbean conquest by penetration and subversion in which the Republic of Cuba has been an important target.

In addition to the strategic significance of Cuba because of its location on the northern flank of the Atlantic approaches to the Panama Canal, the most important U.S. naval base in the Caribbean is at Guantanamo. Its security is a matter of prime concern on the part of those responsible for the naval defense of the United States.

Thus, I read with especial interest in the January 23, 1960, issue of the Charleston (S.C.) News and Courier a thoughtful editorial dealing with the Cuban situation and emphasizing the Monroe Doctrine as the Nation's basic guide for hemispheric defense.

The editorial follows:

BOLDER U.S. ACTION ON CUBA REQUIRED TO SAFEGUARD FREEDOM FROM CASTRO

In rallying the Cuban mob, Fidel Castro is goading the United States ever more surely toward decisive action. Unwilling though our Government may be, it cannot put off indefinitely adopting firmer means of curbing the bearded dictator.

If Washington continues to do nothing, a people's republic soon will be in full bloom 100 miles off the Florida coast and a new staging area for Soviet power will take shape.

Polite treatment of Castro has not made him act respectably. American property has been seized. U.S. citizens have been put in jail. Castro has rejected friendship with the country that liberated Cuba in 1898. He has joined the Communist bloc in the United Nations. The direction in which he is leading must not be misinterpreted.

The latest outrageous act, an abusive speech against the Spanish Ambassador to Cuba, was not without design. Cuban middle and upper classes have strong emotional ties to Spain. They regard Spain with the same kind of affection that many Americans feel for England. By striking at Spain, Castro would discredit moderate elements in Cuba. If he can link Spain, which is disliked by Latin America's leftwing intellectuals, with Washington, he will have gained another point in his propaganda war against the United States.

The Associated Press report that U.S. Ambassador Philip Bonsal now believes a new policy is needed with respect to Cuba. If he suggests a crackdown on Castro, it is unlikely the State Department will endorse his recommendations. The State Department has a long history of resisting bold measures against world communism. Such firmness as exists in U.S. policies comes from the Defense Department.

The American press has changed its tune on Castro. Influential newspapers such as the Washington Post and the Chicago Daily News, once strongly pro-Castro, now condemn him. The public is getting into a frame of mind for action against the Cuban dictatorship.

Though the State Department in 1934 signed away the specific right to intervene in Cuba, the Monroe Doctrine is still the Nation's basic guide for this hemisphere. This 137-year-old document established a permanent U.S. policy of barring European powers from taking over Latin American governments. While European Communists are not in direct control of Cuba, Castro's lieutenants are leftists who follow the international Communist line. Thus the United States has a doctrinal basis for intervention.

But what sort of action should the United States take in Cuba? The answer, in our judgment, is whatever may be necessary. If Americans will do what's necessary to hold a string of little islands 5 miles off the mainland of China, they should not lack for boldness in Cuba.

The first logical step to restore freedom in Cuba is to withhold the sugar subsidy, which Castro's government needs to prop up the economy. Next could come withdrawal of U.S. recognition, an embargo on trade, and support of a free Cuba movement in the United States.

Beyond this is the possibility of direct U.S. military intervention, should revolt occur. As in Lebanon, the United States would have to go in quickly and get out just as fast.

If the U.S. Government could act in Lebanon, which is across the world, it could act in Cuba at its own doorstep. All that's necessary is for the public to get adjusted to the idea. Military intervention may seem too drastic at the moment, but we believe the public is ready for initial steps. If these are successful, it may not be necessary to send Marines to Cuba.

One way or another, communism must be barred from the New World.

Lyndon Johnson and Civil Rights

EXTENSION OF REMARKS
OF
HON. VICTOR L. ANFUSO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. ANFUSO. Mr. Speaker, I think that the majority of the American people want to make progress in the field of civil rights. I think that most Americans realize that there is a question of national unity at stake.

Recently, Senate Democratic Leader LYNDON B. JOHNSON—a man who believes in progress—visited New York. He addressed the Cathedral Club in Brooklyn and his remarks represented a stirring call to Americans to put aside prejudices and bigotry and act on adult issues.

He also forecast that Congress would pass a good civil rights bill at this session. This is very significant because it was under LYNDON JOHNSON'S leadership that the Senate of the United States passed the only civil rights bill that it has passed in 85 years.

Mr. Speaker, under unanimous consent I include in the RECORD a fine editorial from the New York Journal-American of January 25 commenting on Senator JOHNSON'S statement.

A CONGRESS "MUST"

Senator LYNDON JOHNSON made a fine impression on his visit to New York by his firm and realistic stand on civil rights.

The Senate majority leader forecast that Congress would pass a good civil rights bill at this session. He pledged it would protect everyone in the full exercise of constitutional rights and he emphasized voting rights.

The Texan said if the House failed to act by February 15 the Senate would produce his own measure. He added that the legislation would embody "substantial progress."

Substantial progress in civil rights is what this Nation must have.

Failure to get a good civil rights bill out of committee cold storage is a shameful thing. If those Congressmen of both parties who favor civil rights cannot do it, the Senate must.

That is why Senator JOHNSON'S promise that a bill will be passed is heartening.

In a Free Country We Cannot Be Our Brother's Keeper

EXTENSION OF REMARKS
OF
HON. CHARLES E. GOODELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. GOODELL. Mr. Speaker, recently one of my constitutents sent me a copy of an editorial from the Saturday Evening Post, admonishing the American people that "in a free country, we cannot be our brother's keeper." I believe the distinctions drawn in this editorial are worthy of the attention and thought of every Congressman and Senator in these days when our every action in Washington has far-reaching impact upon our individual citizens.

Under leave to revise and extend my remarks in the Appendix of the RECORD, I present the following:

IN A FREE COUNTRY WE CANNOT BE OUR BROTHER'S KEEPER

A common fallacy about man's duty to man was repeated recently by a prominent layman at a religious conference. As an expression of our social responsibilities he suggested, "We are our brother's keeper."

Although this interpretation of a scriptural sentence is widely accepted, it is without foundation in ethics and can lead to more quarrels than benefits. It derives from a misreading of the passage in the fourth chapter of Genesis about the murder of Abel by his brother Cain. When the two brothers were in a field, Cain rose up against Abel and slew him. Afterward the Lord said to Cain, "Where is Abel thy brother?" Not having the benefit of our modern enlightenment, he did not take the fifth amendment. He simply told a lie, "I know not." And then he countered with an evasive question, "Am I my brother's keeper?"

This was altogether irrelevant. The Lord was not demanding that he be his brother's keeper, but only that he shouldn't be his brother's murderer.

In our bill of responsibilities, the first is not, as urged by sociological busybodies, that we shall be our brother's keeper, standing watch over them and poking our noses into their private concerns. The first responsibility is that we shall not shed their blood

or do any other wrong against our fellow men.

If all the world's people were our brothers, and we were our brother's keepers, they would also be our keepers. We would be among the kept. In the slave societies of totalitarianism, from the Baltic Sea to the sad coasts of Siberia and China, everybody is required to be his brother's keeper, to maintain a sharp watch on him and to blow the whistle the minute he deviates from total obedience.

Of course, such a way of life for America is not advocated by well-meaning people who tell us that our duty is to be our brother's keeper. Generous as they are in spirit, they have failed to draw clear distinctions between proper help and perpetual meddling. We have a duty to help the sick, the incapacitated, the very weak. But what our neighbors in general need is a large amount of being let alone.

Foreign Aid Revisited

EXTENSION OF REMARKS
OF

HON. HOWARD W. ROBISON

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Monday, February 1, 1960

Mr. ROBISON. Mr. Speaker, in view of our unfavorable balance-of-payments position with the rest of the world, I think the time has come to take legislative steps to insure that at least some of the funds granted to foreign governments for capital and equipment improvements be spent in the United States.

As excellent examples of the problem, which I feel must be faced by the Congress, I include a letter from Mr. A. Ward LaFrance, chairman of the LaFrance Export Corp., Elmira, N.Y., and an article from the November 16, 1959, issue of the magazine Export Trade, by Mr. Stefan J. Rundt:

LAFRANCE EXPORT CORP.,
Elmira, N.Y., January 6, 1960.

Hon. HOWARD W. ROBISON,
House Office Building,
Washington, D.C.

DEAR SIR: I trust that you will be able to find time to read the enclosed article entitled "Protectionism" or "Trade, Not Aid" by Stefan J. Rundt, which was run in the November 16, 1959, issue of the magazine Export Trade.

I believe that the article speaks for itself, but can add that we have lost considerable export business of fire apparatus to foreign competition when the funds for the purchase of same were furnished by the International Cooperation Administration (ICA).

It is very difficult for our foreign distributors to understand the U.S. policy whereby an appropriation is made to a foreign country for capital improvements and, in many instances, with no restrictions as to where the purchases can be made with the funds.

The following are two recent examples as to how this policy affects our export sale of fire apparatus:

SPAIN

ICA purchase Authorization No. 152-99-928-9246, the tender specified a French fire truck model M-16 A1 TZ on a LATIL chassis, or equal, with a Guinard pump, or equal.

The award was made to the French firm SIDE, represented in Spain by Contiber, S.A., for the LATIL apparatus.

LEBANON

ICA purchase authorization No. 68-37-102-9-90004, invitation No. 20 calling for two airport crash trucks.

The award was made to the British firm Fire Armour, represented in Lebanon by Near East Resources Co.

It seems to us that this policy, on the part of our Government, of allocating funds or making loans to foreign countries without some provision that they should use the funds for purchasing American goods is a very unrealistic business arrangement.

From the American taxpayers' viewpoint, who is putting up the money, it seems almost stupid, and the writer is inclined to believe that foreign companies think likewise. I may be too pessimistic, but I am of the opinion that this country cannot continue to do this. I do not believe that any other trading country, who are giving us real strong competition, would do it.

If you agree with this and Mr. Rundt's article, we trust that you will use your influence so that Congress will tie some strings to these loans and giveaways which will help American business.

Respectfully yours,
A. WARD LAFRANCE,
Chairman.

[From Export Trade, Nov. 16, 1959]

"PROTECTIONISM" OR "TRADE, NOT AID"—THE UNITED STATES STANDS AT THE CROSSROADS

(By Stefan J. Rundt)

A major battle is raging and may approach its crisis (perhaps only one of several yet to come), as these lines are written. But even though a partial or temporary compromise or a solution may have been decided upon by the time this article is read, the basic issues are not likely to be resolved so soon.

With the continued deterioration of the U.S. external payments position and the currently light but sustained pressure upon our dollar, from within and without, will have to come an agonizing reappraisal of our stand in the world of economics. We are at the crossroads.

TWO WARRING GROUPS

Two powerful and determined groupings in Washington and throughout the Nation have locked horns over an important issue: Should more, if not all U.S. foreign grants and accommodations be tied to the purchase of American-made goods, or should, as hitherto, to a lately growing extent, be portions of such assistance abroad from the American taxpayers' till, dispensed by such agencies as the ICA but also by others, under various headings (not always clearly defined for the public, nor in all cases honestly labelled) be multilateral in their utilization by the recipient nations, so that they may buy what they need from the cheapest supplier, even if it be the keenest competitor on the world markets of American exporting industries? The implications of this specific question are much wider than appears upon cursory analysis.

At the bottom is a fundamental problem: Where does internationalism of the variety we have been preaching so vocally and practicing for so long reach absurdity, and where must national self-interest begin? Are we not perhaps righteous rather than right in striving toward the nonfeasible rather than the attainable? How realistic are we?

Up in arms (to begin with over the recent Development Loan Fund's major shift in policy, but even more in fear that similar changes will come upon the ICA and other agencies) are: the State Department (which, let us see clearly, has somehow acclimated itself to the proposition that one can buy friends or, anyway, rent them for a while); the ICA (which is an organization primarily concerned with the disbursement of public funds, whose predecessors have done a great deal better than it does itself, of which cynics have said with a measure of justification that it has been "founded to bankrupt us and is trying hard to stay in business to complete the mission"); and segments of the influential press frequently reflecting idealistic optima and/or State Department views in their lead articles, even if individual columnists on their editorial pages expound opposite opinions, and although outstanding British papers fully understand that group in our midst which would like to shift from "direct grants" (i.e. giveaways) and the support of other nations' trade, to commercial accommodations (loans and credits) and to the systematic promotion of U.S. sales abroad.

In favor of basic modifications in our foreign assistance programs (and there has always been and still is a wide and uncoordinated area between the various agencies and efforts) are the U.S. Treasury, the Development Loan Fund, probably also Eximbank (whence the Development Loan Fund's present Managing Director, Mr. Vance Brand, hails), most bankers, and in all likelihood a major segment of the international business community of this country.

Many of us who have always supported free trade (and in this writer, for his part, has surely suffered material losses because of his stand) are now being accused of having turned protectionist, simply because we want to leave no reasonable attempt bypassed to balance U.S. external payments; because we have warned for some 18 months that this Nation, too, is subject to fundamental economic laws; because we draw a line between the free flow of goods and funds, on the one hand, and the two-way nature of a lender-borrower relationship; and because we believe that, in the final analysis, international trade is a matter of highest national interest, as long as there exist sovereign nations with diverse problems. It is a bitter pill for a long-time free trade proponent to swallow such accusations, when they stem not only from quarters toward whose opinions one has been indifferent, to say the least, but when such charges, without qualifications, are leveled by circles whom one has held in high esteem. Worst of all, I for one, am unable to understand some of the semantics and of the terminology of such accusations.

The hue and cry now widely heard against anybody who hopes that more U.S. foreign outlays should be linked to sorely needed U.S. exports, and that more of what we sow should be reaped by us, too, is well worded. Among the catchy phrases unleashed are, e.g.:

(1) "As protectionist as an unreasonably high tariff."

Comments: Don't we here mix up the free flux of merchandise and of capital with the normally bilateral dealings between financier and purchaser? And are we forever to perpetuate grants rather than move on to trade instead of aid? Have the accusers never heard of trade credits? Are they unaware that all leading trading nations support their own exports (without which they would perish, or at least drag down their living standards) by governmental or for the most part publicly funded risk insurance, guarantees and financing schemes, exclusively confined to national exports? Does anybody believe that any other nation's exchequer will ever furnish such funds or props accessible to U.S. exporters or their customers abroad? Quelle naiveté. To uphold an economy within by outward quota restrictions and duty barriers is protectionism. But as the term is used by some people today, the support from public funds of our Army, our defense

industries, or foreign soil of strategic importance to us—would also merit that ugly word.

A STEP BACKWARD

(2) "A violation of our own basic foreign economic policy * * * a turning away from liberalization of world trade which we have urged for so long * * * a step backward from all past efforts to foster growth abroad of free enterprise."

Comments: Firstly, was our past policy actually a policy, and if so, was it flawless? We have turned about by 180° in the political sphere, from brinkmanship to summitry, apparently because a revision was urgently needed. (Did we foster growth abroad when our 6th Fleet played the Suez Canal into the hands of an autocrat incapable of improving the miserable lot of his people and borrowing money for inefficient use in his state-owned plants? What have we achieved toward trade liberalization in the Philippines, in Korea, or Taiwan?) Could it be that a comparable alteration in policy is now unavoidable for our economic stand? Isn't it possible that what we have urged with all our might and for so long is beyond the feasible optimum, and that it is merely an unrealizable ideal? By the way, we have also urged so many other nations to balance their budgets, to fund their debts, long-term, to lower taxes, to stop farm subsidies, to abrogate agricultural import curbs, to stop dumping their surplus goods and to get their external economics away from politics. How well did we do in these respects? Secondly, was not our policy merely based on the notion that we must spend more and more, to buy alliances and to improve some of the least equipped or prepared places in our image? Thirdly, has not our policy failed rather miserably (a) in some areas where we have helped to make the rich indecently richer, while we did not manage to lift up the pitifully poor, and (b) in that we have oversubscribed our efforts to the point where we stand endangered of giving away the strength of our dollar, if we continue in the past? May not a new step be everything but backward, and simply represent a turn (or a return) to the practicable?

BLOW TO U.S. LEADERSHIP?

(3) "A major blow to U.S. leadership in world trade."

Comments: An exciting phrase, but is it valid? The softer position of our dollar, our fiscal mismanagement, our inability to establish a clearcut policy, the lead, zinc and oil quotas, some of our Public Law 480 sales and so on, have harmed us more than would any step designed to move from gifts to sales and to a posture which is that of every trading nation in history, namely one where our funds, intended to help others, also benefit ourselves directly, rather than third nations, which by now have been fully rehabilitated—with our help.

WORLD COMPETITION

(4) "An acknowledgement that American goods can no longer compete in the world * * * a relaxation of pressure upon U.S. producers to remain competitive."

Comments: That many of our goods have, indeed, become noncompetitive throughout the world, and even right here at home, has been known and said by the unhypocritical for many a month. In part this has come to pass because our mass production and distribution structures for our huge domestic market have made us inflexible when it comes to special export efforts (e.g., special export models); in part it has come because in many instances we have relegated exports to second place; in part it is true because we here have no major export incentives and special tax supports as have others; (in Germany, for decades, there have existed export tax rebates, special insurance and financing facilities and, up to World War II, the unions had agreed to a 15-percent wage cut—all especially for exports). We are also often noncompetitive because of insane union demands, featherbedding and the lag of productivity behind wages, as well as oligopolistic practices by some basic materials' producers. All in all, we have not yet fully faced up to the fact that we, too, must export, in order to cover our growing requirements in imports. For years we have exported to help others and now we must export to help ourselves. And as to the pressure upon U.S. producers to remain competitive, let us ask: (a) Is our Government here to help or to exert pressures, when it comes to nationally vital efforts? (b) aid-supported exports could be limited to goods of fair market value and specific factory markup.

BUY AMERICAN

(5) "Buy American again * * * subsidizing exports * * * economic imperialism."

Comments: The dismal failure of buy American will be admitted by most any intelligent person and nobody in his right mind will want buy American to return. But where is the similarity between public U.S. tenders tied to the purchase of U.S. goods, and international sales linked by the seller-financier to his own merchandise? Besides, our external position today is vastly different from what it was 5 years ago. Who ever heard of Macy issuing credit cards valid at Gimbels? If the banks have special credit purchase schemes, utilizable at thousands of stores, the banks are making a neat and prompt profit from such plans. And as to subsidizing exports, we, too, dislike the idea that we may give unnecessary aid to inefficient or greedy U.S. exporting industries, or to insolent union labor. But are Hermes in Germany or Britain's Export Credits Guarantee Department stimulating U.S. exports? Economic imperialism? This is merely a devastatingly ugly phrase of no applicability here. A lender is entitled to benefits. How far can our missionary zeal lead us? Besides, do we not subsidize our farmers, so that some of them can virtually retire in Florida for growing and raising nothing? Do not our postal rates subsidize our publishers? Do not cost-plus contracts subsidize our arms makers? In fact, is there anybody left in our land who is not subsidized? (Lord Keynes must laugh himself to death in his grave.) I am not in favor of subsidies of any sort. But exports are now nationally more vital than ever; they create employment, which we urgently need; and they render revenues to Uncle Sam, which we also require, to balance the budget.

BIG HEADACHE

(6) "It (the tie-in) will have almost no effect * * * peanuts * * * prescribing a dose of aspirin for a headache that is merely the manifestation of a more deep-seated physical disorder."

Comments: Savings and curtailment (let's call it austerity, as we do when we talk of others) must start somewhere and ultimately affect every corner. The net 1950–58 capital outflow from the public till came to $65.4 billion, while private net capital outflow (which is a great deal more productive) amounted to $15.8 billion. This is in a way more interesting than the oft-repeated payments deficit of $4 to $4.5 billion expected this year, because it spells out the cause rather than the consequence. Let's cut where the slices can be thickest. Naturally, our entire foreign aid requires judicious pruning. Our military oversea spending will have to be pared. And our allies will not help us a lot to support our troops on their soil. Defense spending has lost all popularity abroad. Exactly what our assorted economic support schemes in connection with military outlays amount to—nobody seems to know. But they are huge. Our farm support at home costs annually about $3 billion. These are the fat paunches from which we will have to trim the savings to balance our books, at home and abroad. To cut imports artificially would be insane. It would mean isolationism. Admittedly, the aid-export-tie-in may be relatively small an item, but I believe that only he who is willing to save pennies will ever bank dollars. In other words, the headache's deep-down causes fully realized, all sorts of medications will be needed, aspirin not excluded.

MUTUAL SECURITY PROGRAM

(7) "It will increase the cost of the mutual security program * * * and impairs the flexibility (of our grants and loans abroad) and reduces their values as instruments for rapid economic development (of other nations) * * * the psychological impact abroad can only be adverse."

Comments: Perhaps our mutual security program is over-ambitious to start with? I think that much less money could do the trick if we were not to squander or let others squander quite blatantly. Perhaps the recipients of foreign aid are overly ambitious in their drive to develop—usually too fast, with too little. And they are overheated and under-financed because local money remains in hiding. More prudent spending will be the answer rather than further aid increases. Are we not a bit too flexible in our handouts? The Soviets grant in the main low-interest loans and commercial credits. And as a rule they get a better run for their relatively few rubles than we are getting a bang out of our billions of bucks.

The overall problem of our foreign economic policy is intricate and merits more careful study than given so far. To cry "protectionist" will not do in all instances. (In my circles, this sobriquet is almost tantamount to a reference to a man's canine or illegitimate ancestry.) It is easy to polemicize, and my own comments can no doubt be rebutted, with the rebuttals no doubt also subject to further re-rebuttal. But let us see clear that the hue and cry so far comes from the professional spenders rather than the habitual earners and the squeezed taxpayers.

MULTILATERALISM

I am afraid that the word "multilateralism" has been worked to death. As I understand that noun, it refers to unhindered movement beyond borders of goods, capital, and services in many or all directions. But the connotation given to this word in recent years, by those who most often repeat their cliches, reminds me of "multisexuality." Trade transactions or series of transactions are normally two-way deals (from seller to buyer), very much as sex is usually an affair between two parties. In trade (as in sex) there can be tricornered and even multi-angular arrangements, but this may tend to become an orgy of sorts, and, anyway, bilateralism is the rule for transactions. And nations have also two-way deals with specific trading partners, and calculate trade and payments balances on the basis of nation-to-nation totals or what of their own national aggregate bookkeeping. Nobody could ever figure out a single multinational, global payments balance for all the nations of the world. In other words, while huckstering the word multilateralism, we have somewhat lost track of the undeniable fact that most trade is to start with between two partners, i.e., bilateral, and not an orgy. And this will not change, ever. Multilateralism means merely free choice of one partner for one equitable transaction. The minute financing enters the picture, trade is almost invariably tied, unless third-point funding is profitable for the lender.

Uncle Sam will never convince Germany, France, or Japan to give underdeveloped nations grants or loans not somehow predicated upon acquisition of goods by the borrower from the lender. And as long as we here

support everybody's exports by unrestricted offshore financing (the very word "offshore" must have been invented in its modern meaning—in order to camouflage and to confuse), why should other trading nations bother to increase their contributions to e.g., Afro-Asian development? They will merely tell the finance minister of a nonindustrial country: "You go to Washington and get the dough, and then we'll be glad to ship you our goods."

When we say "grants" we mean gifts. When we say "off-shore" we mean "It'll help everybody but us." When we say "defense support" we mean economic aid which often has nothing to do with the military heading under which it travels. And now a "protectionist" is anybody who wants to get a little bit more for his money, or, at any rate, more than almost nothing. What a bunch of hypocrites we have become. Me, for calling a spade a shovel.

We are in trouble because we have gone too far in our unrealistic idealism. We will have to tighten our belts—to pick another cliché we are so fond of using when talking to others. Already there are loud voices of real protectionists, who clamor for such barriers as higher tariffs and more stringent quotas. Let us defeat them by taking such steps as we can without turning to real protectionism. Let us avoid extremism by well-measured remedies. The means to get straightened out are all within our national power. Or is Eximbank, which for a quarter of a century has done such a fine job, also a protectionist agency? Dollar for dollar (its limitations fully realized), Eximbank has given us taxpayers and this Nation as a whole more than all our spending agencies in recent years, for a lesser total in outlays and at smaller risks. An export credit guarantee scheme would be better than more spending. And when it comes to cutting, let's audit our expenditures and check the results achieved by our aid to such staunch free enterprisers as Messrs. Tito, Franco, Sukarno, Chiang, Rhee and Cie. Would it not be better to deal with these types by way of controllable trade credits rather than in terms of signed blank check arrangements.

We need not put ourselves (or ICA) in a strait jacket. But much less of our disbursements should be alms to others. In the long run, the giver of alms is hated. This year we'll do well if our trade surplus will come to $500 million or $1 billion. Yet our payments deficit will come close to $4.5 billion or more. Net capital outflow from the public till is close to the 8-billion level. That can not go on.

The biggest trading nations (which have received billions in United States aid in the past 12 years or more, are lending "strings-attached." Is the whole world out of step but for us?

Let's again think straight, talk plain and act logically. As things are, I am afraid Abraham Lincoln could have never been elected President. He thought different from Madison Avenue and knew not the Federalese we have adopted; his words were simple ones; and his actions were in keeping with his words as well as with reality. Until lately we have worried about the entire world—except about ourselves. Charity not only begins at home in egotistic self-interest. If Uncle Sam is sick, the entire free world will suffer. Our inconsistent, haphazard, multi-agency spending must end—in our interest and in the interest of those political, economic, social and humanitarian concepts for which we truly stand. Times have changed. We can no longer afford the rut we have been in for so long.

The Interest Ceiling

EXTENSION OF REMARKS
OF
HON. JOHN W. BYRNES
OF WISCONSIN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. BYRNES of Wisconsin. Mr. Speaker, much has been said and written about the problem posed by the present ceiling on the interest the Government can pay on intermediate and long-term bonds. In today's Washington Daily News, Mr. Peter Edson reduces this problem to its simplest terms. It is well worth reading.

The article follows:

ANDERSON TRIES AGAIN

Treasury Secretary Robert E. Anderson's second attempt to get Congress to lift the 4.25 percent interest rate ceiling on long-term Government bonds is in for tough sledding again. One principal reason may be that few people and fewer Congressmen understand the issue.

It is so easy for a Congressman to brag to his constituents that he voted against raising interest rates on Government bonds. This caters to a popular belief that if Government interest rates go up, all others will follow.

It is more difficult for a Congressman to justify a vote for raising the interest rate ceiling. To do so he must get into a long and involved discourse on banking.

Thus, even the Democratic majority of the Senate-House Economic Committee, which is supposed to understand these things, has just come out with a report opposing the interest rate hike. This report maintains that the 4.25-percent ceiling should be retained until Treasury and Federal Reserve Board reform their monetary policies. This passes the buck to an even more complicated subject.

The late Senator Carter Glass, of Virginia, who understood Government finance as well as anyone, opposed this ceiling when it was put on in 1918 as a World War I curb. But from then until last summer, a breakthrough was never threatened.

What Carter Glass understood, and what Treasury officials are now trying to get across is that interest rate ceilings can't be set artificially by law unless they are supplemented by Government subsidy. In the long run, interest rates are set by the supply of money and the demands for credit in the open market.

If the rates did not vary up and down this way in a free economy, Congress could pass a law fixing interest rates at, say, 2 percent or even 1 percent.

If Congress were to pass such a law now, the U.S. Government would probably not be able to borrow a dime.

Congress might pass a supporting law, requiring all banks to hold a certain amount of their reserves in these 1 or 2 percent securities. That might work in Russia. But it would not work long in any country with a free economy.

As a matter of fact, the 4.25 percent interest rate ceiling has already been broken. This was done by a congressional grant of authority for the Treasury to sell some of its securities at a discount. Oversimplified, it works like this:

A bond, note or Treasury bill worth a face value of $100 and bearing interest at 3.625 percent, is sold for $85. The yield on the $85 is 4.5 percent. The Treasury uses this authority now in some of its advance refunding operations.

For example, a bond due to mature in 7 years is exchanged for a new bond maturing in 15 years, at a fractionally higher rate of interest. The amount of the debt is not increased by this exchange. The debt is merely lengthened. But the Government's interest costs are increased, frequently over the ceiling. One recent offering went to 5.19 percent.

The Treasury is now reluctant to use this discount authority for two principal reasons. If the Treasury started selling all its $100 bonds for $85, the impression would be given that the United States was hard up. And if the bonds didn't sell, it would show that the credit of the United States was impaired, and the value of the dollar was going down.

If the Treasury is given authority to raise long-term interest rates above 4.25 percent, there is no plan to flood the market with such securities.

Cancer Kills Vet Leader McGonegal

EXTENSION OF REMARKS
OF
HON. GEORGE P. MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. GEORGE P. MILLER. Mr. Speaker, death has taken a dedicated man who served the war veterans of his country with all his heart and soul. Charles Craig McGonegal, 64, a national vice commander of the American Legion and a double amputee, died of cancer in the Oakland Veterans Hospital on January 22, 1950.

Charlie McGonegal was known throughout veterans circles in the United States for the contribution he made to the welfare of the disabled. In spite of the grave physical handicap of the loss of both arms, he demonstrated that the spirit and will to win could overcome such handicaps.

During World War II he traveled widely to visit veterans hospitals encouraging amputees and demonstrating to them not only the dexterity they could achieve in the use of prosthetic appliances but imbuing them with his own spirit.

Charlie McGonegal was a member of Hayward Post 68 of the American Legion.

I extend an article which appeared in the Daily Review of Hayward, Calif., on January 22, 1960:

CANCER KILLS VET LEADER MCGONEGAL

Charles Craig McGonegal, 64, national vice commander of the American Legion and a man who dedicated much of his life to bringing hope to other amputees, died of cancer today at Oakland Veterans Hospital.

McGonegal, who lost both hands in a World War I grenade explosion, was active in local (Hayward Post 68), State, and National programs of the American Legion, and was a Republican candidate in 1962 for the congressional seat won by George P. Miller.

Until his health began to fail, following an operation last October, McGonegal toured hospitals throughout the Nation to help and instruct amputees.

Despite his handicap, McGonegal learned to drive a car, fly a plane, rode horses, swam, hunted, and bowled.

"A cripple is someone who has something wrong with him, but fails to do anything about it," he once said. "I have set no goals other than to live a normal, useful, and productive life."

Following World War I he became a traveling salesman, then worked as a trucker in a lumber yard, later became postmaster at Bell, in southern California.

In recent years he had been a rancher and real estate broker, operating from his Kilkare Road home in Sunol.

He was a member of Hayward Post 68, American Legion, Disabled Veterans of America, Rotary Club, Elks, and the Congregational Church.

He is survived by his wife, Pearl, and two sons, Caron, and Donald.

Services are pending from Berkeley Hills Chapel, 1600 Shattuck Avenue, Berkeley.

Address by Charles H. Silver, President, Board of Education, City of New York

EXTENSION OF REMARKS
OF
HON. EUGENE J. KEOGH
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. KEOGH. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following address by Charles H. Silver, president of the Board of Education of the City of New York, at the Catholic teachers' breakfast held at the Waldorf Astoria on November 8, 1959. Mr. Silver for many years has been chairman of the annual Alfred E. Smith Memorial Foundation dinner and is the personification of the interested, devoted public servce rendered to the city of New York by the members of the board of education who are in the forefront on all civic matters and is an outstanding example of the broad and tolerant view that is displayed by thoughtful Americans.

The address follows:

ADDRESS BY CHARLES H. SILVER, PRESIDENT, BOARD OF EDUCATION, AT THE CATHOLIC TEACHERS BREAKFAST, WALDORF ASTORIA, NOVEMBER 8, 1959

The extremely personal nature of these gatherings always makes me feel especially privileged that you have asked me to join you. Our spiritual resources were never more needed than in these troubled hours of doubt and fear when mankind is desperately clinging to the faith that sustains us today and gives us hope for tomorrow.

We have probed the secrets of humanity's physical ailments; we have widened the scope of knowledge, and conquered the limitless vastness of space * * * human beings live longer and better than ever before, but we still have much to learn about how to live with each other. World peace remains delicately balanced on the launching pads of deadly missiles while diplomats commute and smile and talk of universal disarmament.

We have had a visit recently from an emissary from abroad who has the power to erase the past, present, and future of all people including his own.

He came on a mission whose major message expressed the hope that all nations disarm. We do not know whether it was really news or just noise.

But all people should weigh carefully any call to beat our swords into plowshares, no matter from what source it comes, for never was there greater need for genuine understanding among nations and among people than there is today.

This is a time, indeed, when it is well for men of good will to break bread together in communion with God. In bringing you the greetings of your board of education, I am only echoing the pride of our entire community in the great work you are doing to mould the minds and characters of our young people.

I know that your zeal and devotion as teachers are enhanced by faith. It is with such dedication to the cause of learning that we will realize the plans put forth only a fortnight ago, in the United Nations, for a bill of rights for youth proclaiming that "mankind owes to the child the best it has to give."

If I may make a suggestion to Mr. Khrushchev, he has an opportunity to put this principle into practice immediately. Many Hungarian children, 14, 15, and 16 years of age, were jailed following the Hungarian revolution, and are to be executed upon reaching their 18th birthday. I have urged that the young people in our secondary schools give thought to participating in the campaign of appeal to Mr. Khrushchev to release these children. I am happy to say that the student councils of our schools are presently considering the appropriate action to take.

The marshalling of the resources of the world in behalf of youth is the wish of many of our Nation's leaders.

It is wholly in keeping with the desire expressed by His Eminence, Cardinal Spellman, that America take positive steps in a crusade for the inculcation in our children of higher standards of juvenile decency. They are the future brotherhood of man. Their path and the progress of civilization is largely in your hands as teachers.

There are challenges on every hand which none but you, as teachers, can meet. I am speaking not only of the immense new forces of destruction unleashed by science in appalling enormity. These manmade invaders of space must eventually crumble and fall to earth.

We must set the gaze of youth on things beyond * * * on the changing stars in a changeless space, and on the ancient but ageless teachings, the time-tested sources of all strength.

We must lift the minds of our children from the filth on sale at the corner newsstand, from the indecency of some current literature, and the boldness of many motion pictures and television shows. We must turn them toward standards of conduct that stem from the wholesome family life and a strong moral heritage.

Our public school system is joined in these efforts by many nonpublic schools in our city. One example of these is the great Catholic parochial school system of this city, which renders invaluable service in the cause of education. Its 13,000 teachers provide instruction for approximately 370,000 children. It would mean an additional cost to the city of $750 million for housing facilities, $120 million in annual operating expenses, plus many millions of dollars for teachers' salaries, if this were a muncipal obligation.

I think we can salute this tremendous contribution to the youth of our city.

Our struggle will continue to be severe, taxing every resource of your profession. The burden falls heaviest on you, the teacher, for the greatest demands are made upon our schools; but you and our schools are equal to it.

This is a responsibility which merits adequate compensation. Only a few days ago, at the Alfred E. Smith Memorial Foundation dinner, I emphasized the need for funds to increase the rewards to teaching. I spoke in the presence of Governor Rockefeller, the mayor and other members of the board of estimate, and pointed out the dire necessity for higher salaries.

I know that I echo here the constant plea of a dedicated profession. The dignity of teaching is a potent factor in and of itself, and the justice of your cause can be reinforced by a professional approach befitting your position in the eyes of the people and our public officials.

In this age of education, we must understand your needs as we, in turn, ask you to understand the needs of our children, and to teach them to understand each other. In closing, because I have learned some of the precious maxims of your gospel from such cherished friends as my good neighbor, Owen McGivern, and the inspired leaders of your own organization, let me express the hope that the day is not far distant when we shall yet learn how to live with one another in peace, in justice, in the way of the Almighty.

And, sharing in your communion, may I join you in the hope that among the words of the great teachers that are to be embodied in the bill of rights for youth, will be these that were spoken for the ages:

"Blessed are the meek; for they shall inherit the earth.

"Blessed are they which do hunger and thirst after righteousness.

"Blessed are the merciful.

"Blessed are the pure in heart.

"Blessed are the peacemakers; for they shall be called the children of God."

The Numbers Racket: Resolution by Interdenominational Ministers Meeting

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following letter and motion that was passed at the Interdenominational Ministers Meeting of Greater New York and Vicinity:

NEW YORK, N.Y., *January 12, 1960.*

Dr. A. CLAYTON POWELL, Jr.
Abyssinian Baptist Church,
New York, N.Y.

DEAR DR. POWELL: It is with pleasure that I enclose a copy of the motion that was passed at the meeting of January 11, as a result of your presenting to us the situation and effects of the numbers racket as it is practiced in our community.

May you lead the fight to a successful conclusion.

Sincerely yours,

PHILIP J. BAILEY,
Secretary.

MOTION PASSED BY THE INTERDENOMINATIONAL MINISTERS MEETING OF GREATER NEW YORK AND VICINITY, JANUARY 11, 1960

It was voted that:

1. As ministers we go on record as commending the Reverend Dr. A. CLAYTON POWELL, Jr., Congressman and pastor of the Abyssinian Baptist Church, for speaking out

against the numbers racket, and maintaining his stand at the jeopardy of his life.

2. We help to sustain him in the position he has taken by a collective effort of preaching from our pulpits, thus accelerating the movement that he has initiated.

C. ASAPANSA-JOHNSON,
President.
PHILIP J. BAILEY,
Secretary.

The Estimation and Measurement of Hydro Resources

EXTENSION OF REMARKS
OF
HON. AL ULLMAN
OF OREGON
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. ULLMAN. Mr. Speaker, the development of our energy resources is a topic of vital and continuing interest to all of us. We have too frequently been unwilling to face the problems of resource development realistically and with vision. I wish to call to the attention of this House a paper recently presented by Mr. Bruce Netschert of Resources for the Future to the Electric Consumers Information Committee at their legislative workshop held here in Washington. This study points up the lack of a realistic basis for the estimation of our Nation's hydroelectric potential. It is, in my opinion, worthy of our study and that of others concerned with the development of our great natural resources to their true full potential.

The paper follows:

THE ESTIMATION AND MEASUREMENT OF HYDRO RESOURCES

(By Bruce Netschert)

My interest in the subject I am discussing this morning arose in the course of my work at Resources for the Future on the general subject of future energy supply. My specific purpose was to derive an estimate of installed hydro capacity in the United States for the year 1975. This work in turn was part of a larger project, the results of which will be published within the year under the title, "Energy in the American Economy, 1850–1975.".

One of the additional and unanticipated results of my work was a finding that I have chosen as the thesis of this talk: namely, that the estimation and measurement of the hydro potential in the United States currently lacks a systematic basis and clearly defined, unambiguous terms. This finding would, however, have little interest for you and would be of no significance were it not for the results of the lack. The absence of a clear, logical basis for estimating and expressing the hydro potential has contributed to a constant, serious underestimation of the true extent of that potential.

Let me begin, in demonstrating why I believe this to be so, by examining the question of hydro resource estimation and measurement in the abstract. The logical starting point for considering the hydro potential is the definition of the term. Is it the total unutilized head and flow in the country? Is it all the capacity that could be installed at present costs? What about multiple-purposes aspects? The total unutilized head and flow is a vastly different thing from capacity installable at present costs. And, as we all know, multipurpose development may make the difference between whether a given hydro site can or cannot be developed at present costs. It is essential, therefore, that any method of estimation deal logically and consistently with considerations such as these and state clearly just how they are dealt with.

There are three elements that enter into the definition and measurement of the potential: (1) The actual head and flow in the streams of the country, (2) the technology that is available with which to capture that head and flow in the form of installed capacity, and (3) the costs of so doing. The first is, in the larger sense, fixed and immutable—it is what nature provides. The other two, technology and costs, apply not only to the first but to each other. For example, until the advent of modern earthmoving machinery the capacity represented by many potential hydro sites was so costly as to be infeasible, but with the possibility of large earthfill dams this capacity became economic. Any advance in technology, from earthmoving through dam design and construction and facility design, construction and operation, even to transmission practices, implies cost reduction. And conversely, if one wishes to allow higher costs, more expensive techniques can be considered to make a project feasible. Perhaps most important in the present context, since technology is undergoing constant progress, is the across-the-board possibility that what is uneconomic today may well be economic tomorrow. None of this can be ignored by a logical system for estimating hydro potential.

The whole purpose of estimating hydro potential is to get a measure of what is available for possible future development. Thus it is, in a sense, self defeating to estimate the potential solely on the basis of what is economic here and now. Yet as soon as one goes beyond the limit of what is presently economic there is the vexing problem of establishing a larger limit. This problem cannot really be solved satisfactorily, but at least it can be treated logically.

One way is to use whatever cost limit beyond present costs appears appropriate for the purpose in mind. One might take the limit to 10 percent higher than present costs, or 25 percent, or 50 percent, or double, and so on. The advantage is a tremendous gain in clarity and conceptual neatness. If one says the potential is X million kw, it is then understood by all who see and use this estimate exactly what the limiting criteria are. They know what the figure stands for, and what the estimate means. The trouble is, one has to know the cost of all conceivable undeveloped capacity.

Another way of establishing a limit beyond present costs is to take as the limit current technical feasibility, regardless of cost. Costs remain unspecified, but one has laid out the ball park, so to speak. This second approach toward going beyond what is currently economic has received a good deal of attention in Europe, and there exists a sizable literature on the subject under the auspices of the Economic Commission for Europe and the World Power Conference. Whether one approves or disapproves of the terminology employed, and even if one has doubts as to the practical value of the systematic basis for estimation that has been developed, this literature represents a stimulating and provocative contribution to the subject of hydro potential estimation. I confess I am baffled by the complete absence of any reference in American technical journals to this European contribution. Indeed, it appears that only the rare hydrologist or power engineer in this country is even aware that it exists.

As an enlightened audience you may well be familiar with this European approach, but it can be briefly summarized as follows: There are three levels of hydro potential. The theoretical potential is that afforded by the total head and flow of all streams in the country. The technical potential is the total capacity that could be installed, regardless of cost, with current technology. The economic potential is the total capacity that could be installed at current costs. In all three of these potentials the capacity already installed is, of course, included.

This system does not eliminate the enormous difficulties of actual measurement of hydro potential, but it has the merit of providing the appropriate perspective for estimating the hydro potential that may be relevant for the long-term future. It is, in my opinion, an important advance toward reality in assessing hydro possibilities.

So much for the abstract. Now let us turn to the specific question of the hydro potential of the United States. There is, as you all know, only one authoritative estimate, that of the FPC, which is periodically revised. The latest figure, as of January 1, 1959, is 121.8 million kilowatts, excluding Alaska and Hawaii. (I excuse the omission, but I want to make the figure consistent with later data I shall cite, and all my work was done on a 48-State basis, before those 2 States entered the Union.) The Commission labels its estimate "the hydroelectric power resources" of the United States, and earlier in its series of revisions commented on the basis of its figure as follows:

"The estimates of undeveloped waterpower include projects on which economic feasibility has been demonstrated, as well as projects at which sites where physical conditions indicate engineering feasibility and promise at some time of economic feasibility. The estimates with respect to the latter class of projects are subject to revision either by increase or decrease as additional information becomes available concerning streamflow, reservoir sites, costs, and other pertinent factors.

"The undeveloped hydroelectric power picture is constantly changing as new projects are constructed, and as continuing studies * * * uncover new potential projects, or * * * demonstrate the desirability of modifications of older plans. Hence, estimates of undeveloped hydroelectric power must be revised from time to time. * * * Although some of these potential projects may * * * be found infeasible * * * from physical, or economic, or other standpoints, the estimates taken in the aggregate serve to indicate, from a long-range view, the overall waterpower potentialities of the United States and the waterpower resources available for possible future development."[1]

This is a fine statement as far as it goes, but it fails to say that the estimate is the total of individual site estimates from various sources originally made for a variety of purposes. The basis for some site estimates is detailed; others are mere guesses. In addition, the figure excludes sites of less than 2,500 kilowatt potential.

My criticism of the FPC in this matter is on two counts. If this is what the Commission has to work with, and if in its opinion further refinement of the data or the total estimate is unnecessary or undesirable, the Commission is entitled to its judgment. But the total figure does not represent what the Commission labels it, the "hydroelectric power resources" of this country. It is merely the total of data available in the Commission files; as a measure of resources it is incomplete however they are defined. Yet—and this is the second count—why should the Commission not base its total on consistent data? It acknowledges its interest and responsibility by publishing the estimate. Why should it not assume the full responsibility and make an estimate based

[1] Federal Power Commission, "Hydroelectric Power Resources of the United States: Developed and Undeveloped, 1957," p. 19.

on a survey conducted for that purpose? Let it define hydro resources as it will, but let the estimate have a logical, consistent basis, and let it be complete.

The shortcomings of the only available estimate of this country's hydro potential are well brought out by a comparison with the European approach. Obviously, the FPC figure is not at the level of the theoretical potential, nor does it pretend to be. It goes beyond the economic potential, as the FPC states; but it does not attempt to go the technical limit, and at the indefinable level at which it rests its coverage is incomplete. That is, it does not include all capacity that could be developed economically under present conditions, nor does it include all capacity that is technically feasible to develop.

I turn now to the consequences of the Commission's estimates. In the course of my work I assembled all estimates of future installed hydro capacity for the period through 1980 that have been published since 1948. Upon analysis of these estimates I discovered a peculiar thing: throughout this period the majority of the 20 estimators were pessimistic with respect to the future rate of growth in installed hydro capacity. In almost all instances they underestimated the rate of growth that has actually occurred subsequent to the time they made their estimate. What is perhaps most remarkable is that this pessimism has persisted through to the present. Even the estimates of the past 2 years (including some made by the FPC in 1959) assume a marked reduction from current growth rates in the future. The average growth per year in installed capacity from 1946 to 1958 was 5.5 percent; the FPC's own assumed growth rates in its recent projections of installed capacity range from a high of 4.4 percent to a low of 3 percent. The inconsistency in all of this is especially marked with respect to the current growth rate as indicated by projects underway and planned through 1961. The annual rate from 1958 to 1961 is 8 percent, yet the FPC's own projections of future installed capacity assume a growth rate after 1961 of less than 3 percent.

I want to make it clear that I am not criticizing or holding up to ridicule past estimates that have since proved wrong. This is poor sport for anyone making his own projection. The point I am trying to make is that there has been a persistent tendency by the estimators to assume that there would be a sharp drop from the then current rate in the future pace of hydroinstallation. Few estimates are accompanied by statements of the reasoning behind them, but the only logical basis for believing the pace of total hydrodevelopment would decline (notice, I am not talking about the pace of public versus private development) would be the expectation that costs, in constant-dollar terms, would shortly begin to rise in the development of the remaining sites—and rise sharply enough to severely curtail the pace of development.

Such an expectation is engendered by the common generalization that in the course of exploitation of any natural resource, the richest and best resources are, by and large, developed first. In this instance it would mean the lowest cost hydro capacity. It then follows that successive additions to capacity through development of the remaining resources would be increasingly costly. And, at some point in the sequence, the rise in costs would begin to steepen as the resource dregs were approached.

Now this is all very well as a generalization, but there is no natural law or statistical relationship that enables one to predict just where on the curve of cumulative resource develpoment costs will begin to rise steeply. Nevertheless, several of the estimators cited such a steep cost rise as a reasnn for expecting a slower future pace of hydro development, and one can only infer that it must have been in the minds of those who did not specify the basis of their estimates.

The incomplete hydro resource figure of the FPC, as the authoritative measure, has contributed to the consistent serious underestimation of the pace of future hydro growth in the following manner. It is clear from the Commission's discussion of their figure that that agency is aware of what it means; it is quite conceivable that 100 percent of the total could be eventually developed, and I venture to say that the FPC expects that most of it will be. But the users of the figure have been misled by the term "resources," and regard it as a measure of all that exists—i.e., the potential. Some projections take the development to 60 percent or more of the FPC's current resource estimate (an estimate which was, by the way, smaller in earlier years. It has itself undergone constant growth, and between 1953 and 1959 alone grew by 12 percent). If the estimators had related their projections to the true potential, the percentage of development of the total they were projecting would have been correspondingly smaller, and the expectation of a cost rise on resource grounds correspondingly less. I don't know whether any widows or orphans got hurt by this chronic underestimating of the future growth of hydro capacity, but it has certainly been to the detriment of good planning in this field, whether by Government or by private industry.

What we really need is a comprehensive survey of the hydro resources of this country at the level of the theoretical potential. Of course we can never develop all, or even most of that potential, whatever it is; nor can we easily agree on a definition of the potential at any other level that would satisfy all concerned. On the other hand, we can benefit from knowing the true dimensions that nature has provided in the field of hydro potential. Just as the theoretical maximum efficiency in the Carnot cycle provides a measure to the mechanical engineers of where they actually stand in thermal plant efficiency, so the theoretical hydro potential fixes the outer limit and a measure of where we actually stand in the development of our hydro resources.

It is my belief that our ultimate hydro development will turn out to be far greater than any of us dream at present, and that we need to know the outer limit to get some idea of the scale of possibilities. Hydro will, of course, continue to be only a small portion of total generating capacity, but this still leaves plenty of room for further growth. I return to the technology-cost relationship to which I referred earlier. The directions of current technological progress indicate the good probability that costs can be kept down and the value of hydro capacity in systems increased.

There is one technological advance that deserves special mention—pumped storage. The recent perfection of the reversible pump-turbine for hydropowerplants is, I think, a development of the greatest significance for the future of hydropower. Under the appropriate conditions it appears that pumped storage offers attractive savings for peaking capacity, and as thermal units get larger and the capital costs of base-load capacity go up, the urgent necessity for maintaining a high plant factor should enhance that attractiveness. Already several large pumped-storage projects, such as that at Niagara, have been installed or are planned. But the truly startling implications involve the pumped-storage unit that shuttles water back and forth between two modest-sized reservoirs without using any streamflow. How many million kilowatts of economic hydro capacity are possible when such capacity can be created where it does not even exist in nature?

As I see it, the need and desirability of a comprehensive, systematic inventory of this country's natural hydro potential will become increasingly apparent. It will be interesting, when such work is finally undertaken, to see how much larger the true potential is than the elastic figure that we have had to make do with thus far. One thing is, I believe, already apparent: Resource limitations on further expansion of this country's hydro capacity are not yet in sight. When limitations do appear, they are more likely to come from competing water uses than from the lack of head and flow.

Harlem's No. 1 Sickness: The Numbers Game

EXTENSION OF REMARKS
OF
HON. ADAM C. POWELL
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. POWELL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include the following article by Jackie Robinson from the New York Post of January 15, 1960:

Now that Manhattan Borough President Hulan Jack has been indicted by the grand jury investigating his dealings with realtor Sidney Ungar, there are many who consider the matter a closed chapter. Mr. Jack is as good as out of office and behind prison bars, they say. It's merely a question of time. Yet, I submit that due process of law applies to Hulan Jack as much as anyone else, and regardless of the circumstances he is entitled to his day in court.

Jack still stoutly maintains his innocence of any criminal wrongdoing, and certainly he should be allowed to defend himself against the indictment before any final verdict is rendered. He has, of course, already given public evidence of bad judgment in allowing Ungar to pay for the redecoration of his apartment, knowing Ungar was seeking a title I contract with the city. And the statement of District Attorney Hogan—that Jack admitted the falsehood of his first claim that Mrs. Jack had paid the bill—is damaging to public confidence in Jack as a public official.

But whether Jack's actions have constituted criminal acts, for which he may be liable for jail sentences and fines, is a question yet to be decided. That is now the duty of the proper courts of law. My own feeling, still, is that Jack is a man of basic integrity who has made a very serious mistake. He must now—like any other official—be prepared to face the consequences of that mistake, as determined in due course by the proper authorities.

Another public figure from Harlem has also been very much in the news these days. Say what you will about Representative ADAM CLAYTON POWELL, he very often lands some telling blows against injustice, and the past few weeks have been no exception.

Not only has he stepped up his continuing campaign for wider political representation of minority groups in New York's governmental affairs, but he has launched a one-man campaign against the evils of what he calls Harlem's No. 1 sickness—the numbers game. Even aside from the eye-opening revelations that Negroes involved in the numbers are constantly arrested and harassed while white policy barons go free, POWELL launched an all-out war upon the numbers—no matter what race is involved—

in his sermon at Abyssinian Baptist Church last Sunday. Said Reverend POWELL:

"We need to realize that we as a community are sick. Just as narcotics becomes habit forming to the individual, so has the numbers become habit forming for about 50,000 people in this area. We need to 'kick the habit.' Instead of the old symbol of get-rich-quick, do-it-the-easy-way, we need the new symbol of 'stand together' and taking these pennies and nickels and dollars that we have been squandering, deposit them in our banks, pooling our resources and lifting ourselves up."

Dismissing reports that his actions had caused resentment among number runners and players in Harlem, POWELL declared that he is more determined than ever to pursue the matter, regardless of personal threats or political repercussions. He charged that numbers were pauperizing Harlem, and that due to the large numbers of Negroes arrested each year in connection with the racket, the community is being criminalized.

"It may take some time," he continued, "but just think that every day we keep the heat on the police department and keep the heat on the bums that infest this community—every week we do this, we are saving a million to $2 million. Just think what $50 million in 1 year could do for Harlem."

I applaud Reverend POWELL on this issue, and I hope sincerely that he does conduct a vigorous and continuing campaign to rid the community of such criminal activities, no matter who conducts them. I do not know of another Negro in public life who can arouse the support of his followers in the manner that Reverend POWELL can. I urge the Congressman to extend the responsibility of leadership that is his and forge ahead on other fronts as well, for the betterment of the Harlem community and the Nation at large.

Mileage in Reverse

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. DINGELL. Mr. Speaker, pursuant to permission granted I am inserting into the Appendix of the CONGRESSIONAL RECORD an article which appears in the Washington (D.C.) Post and Times Herald the other day.

The article follows:

MILEAGE IN REVERSE

Minority Leader HALLECK may be playing a clever political game in the House by discouraging Republican signatures on the petition to discharge the civil rights bill from the stalling Rules Committee. But it may also prove to be a dangerous game. Its obvious purpose is to embarrass the Democrats by demonstrating that, with all their numerical superiority, they do not control the House on issues of this kind. Everyone knows, however, that civil-rights questions split the Democratic Party wide open. The more significant aspect of the HALLECK maneuver is that is it lending Republican support to those Southern Democrats who want to defeat civil rights legislation at this session of Congress.

Mr. HALLECK's foot-dragging is more curious because it coincides with the advancement of a new civil-rights plan by the Department of Justice. Presumably the best chance for enactment of this measure to have court referees register voters who have been victims of discrimination is to attach it to the existing House and Senate bills as an amendment. Before this can be done, however, the House bill must be rescued from the Rules Committee.

The situation is not changed by Rules Chairman HOWARD W. SMITH's belated call for a meeting of his committee on Monday. Obviously he is acting under pressure from the mounting signatures on the discharge petition. But no capitulation on his part is in sight. If the committee takes up the bill, it will doubtless be merely a delaying tactic. Surely Republicans have as great an obligation as Democrats to avoid further obstruction.

If Mr. HALLECK persists in his course, he will end by embarrassing the President and his own party much more than the Democrats. Vice President NIXON must be concerned about it, and since Mr. HALLECK is an avowed candidate for the Republican vice presidential nomination he might find it profitable to review his own standing before the public in the light of this reactionary maneuver. His support of the obstructionists is hurting the District home-rule petition as well as the civil-rights petition. If there is any political mileage in this, it is mileage in the wrong direction.

One-Hundredth Anniversary of Rabbi Morris J. Raphall's Prayer in Congress

EXTENSION OF REMARKS
OF
HON. JOSEPH E. KARTH
OF MINNESOTA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. KARTH. Mr. Speaker, it is particularly fitting when we today commemorate the 100th anniversary of the occasion of Rabbi Morris J. Raphall's delivering the first prayer by a Jewish minister in the Halls of Congress that we pause and reflect on the deep and venerable roots of the Jewish community in American society.

This moment is an especially appropriate time because of the various acts of medieval intolerance which have lately been manifested against Jewish houses of worship.

Barbaric acts of anti-Semitism strike at not a particular isolated group, but at all of us. A democracy survives not in a society of an elite self-imposed on coteries of second-class citizens, but in a society of truly equal individuals. It is sober fact that we in the United States are still striving for that great achievement of democratic equality of which our forefathers dreamed. We are on the threshold of its realization. The struggle for full equality awaits the fateful decisions to be made within these very walls shortly.

Rabbi Raphall was an especially illustrious minister of a long and distinquished line of spiritual leaders of the Congregation B'nai Jeshurun of New York City.

Dr. Raphall was called in 1849 to this famous congregation in New York City from Birmingham, England, where he had become famed as the foremost exponent of the Jew to the non-Jew and had served to win for Jews the battle for equal political rights which were as yet denied them in the British Empire.

Rabbi Raphall's fame as preacher and scholar became quickly established in America too, not only among the Jewry but also among the Christian clergy so that when the invitation to open a session of the House of Representatives with a prayer came to him, he had long been acclaimed for his erudition and his oratory.

His prayer to the House of Representatives on February 1, 1860 in many respects was prophetic for a nation shortly to be torn asunder by civil war. Portions of his prayer have significance for our time too. He said then:

The Constitution and institutions of this Republic prove to the world, that men created in Thine image and obedient to Thy precepts are not only capable—fully capable of self-government, but that they know best how to combine civil liberty with ready obedience to the laws—religious liberty with warm zeal for religion—absolute general equality with sincere respect for individual rights.

And even more significant, he exhorted:

"Let Thy grace guide them, so that amidst the din of conflicting interests and opinions, they may each of them and all of them hold the even tenor of their way—the way of moderation and of equity—that they may speak and act and legislate for Thy glory and for the happiness of our country; so that from North and from South and from East and West, one feeling of satisfaction may attend their labors while all the people of the land joyfully repeat the words of Thy Psalmist:

"Lo! how good and how pleasant it is for brethren to dwell together in unity."

Dr. Raphall remained the pillar of New York's Jewish community until his death on June 22, 1868 after nearly 20 years with Congregation B'nai Jeshurun.

It is good that we commemorate this occasion and in the light of this facet of history we reexamine our consciences so we might be strengthened in our resolve to be just.

On the Understanding of Inflation

EXTENSION OF REMARKS
OF
HON. CLEM MILLER
OF CALIFORNIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. CLEM MILLER. Mr. Speaker, under leave to extend my remarks I would like to recommend the following article from the February 1 issue of the New Republic:

A PRIMER ON INFLATION
(By Robert Lekachman)

The President's sermon on the economic verities in his State of the Union message prompts me to wonder what are the economics behind the platitudes.

Let us start at the very beginning. The simplest definition I know of inflation labels it as a period in which prices continuously rise. Prices, in general, rise when the total amount people want to spend on goods and services is larger than the sum of

the price tags which sellers have placed on their merchandise and services. The response of happy sellers is to raise prices and eliminate poorer or less eager buyers from the competition for scarce goods. Thrift tends to slow or stop inflation because some of the possible buyers voluntarily remove themselves from the market. On the other hand, borrowing adds to the sums which buyers can spend and promotes price increases. What is true of individual consumers applies also to other spending units, including businessmen, farmers, private institution, and governmental agencies.

As late as the early 1930s, many economists contemplated wage reductions as a means of restraining inflation. Since the ordinary wage earner is the most prone to spend a large percentage of all of his weekly income, reductions in wages might well lead to nearly equal reductions in spending. Under the influence of Keynes, rather few conservative economists now advocate such a policy. In the world of reality, trade union resistance would be overwhelming and the danger of unemployment as a corollary of wage reduction quite considerable. There are few left to point to the economic advantages of unemployment—at least in public.

More socially acceptable as a mode of monetary limitation is credit contraction. Here the story becomes complicated. What the economists calls money falls into two major categories: paper currency and metal coins, and demand or checking deposits in commercial banks. Deposits are vastly more important than currency, comprising some four fifths of the total money supply. They are not only the largest, they are also the most volatile portion of the money supply. Although commercial bankers bristle at the imputation, it is they who have most to do with this fluctuation in the money supply. To understand their role, it is necessary to examine the manner in which loans are made. Conventionally, a commercial bank extends credit to a borrower by giving him a deposit. On this deposit, the borrower can draw by check to pay his bills. In short, the deposit is money. If the bank does not make the loan, the money is not created. If when the loan is repaid, the bank does not make another of the same size, the money supply contracts. Loans expand the money supply and repayments shrink the money supply.

These expansions and contractions are intensified by the circumstance that American banking is based on fractional reserve requirements. Commercial banks need keep no more than about $1 in cash (actually as a deposit in a Federal Reserve bank) for each $5 in deposits. Or, what is the same point, every dollar of reserve can support $5 of deposits, and deposits are money. Conservative economic policy concentrates its efforts on altering the size of these reserves on the assumption that larger or smaller reserves lead to expansion or contraction of loans and deposits.

The chosen instruments of this policy are the 12 Federal Reserve banks in the major cities and the Board of Governors of the Federal Reserve System in Washington, as coordinator of national policy. The President appoints members of the Board to 14 years, staggered terms of office. The Federal Reserve System exercises important controls over the lending activities of the commercial banks who belong to the system. Chief among them is the ability to increase or decrease reserves—the basis of the money creating capacity of commercial banks. The Federal Reserve's three classic weapons are variations in reserve requirements, alterations in rediscount rates, and open market operations. If commercial banks are directed to hold in reserve one dollar for every four instead of five dollars in deposits, they can adjust themselves to their new situation by refusing to renew loans when they fall due. This action extinguishes the deposits with which the loans are repaid and thus contracts the money supply. The commercial bank can put itself into an appropriate legal position in another way; instead of reducing the deposits against which it holds reserves, it can increase its reserves by borrowing from the Federal Reserve. But this action only delays the inevitable. When it comes time to pay the Federal Reserve, the commercial bank can do so only by reducing the loans which it makes to its own customers.

Moreover, borrowing from the Federal Reserve is expensive, for interest must be paid. Constitutionally, commercial bankers delight in interest paid to them and abominate interest paid by them. The Federal Reserve can increase this detestation by raising the charges it makes when commercial banks borrow reserves. These charges are called the rediscount rate. If the Federal Reserve increases reserve requirements and rediscount rates simultaneously, the pressure upon the commercial banks to contract credit is verly considerable. Commercial bankers transmit this pressure to their customers by raising interest rates and thus discouraging some borrowers entirely, increasing the severity of the terms upon which loans are made and reducing the size of individual loans. Businessmen in general discover that it is more difficult to borrow the funds they require to expand their inventories or even to maintain them at present levels in periods of rising prices. Small loan companies which conduct their affairs substantially on the basis of funds they borrow from commercial banks are compelled to accept smaller credits and pay higher rates for them. In turn, they reduce loans to consumers and make them more expensive. As the impact of higher interest rates widens, home buyers face harsher mortgage terms and find themselves less able to contemplate monthly payments in which interest bulks large, automobile buyers postpone purchases, and businessmen of all varieties curtail their rosier visions of expansion. In short, spending dimnishes and prices stabilize or fall.

If these weapons do not suffice, the Federal Reserve has at its disposal a still more powerful technique, open market sales of Government securities. Of the many billions of dollars of Government securities in its possession, the Federal Reserve, acting through its Open Market Committee, can sell as much as it pleases, to whoever will buy. These marketable securities—a category quite different from the savings bonds purchased by ordinary individuals—include 91-day Treasury bills, and a wide variety of bonds of various maturities. By its own self-denying ordinance, the Federal Reserve customarily deals only in the shortest term of these securities, a policy usually called "bills only." When it sells these securities, it reduces deposits in commercial banks, for the corporations, banks, life insurance companies, mutual and welfare funds, and institutions which are the largest buyers of the bonds pay for them by check. The money supply declines immediately because of this deposit contraction and the ultimate effect is still greater. The Federal Reserve can always persuade buyers to purchase by reducing the price of the securities. Since the interest payment is not curtailed when the price falls, purchasers enjoy higher effective yields—the relationship between price at purchase and annual interest payments—than before the price reduction. If rational behavior in financial markets is assumed, there will always be some yield which will induce possible purchasers to prefer Government securities to alternative uses of their funds, including personal consumption.

THE BANKERS' PREFERENCE

In general, bankers and conservative economists much prefer monetary measures of this variety to alternative forms of Government intervention. For this preference, there are several reason. Banks are conservative institutions, and bankers cast themselves as models of prudent behavior, not always with adequate justification. Conservatives are happy when prudent men, even Federal Reserve central bankers, meeting in the privacy of dignified boardrooms, are at the financial helm. The whole operation appears less like Government interference and more like an extension of normal business practice. Banking action is quick, secret, easily reversible, and free of bureaucratic complications. Finally, banking regulation at least appears to interfere least with the private decisions of individual consumers and businessmen. Banking controls apparently refrain from singling out individual industries, much less individual persons for discriminatory attention. Commercial bankers are still left with the task of allocating credit among their borrowers. They simply have less credit to allocate. If, as intelligent conservatives recognize, Government action is essential when either inflation or recession threatens, then banking policy is by all odds the least governmental of Government actions.

At about this point in the exposition, the argument between liberals and conservatives begins. The major liberal criticisms of recent monetary policy, carried out after this rationale, conveniently fall under two headings, efficacy and equity. Liberals charge that the partisans of monetary policy have not kept up with the changes in financial institutions and practices which have diminished the impact of monetary policy. Thirty years ago, perhaps even 10 years ago, Federal Reserve policy directly affected the bulk of lending activity. For a great many reasons, this is much less the case today. Since Government expenditure is much more important as a percentage of total spending than it used to be, limitation of private spending leaves untouched a major spending source. Interest costs mean much less to a businessman as a deterrent from borrowing because corporate taxes enable him to regard half the interest burden as a credit on tax payments. Commercial banks are much less important because the larger corporations tend more and more either to handle their own financing out of accumulated profits, or to borrow from life insurance companies or other institutional lenders instead of commercial banks. As the last sentence implies, other financial institutions—life insurance companies, savings and loan societies, Government lending agencies, and mutual funds—have grown more rapidly than the commercial banks. None of these lenders, it should be emphasized, is subject to the control of the Federal Reserve. Since the Federal Reserve can affect directly only a diminishing percentage of potential lending, it can contract total spending much less than it once could.

THE CASE OF THE SMALL BORROWER

Moreover—and this is the second liberal criticism—what effect it does have is only at the cost of grave inequity. For the brunt of credit limitation is suffered by the borrower who has no alternative to the loan from a commercial bank. That borrower almost inevitably is a person or an enterprise of small resources. As we have said, the large enterprise draws upon accumulated retained profits, or places its securities with some institutional investor. If, at worst, it borrows from the commercial banks, it enjoys the most favorable terms. The small borrower's case is much different. If he fails to win accommodation from a commercial bank, he must go without. Since the small borrower is likely to be a poorer risk, and he is certainly the most trouble to handle in relation to the size of the transaction, the burden of monetary contraction falls most heavily

upon him. Other sufferers are consumers with low incomes. It is the man whose income is $4,000, not his richer brother, who is denied credit upon purchases of cars, refrigerators, or living room suites. This is not the end of monetary policy's inequities. The longer the time of repayment, the larger is the percentage of the value of a loan paid in interest. Major long-term borrowing concentrates on construction. This is another way of saying that State and local authorities, with no access to Federal credit, can construct schools, hospitals, parks, and other public facilities only at sharply rising costs. When bond issues expand, more of them are rejected by voters, and the present misallocation of resources between public and private uses is aggravated.

As many critics view monetary policy, it is not as effective as it once was, and it is more and more unfair. The paradox appears to be that monetary policy has been just effective enough to hamper growth and not effective enough to contain inflationary forces.

How do recent events fit into this simplified framework? Start with the Federal budget. Although there is many a slip between the prediction and the achievement, the President forecasts a budget surplus of $4.2 billion for the fiscal year which begins July 1, 1960, and terminates June 30, 1961. Sternly and morally, he proposes to apply this sum to the reduction of our impressive $290 billion national debt. Such a reduction will save in interest some $200 million. Let us dispose first of the morality of budget reduction. In his reference to 'our children's inherited mortgage," the President commits the logical fallacy of composition, of arguing that what is true of the parts of a whole must necessarily be true of the whole. For an individual an inherited debt is an ill, since when he repays it, he transfers assets which he might have enjoyed to the creditor.

But the case of an internally held Federal debt is a great deal more complicated. In the first place, it is owned by a great many individuals—directly in the shape of savings bonds, indirectly in the form of claims in institutions which themselves are owners of Federal securities, such as insurance companies, savings banks, and saving and loan associations. Not only is the debt widely held, it is widely financed, through general taxation. Therefore, who bears the burden of the debt depends upon who owns the debt and who pays the taxes which cover interest and principal. Conceivably, the owners of the debt could redeem it out of taxes they themselves pay, given the appropriate distribution of debt and taxes. It is plain that the process involves essentially internal transfers of wealth. At its end, the community is neither richer nor poorer, although some people within the country may gain and others may lose. In any event, morality is irrelevant to the issue.

Nevertheless, the size and the character of the national debt do give rise to genuine, technical problems. Here we must consider, as illustration, the President's plea for the lifting of the 4¼-percent ceiling on Government bonds of 5 years or longer life, a restriction which he stigmatizes as an artificial barrier to proper debt management. The Treasury's troubles are related to the fact that most of the national debt is in short-term securities. Approximately $84 billion of these securities will mature in 1960. In effect, the Treasury must find $84 billion of new money to replace the sums it pays to the holders of maturing debt. As a matter of administration, this necessity is a nuisance, involving much unnecessary activity in financial markets. Worse than that, the Treasury's large refunding operations complicate the Federal Reserve's tasks of monetary management. In custom and in practice, the Federal Reserve must make money sufficiently plentiful in the community so that the Treasury can sell its new securities issue without embarrassment. But this tradition may well coincide with a time when the Federal Reserve wishes to contract credit in order to combat inflation.

What would the Treasury like to do? If the size of the national debt were reduced, the impact of Treasury operations would diminish. Even if the size of debt remained stable, improvement would occur if when short-term securities fell due, the Treasury could replace them with long-term bonds. Such a change would decrease the number of times the Treasury had to resort to refunding operations. But, asks the Secretary of the Treasury, how can this laudable goal be attained or even approached if nobody wants to buy long-term Government securities for the sound and sufficient reason that yields higher than 4¼ percent can be earned on other securities, loans, or mortgages. Because of this obsolete restriction, the Treasury must sell more and more short-term securities. When it does so, it forces short-term interest rates up both for itself and for other borrowers. As a result, long-term rates are lower and short-term rates are higher than they would be, except for the distorting effects of the Treasury's operations.

On general grounds of administrative efficiency and even economic principle the administration case is good. Those who argue with it are not so much opposed to Treasury freedom as they are eager to accomplish another purpose: a general revision of interest-rate policy. Critics of the administration are in effect proposing a trade—repeal of the interest-rate ceiling in return for looser credit policies by the Federal Reserve System. The heart of the matter is the independence of the Federal Reserve from congressional influence. Congressional Democrats are convinced, with some reason, that in recent years the Federal Reserve has forced interest rates too high, intensified the difficulties of small borrowers, and created an artificial shortage of funds for public purposes. The net impact of these policies has been inhibit growth and increase average levels of unemployment. Congressional reluctance to raise the interest ceiling is a judgment that existing rates are higher than they should be for the welfare of the society. If this is so, then allowing the Treasury to sell long-term securities is the equivalent of giving the purchasers an undeserved bonus over the lifetime of the bonds. On the other hand, if the Treasury sells short-term securities, there may come a time when it can exchange for long-term bonds, but at lower interest rates. No doubt Congress is making an economic judgment after an awkward, political fashion, but it is difficult to see what alternative it enjoys.

In his message, the President was concerned not alone with balancing the Federal budget, but also with holding down its size. Orthodox conservative ideas on this subject are simple enough. Private activity, in general, is to be preferred to public activity because private activity registers individual choices and preferences in a way that the clumsier apparatus of Government cannot match. Private activity is also more efficient because it is sensitive to the stimulus of private gain. Although in complex modern societies government intervention is frequently necessary, the necessity is a source of regret not of joy. If government must intervene, let the unit be as near the voters as possible, preferably the State or the community. In pursuit of these principles, the Eisenhower administration has proposed only timid programs of housing, school construction, and urban redevelopment. In advancing toward even puny objectives, it has displayed a weakness for complex financing devices which center in the commercial banks.

WHO PAYS THE CRIPPLING TAX?

What is a possible alternative position? It is irresponsible to take the danger of inflation lightly. But inflation is dangerous not because of the President's reason, that "every American pays its crippling tax," but precisely because so many Americans do not pay "its crippling tax." Any businessman, speculator, or worker whose remuneration advances more rapidly than prices increase enjoys a benefit, although he may inflict a penalty on others whose fortune is less good. Inflation afflicts pensioners, public employees, teachers, and rentiers. If unchecked, it cripples incentives and distorts production. But it is foolish not to realize that one reason inflation occurrs is that inflation is of immediate benefit to a great many Americans.

How does the budget affect the control of inflation? A budget surplus diminishes total spending by taking out of the income stream more money in taxes than it returns to that stream by its own expenditures. Hence a budget surplus tends to be anti-inflationary. Although liberals as well as conservatives can participate in the President's enthusiasm for a budget surplus at this time, such endorsement need not preclude support of expenditures on a wide range of neglected social objectives. Housing, schools, and medical services are essential to the rectification of the imbalance in our society between private affluence and public poverty. Since private markets fail to house us adequately, guard our health, or make our cities livable, Government action is essential.

The logic and the arithmetic of the simultaneous pursuit of price stability and social progress amount to this: the budget should be more than balanced, and the level of Federal spending on social welfare should sharply rise. The resultant of these two forces is higher taxes. At the moment, in an election year, it would take a courageous Congress to face this fact, for the feelings is still widespread that the tax reduction which former Secretary of the Treasury George Humphrey urged through Congress in 1954 created a sacred ceiling on the taxes that the community should pay. That assumption stands as a major barrier to social progress.

A Resolution Unanimously Adopted by the Twin Falls, Idaho, Chamber of Commerce

---

EXTENSION OF REMARKS
OF
HON. HAMER H. BUDGE
OF IDAHO
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. BUDGE. Mr. Speaker, there follows a very excellent statement in the form of a resolution adopted by the Twin Falls, Idaho, Chamber of Commerce and which I commend to the attention of the Members of Congress:

A RESOLUTION UNANIMOUSLY ADOPTED BY THE TWIN FALLS, IDAHO, CHAMBER OF COMMERCE

Whereas the members of the Twin Falls Chamber of Commerce are vitally concerned with the runaway inflation and deficit spending practices of the Federal Government, particularly in areas that are not concerned with the well-being of the citizens of the United States, and

Whereas we feel the economy of our country and the incentive of industry would be materially enhanced by a tax reduction at the earliest possible date consistent with sound budget principles; and

Whereas we believe effective annual control over Federal spending and debt is seriously hampered by inadequate congressional fiscal procedure and practice, as follows:

1. Congress annually passes many seperate appropriations bills in a piecemeal process with few being related to the cost of others, or to total expenditures, or anticipated revenues, or their effect on the national debt;

2. Congress in recent years has avoided the appropriation process by directly authorizing withdrawal of funds from the Treasury and by authorizing contracts requiring future provision of funds. This type of backdoor financing prevents adequate control of expenditures by the Federal Appropriations Committees.

3. Congress has no procedure to set annual limits on spending. Its own committee reports concede a lack of knowledge of total annual spending as a result of their authorizations until the Budget Bureau publishes its review, after Congress has adjourned.

4. Congress has made many appropriations without taking into consideration funds appropriated in prior years but unspent by certain departments, branches, bureaus, and committees;

5. Congres has apparently failed to scrutinize the needs, effectivenes, purpose, and intent of departments, bureaus, and committees which in the past have been created to answer a specific need and which need or purpose no longer exists;

6. Congress has apparently failed to completely and thoroughly analyze all departments, branches, bureaus, and committees and eliminate costly duplication of efforts.

Whereas we believe better congressional procedures are essential to any long-term and immediate Federal spending: Now, therefore, be it

Resolved, That we urge Congress to act at once to accomplish the following:

1. Place all expenditure authorizations in a single all-inclusive plan and rerelate them annually to revenues for the purpose of assuring an over-all fiscal policy on spending, reduction of taxes, elimination of deficit spending and a reduction of the Federal debt.

2. End practices of back-door financing which circumvent the appropriations process.

3. Take into consideration in appropriating funds for certain departments, branches, bureaus, and committees the unspent funds from prior appropriations.

4. Eliminate the departments, bureaus, and committees which are no longer essential or productive.

5. Analyze all departments, branches, bureaus, and committees in an effort to eliminate costly duplication of efforts.

CARL BERG, *President*.

Attest:

WILLIAM GRANGE, *Secretary*.

Vandalism to Houses of Worship

EXTENSION OF REMARKS

OF

HON. GEORGE M. WALLHAUSER

OF NEW JERSEY

IN THE HOUSE OF REPRESENTATIVES

Monday, February 1, 1960

Mr. WALLHAUSER. Mr. Speaker, I would like to add my voice to those who express shock and horror at the recent outbreak of vandalism to houses of worship and anti-Semitic feeling.

This is evidence of religious intolerance and is shocking to every thinking person, who, I feel certain, must be indignant over these shameful acts.

I sincerely hope that our citizenry has been sufficiently alerted to the serious problem of combating bigotry and will continue to be ready to join in the fight against it.

Six-Percent Differential Held Vital to West-Coast Shipbuilders

EXTENSION OF REMARKS

OF

HON. DON MAGNUSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Monday, February 1, 1960

Mr. MAGNUSON. Mr. Speaker, under leave to extend my remarks, I wish to include in the RECORD an editorial which appeared in the January 16, 1960, issue of the Marine Digest. The editorial, entitled "The Six Percent," relates to the ship construction differential favoring west coast builders on certain Federal Maritime Board contracts. As the editorial points out, it is imperative that this differential be maintained so that the west coast shipbuilding industry, an important segment of our economy, can continue to compete with other areas. I feel confident the combined efforts of the western congressional delegations will be successful in "holding the line."

The editorial follows:

THE 6 PERCENT

All 13 Western States are being asked to join in a combined effort on a maritime matter. At stake is the 6-percent construction differential favoring west coast builders on certain Federal Maritime Board contracts.

The differential was made law in 1936 and was primarily intended to offset the higher cost of constructing ships on the west coast; costs made higher by freight and labor differentials.

It is essential that the Western States get together and fight for the preservation of the 6-percent differential. Shipyard officials have pointed out that its loss will mean the loss of millions of dollars in the next few years to the economies of Western States.

Joe Byington, of Puget Sound Bridge & Dry Dock Co., has brought another point into the open in noting that the 6-percent clause applies only to ships for west coast-based steamship companies and which will be used in service from the Pacific Coast. Byington points out that of the 225 ships to be built between now and 1977, less than 40 will qualify for the 6-percent differential.

Byington has told the newly formed Western Shipbuilding Conference that holding the differential is not enough. The West should have more of the overall total.

Western congressional delegations should waste no time getting together to fight the current effort by Atlantic and Gulf interests to remove the differential, and, if possible, to expand its application to a larger area. The future of west coast shipbuilding depends on the success of such a fight.

On a long-term basis, the Western Shipbuilding Conference has the opportunity to perform a far more valuable service. One of its jobs will be to put together a graphic picture of the thousands of items that go into a ship so that congressional committees can be shown why and where western yards are at an honest disadvantage.

It is doubtful that the Government can go on and on maintaining the shipbuilding differential. There is a growing demand in America to do away with subsidies to special groups, be they farm, airlines, ships, or publishing. Business under special dispensation in the long run, is not healthy business.

The Western Shipbuilding Conference could do a great service to its members if it can pinpoint the differences and start action to eliminate them so that west coast yards can compete on an equal basis with eastern yards.

This may mean changes in freight rates and increases in labor production to offset wage increases. It very well could mean attracting supplier industries to the growing markets of the West so that parts and supplies need not be shipped long distances.

Right now, all in the West should join the fight to hold the line.

Civil Rights

SPEECH

OF

HON. BARRATT O'HARA

OF ILLINOIS

IN THE HOUSE OF REPRESENTATIVES

Wednesday, January 27, 1960

The SPEAKER pro tempore. Under previous order of the House, the gentleman from Illinois [Mr. O'HARA] is recognized for 1 hour.

Mr. O'HARA of Illinois. Mr. Speaker, I have asked for an hour's time and yet I can say all that would cover the subject in a few sentences and still could not exhaust the subject if I spoke for many days. The laws of human deportment and our relationship to our Maker and our fellow man are set forth in a relatively few sentences in the Ten Commandments, but countless millions of words written and spoken in many generations have given them a richness of interpretation and of understanding adaptation to changing conditions as mankind ascends, ever higher, in the climb to the mountain's top.

And so I could say briefly that if we believe in our democracy—and with us our Constitution is a sacred document of political faith and not an instrument of mockery—we cannot hide behind a fence of excuses when the signing of a discharge petition means the opening of the way for millions of our fellow Americans to come into full enjoyment of their constitutional right of participation as electors in a government of, for, and by all the people.

Unless the discharge petition reaches the required number of signatures, civil rights legislation is doomed, and any Member of this body, Democrat or Republican, who refuses to sign the petition must individually take the responsibility of being party to a conspiracy to continue to hold in political bondage millions of his fellow Americans. It is that simple.

I seek to be charitable with all my colleagues, as I trust my colleagues will be charitable with me. I wish, Mr. Speaker, that my colleagues from the North who have not as yet signed the discharge petition would counsel with their consciences. Yes, there may be a political expediency in withholding their signatures, saying the responsibility is upon the Democratic Party and the Demo-

cratic Party is in the majority in numbers in this Chamber; but to their own conscience that cannot be satisfying. They know that on the Rules Committee are all of the Republican members of that committee joined with two Democrats, two Democrats from the South, to keep bottled up the legislation that decency demands and that our security in a troubled world demands. These colleagues of mine on the other side who have not signed the petition know that that is a fact, but I suppose with a sense of political expediency, thinking that the responsibility can be thrown onto the Democratic side, they are withholding their signatures. This may be a partisan advantage, according to the reasoning of some, but in good conscience no advantage is worth the price of continuing on millions of our fellow Americans the chains of political bondage.

Mr. Speaker, I remember in the 81st Congress I was on the committee that wrote a housing bill and my heart was in the enactment of that great piece of legislation. The vote we knew would be very close, and many felt that the adoption of an antisegregation amendment would doom the measure. The leadership regarded the amendment as a device to kill the bill.

There was a teller vote. I saw some of my liberal colleagues from the North, just as sincere in their opposition to segregation as I am, line up and vote against the amendment to save as they felt the housing bill that meant so much to all our people in that period of critical housing shortage. I voted for the amendment. The amendment was defeated by one vote. Had it carried, possibly I would have borne the responsibility of having killed that great housing bill. But I could not have lived with myself unless I had done as I did. Each man must make his own decisions, and I am sure that in this body always they are honest decisions, varying with different philosophies and different approaches. I happen to believe that no material advantage is worth the abandonment of a moral principle.

I was not surprised when I heard a brilliant and distinguished colleague of mine, a Republican from Illinois, Congresswoman MARGARET STITT CHURCH, say that she had signed the discharge petition, and she did it, I know, because of her conscience. She was not thinking as a Republican when she signed the petition nor was I thinking as a Democrat when I signed the petition. You cannot duck conscience in a pool of partisan waters. You cannot play politics with morals. I hope that all my colleagues from the North on the other side of the aisle who sincerely believe in civil rights and who believe that everyone of our Americans should have an equal opportunity to vote regardless of any political expediency and regardless of any whispered counsel from their leadership will come and sign this petition.

Now I am not judging our Democrats from the South. It is not given to me to judge any of my colleagues. They at least are consistent. They realize they are standing for a dying order. An order that has gone and will never return. But they are still standing for it, on the fringe of a lost battlefield. When we had civil rights legislation before the House in the last Congress, it was late in July, I think, a beautiful summer day. Summer was in the full bloom of its enrapturement. Yet, my friends, summer than had been on the path of death for more than a month. Although everything spoke of summer, it was a dying and not a borning summer. Summer was on its way out. That is how it is with the changing order now. So my southern colleagues cannot be accused of hypocrisy or insincerity when they are fighting this legislation which will hasten the coming to the South of a new order and which, when the dread of a change from the status quo is gone, the South will find a much better order.

But what about my colleagues from the North who profess to believe in the equality of the races and who yet are taking this legislation down to certain death and because of a certain weird calculation of political expediency are withholding their names from the discharge petition? Everyone knows the condition in this House. Everyone knows that the Democratic Party elected a majority of the Members of this body, and everyone knows that the Republican leadership outnumbered, formed a coalition with certain Democrats. These Democrats from the South had something they were interested in and the Republicans of the North agreed to play in partnership with them. The price exacted from the Republican leadership was aid in defeating civil rights legislation. We know the condition here. I do not imagine anyone in the country is much fooled. Four Republican members of the Rules Committee joined up with 2 southern Democratic Members to keep civil rights legislation bottled up in the Rules Committee is so self-evident that any civics teacher in any high school would be ashamed of any pupil who missed the point.

Mr. CUNNINGHAM. Mr. Speaker, will the gentleman yield?

Mr. O'HARA of Illinois. I gladly yield to my distinguished and beloved friend from Nebraska.

Mr. CUNNINGHAM. The gentleman, my dear friend, states that four Republican members of the Rules Committee voted to kill this legislation. I do not believe there has been a vote on it yet in the Committee on Rules; is that not so?

Mr. O'HARA of Illinois. I am very sorry that my inadequacy in handling the English language caused me to be misunderstood by my distinguished colleague. Would the gentleman say there are any Republican Members on the Committee on Rules who have shown any interest at all in voting out this bill? Will he give me the name of one Member?

Mr. CUNNINGHAM. In answer to the gentleman, I think the only way you can know the truth is to have the majority party bring the matter up for a vote so that that could be determined. I do not believe that we, as responsible Members of this important body, can go on the basis of guesswork.

Mr. O'HARA of Illinois. I think the gentleman is right—there should not be any guesswork about it. But where I find a great moral issue involved and find on one side four Members, and they are Republicans and they are from the North, standing up like a stone wall with two southern Democrats and not moving—I do not think I have to resort to any guesswork.

Mr. ROOSEVELT. Mr. Speaker, will the gentleman yield?

Mr. O'HARA of Illinois. I am happy to yield to the gentleman from California.

Mr. ROOSEVELT. May I say to the gentleman that it is a well-known fact that the members of the Rules Committee may request a meeting of the Rules Committee at any time. Certain Democratic Members have indicated a desire to have that meeting. They have not been able to have it, but if just one of the Republicans joined with them in that request they could have a meeting, but as long as they are not able to get one Republican, a meeting cannot go forward. If three or four Members would indicate that they would come to that meeting, the Democrat Members have already indicated that they are happy to join them. But until their Republican friends do that, there is nothing to happen in the Rules Committee.

Mr. CUNNINGHAM. Mr. Speaker, will the gentleman yield?

Mr. O'HARA of Illinois. I am glad to yield. I am looking for some logic on your side.

Mr. CUNNINGHAM. Yes; and I will spell it out to you. I am looking for some logic on your side other than the political maneuvering that is going on here today. You made this statement: The Rules Committee has four Republicans voting with two Democrats, and they could get this legislation out. Earlier in your remarks, and I congratulate you for it, you said it is the responsibility of the majority party to bring about this legislation. My question is this: Do you feel that six of the Democratic members on the Rules Committee are not in favor of bringing out this legislation?

Mr. O'HARA of Illinois. I do not know that I have any feeling at all, except what one may have when he sees something just as plain as one's hand before one's eyes. I see on the Rules Committee four Republicans and two Democrats joined up against the solid northern Democratic membership of that Committee. I know that if one of the four Republicans budged we would have this legislation out.

Mr. CUNNINGHAM. I am wondering, then, if there is involved in your comment a criticism of the other Democratic members of the Rules Committee? If the leadership is in favor of this legislation why could they not make a change in the personnel on the majority side of the Rules Committee, which is within their power to do? In other words, when

this Congress was organized in January, the members of the various committees were drafted and approved by the leaderships on both sides. If this matter is as desperate as many think it is and it is bogged down and we are having all this controversy, if the Democratic leadership is genuinely interested in getting this out without making a political football out of it, it would seem to me the Democratic leadership could make a change in the Democratic membership on the committee.

Mr. O'HARA of Illinois. My friend, let me say this. I was seeking to sympathize. I do not like to see my Republican colleagues from the North put on the rack by their own leadership. It will be hard for them to explain. May I ask the gentleman, Has he signed the discharge petition?

Mr. CUNNINGHAM. The gentleman from Nebraska has signed the discharge petition as I stated before.

Mr. O'HARA of Illinois. I congratulate the gentleman, but I am not surprised. While there is no one on his side of the aisle who is more loyal to his party, and we all recognize his ability, I have observed that on moral issues like this he votes with his conscience.

Mr. CUNNINGHAM. The gentleman makes the statement that he just made because that is the basis on which it ought to be determined and not on a political basis.

Mr. ROOSEVELT. Mr. Speaker, will the gentleman yield?

Mr. O'HARA of Illinois. I yield.

Mr. ROOSEVELT. The last remark of the gentleman from Nebraska I think is illustrative of the type of argument which has obstructed us very much.

He knows as well as I do or anybody else in the House does that to change the members of a committee at this time in this session would be simply asking for the impossible. We also know that actually it was a question, as the distinguished gentleman from Illinois has said, a question of the individual. Four of them we know honestly and conscientiously do not want a civil rights bill. Four of the Democrats have said openly they want one and would vote for it. Four members on the Republican side have said they would support the civil rights legislation. It is simply a question of arithmetic then. Why will not the four Republican members who profess to be for civil rights join with the four Democratic members who are for civil rights and get the bill out? Why can we not argue it on the basis of merit rather than of partisanship? Let the four Republican members who said they are for civil rights show it by their actions.

Mr. CUNNINGHAM. Mr. Speaker, will the gentleman yield for a response to the gentleman from California?

Mr. O'HARA of Illinois. After I have yielded to the gentleman from Illinois [Mr. YATES]. I promised him I would yield.

Mr. YATES. I have a statement to make. May I make my statement?

Mr. O'HARA of Illinois. I will very much appreciate my friend and colleague joining me in the well.

Mr. YATES. I thank the gentleman for yielding to me.

Mr. Speaker, I would like to join the gentleman from Illinois in his excellent statement this afternoon.

The debate this afternoon is a most important one in making clear the position taken by the Democratic Party and the Republican Party in the field of human welfare and civil rights. Of late, the Republican Party has professed to be the champion of the little man and of minority groups. Its members are loud and strong in their profession of advocacy of the civil rights program; but there is little action to support their protestations. They are now continuing the record they have made over the years, and they cannot deny it.

Let us look at the record. The record shows it was the Democratic Party through the New Deal and Fair Deal which first gave impetus to the hopes of the minority groups in America. Their programs brought a social revolution which changed the people's attitude toward their government.

As explained by Republican editor William Allen White, the victory of the Democrats indicated a firm desire on the part of the American people to use government as an agency of human welfare.

Under this concept, the powers of government were used by Democratic administrations to assure the American people of the right to a useful and remunerative job; of the right to earn enough to provide adequate food, clothing, and recreation; of the right of every farmer to raise and sell his products at a return which would give him and his family a decent living; of the right of every businessman to trade in an atmosphere of freedom from unfair competition and domination by monopolies; of the right to a decent home; of the right to adequate medical care and the opportunity to achieve and enjoy good health; of the right to a good education for their children; and of the right to adequate protection from the economic fears of old age, sickness, accident, and unemployment.

Taking action to achieve these goals, the Democratic Party initiated legislation for a minimum wage law; for a full employment law; for a Federal aid to education bill; for raising health standards through adequate medical care; for good housing, including public housing; for a farm bill that would permit farmers to live in decency; for unemployment compensation and for social security.

And all this time what were the Republicans doing? They were opposing every single one of the New Deal measures. The record shows that all the social reforms which are recognized today as being an essential part of our democratic way of life were enacted into law in spite of—not because of—the Republican Party.

Why did they oppose such reforms? They said they were socialistic.

Socialistic: Not to all Republicans. The Democratic program was not socialistic to Dr. Channing H. Tobias, for example, who at the time was an independent Republican. He said that he proposed to support President Roosevelt in 1944 "because his philosophy of government and the generally progressive course he has followed for the past 12 years have vested the common man of every race, creed, and color with a dignity and inspired him with a hope that he has never known before."

Dr. W. E. B. DuBois, after looking carefully at the record, was convinced "without the slightest doubt that Franklin D. Roosevelt has done more for the uplift and progress of the American Negro than any President since Abraham Lincoln."

And with respect to President Truman, Mr. Thurgood Marshall—one of the most respected attorneys in Washington—had this to say in a radio interview when he was asked about possible presidential candidates in the last presidential election:

> The candidate that gets nearest to Harry S. Truman will more than likely get the votes of the people who believe in civil rights. That's my belief.

It is to be expected that these outstanding leaders would so express themselves. The rise of the average American under the Roosevelt reforms was unbelievable. Knowing that there could be no true freedom unless there is freedom from want, the New Deal of the Democratic Party set about first the elimination of the ravaging effects of poverty, and bringing a dignity to the forgotten man that he never before enjoyed. Both the President and Mrs. Roosevelt gave him a recognition and the feeling that he was a necessary part of the community—that he belonged.

And as for Harry Truman, he became the symbol of progress in the field of human rights. It was he who established the first commission to study the complex problems of assuring every citizen's constitutional rights. It was he who fathered the greatest all-round legislative program in the field of civil and constitutional rights this country has ever known.

Yes, and it was he who stayed by that program right through the 1948 Democratic Convention and right through the election, even though he knew it might split his own party and cost him the Presidency. And year after year President Truman kept urging his program on the Congress.

Just compare President Truman's actions with those of the present administration. Under President Truman the Federal Government stood squarely behind the constitutional rights of all individuals. Shortly before he left office he stated his view of the responsibility of Federal Government in this field.

> I am not one of those—
>
> He said—
>
> who feel that we can leave these matters up to the States alone, or that we can rely solely upon the efforts of men of good will. * * * The full force and power of the Federal Government must stand behind the protection of rights guaranteed by our Federal Constitution.

I was in the 81st Congress when the civil rights bills were filed to implement

the civil rights program, as recommended by President Truman's Commission. They might have been passed if the northern Democrats had received the cooperation rather than the opposition of the northern Republicans. But because most of the members of the Republican Party chose to work with reactionary Democrats from the South, the bills were defeated.

For example, I remember very well the fight on an FEPC bill in 1950 because I was right in the middle of it. After months of maneuvering the bill finally came to the floor on Washington's birthday, February 22d. The southern Congressmen who opposed the bill fought it with the only filibuster that the House knows, quorum calls and roll calls. Even though the bill had been made the legislative business of the day, after completion of the reading of Washington's address, which is always done on his birthday, Congressman Cox of Georgia got up and moved that the House adjourn out of respect to the memory of George Washington. Time after time that day I watched Republican Members of the House walk off the floor so that a quorum call could be made by a southern Member. A quorum call takes 40 minutes. There were about 10 of them.

We got a vote on FEPC at 3 o'clock the next morning. Those of us who favored the strong bill watched with dismay when a substitute bill which took away all the enforcement powers of FEPC was offered. Was it offered by a southern Democrat? It was not. It was offered by the ranking Republican member of the Committee on Education and Labor, and the Republicans approved it. On that vote, a majority of the Democrats voted against the substitute bill. Sixty-eight percent of the Republicans voted for it.

In all the legislative battles when southern Democrats have fought civil-rights measures, it was the northern Democrats, rather than the Republicans, who led the fight against them. A few years ago Congressman WINSTEAD, of Mississippi, offered an amendment to the Selective Service Act which gave the right to every inductee to serve in a segregated outfit, if he chose. That amendment, which was approved by the House Armed Services Committee, was defeated on the floor of the House because of a magnificent speech by Congressman WILLIAM L. DAWSON, of Chicago, delivered in support of the motion to strike it out filed by another Democrat, Congressman PRICE, of Illinois. Congressman DAWSON, a Democrat, is the first Negro chairman of a major congressional committee in the history of the Nation.

Nor is Congressman DAWSON the only member of the Negro race in Congress. Three other Negro Members grace these Halls—and all are in the Democratic Party. None are from the Republican Party.

The record shows that the Republican Party has fought public housing; it has fought the minimum wage law and subsequent increases; it has fought social security and increased coverage and benefits; it has fought unemployment compensation; it has fought appropriations for health measures and hospitals; it has fought FEPC; it has fought Federal aid to education. It has fought all progressive legislation.

But now the Republicans say forget the past. We have a new Republican Party. We are now the party of Eisenhower. We are "modern Republicans." Forget the fact that the Republican Party did little to help the average man when it was in power. Forget that the Republican Party fought all measures for the people. Forget that it is the party of big business. This is a new party, say the Republicans.

Well, former President Calvin Coolidge was once asked the question: "Mr. President, do the people where you come from say a hen lays or a hen lies?" Mr. Coolidge replied: "The people where I come from, sir, lift her up to see."

Let us lift up the hen and take a look at the new Republican Party. What has the President done in the field of civil rights? In contrast to the fighting leadership given to the civil rights program by Harry Truman, President Eisenhower has done little or nothing. During the first 3 years of his administration he presented no civil rights program at all to the Congress. And when the Supreme Court handed down its decision in 1954, regarding school desegregation cases, did the President hail the decision? Did he take steps to implement or encourage communities to carry it out? He did not. He has not to this day declared that he favors that decision. He has not declared at any time that he favors the elimination of segregated schools.

Did President Eisenhower include FEPC in his program? He did not. The President has stated that he is opposed to FEPC. A few years ago when Secretary of Labor Mitchell testified before a Senate committee that he favored a strong FEPC with enforcement provisions, the President declared that Secretary Mitchell was entitled to his opinion. As far as he, the President, was concerned, he did not agree with him.

A civil rights bill was passed a few years ago, the first one in 80 years. It was a democratic Congress which passed it and it is true that many Republicans helped by voting for the bill. It is also true that the bill that was passed had the support of the administration. Passage of that bill established the fact that in order to obtain passage of civil rights measures, Republicans must join with Democrats in supporting the legislation. And Republicans helped pass that bill.

Why, then, should they now refuse to take similar action on the pending bill? It is a moderate bill. They have no reason to oppose it. Why do they not join with Northern Democrats in signing the discharge petition so that the bill may be considered by the Congress? Why does the minority leader draw himself up in parliamentary dignity and declare that he favors orderly procedures for the bill and that "this is a Democratic Congress. The Democrats have the responsibility for enacting the bill." He knows very well that the Democratic Party, being a national party, and having Members from the South, will find a number of Democrats refusing to vote for the bill. That same attitude prevails among Republican Members from the South and from the border States as can clearly be disclosed by an examination of the voting records of Members from such States. But Republicans from Northern States have no reason to act like their southern brothers. The Republicans from the North are not bound by southern prejudices and customs on civil rights legislation.

In a few days the Republican Party will represent itself as the party of Abraham Lincoln in speeches and banquets all over the United States, made and held to celebrate the martyred President's birthday, but if Abraham Lincoln were to see the manner in which the members of the Republican Party were procrastinating on the civil rights bill he would abjure his party membership.

Mr. Chairman, the choice is clear. Almost without exception, Democrats from the North have signed the discharge petition to bring the civil rights bill to the floor. Almost without exception, Republicans have refused to sign it. They will make excuses, but they cannot gainsay their record. Let them, if they can, henceforth go to the people and state again that they favor civil rights legislation in the face of that record.

The point of President Coolidge's story which I related earlier becomes clear. The hen has been lifted and the results speak for themselves.

I listened to what my good friend from Illinois said a few moments ago of the time that both he and I were in the 81st Congress. We had certain legislation that we had to consider. I am sure that he recalls, as I do, the fight we had for the passage of the FEPC bill and that we learned at that time of the coalition, which is echoed today, the coalition of the reactionary or conservative Democrats from the South and the conservative Republicans from the North. I recall after months of maneuvering how the FEPC bill came to the floor. It was Calendar Wednesday. It was Washington's Birthday, as a matter of fact. I recall that immediately following the reading of Washington's farewell address, Mr. Cox of Georgia got up and moved that the House adjourn out of respect for the memory of the ex-President. Of course, that was voted down. But there was quorum call after quorum call when Republican Members left the floor in order to permit the Democrats from the South to make a point of no quorum. There were 10 or 12 quorum calls that were resorted to because it is only through quorum calls that a filibuster can be carried on in the House. It was 4 o'clock in the morning that we finally got a vote on the FEPC bill.

The gentlemen will recall that one of the votes we had touched upon the question as to whether or not we should have a strong FEPC bill or whether we should have a weak FEPC bill. There was a substitute offered for that FEPC bill which pretty much weakened it. The gentleman will recall who offered that amendment. It was not a Democrat

from the South who offered that amendment. It was the ranking Republican member of the Committee on Education and Labor. That amendment carried because of the votes of the southern Democrats and the Republicans. On that vote a majority of the Democrats voted against the substitute bill. Sixty-eight percent of the Republicans voted for it.

In all the legislative battles in which southern Democrats have fought civil rights measures, it was the northern Democrats rather than the Republicans who led the fight against their brethren from the South.

A few years ago the gentlemen will recall when the gentleman from Mississippi [Mr. WINSTEAD] offered an amendment in the Armed Services Committee to permit segregation in the Armed Forces because of race. When that bill came to the floor of the House one of our colleagues from Illinois [Mr. PRICE] offered an amendment to delete the Winstead proposal from the armed services bill, and it was a Member from Illinois, Mr. WILLIAM L. DAWSON, a Democrat, the first Negro chairman of a major congressional committee, who made the speech that swept the House and resulted in elimination of the so-called Winstead amendment.

I think we should point out, insofar as party adherence to civil rights is concerned, and the loyalty of minority groups to either party, that the gentleman from Illinois [Mr. DAWSON] is not the only member of his race in the House of Representatives. There are other Members, but all of them without exception are in the Democratic Party. None of them is in the Republican Party.

The record shows that the Republican Party has fought public housing, it has fought the minimum wage law, it has fought social security, and increased coverage and benefits; it has fought unemployment compensation; it has fought appropriations for health measures and hospitalization; it has fought FEPC, Federal aid to education. It has fought all progressive legislation. But now the Republicans are saying this: 'They were saying this when they desclared that they were modern Republicans. They said, "We have a new Republican Party. We are not the party of Eisenhower. Let us forget the fact that the Republican Party did little to help the average man when it was in power; forget that the Republican Party fought all the measures of the people, that the Republican Party supported all the measures of big business. This is a new party," now say the Republicans.

My colleagues will recall former President Calvin Coolidge who was once asked the question: "Mr. President, do the people where you come from say 'A hen lays' or 'A hen lies'?" Mr. Coolidge relied: "The people where I come from, sir, lift her up to see."

Let us look at the record. Let us lift up the hen and take a look and see whether the new Republican Party is a champion of civil rights. What has the President done in the field of civil rights and what has his party done in the field of civil rights in contrast to the fighting leadership which was given to the civil rights program by President Harry Truman? President Eisenhower has done little or nothing, certainly during the first 3 years of his administration, at a time, sir, when the Republican Party was in control not only of the White House, but when the Republican Party, during the 83d Congress was in control of both Houses of Congress. Not one step was taken to implement a civil rights program. There were no Democratic chairmen of committees at that time to whom the Republicans now point to and say "Look what is happening." At that time the committee chairmen were all Republicans and yet there was no program that was given to the Congress. There was no program that emanated from the Republican Congress in support of civil rights. And, when the Supreme Court handed down its decision in 1954 in the school desegregation cases, did the President hail the decision? He did not. Did he take steps to implement it? Did he take steps to encourage communities to carry it out? He did not. As far as I have been able to determine nowhere have I read that the President of the United States has declared that he favors the decision of the Supreme Court in the school desegregation cases. He has declared only that it is the law and that he proposes to carry it out. And, has President Eisenhower, since he made that statement recommending civil rights, included FEPC in the program? He has not. FEPC was last heard of by a President when Harry Truman was in the White House. As a matter of fact, President Eisenhower has declared that he opposes FEPC, and this declaration of opposition came in response to a question by the press after Secretary of Labor Mitchell had declared before a Senate committee that he favored FEPC. The President was asked whether he agreed with Secretary of Labor Mitchell, and he said, "No, the Secretary is entitled to his own opinion."

A civil rights bill was passed a few years ago, the first one in 80 years. It was a Democratic Congress which passed that bill. And, it is true that the Republicans helped by voting for that bill. It is also true that the bill had the support of the administration. I suggest and urge my friend from Nebraska to listen to this, if I may, because of the interchange which occurred a few moments ago, because of the passage of that bill I think the principle was established that the Republicans, if they favor civil rights, must join with Democrats who favored civil rights in the passage of that bill, too. The Republicans helped pass that bill. Why do they not now help in passing civil rights legislation? Why do they not join with northern Democrats in signing the discharge petition so that the bill may be considered by the Congress? Why does the minority leader draw himself up in parliamentary dignity and declare that he favors orderly procedure for the bill and also states that this is a Democratic Congress and that the Democrats have the responsibility for enacting this legislation? He knows very well that the Democrats, being a national party, have members from the South who will refuse to vote for the bill. But, let me point out, too, that there are a few Members of Congress who are Republicans who come from Southern and border States, and these, too, have demonstrated, and the record is clear on this, they have demonstrated in every vote that has come up that they will vote in accordance with the same standards and in accordance with the same customs as the Democrats from the South vote. The Republicans from the North, however, are not bound by southern prejudices, they are not bound by southern customs on civil rights legislation.

Mr. CUNNINGHAM. Mr. Speaker, will the gentleman yield at that point?

Mr. O'HARA of Illinois. I yield to the gentleman.

Mr. CUNNINGHAM. As I said earlier, that is another in a series of excuses and alibis because the gentleman's party does not assert and cannot assert responsible leadership. So they alibi here. Speaker after speaker all afternoon has talked about their dear friends in the South, who have their convictions and their ties, but they cannot and do not sign the petition. That is just an excuse, an alibi.

Mr. YATES. Does the gentleman deny that it was a combination of Republicans and Democrats who passed the first civil rights bill in 80 years during the 84th Congress and only because there was a union of voting of Republicans and Democrats that the bill was passed? The gentleman now, after having accused us of making political capital and political maneuvering, seeks to state that we are making excuses. We are making no excuses. We are declaring that those who come from the South, whether they be Republicans or whether they be Democrats—and the record is clear to substantiate this point—if they come from the South they will vote against civil rights legislation. That is why it is essential that those who come from the North, if they favor passage of civil rights legislation, should join in support of it.

Mr. CUNNINGHAM. I should like to make the observation in view of what has been said that it must just be a coincidence then that for the first time in 80-odd years we had a civil rights bill, and that is when we had a Republican in the White House.

Mr. YATES. On the contrary. It was a coincidence that that occurred, but it was a coincidence, too, that the Republicans joined with the Democrats. The Republicans did not join with the Democrats in earlier days. Let me point out that with respect to the other body, part of the difficulty lay in their filibuster rule, and the one who saddled that filibuster rule until the recent change, upon the other body, was not a Democrat, but the late Senator Wherry, a Republican from Nebraska, as the gentleman well knows.

Mr. CUNNINGHAM. It has been stated here—it was a surprise to me, just lately after hearing all of the other talks—that there are some northern Members of the gentleman's party who have not signed. The impression has

been given that all of the northern Members have signed, and it was just the southern Members who have not signed.

Mr. YATES. I do not know just what the situation is with respect to the signing of the petition, but I would declare without that knowledge, and I would be willing to bet upon it, that almost without exception the Democratic Members from the North have signed that petition. There are some who have not. I would be willing to declare further that almost without exception the Members from the North in the Republican Party have not signed that petition. I would be willing to place that petition in the RECORD, if it were in accordance with the rules. But I think that my assertions will be substantiated.

Mr. CUNNINGHAM. I would only suggest that with the few signatures that are still needed the responsible members of the majority party pushing this petition might want to convince their northern members that they ought to sign, and if they did that maybe they would have enough signatures.

Mr. YATES. I would suggest to the gentleman that if every Democrat from the North were to sign that petition it would still not make up the necessary number to bring the bill to the floor. But, regardless of that point, the gentleman has been very vociferous in urging that politics not be a part of this deliberation. Why should not members of the Republican Party from the North join Democrats from the North in bringing the bill to the floor and permitting us to work its will on it? Does not the gentleman favor it? Of course he does, because he signed the petition.

Mr. CUNNINGHAM. I am sorry that the gentleman was not on the floor earlier when that subject was thoroughly discussed. If he had been, he would know, from having listened to the various speeches that they were loaded with political implications and the presentation this afternoon is clearly a political matter.

Mr. YATES. What is a very political matter?

Mr. CUNNINGHAM. That this whole afternoon was a political maneuver, a very critical series of statements that brought politics into this, directed at the minority party.

Mr. YATES. I am glad the gentleman recognizes a political maneuver, because certainly the Republican Party has been engaged in political maneuvering with the Southern members of our party for a long time. I am sure that if there is any political maneuvering going on the Republican Party is well aware of it. I think it is appropriate that we have this discussion at this time because in about 2 weeks the Republicans will go back to their districts all over the country and will attend Lincoln birthday banquets and will pose as the champions of civil rights in the name of Abraham Lincoln. I declare that if Abraham Lincoln were to see the way in which Members of the Republican Party are procrastinating now in asserting their championing of the cause of civil rights—and this is the test; this bill is the test—I feel quite sure he would abjure his party membership.

Mr. CUNNINGHAM. The fact remains that the Democratic Party has a 2 to 1 majority. It has a strong platform on civil rights. I presume that you speakers went up and down the country proclaiming the platform in order to secure votes. The people saw fit to give you a 2 to 1 majority here in the Congress. One of the things that you said you were going to do was to pass civil rights legislation. The simple fact is that you have not done it; you have not been able to bring civil rights legislation to the floor of this House of Representatives. The people are going to know that the responsibility rests upon your shoulders, and no amount of alibiing and excuses can change that.

Mr. YATES. I would suggest to the gentleman that the people will know where the responsibility lies. The administration has declared that it is for civil rights. The gentleman cannot tell me that if the administration wanted the members of the Rules Committee from the gentleman's department to clear the civil rights bill to the floor—and we have four Members on our side of the Rules Committee who are willing to bring the bill out—it would not do so. There has been no indication from the President or from the White House that this is what he wants.

Secondly, you cannot tell me that if the Members of the gentleman's party wanted to consider civil rights legislation, and they say they want to consider it, they could not have it by signing the discharge petition.

Mr. CUNNINGHAM. On the statement the gentleman has just presented, by the same token if the leadership on his side of the aisle, the Speaker and the majority leader, also wanted civil rights legislation passed, they certainly would have just as much influence on your eight members as the President would have on our four members of the Rules Committee.

Mr. YATES. I do not say to the gentleman that they have not used any, but I say to the gentleman he was exactly wrong because I am sure that just as he stated that members of my party went through the length and breadth of the land in the North and through our districts campaigning on a program of civil rights, so did members of my party go through their districts in the South campaigning against the program of civil rights and that those members of the Committee on Rules who voted for such a bill would be going against their pledges to their people.

Mr. CUNNINGHAM. I would only make the observation at this point that your party evidently runs on two different platforms.

Mr. O'HARA of Illinois. Mr. Speaker, while I am very happy to yield to all my colleagues, and I believe I have been generous in yielding time, my time is running out. I am happy that the conscience of my good friend from Nebraska is clear since he signed the discharge petition. I do not want to remain in the embarrassing position of continuing to apologize for his colleagues who have not signed the petition.

Mr. CUNNINGHAM. I shall not do that, and may I say to my colleagues I have not done that. It is clear to me that all of the apology comes from the Democratic side of the aisle. Theirs must be an extremely embarrassing position. I recognize their situation. I have charity in my heart for them. I have charity in my heart for anyone that is down on his luck. So I signed the petition—I want to help them out.

Mr. STRATTON. Mr. Speaker, will the gentleman yield?

Mr. O'HARA of Illinois. I am delighted to yield to my colleague from New York.

Mr. STRATTON. Mr. Speaker, I have been interested in the colloquy of the two gentlemen from Illinois and the gentleman from Nebraska on this subject. I am inclined to agree with the gentleman from Nebraska that this subject should not be a subject of partisan concern. It ought to be a subject and an issue on which Americans of good will in both parties can unite. I want to express my appreciation to both of the gentlemen from Illinois, who are in the well and the other Members who have taken time this afternoon to bring this issue to the attention of the House and the American people. I would like to join with them, Mr. Speaker, particularly to appeal to my colleagues in New York State and, particularly, in the upstate area of New York, part of which I have the honor to represent, to join with me regardless of party in signing the discharge petition. It is my understanding that very few of the gentlemen from my area of the State on the other side of the aisle have signed this petition. I hope, as the result of the discussion that has been had here today, they will reconsider their decision and see fit to join us in our endeavor to bring this legislation to the floor.

Mr. Speaker, as a new Member of this body, I was somewhat concerned as to whether one should sign a discharge petition and whether this was really a proper device to use. We have heard reference today to doing things in an orderly fashion. Well, let me say that I have examined the situation and ascertained to my satisfaction, at least, that this was the only practicable way in which adequate civil rights legislation could be brought before this body for action. Therefore, it seemed to me that anyone who is genuinely in favor of civil rights he had a personal responsibility to sign the petition which, as a practical matter, would alone make it possible for the House to take action on civil rights. We have heard references today to people in either party who may or may not be in favor of the principle of civil rights, and there are certainly many in my own party who have made it clear that they are vigorously opposed to civil rights. But just because of this fact, Mr. Speaker, there is all the more responsibility on those Members who have previously expressed themselves as being in favor of civil rights to join in taking the only step

that can be taken to get this bill out and onto the floor of the House. In fact I think there is some degree of responsibility on the part of every single Member who says he favors civil rights and yet who hesitates to sign this petition—a real responsibility that he will have to face up to later on in terms of his own conscience, and, perhaps, to the electorate if this legislation does not get onto the floor for action. Indeed, those who would suggest that the petition not be signed are suggesting that Members abdicate a responsibiliity which I believe they cannot abdicate.

May I say, having had the opportunity over the recess to visit in a number of countries abroad, I think the world is looking to us for leadership in this matter. Oftentimes we have been inclined to think of this kind of leadership just as a matter of passing out a few million or billion dollars. Here is an opportunity for us to assume real world leadership and it is not going to cost us a nickel. This legislation is a matter of moral leadership which may in the long run be even more effective than some of the money we have been spending in past years.

So I want to urge my colleagues, Mr. Speaker, particularly from the upstate area of New York, where we, too, are concerned with the problem of civil rights, to join with us in signing the discharge petition. I thank the gentleman for being so courteous and for yielding so that I might make this statement in support of his point of view.

Mr. YATES. Mr. Speaker, the choice is clear. Almost without exception, as I stated before, the Democrats from the North have signed the petition, and almost without exception the Republicans have not signed the petition.

In passing, I want to congratulate the gentleman from Nebraska for having signed the petition.

I wish that his influence and his example could prevail upon his colleagues to join with him. But we will hear excuses from the Republicans. We have been accused of making excuses, but the fact is we are taking every step we can to bring the civil rights bill to the floor, and the Republicans are not joining with us. Let them, therefore, if they can, henceforth go to the people and state again that they favor civil rights legislation in the face of that record.

Mr. Speaker, the point of President Coolidge's story as I related earlier, becomes clear. The hen has been lifted, and the results speak for themselves.

I thank my colleague from Illinois for yielding.

Mr. O'HARA of Illinois. I thank my distinguished colleague from Illinois for his valuable and inspiring contribution.

Mr. ROOSEVELT. Mr. Speaker, will the gentleman yield for a consent request?

Mr. O'HARA of Illinois. I yield.

Mr. ROOSEVELT. Mr. Speaker, I ask unanimous consent that the gentleman from Pennsylvania [Mr. RHODES] be allowed to insert his remarks at the conclusion of those of the gentleman from Illinois.

The SPEAKER. Is there objection to the request of the gentleman from California?

There was no objection.

Mr. BURDICK. Mr. Speaker, will the gentleman yield?

Mr. O'HARA of Illinois. I yield.

Mr. BURDICK. I should like to commend the distinguished gentleman from Illinois for his stirring addresses this afternoon, and also commend the other speakers, the gentleman from California [Mr. ROOSEVELT], the gentleman from New York [Mr. CELLER], and the others who made such fine presentations this afternoon.

Mr. O'HARA of Illinois. Mr. Speaker, I think the issue has been made clear. The Speaker of this House, and the majority leader both have encouraged Democratic Members of this body to sign the discharge petition, and that is something most unusual for the leadership. It is because of a realization on the part of the Speaker and of the majority leader that there is involved in this a great moral issue—and the strong and effective civil rights legislation—to which the Democratic Party is pledged. So they have encouraged the Democratic membership to do the unusual thing as a recommendation of the leadership, to sign the discharge petition.

As I understand it, practically all of the northern Democrats have signed the petition. I doubt that there are any northern Democrats who have not signed. Relatively few of the Republican Members have signed the petition. If more Republican Members from the North do not sign, civil rights legislation is dead.

I know that in my district I will be judged not by what my colleagues from the South might have done or anybody else might have done; I will be judged in my district by the fact that my name is on the discharge petition. I am sure that will be true of every Member of this body, Republican as well as Democrat. People are not fools. People have common sense. You cannot go in the northern districts and say: "Well, I am for civil rights but when I had the opportunity to bring about the consideration and enactment of strong civil rights legislation I held back." No, no; people do not take that sort of thing.

And I am not criticizing any of my colleagues. I know how sincere the gentleman from Nebraska was when he was standing up here making a fight, I will not say for the honor of his Republican colleagues, but certainly his conscience was bothering him for them. He had signed the petition; there was not any holding back on his part. He did not say: "Well, now, maybe there will be a party advantage in not signing this discharge petition; maybe we can put the Democrats on the spot; maybe we can say that Speaker RAYBURN and Leader MCCORMACK and the Democrats killed this"; no, he went in and signed the discharge petition. Then, I think a little bit concerned for his Republican colleagues who had not taken the same step, he stood up valiantly fighting against reason, logic, and commonsense to preserve their honor, as it were.

Mr. CUNNINGHAM. Mr. Speaker, will the gentleman yield?

Mr. O'HARA of Illinois. I yield to the gentleman from Nebraska. He and I have a common interest. We both have signed the discharge petition.

Mr CUNNINGHAM. I want to make just a brief comment. I have always, had a clear conscience and I do not worry about the other fellow's. That is no one's business but his own.

Mr. O'HARA of Illinois. I congratulate and commend the gentleman.

Mr. McCORMACK. Mr. Speaker, will the gentleman yield?

Mr. OHARA of Illinois. I yield to the distinguished majority leader.

Mr. McCORMACK. In relation to the observation my friend just made, may I say that when my conscience is clear I am sometimes very much concerned about the conscience of some of my friends.

Mr. KOWALSKI. Mr. Speaker, will the gentleman yield?

Mr. O'HARA of Illinois. I yield to the gentleman from Connecticut.

Mr. KOWALSKI. Mr. Speaker, we are talking about conscience. This brings my thoughts back to World War II in Europe. At that time I was Chief of Training in ETOUSA Headquarters. We received a directive which was inspired by our great war leader, President Roosevelt. It came through Eisenhower's Headquarters directing my section to develop a policy for the integration of Negro soldiers into our white American units. As you may know, in those days we had Negro tank battalions, Infantry battalions and truck companies. I was privileged with another Member on the other side of the aisle who was then an officer in my section to write the initial policy for this integration. Later I had an opportunity to visit some of the units into which the Negro soldier had been integrated. I saw Negroes fighting and dying shoulder to shoulder with our white American citizens.

Today it would seem to me President Eisenhower might search his conscience and make an effort to assist those same Negro soldiers who fought so well in Europe to secure the right to vote. In the light of his great influence, he could do so much with a few words addressed to the right people to urge our Republican colleagues to sign the discharge petition.

Mr. O'HARA of Illinois. I thank my distinguished colleague from Connecticut for his valuable contribution and his poignant suggestion of a Presidential directive to the Republican members of the House who have not signed the discharge petition. I have no doubt a word from the President, or even a quiet word from the able minority leader, would have results.

I have not any doubt that many of our Republican colleagues who have not signed the discharge petition are thoroughly sincere. I think they are just as sincere as our colleagues from the South who have not signed. They are against civil rights legislation. But I do wish they would come out and let us know. We can respect any man if we

believe he has sincerity in his convictions. But we do not like hypocrisy. We do not like them saying, "Yes, we are for civil rights," when they are not. We do not like people playing both sides of the fence.

The issue, Mr. Speaker, is crystal clear. He who signs the discharge petition is for the enactment of strong civil rights legislation. He who refuses to sign, under whatever pretext, is on the other side of the fence.

Washington Report

EXTENSION OF REMARKS
OF
HON. BRUCE ALGER
OF TEXAS
IN THE HOUSE OF REPRESENTATIVES

Monday, February 1, 1960

Mr. ALGER. Mr. Speaker, I include the following Newsletter of January 30, 1960:

WASHINGTON REPORT
(By Congressman BRUCE ALGER)

The 1961 Federal Budget is 1,030 pages, weight 4 pounds, 4 ounces, and filled with detailed expenditure figures for every branch of Government. Estimated expenditures are $79.8 billion, estimated receipts, $84 billion. The budget does not, however, cover all Federal moneys. The cash flow or cash budget (including trust funds of all kinds) is estimated at $94 billion expenditures and $102 billion receipts. The $4.2 billion debt repayment suggested by the President is recognition of the need in more prosperous times of reducing the debt, instead of constant deficit financing no matter what the shape of our economy. The latter course is the road to ruin. Here's an example of budget language:

"The budget presents a balanced program which recognizes the priorities appropriate within an aggregate of Federal expenditures that we can soundly support. I believe the American people have made their wishes clear: The Federal Government should conduct its financial affairs with a high sense of responsibility, vigorously meeting the Nation's needs and opportunities within its proper sphere while at the same time exercising a prudent discipline in matters of borrowing and spending, and in incurring liabilities for the future."

What does it mean? It is clear to me. Yet this is the kind of language that each person can bend to his own interpretation or need. Here is language more specific:

"In times of prosperity, such as we anticipate in the coming year, sound fiscal and economic policy requires a budget surplus to help counteract inflationary pressures, to ease conditions in capital and credit markets, and to increase the supply of savings available for the productive investment so essential to continued growth. * * * If expenditures are held to the levels I am proposing for 1961 and reasonable restraint is exercised in the future, higher revenues in later years will give the next administration and the next Congress the choice they should rightly have in deciding between reductions in the public debt and lightening of the tax burden, or both. Soundly conceived tax revisions can then be approached on a comprehensive and orderly basis, rather than by haphazard, piecemeal changes, and can be accomplished within a setting of economic and fiscal stability."

Now that says it. All we have to do as people and Congressmen is to believe it and practice it, not just pay lipservice. Election year forensics unfortunately may "muddy up the water" of such commonsense. For my part, I shall support these budget statements of the President, perhaps even repeating them later should I encounter differences of viewpoint—whether differing with a Democrat-led Congress or Republican administration.

The President's economic report expanded the elementary economic bases underlying the administration's analysis of the Federal role in our national economy. The President said, "A well-informed and vigilant public opinion is essential in our free society for helping achieve the conditions necessary for price stability and vigorous economic gorwth. * * * It would be a grave mistake to believe that we can successfully substitute legislation or controls for such understanding. Indeed, the complex relationships involved cannot be fixed by law and attempts to determine them by restrictive governmental action would jeopardize our freedoms and other conditions essential to sound economic growth."

I am convinced that many Members of Congress do not believe the statement above; rather, they believe that Federal law is the panacea and cure for all economic problems. In fact, though I agree with most of the President's economic message, it demonstrates to me (contrary to the language quoted) that too heavy reliance is placed on the "Full Employment Act of 1946" which places far too much responsibility in the Federal Government for providing jobs under the guise of providing the "proper climate" for business success and growth. It is not the role of Federal Government to provide jobs any more than it is to feed, clothe, house, and provide other basic necessities for our people; nor can government do these things without the tyranny of a regimented and controlled economy. Herein lies the difference between a free society and socialism.

The announced retirement from Congress of GRAHAM BARDEN, able and despected North Carolinian, serves to point up the dilemma confronting the less liberal element remaining in the Democrat Party. Of the really vital issues which may divide our people, none are more important than those which must be thrashed out before congressional committees concerned with the courts, education, labor and public works. With Mr. BARDEN'S retirement, in any democrat-controlled Congress, the House committees handling legislation in these areas will all be controlled by New York City Democrats of distinctly liberal persuasion. Charles Buckley, enthusiastically endorsed by the ADA, rules the Public Works Committee whose activities involve such a whopping proportion of government expenditures each year. EMANUEL CELLER presides over the important Judiciary Committee, and now with BARDEN'S departure, ADAM CLAYTON POWELL can expect to be elevated to the chairmanship of the key Committee on Education and Labor.

On Mount Rushmore—the Faces of Franklin D. Roosevelt and Dwight D. Eisenhower Will Be Eternal

EXTENSION OF REMARKS
OF
HON. ALFRED E. SANTANGELO
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES

Monday, February 1, 1960

Mr. SANTANGELO. Mr. Speaker, I have introduced today for appropriate reference a bill to authorize the Mount Rushmore National Memorial Commission to conduct an investigation and study of the feasibility of adding figures of Franklin D. Roosevelt and Dwight D. Eisenhower to the present memorial. It is my hope that this bill will pave the way for including likenesses of these two Presidents alongside those of Washington, Jefferson, Lincoln, and Theodore Roosevelt.

It would be fitting to have the figures of Franklin D. Roosevelt and Dwight D. Eisenhower added to the panorama of other great past leaders. President Franklin D. Roosevelt stirred this Nation to cast out fear from our hearts and initiated programs which lifted our Nation from the depression and gave encouragement and strength to the youth of our country, our farmers, our workers, and all economic groups. Later he inspired the free peoples of the world to rise up and resist the spread of ruthless tyranny and tear asunder the chains of slavery imposed upon free peoples by totalitarian regimes. President Dwight D. Eisenhower led forces of the United States and our allies to military victory. He has been an inspirational figure throughout the world and carries the confidence of foreign nations and the American people by his fatherly image and trustworthiness. Each man played his part in making America fully aware of its world responsibilities and its obligations to men of good will in the task of building world peace and security.

I am delighted that my colleague and friend, Congressman PAUL A. FINO, of New York, is also introducing this bill. On the Senate side, this measure has bipartisan support in the person of my good friends, Senator HUBERT H. HUMPHREY, of Minnesota, and Senator KENNETH B. KEATING, of New York. A moving force behind the drafting of this measure has been the Federation of the Italian-American Democratic Organizations of the State of New York, whose officers are as follows: Honorary advisory board; Hon. Nina Rao Cameron, Hon. George B. B. DeLuca, Hon. Ross J. Di Lorenzo, Hon. Athony Di Paola, Hon. Frank A. Emma, Hon. Enzo Gaspari, Hon. Lawrence E. Gerosa, Hon. Angelo R. Parisi, Hon. Charles Polleti, Hon. Paul P. Rao, Jr., Hon. Vincent P. Rao, Hon. Ben Scafidi, Hon. Joseph P. Vaccarella; president, Jack Ingegnieros; vice presidents, Miss Sarina D'Amato, Prof. Bartolomeo Liscio, Frank Valenti; treasurer, Mrs. Antoinette Loscuito; executive secretary, J. P. Sommer; publicity, Miss Terry Milburn.

No matter what the Republicans may think of Franklin D. Roosevelt or what the Democrats think of President Dwight D. Eisenhower, informed and impartial men of good will can agree that they have played vital roles in the story of our Nation. They deserve to be considered for their works and place in history, apart from any partisan considerations. It is in this spirit that I offer this measure.

Mr. Speaker, the Mount Rushmore National Memorial is a unique, magnificent and heart-warming aspect of our national life enshrining as it does Presi-

dents who have meant much to the progress and heritage of America. I hope this bill will make possible the addition of these two towering figures to this sculpturing marvel.

High Cost of Sickness

EXTENSION OF REMARKS
OF
HON. JAMES M. QUIGLEY
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. QUIGLEY. Mr. Speaker, like every other Member of Congress, I have received a large volume of mail—for and against—the Forand bill. I regret that much of this mail is more emotional than logical and that a great deal of the criticism of the bill is more often subjective than objective in nature.

For this reason, I was pleased to read a recent editorial in the York (Pa.) Dispatch dealing with the true issue involved in the Forand bill, "The High Cost of Sickness." I commend it to my colleagues because, in my judgment, it sets forth one of the most objective, unemotional, and truly intellectual appraisals of the real problem facing the Congress, the members of the medical profession, but, most of all, the American people. The situation of this problem is one of the real challenges of our time. It will be solved if it is approached with the forthright honesty included in this excellent editorial, which follows:

HIGH COST OF SICKNESS

Recent days have seen a flurry of news items about the rising cost of medical and hospital care which, by the way, many Yorkers can prove by their pocketbooks.

What the stories reflect is increased awareness of this critical financial problem. Each day more people are finding out that a severe illness can wipe out the savings of a lifetime.

Accordingly, the Nation is seeing a new push for compulsory health insurance in the proposal by Congressman FORAND, Democrat, of Rhode Island, to provide hospital, nursing home, and surgical services for persons eligible for old age and survivors' benefits.

Already the American Medical Association has attacked the Forand bill, declaring it would inject the Federal Government into the physician-patient-hospital relationship and sap the quality of care rendered.

Perhaps the doctors are right. But there is difference of opinion on charges that compulsory health insurance has reduced the competence of British doctors or hospitals.

At this point we are not advocating compulsory health insurance, if for no other reason than we do not know where it would lead in already burdensome taxes. But the time may come when we may feel it would be better to pay increased taxes for medical benefits over a period of time than be floored with one whopping medical bill all at once.

Could such a time ever come? It could, we believe, when those who can afford health insurance rebel at gigantic premium hikes. Or it could come when patients feel that doctors' and surgeons' fees have gotten out of line. The public may not be far from either conclusion at this time.

However, the public itself cannot escape some responsibility for mounting costs. How many are there who, because they have insurance, insist upon hospitalization when treatment at home would suffice? Then there are doctors who know that it is far simpler—and just as good financially—to see several patients in one hospital visit than to make separate trips to homes outside.

As long as patients are willing to be hospitalized for minor ailments because they have insurance, there are always some doctors who will see that they are admitted—adding, of course, to the congestion and ultimate cost of hospital facilities. As the York Hospital contends, Blue Cross payments do not cover the actual costs of patient care.

Right now the public has no direct control over such matters as hospital rates, insurance premiums or doctors' fees. Most patients are sick people. They need care. They can't strike or organize a boycott against doctors or insurance companies.

Therefore, it is primarily up to the medical profession, insurance companies and hospitals to keep costs in line. Should they fail this trust, then the public may choose to exercise its political power by pressuring Congress for Government-supervised medical benefits.

Federal Aid to States for School Construction

EXTENSION OF REMARKS
OF
HON. JOHN D. DINGELL
OF MICHIGAN
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. DINGELL. Mr. Speaker, It appears that the President has abandoned the whole concept of Federal aid to States for construction of primary and secondary schools.

Can he have lost sight of the fact that we are short 140,000 classrooms needed to house our bulging school population, now some 2½ million children in excess of school capacity? Some experts even set this classroom shortage at being 500,000 classrooms short. These 140,000 classrooms would constitute a building one room wide across the United States from Atlantic to Pacific. With the tremendous population expansion anticipated during the next few years, the shortage will grow and feed upon itself with each passing year.

In order to forcibly remind the President of his orphaned and abandoned administration proposal for Federal aid to States for school construction, I am reintroducing the administration's 4-year program of Federal aid to States, introduced on January 27, 1957 as H.R. 3976 and H.R. 3986. I regard this bill as grossly inadequate to meet the need, unfair to large and prosperous States, unsuited to its purpose, and insufficient to meet the crying need of this country. This is the first, and I hope the last, time I introduce a piece of legislation with which I am not in sympathy.

I favor proposals offered by the distinguished senior Senator from the State of Michigan, the Honorable PAT MCNAMARA, and the bill sponsored by the distinguished senior Senator from Montana, the Honorable JAMES MURRAY, and by colleague in the House of Representatives, the Honorable LEE METCALF, known as the Murray-Metcalf bill. These bills offer significant advance in the field of education and would enable this country to meet its school needs in an age where education is everything to business, science, the community, to the individual, and to the United States in its competition with an atheistic, communistic dictatorship whose purpose is to rule the world by conquest, or if possible by economic and technological competition.

Inadequate though this legislation is, I introduce it with a challenge to the President of the United States and to the members of his party to at least support their own measure for school construction during this Congress. I remind the President and his partisans that 2 years ago Mr. Eisenhower pointed out that there were over 2.5 million children in excess of normal capacity of existing buildings and that the need for Federal assistance is not theory, but demonstrated fact since it cannot now be said realistically—that the States and communities will meet the need for school construction. The school needs of this country are too great, too many children are on half days, in overcrowded classrooms taught by overworked teachers, for inaction on any level of Government. Certainly the words of the President himself are conclusive of the need.

Unless something is done shortly about school construction the United States will be in danger which will exceed anything which we have met in the past, including the missile lag, the sputniks and Russian acquisition of nuclear and thermonuclear weapons. The danger will be an educational lag resulting in the loss of scientific and technological lead in the world to Russia. If the present situation continues Russia and even China not too long hence will surpass the United States in scientists, technicians, and in invention and scientific effort in all fields. The point may be reached ultimately where the United States will be weakened financially and economically, so deficient in production of new scientific thoughts and new weapons as to cease to be a factor in world politics. When this has come to pass the United States will not even be a secondary power; America will simply be a thrall to Russian communism. Inadequate though this legislation is, it is the least which can be done by the Congress, and I challenge the President and the party to support their own program reminding them of their words of 2 years ago.

The bill would provide $325 million for 4 fiscal years for grants to the States and municipalities. The Federal share on a project would be not less than one-third nor more than two-thirds varying in accordance with the States relative income per child of school age.

It authorizes appropriations of $750 million for a 4-year program to enable the Federal Government to purchase obligations of local school districts issued to finance public, elementary, and secondary school construction where bonds could not be marketed at reason-

able rates of interest by the State or municipality.

It provides $150 million for a 4-year program for Federal advances to State school financing agencies for deposit in reserve funds to be used to back up issues of obligations for public, elementary, and secondary school construction purposes.

Lastly, the bill provides for miscellaneous grants of $20 million over 4 years to enable States to meet their administrative expenses for construction or development programs to increase school construction and promote greater efficiency in planning and financing such construction.

I am extremely critical of this legislation because the matching requirements place an unfair and undue burden on prosperous States like New York, Connecticut, California, Illinois, Ohio, Michigan, and Indiana. The provision for Federal purchase of State and local obligations is a pathetic effort to meet the real needs of the States which will create a bonanza for investment bankers to broker bonds from municipalities and States to the Federal Government with a large rakeoff, when the whole matter could be handled more cheaply and with less money dribbled off in sundry administrative costs through direct Federal grants. Moreover, many communities are already bonded to the limits of their financial ability to carry debt and still others have reached their statutory debt limit. To these, this provision will be an insult.

This is not an effort to put the administration or the Republican Party on the spot. America, the administration, and both political parties are on the spot and failure to act vigorously at this time may result in a situation of irreparable harm to the United States before we are aware of it.

Alvin R. Bush

EXTENSION OF REMARKS
OF
HON. JOHN P. SAYLOR
OF PENNSYLVANIA
IN THE HOUSE OF REPRESENTATIVES
Monday, February 1, 1960

Mr. SAYLOR. Mr. Speaker, if any Member of the House was more genuinely liked by his colleagues than Alvin Ray Bush, his service ended before I entered Congress.

Many, many close friendships are established here on Capitol Hill. Like shipmates in wartime, we forge innumerable and indissoluble fraternal bonds in the course of our meetings and conversations. Our debates may sometime reach a high degree of intensity, but when we recess or adjourn the combatants walk out together in much the same spirit of amity that prevails at the close of an athletic contest when victim and vanquished join arm in arm as they leave the arena.

Alvin Bush and I sat on the same side of the aisle and our political convictions were largely parallel; thus in the 9 years we served together, conflicts in our views on issues to be decided in this legislative body were infrequent. But it would have made no difference if we had never shared the same opinion. His host of friends here today whose voting records show no taint of similarity with that of our departed colleague will concur unanimously.

Alvin Bush did not think about a person's pedigree, his background, his party affiliation, or his political philosophy. As he was a good man, he enjoyed associating with good men. Of him it can be truly said "He lived by the Golden Rule." He was a deeply religious man, and his Creator's precept on love of ones fellow man was inherent in his character.

Through a geographical advantage, I was able to spend more time with Alvin Bush than most Members of the House found possible. Our families were close and I visited his home and enjoyed many an hour there with him, Mrs. Bush, and their fine children. My life has been enriched by their homelife with its warmth, enthusiasm, and sincerity.

Anyone whose accomplishments are akin to those of Alvin Bush could justly be proud of his record, but here was a modest man who discounted what he had done because his only concern was to serve his country and his fellow men so that they and their progeny might live in an atmosphere conducive to a wholesome life in the service of their God. His career bespeaks his ability, determination, and zeal. He went overseas in the defense of his country in World War I, then picked up where he had left off and went on to success as a businessman. With all these interests, he took time to participate in civic affairs and to beoome active in hospital work. He was a devout church member, and he accepted public service with a spirit of extreme responsibility and dedication.

Our friend has gone to his reward, but his warm personality and inspiring camaraderie will always be appreciated by everyone who ever had the pleasure of knowing him and of sitting with him in this chamber. God grant him eternal peace.

Israel's Most Popular Judge Is an Arab

EXTENSION OF REMARKS
OF
HON. ABRAHAM J. MULTER
OF NEW YORK
IN THE HOUSE OF REPRESENTATIVES
Monday, January 18, 1960

Mr. MULTER. Mr. Speaker, I commend to the attention of our colleagues the following article by Leo Heiman as it appeared in the American Zionist, January 1960 issue:

ISRAEL'S MOST POPULAR JUDGE IS AN ARAB

(By Leo Heiman)

HAIFA.—On a hot July afternoon in 1959 spectators in the crowded room of the Affulah Court in the Valley of Jezreel in northern Israel perspired as they waited for the judge to appear.

Through the open windows, jeeps and weapons-carriers of the special riot dispersal task force would be seen driving slowly along the streets of this bustling Israeli town.

The seven men on trial in the Affulah Court were not ordinary criminals, crooks, or traffic violators. They were the ringleaders of the race riots and mob violence at Migdal Ha' Emek, an agricultural township near Nazareth. The eruption of mob violence at Migdal HA'Emek was only one of a series of Communist-incited race riots which shook Israel from the Galilee to the Negev, erupting simultaneously in 3 cities, 5 towns, and 16 villages inhabited by immigrants from north Africa.

Since the rioters claimed that they were the victims of alleged racial discrimination, spectators and guards in the jampacked Affulah courtroom were vitally interested in who was going to judge them.

If the judge were of European descent, the rioters, and their relatives would certainly claim that the trial was not fair and that the whites were again oppressing them. If the judge was going to be of Oriental descent, it would amount to tacit admission on the part of the authorities that the people of Israel are in fact divided into two races—white and oriental—and that the latter should be judged by its own judges, bossed by it own foremen and commanded by its own officers.

But when the court official barked "The Court," and everybody stood up to see the door leading to the judge's chambers opening slowly, a sigh of relief escaped from a few hundred throats as the judge's identity was communicated by those inside the courtroom to those waiting outside in the crowded corridors and halls.

The judge who entered the Affulah courtroom was no doubt the most popular Israeli judge. He was not popular with the criminals or offenders, but in any national popularity contest he would certainly be the public's top favorite.

He was neither a European Jew, nor a Jew of oriental descent, but an Arab.

If the most popular judge in the Jewish State can be an Arab, and if Jews do not object to being tried and sentenced by an Arab in their own Jewish state, it is the best proof that Jews and Arabs could easily live together under one roof, provided all Arab intellectuals and leaders were like His Honor Judge Elias Kteily. But it is difficult to find man of Judge Kteily's caliber. He is one of Israel's only two Arab judges and he has the best chances of becoming the first Arab to be nominated to Israel's august supreme court. Had he wished to enter politics, Judge Kteily could haev easily been elected to the Knesset. But he is not interested in politics.

Judge Kteily's popularity stems from his engaging personality as well as from the fact that he metes out justice, not merely the dry letter of the law.

If a man is brought in for stealing a bag of sugar, and if he confesses to having committed the theft, but explains that he had to steal the sugar for his children because he does not earn enough money to buy sugar, his wife is pregnant and the children are sick—Judge Kteily will admonish the man, fine him * * * and pay the fine himself out of his own pocket. But he would also give him a suspended jail sentence, to make sure that he never steals again.

Finally, Judge Kteily would also send a recommendation to social-welfare agencies and employment offices to make sure that the man's family, pregnant wife and children are taken care of, and that he doesn't have to steal in order to feed his children.

On the other hand, if a traffic violator or a hoodlum is brought in to be tried by Judge Kteily, he can start making reservations at the nearest penitentiary. Other judges slap ordinary fines on traffic violators or hoodlums who disturb public order. But Judge

Kteily is not lenient when it comes to protecting lives and property. He always throws the book at them, giving them maximum possible sentences, plus something additional.

The result is that serious road accidents and hooliganism are almost absent from the area under Judge Kteily's jurisdiction, despite the fact that traffic casualties and hooliganism are Israel's biggest plagues in other districts of the country.

Judge Kteily alternates between the courtrooms of Nazareth, where his "customers" are mostly Arabs, and Affulah, where he tries Jews. He speaks Arabic, Hebrew, English, French, and even some Yiddish and he never uses an interpreter. He also knows by heart the Koran, the Bible and the Gospels and quotes from them at length during the trials, citing precedents and examples from the holy books, as other judges quote precedents from English law volumes.

In May 1959, Judge Kteily tried a bus driver who was talking to a passenger while driving. Other judges prefer to reprimand talkative drivers, or fine them a few pounds if it is a second offense of this kind.

Judge Kteily said he was sick of seeing bus drivers who did not keep their eyes on the road because they had to flirt with an attractive woman passenger, or gossip with some friend of theirs. He fined the talkative bus driver 300 Israeli pounds ($150) and warned him that the next time he is going straight to jail. Again, the jampacked courtroom expressed loud approval of the sentence.

Similar penalties, such as 100 pounds for smoking in a bus, 500 pounds plus a jail term for insulting a policeman, and 50 pounds for spitting on the floor of a cinema, have made Judge Elias Kteily a talked-about man.

The daily newspaper, Davar, which reflects the views of Prime Minister Ben-Gurion and other top Israeli leaders, suggested recently that Judge Kteily should be inscribed in the golden book of the Jewish National Fund. Other Israeli newspapers also went out of their way to praise the bespectacled, dark-haired Arab judge.

Drivers and hoodlums describe him as their worst enemy. To this, Judge Kteily retorted that careless drivers are their own worst enemies, while hoodlums "are a plague like a cancer, which must not be allowed to grow."

A descendant of the Nawffal family clan of Tripoli in the Lebanon, Elias Kteily was born in Haifa in 1912. His parents were poor Arabs who embraced the Greek-Orthodox faith, and Elias had to leave school at 15 and go to work to help his father with the family of nine.

But he took correspondence courses and received a secondary school graduation certificate after studying at night, after work. He continued his studies, including Hebrew and foreign languages, while working as an apprentice clerk with the British Palestine Railways Administration.

He passed legal examinations after studying in his free time and in 1942, at the age of 30, was transferred to the Legal Administration, where he served first as an interpreter and then as Chief Clerk of the Haifa District Court.

In 1948 he refused to flee from Haifa in the mass exodus of Arabs from the strife-torn city. "Jews and Arabs can live in peace together, under the same roof," he told his friends who urged him to flee. Instead of fleeing, Elias Kteily volunteered to serve as Chief Secretary to the Israeli Military Governor of Nazareth. He studied Israeli law in his free time and was appointed judge in 1955. The only other Arab judge in Israel is Mr. Aziz Jarjoura, a close relative of the popular Arab mayor of Nazareth.

The popular Arab judge was a "natural" when it came to trying the Jewish rioters and mob leaders who set up roadblocks at Migdal Ha'Emek, attacked police cars and sent special shock gangs to Haifa to wreck the Jewish agency offices there.

"I give you the benefit of doubt and I am going to think that you really regret your outbreak of hooliganism and violence. Therefore, I am going to be lenient with you," Judge Kteily told the seven riot ringleaders handcuffed to each other on the Affulah courtroom bench, "I sentence each of you to a suspended term of 2 months in jail, conditional on your good behavior for the next 3 years. In addition, I sentence each of you to a token fine of 10 pounds. I realize that most of you cannot afford to pay even 1 pound and I rule herewith that you shall have to pay your fine in 20 monthly installments of 250 pruta (about 12 cents) each. Although nearly 2 years will pass before you have paid your fine, it will be a good lesson to you. Just like a pious Jew kisses the Mezuzzah which is fastened to his doorframe, whenever he enters or leaves his house, because the Mezuzzah contains a portion of the Holy Scroll of Law and by kissing it he protects himself from sin and promises not to stray from the path of righteousness, so the few pennies which you shall have to pay to this court each month will remind you of your guilt against society and against the state in which you live and which was so good to you. The monthly payments will also keep you on the path of righteousness and protect you from sinning against state and society.

"I know what you are thinking. You are thinking that the State of Israel was not so good to you, and that the society owes you something. You believe yourself to be discriminated against and you think you are second-class citizen because you are not of European descent. But is not this very court the best proof of Israel's democracy, freedom, equality and equal chance for all citizens?

"I know that your situation is difficult and that you have many legitimate grievances. But you arrived here from primitive and backward Arab countries, where you lived in squalor of slums and gutters. You came to this country without any skills, education, trades or professions. Because of your background and heritage, it takes you longer to learn and get integrated. The European immigrants who arrived here together with you have already settled in nice houses, have jobs and enjoy life in a country of their own. But they arrived here from civilized countries, and they have skills. They are doctors, lawyers, technicians, engineers, electricians, architects and builders. They are educated and used to discipline and efficiency.

"And you forget that the professors, doctors, engineers and lawyers who came to this country from Germany 25 years ago had to live in tents for several years and work physically as hod carriers, roadbuilders and ditch-diggers. They did not complain or demonstrate, and they had no one to help them then.

"I honestly believe that you have many legitimate grievances and that you have been neglected in some respects. But do you really believe that throwing stones, smashing windows, attacking police and engaging in rioting and arson will solve your problems? No, it will only aggravate them. You are hotheaded Orientals, and like all hotheaded Orientals you prefer the emotional approach to the logical one. But use your heads, men. The Israeli judge is not your enemy. He is your brother or father. And King Solomon's dictum—He Who Neglects Punishment Hates His Son—guides me on considering your case.

"You are not the only ones who are hungry and feel neglected. I was hungry when I was 17 years old. My late father was hungry too, and we frequently lacked bread in our house. But I did not steal or rob, did not demonstrate or brawl. I demonstrated within the depths of my own soul, and I struggled hard all my life until I achieved my present position. No one is starving to death in Israel, and no one is really hungry. But people who are able to work must be willing to work. The people who built this country toiled all day long to drain swamps, move mountains and reclaim marshes. They were paid less than you, and were frequently hungry. But they toiled by the sweat of their brows to build this State so that you shall have a quiet corner of your own, instead of some evil slum in a ghetto.

"And you come here, and instead of working hard and enjoying a life of freedom, start throwing stones and attacking police. You say life was better where you came from. But I ask you: Would you have dared to throw stones and attack police in the countries where you came from?

"I am very lenient with you because I regard you as hotheaded and misguided children, and I hope that the authorities and agencies responsible for your integration will show the same degree of understanding and help you to become good, loyal, and law-abiding citizens. * * *"

Israeli newspapers called Judge Kteily's summing up of the sentence "the best lecture on modern Zionism. * * *" "Our Arab judge analyzed the recent race riots and summed up the whole situation better than a hundred political speeches and all newspaper articles written until now on this subject," an admiring Israeli police officer declared following the trial.

Judge Kteily divides his time between his two courts and between his family and hobbies, which are gardening and collecting pipes. He has won the first prize in most Israeli gardening competitions, while his collection of pipes is second only to that of General Laskov, chief of the general staff.

His attractive wife and four children help out in the garden. "Israel is a Garden of Eden," says Judge Kteily, "but then some people did not appreciate even the original Garden of Eden. That's human nature."

The Soviet Union's Self-Sufficiency in Metals

EXTENSION OF REMARKS
OF
HON. WAYNE N. ASPINALL
OF COLORADO
IN THE HOUSE OF REPRESENTATIVES

Monday, February 1, 1960

Mr. ASPINALL. Mr. Speaker, under leave to extend my remarks in the RECORD, I include extracts from a very informative article on the Soviet Union's policy of self-sufficiency in metals.

The article, appearing in the December 1959 issue of the quarterly review, "Optima," published by Anglo-American Corp. of South Africa, was written by Jan Kowalewski, formerly managing director of TISSA, a semigovernmental company in the Soviet Union dealing with strategic raw materials, now living in London and writing extensively on Soviet strategic problems.

Mr. Kowalewski's analysis concludes that the Soviet Union is reaching its goal of self-sufficiency in nonferrous metal production. This comes at a time when the United States is becoming increasingly dependent upon foreign sources for certain nonferrous ores and metals.

Statistics prepared by the Committee on Interior and Insular Affairs, published in House Report No. 708, 86th Congress, 1st session, show the following changes in U.S. self-sufficiency of nonferrous metals from 1950 to 1958:

[In percent]

	1950	1957	1958
Aluminum ore (bauxite)	40	19	15
Antimony (primary)	20	6	7
Beryllium	19	12	8
Copper	63	89	91
Mercury	10	61	71
Platinum	8	3	3
Lead	32	30	28
Zinc	55	44	36

The extracts from the article follow:

When, in 1926, the planners of the Union of Soviet Socialist Republics set out to achieve full economic and strategic self-sufficiency in nonferrous metals, they were faced with a difficult task. The Soviet Union was endowed with enormous natural resources in ores, but the nonferrous metals industry was limited in scope and the number of qualified engineers and technical experts was totally inadequate. They have finally achieved their goal, however, for the Soviet Union is now one of the leading world producers of nonferrous metals, second only to the United States of America in copper production, second to Canada in nickel, and approaching the position of the biggest world producer of aluminum.

In achieving their present position, the Russians made liberal use of the advancement in Western science and technical knowledge. The foreign capitalist interests that acquired concessions in Russia before the revolution introduced not only the necessary investment capital but also scientific and technical methods previously unkown to Russia. British, German, French, and Belgian enterprises, incorporating the latest technical advances, were established.

* * * * *

In 1928 the head of the All-Union Nonferrous Metals and Gold Trust, Mr. Serebrovskyi, visited the United States and Canada and made contracts with an engineering consulting firm in New York for about 175 American engineers to serve as consultants for the Soviet nonferrous mining and metallurgical industries. These engineers remained in the Soviet Union until 1937, during which time basic reconstruction and development were being carried out under the first and second 5-year plans.

Thanks to their cooperation, there were considerable improvements in the existing plants, and production was increased by the introduction of up-to-date methods, such as the electrolytic process in place of the distillation process in zinc production. Technical aid was extended to all metals except tin. Soviet commentators have long described Western metallurgists as secretive in their development of nickel and tin technology.

Soviet metallurgists made extensive use of the written works of American, German, French, and other metallurgists and scientists. As a result of the last war, the Soviet Union profited from the knowledge of the Germans and Japanese. For instance, the entire zinc plant at Magdeburg was transferred to Altay, in the Soviet Union, and the Russians applied the technical methods used in the North Korean magnesium plant built by Japan with American technical help before the war.

Current developments in the Western countries are studied very thoroughly, and all articles appearing in the Western press on mining and metallurgy are translated and published in Soviet information journals.

A determined effort is being made to augment the number of scientists, engineers, and technical mining experts. Under the auspices of the All-Union Science Research Institute for Nonferrous Metals, separate scientific research institutes have been established for various groups of metals, including aluminum and magnesium, copper, nickel and cobalt, tin, and the rare metals. Several specialized departments and laboratories have been opened by the Soviet Science Academy and by most Soviet universities and other technical institutions. Laboratories associated with production plants also make a material contribution to this research.

As a result of this effort, the number of trained people is now adequate for all Soviet needs, and nonferrous mining and metallurgy have not only reached the theoretical level of Western techniques but are benfiting from the fruits of Soviet research.

In practical applications, however, the Soviet nonferrous metals industry still lags behind Western standards. Its particular disadvantages include high costs of production, low productivity, and an excessive loss of metals during the whole recovery process from the treatment of ore to the production of refined metal.

During the present 7-year plan (1959–65), a great effort is being made to eliminate these defects, and of the planned increase in production during this period about half is expected to come from an improvement in the productivity of labor and in technological processes. The remainder will depend upon new investment.

Now that the capacity of the metallurgical plants has been increased so substantially, there is an urgent need for bigger supplies of ore to keep the plants working to capacity.

Domestic consumption of nonferrous metals is expected to rise considerably during the 7-year plan (1959–65), and it is estimated that in 1965 Soviet industry will need nearly twice as much copper and copper-zinc alloys as it used in 1958. This means, of course, that in 7 years, twice as much ore must be mined.

The latest complete figures show that in 1957 the total volume of nonferrous metal ores mined in the Soviet Union amounted to 192.5 million cubic meters, of which 92.5 million cubic meters were mined by open-cast methods and the remaining 100 million cubic meters were mined underground. The target for 1965 is 400 million cubic meters, of which 260 million cubic meters of ore are to be mined by open-cast methods and only 140 million cubic meters by underground operations.

* * * * *

The importance of Soviet supplies of metals to the countries of the Soviet economic bloc was noted at the second sesesion of the Council of Economic Mutual Aid, held in May 1959. At that meeting it was stated that, although the European countries represented on the council had increased their production of some nonferrous metals, deliveries of metals from the Soviet Union to those countries would be "considerably increased."

In other words, although the Soviet Union is reaching self-sufficiency in nonferrous metal production, the Soviet economic bloc, as a whole, is far from being self-sufficient. The best proof of that point was the fact that, when the embargo on copper exports to China was lifted, China began to buy large quantities of copper wire on the London market, even though the Soviet Union was exporting copper and copper wire at the same time.

So much importance is attached by the Soviet Union to the cause of becoming self-sufficient in nonferrous metal production that development of mining and metallurgy has been conducted, regardless of cost. As a result, several enterprises were established under such unfavorable conditions that they would be considered uneconomic by Western standards.
